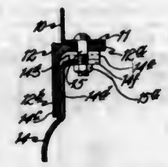
1,691,690. LIQUID-FUEL BURNER. COTTRELL C. WHEELER, Forest Hills, N. Y. Filed May 18, 1926. Serial No. 109,882. 10 Claims. (Cl. 158—91.)

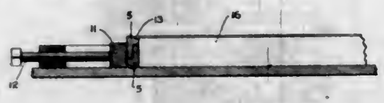
1. A liquid fuel burner comprising a base, a bowl, means for admitting fuel thereto, a plurality of closely spaced air ducts rising from the outer portion of the said base, a frusto-conical hood extending downwardly between the said air ducts and terminating in a discharge nozzle adjacent the said means for the admission of fuel, and a cover providing a chamber into which the said air ducts discharge, the said bowl, hood, and air ducts constituting a self-contained combustion chamber from which the flame passes through the spaces between the said air ducts.



1,691,691. MACHINE FOR MAKING BOOK COVERS. JOSEPH V. WHITE, Chicago, Ill. Filed Aug. 6, 1927. Serial No. 211,180. 11 Claims. (Cl. 154—41.)

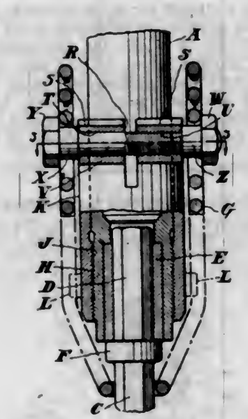
11. In a machine for making round corner cases for books, a platform, means for advancing a glued flexible cover over said platform, a picker head adapted to carry cover-boards to a position above said cover and to press them thereon, said picker head having a plurality of pins extending outwardly from the straight edges, grooved plates movable thereover to fold the margins of the cover over the edges of the cover-boards, a plurality of parallel pins at the corners extending outwardly at substantially 45° from the side pins, said pins extending to substantially the outer edges of said cover-boards, a grooved plate movable inwardly over said corner pins to fold the margin in and crimp it between said cover pins where it will be held by the glue on the cover, and means for withdrawing the pins from the turned-over edges.

1,691,692. STOVE. ZENO C. WILKINSON, Warren, Ohio, assignor to Youngstown Pressed Steel Co., Warren, Ohio, a Corporation of Ohio. Filed Oct. 28, 1927. Serial No. 229,343. 6 Claims. (Cl. 126—305.)



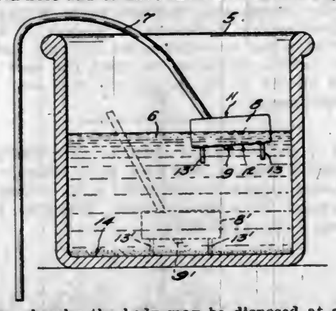
1. In stove construction, an inwardly projecting seat at the lower edge of the stove for supporting a leg, a depending bracing band at the outer edge of the seat, and a leg having an inwardly bent flange along its entire upper edge adapted to rest on the leg supporting seat, the outer surface of the upper end of said leg adapted to

bear against said depending bracing band to brace the leg, and means for attaching the flange on the leg to the leg supporting seat on the stove.



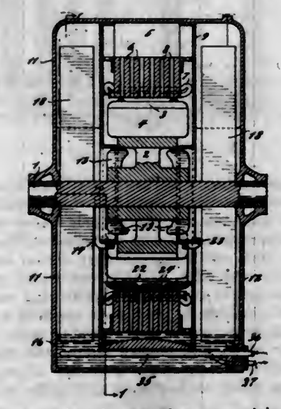
1,691,693. TYPE BEARER. ALBERT A. WILSON, Chicago, Ill. Filed Oct. 15, 1927. Serial No. 226,327. 10 Claims. (Cl. 101—402.)

1. A type bearer comprising a plurality of sections; each section being of less height than the height of type and having grooves therein for permitting said sections to fit together; said completed type bearer being the height of type.



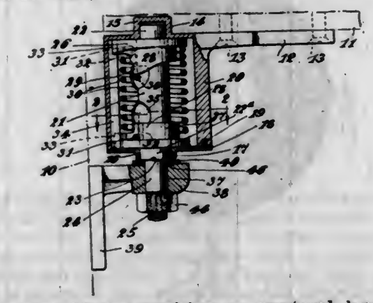
1,691,694. SUPPORT FOR IMPLEMENT RETAINERS. WILLIAM FRANK ZIMMERMANN, Waverly, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 28, 1928. Serial No. 250,249. 4 Claims. (Cl. 121—32.)

1. The combination with a pneumatic tool cylinder, having a tool mounted therein and a retainer for the tool of a sleeve adapted to be disposed on the cylinder, means for clamping the sleeve to the cylinder, said means forming a pivotal support for the implement retainer.



1,691,695. SIPHON ATTACHMENT. ARTHUR L. ARMBRUSTER and CHARLES W. MADISON, Seattle, Wash. Filed Mar. 29, 1927. Serial No. 179,224. 1 Claim. (Cl. 137—20.)

A flotative siphon-hose regulating device comprising in combination a body having a plane under surface and provided with an opening arranged in inclined relation with respect to said under surface and extending entirely through the body, said hole being of a diameter to receive the siphon-hose and to have the latter frictionally engage

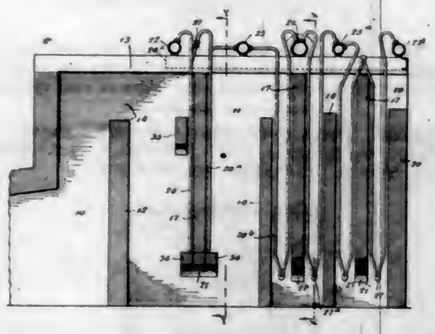


the body whereby the body may be disposed at a desired position along the length of the hose, and leg elements depending from the body at opposite sides of said opening.

1,691,696. DYNAMO-COOLING SYSTEM. FRANK G. BAUM, San Francisco, Calif. Filed Dec. 6, 1927. Serial No. 238,019. 13 Claims. (Cl. 171—252.)

1. A dynamo-electric machine comprising a rotor, a stator, a housing enclosing the same, a reservoir within the housing, an arm secured to the rotor and extending into the reservoir, a stationary pocket having an opening in position to receive liquid thrown by said arm, and a conduit for permitting the flow of liquid from said pocket to the interior of the rotor.

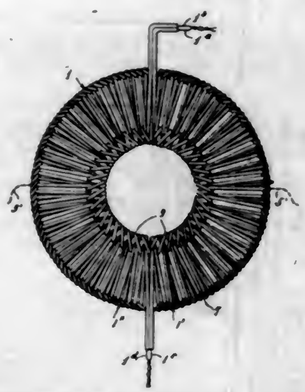
1,691,697. SPRING HINGE. EMIL BOMMER, Brooklyn, N. Y. Filed Mar. 5, 1925. Serial No. 13,013. 1 Claim. (Cl. 16—182.)



A spring hinge comprising an apertured bracket, a pivot pin seated in the aperture in the bracket, means for locking the pin in fixed position in the bracket, the

pivot pin being substantially cylindrical and having vertically extending shoulder means between the upper and lower ends thereof, said shoulder means being swaged out of the cylindrical stock forming the body of the pivot pin, a spiral spring surrounding the pivot pin, and upper and lower collars carried on the pivot pin, each engageable with an end of the spring, and with said swaged-out shoulder means.

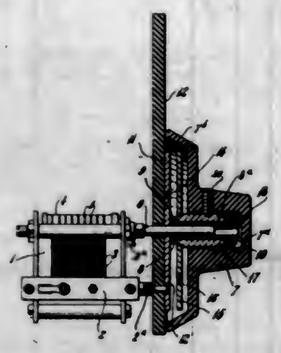
---



1,691,698. SEPARATELY-FIRED SUPERHEATER. BENJAMIN N. BRODO, New York, N. Y., assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed June 17, 1924. Serial No. 720,476. 8 Claims. (Cl. 122—485.)

1. In a superheater, a furnace, a superheating chamber having an inlet communicating with said furnace and an outlet; a plurality of superheater tubes extending within said chamber in the direct path of the furnace gases, a baffle wall extending partially across said chamber adjacent to said inlet, a ledge projecting from each side of the bottom of said wall, a deflecting surface extending across one side of said wall opposite said inlet, said ledge and deflecting surface forming with said baffle wall a pair of pockets located out of the flow of the gases from said furnace, and a plurality of superheater units extending along each side of said baffle wall within said pockets.

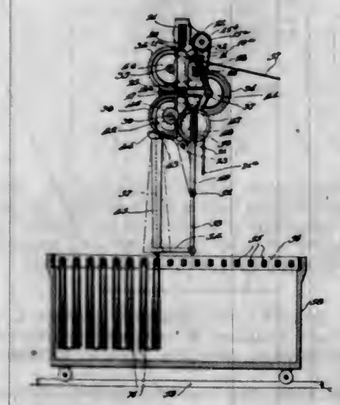
---



1,691,699. TRANSFORMER AND INDUCTANCE. ALLEN D. CARDWELL, Rockville Center, N. Y. Filed May 16, 1925. Serial No. 30,666. 10 Claims. (Cl. 175—359.)

1. A toroidal coil comprising a conductor having turns whose peripheral portions are located side by side and inner portions of groups of turns adjacent, means securing the outer turns together and spaced apart, and means securing said groups of turns together and spaced apart from other groups.

---

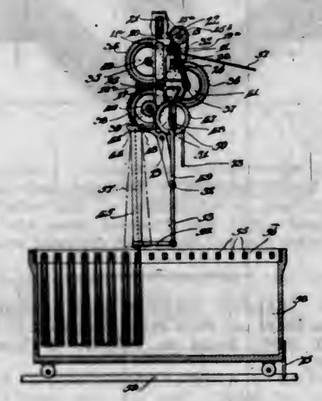


1,691,700. MEANS FOR VARIABLY CONTROLLING ELECTRICAL INSTRUMENTS. ALLEN D. CARDWELL, Rockville Center, N. Y. Filed June 27, 1925. Serial No. 39,097. 4 Claims. (Cl. 175—41.5.)

1. An electrical instrument comprising complemental elements movable relatively one to another, a controlling member rotative independently of the movable element, a stationary cam member, a second cam member rotative relatively to the stationary cam member and connected with the controlling member for operation thereby, an arm connected with the movable element, and a ball cooperative with said arm and with said cam members and movable relatively thereto for actuating the movable element at variable distances for given distances of rotation of the controlling member for producing equal changes in the electrical circuit in which the instrument is used, the arm having guiding means for the ball, whereby rotation of the movable cam member will cause the ball to travel along the arm for variably rotating the movable element in conformity with given movements of the controlling member for changing the constants of the circuit.

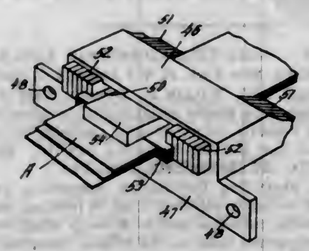
---

1,691,701. METHOD OF DYEING YARN. EDWIN E. CARLSON and LAWRENCE A. STEAD, Chester, Pa. Filed May 17, 1927. Serial No. 191,957. 4 Claims. (Cl. 8—5.)



1. The method of dyeing yarn consisting of looping the yarn over one pole of a rack until the pole is filled, leading the yarn to an adjacent pole in the rack and looping same over this pole until it is filled, continuing this process until the length of yarn is suspended on the rack, and immersing the rack in a dye bath.

---



1,691,702. APPARATUS FOR PREPARING WARP YARN FOR DYEING. EDWIN E. CARLSON and LAWRENCE A. STEAD, Chester, Pa. Filed May 17, 1927. Serial No. 191,958. 11 Claims. (Cl. 8—19.)

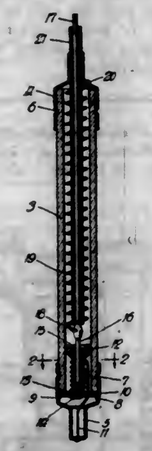
7. Yarn plaiting mechanism including a main frame, an auxiliary frame carried by the main frame, a plaiting tube oscillatable in the auxiliary frame, means for feeding yarn through the plaiting tube, a main shaft rotatable in the main frame, a screw shaft threaded in the auxiliary frame and rotatable in the main frame, clutch sprockets rotatable on the main shaft and mechanically connected to the screw shaft, and clutch parts slidably keyed to the main shaft and adapted to selectively engage the clutch sprockets.

---

1,691,703. GUIDE APPARATUS FOR STRIP-ROLLING MILLS. ALEXANDER FIELDER CLARKE, Pittsburgh, Pa. Filed May 27, 1927. Serial No. 194,612. 7 Claims. (Cl. 80—51.)

1. In a device for pack rolling metal strips, a guide consisting of an open frame, separator plates arranged within the frame and side members arranged within the frame and adapted to contact with the sides of the strips.

---

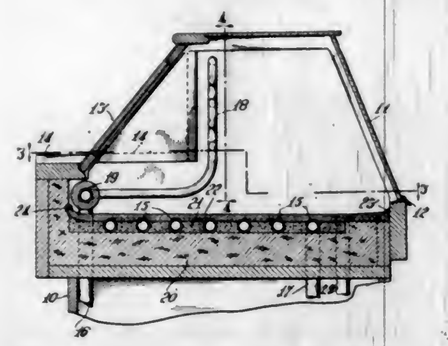


1,691,704. PILING. EUGENE FRANCIS CONSIDINE, Walkerville, Ontario, Canada. Filed Oct. 23, 1926. Serial No. 143,770. 2 Claims. (Cl. 20—100.)

1. A sectional wood pile comprising a lower unpreserved section adapted to be completely below water level and an upper section which has been treated with a preservative.

---

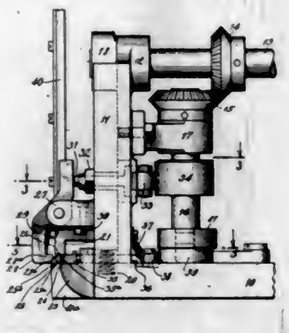
1,691,705. PROTECTOR. WALLACE L. COOK, Chicago, Ill., assignor to Reliable Electric Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 29, 1926. Serial No. 151,422. 1 Claim. (Cl. 200—123.)



A thermal protector of the character described comprising a pair of electrodes, heat responsive means for normally retaining said electrodes in electrical engagement and adapted upon undue increase in heat to permit separation of said electrodes, a spring normally under stress adapted to cause a wide separation of said electrodes upon softening of said heat responsive means, means for again setting said electrodes into operative position upon resoftening of said heat responsive means, an enclosing

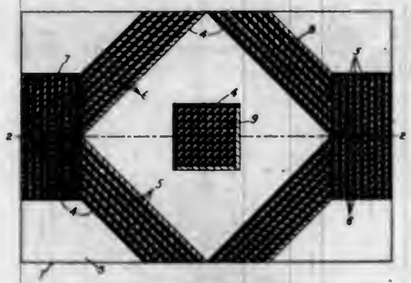
shell housing said electrodes, heat responsive means and spring, and indicating means projecting from said shell for indicating the relative position of said electrodes with respect to each other.

---



1,691,706. DISPLAY COUNTER. FRANK W. DAEMICKE, Chicago, Ill., assignor to Paul J. Daemicke Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 11, 1927. Serial No. 182,738. 1 Claim. (Cl. 62—37.)

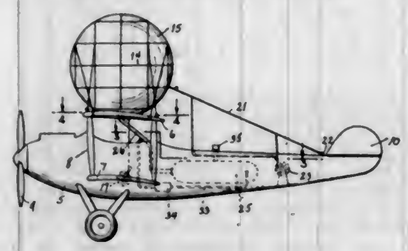
A display counter of the character described having glass side walls, the bottom being provided with insulating material formed to provide a recess on its upper surface extending substantially from front to rear and from end to end, refrigerating coils arranged in the recess, an enclosure for said coils consisting of plastic water and cold resisting material filling said recess and embedding the coils except for the top surfaces thereof, a covering of cold conducting and temperature retaining cementitious material arranged in intimate contact with said plastic material and the tops of the coils so as to prevent passage of air and moisture therebeneath, and drain outlets extending downwardly from said covering to the bottom of the counter.



---

1,691,707. MEANS FOR SEALING CONTAINERS. ANTHONY DANIELS, Newark, N. J. Filed Feb. 18, 1924. Serial No. 693,446. 25 Claims. (Cl. 113—1.)

1. A machine for effecting a closure on an end of a collapsible tube with a clip comprising means for retaining the clip, means for clamping together the sides of the tube end between the sides of the clip, and means for thereafter folding the clinched clip and tube end portion to form a seam.



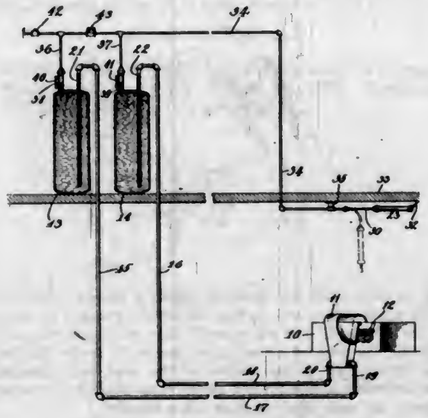
1,691,708. FLOOR COVERING. JAMES ERNEST A. EGLESON, East Orange, N. J., assignor to Congoleum-Nairn, Inc., a Corporation of New York. Filed Aug. 17, 1927. Serial No. 213,484. 6 Claims. (Cl. 41—30.)

1. As a new article of manufacture, a linoleum floor covering having embossed or depressed areas forming a pattern thereon, a multiplicity of light-reflecting surfaces formed within said depressed areas, and a transparent coating material filling such depressed areas.

---

1,691,709. SAFETY DEVICE FOR AEROPLANES. PIROSKA ELLER and JOHN ELLER, New York, N. Y. Filed Dec. 27, 1927. Serial No. 242,717. 2 Claims. (Cl. 244—21.)

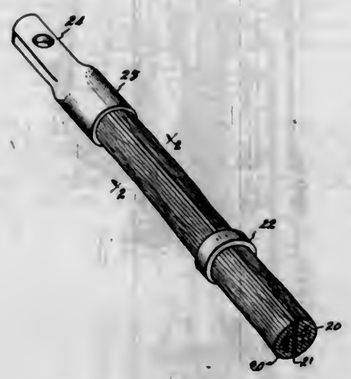
1. A safety device of the class described in combination with the fuselage and wings of a machine, an envelope or balloon having an outer network supported on the top wings, cables connected to said network, certain of said cables passing through the top wings and adapted to be wound on a winch, an inlet pipe and gas storage tanks in communication therewith for inflating said envelope or balloon and means for deflating said envelope or balloon.



---

1,691,710. FIRE-EXTINGUISHING APPARATUS. FRANK A. EPPS, New York, N. Y.; ADDISON O. BONIFACE, East Orange, and WILLIS D. WITTER, Roselle Park, N. J., assignors, by mesne assignments, to American La France and Foamite Corporation, a Corporation of New York. Filed Apr. 1, 1922, Serial No. 548,610. Renewed Dec. 24, 1924. 27 Claims. (Cl. 169—14.)

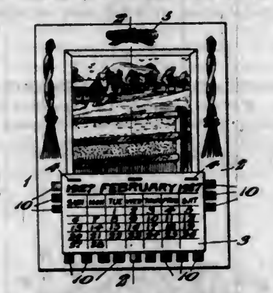
1. A foam protecting installation comprising an acid solution tank, a basic solution tank, a mixing chamber below said tanks, valveless siphon delivery pipes for connecting the respective tanks to the mixing chamber, means operative only through a period of short duration for initiating the flow in both said siphon delivery pipes, the flow thereafter being predominantly a gravity flow and means opening the tanks to the atmosphere sufficiently to compensate the delivery of liquid therefrom.



19. In fire extinguishing apparatus a container for fire extinguishing charge, a casing for communication therewith, and a gravity-operated gas producer loose therein and made up as a separate refill unit having a casing containing both a cartridge and operating means therefor, one of which is free to fall onto the other to set off the cartridge when the casing approaches the vertical.

---

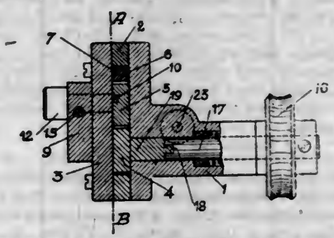
1,691,711. PARACHUTE. ARTHUR E. FIXEL, Detroit, Mich. Filed Aug. 13, 1926. Serial No. 128,946. 5 Claims. (Cl. 244—21.)



1. A flexible rib for parachutes, consisting of outer portions of fibrous material and a non-adhering intervening strip of spring metal.

---

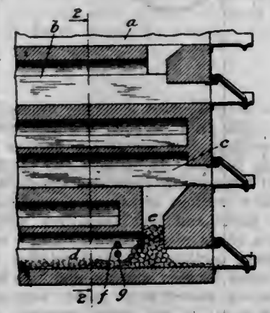
1,691,712. ADVERTISING DEVICE. HARVEY FREDERICK, Newark, N. J. Filed Feb. 15, 1927. Serial No. 168,285. 1 Claim. (Cl. 206—82.)



An article of the character stated, comprising a thin, relatively flat support, arranged to receive conventional calendar portrayals, a leaf having a table of information thereon, said leaf being secured at its top only to said support, and specimens of goods to be advertised fixed along the free marginal edges of said leaf and projecting in both horizontal and vertical manner therefrom, and an additional leaf secured at its top only to said support and arranged to cover said first mentioned leaf and concealing

the attachment portions of said specimens but being of such size as to permit the projected ends of said specimens to be visible at all times.

---



1,691,713. VISCOSE-DISTRIBUTING DEVICE FOR ARTIFICIAL-SILK PLANTS. ARMAND CHARLES FREY, Soultz, France. Filed Mar. 30, 1927, Serial No. 179,679, and in Switzerland Mar. 31, 1926. 1 Claim. (Cl. 103—120.)

A gear wheel pump for distributing viscose in artificial silk plants comprising in combination: a casing; a positively driven spur wheel closely lodged in a cylindrical recess formed inside the casing; a second spur wheel meshing with said driven spur wheel, a crescent-shaped member in which said second spur wheel is eccentrically lodged said crescent-shaped member being freely lodged in a circular recess inside said casing, and a peg rotatably mounted in the pump casing and ending with an eccentrically placed stud engaging a slit formed in the outer periphery of the crescent-shaped member, substantially as described.

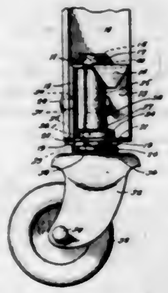
---

1,691,714. PROCESS OF REDUCING THE CADMIUM CONTENT OF ZINC ORE. OSCAR GERLACH, Peru, and NILS OSTMAN, La Salle, Ill., assignors to Matthiessen & Hegeler Zinc Co., La Salle, Ill., a Corporation of Illinois. Filed Dec. 3, 1926. Serial No. 152,376. 6 Claims. (Cl. 75—17.)

1. A process of removing cadmium from oxygen-containing zinc ore which comprises subjecting the ore to steam

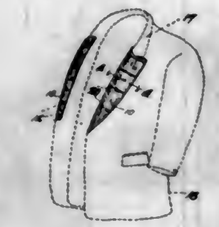
and an amount of reducing agent sufficient to reduce the cadmium but not a material part of the zinc contained in the ore at a temperature at which both cadmium and zinc reduce.

---



1,691,715. STEEL GUIDE FOR SUBMARINE DRILLS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 5, 1927. Serial No. 224,162. 5 Claims. (Cl. 255—51.)

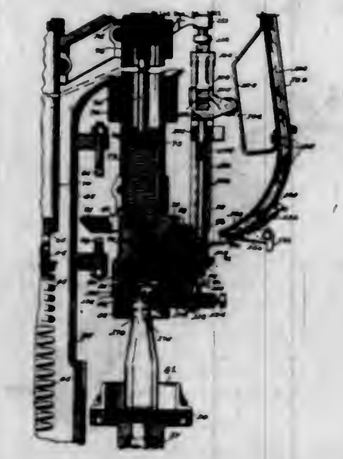
1. A submarine drill unit, having a main frame provided with guides, a guide frame vertically movable on said guides, a drilling element, a tubular mud guard adjustably supported at the lower end of said guide frame below the drilling element whereby the weight of the drilling element may rest upon the mud guard to force it down to the rock to be drilled, a drill steel guide freely slidable vertically on the guide frame, and means for raising and lowering said drill steel guide.



---

1,691,716. CASTER-MOUNTING BRACKET. WALTER F. HEROLD, Upper Montclair, N. J., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Jan. 5, 1926. Serial No. 79,328. 6 Claims. Cl. 16—29.)

1. In a furniture support mounting bracket for attachment to an angle iron support, a removable pintle element, a transverse sheet metal top portion including a pintle bearing portion, an attachment portion integral with and bent downwardly from said top portion, said top and attachment portions acting as a suspension support between the pintle and said angle iron support a base plate having a pintle receiving opening and supported by said attachment portion in spaced relation to said top portion, the space between said top and base portions providing a laterally unobstructed pocket between said portions upon removal of the pintle whereby said attachment portion is laterally accessible at its inner side along lines intersecting the pintle when the latter is in place.



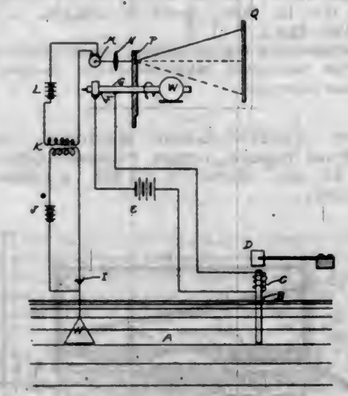
1,691,717. DETACHABLE LAPEL. FRANCIS HOPER, Baltimore, Md. Filed Apr. 16, 1928. Serial No. 270,293. 2 Claims. (Cl. 2—93.)

1. A false lapel for coats including a facing adapted to cover a coat lapel and having one edge arranged to underlie the coat body and an opposite edge portion arranged to underlie the edge of a coat lapel, means to secure the first edge detachably to the inside of the coat, and clamping and stiffening means carried by the false lapel and arranged to grip the coat lapel on both sides thereof.

---

1,691,718. FILLING AND CROWNING MACHINE. GEORGE JOHN HUNTLEY, Baltimore, Md., assignor to The Crown Cork and Seal Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed Dec. 29, 1921. Serial No. 525,544. 15 Claims. (Cl. 226—77.)

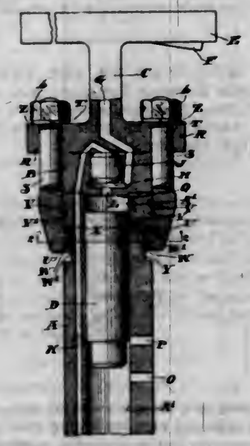
1. A machine of the character described having a crowning-head with a crown passage therein, means for moving the head, means supported independently of the head but movable to and from the crown-passage to feed crowns one at a time thereto, said means being moved by the head, means movable lengthwise of the head for closing said passage when the crown feed moves away therefrom, said latter means also being moved by the head and means for filling the container while the passage is closed.



10. A machine of the character described having a reciprocating crowning head, a filling-nozzle carried by the head, a sealing-gasket, a cup beneath the filling-nozzle and said cup supporting the sealing-gasket, links depending at opposite sides of the head and engaging the cup, means pivotally carried by the crowning head and also pivotally

connected to the said links on the opposite sides of the head for moving said links and the cup to compress the sealing gasket and adjustable trip devices for actuating the latter pivoted means as the head is reciprocated.

---



1,691,719. DEPTH METER. CHARLES FRANCIS JENKINS, Washington, D. C. Filed Sept. 29, 1923. Serial No. 665,729. 1 Claim. (Cl. 177—386.)

In a device for measuring distances, a stationary calibrated scale, a lamp, a lens for imaging the light from the lamp upon the scale, sound producing means, a rotatable member including light refracting means interposed between the lens and the calibrated scale for moving the image along the scale, means for rotating the light refracting member and actuating the sound producer to produce impulses in synchronism with the rotation thereof, sound response receiving means and a circuit connected therewith including means for flashing the lamp upon the reception of a sound impulse.

---

1,691,720. HANDLE FOR PNEUMATIC TOOLS. FRANCIS A. JIMERSON, Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 24, 1926. Serial No. 150,495. 1 Claim. (Cl. 121—36.)

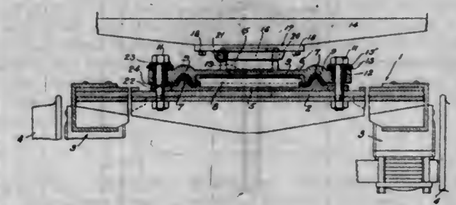
In a pneumatic tool, the combination of a cylinder, a back head forming a closure for the cylinder, a handle portion, lugs on said handle portion, bolts passing through said lugs, said bolts having screw threads for the reception of nuts on the rear end, flat faces on the front end, hooked portions on the front end, similar flat faces and hooked portions formed on and in the cylinder wall permitting cooperation between the bolts and the cylinder whereby the back head and cylinder are secured rigidly relative to each other.

---

1,691,721. PROCESS OF AND MATERIAL FOR TREATING CONCRETE. NATHAN C. JOHNSON, Englewood, N. J. Filed Apr. 2, 1926. Serial No. 99,330. 10 Claims. (Cl. 25—154.)

1. A product of the class described for treating concrete surfaces or the like, comprising an area of flexible sheet material having one side covered with selected concrete aggregate material secured thereon by an adhesive, said adhesive including a substance having the property of inhibiting the normal setting action of a concrete mixture to a limited depth when applied to the surface thereof.

---

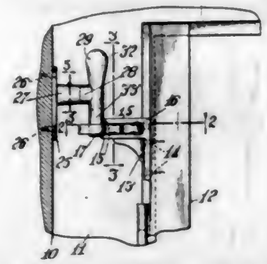


1,691,722. METALLIC JOIST. JULIUS KAHN, Youngstown, Ohio, assignor to Truscon Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed May 23, 1925. Serial No. 32,406. 4 Claims. (Cl. 189—37.)

1. A metallic joist consisting of a sheet metal web portion cut out to form a chord portion with spaced triangular portions projecting laterally therefrom with their apexes integral with said chord portion, and having flat upper and lower surfaces formed by welding angle irons to the sides of said chord portion and to the sides of the bases of the triangles.

---

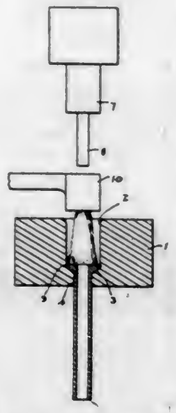
1,691,723. CUSHIONING CONNECTION. WALTER C. KEYS, Detroit, Mich., assignor to The Mechanical Rubber Company, Cleveland, Ohio, a Corporation of New Jersey. Filed May 21, 1928. Serial No. 279,442. 8 Claims. (Cl. 105—200.)



1. A cushioning connection for vehicles intermediate their body portion and trucks, comprising a pair of members operatively connected to the body portion and trucks

respectively and provided with complementary projections and recesses and vibration deadening material located intermediate said projections and recesses and filling the space between said complementary projections and recesses.

---



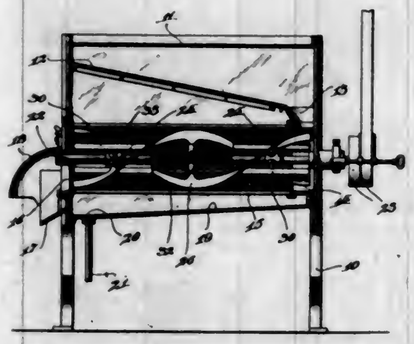
1,691,724. DOOR-HOLDING MEANS. EDWARD A. KRUSCHKA, Milwaukee, Wis. Filed Jan. 10, 1927. Serial No. 160,121. 1 Claim. (Cl. 292—18.)

Door holding means comprising a wall bracket having a laterally disposed hollow boss provided with a circumferentially disposed slot, a tiltable latch member having a rearwardly disposed trunnion seated in said boss, a pin in said trunnion and movable in said circumferentially disposed slot for holding the latch member in place and for controlling its degree of oscillation, said latch member being provided with a handle portion disposed toward one side of the median line of the latch member at an angle less than ninety degrees whereby the latch member is maintained in its adjusted positions, a door bracket provided with a slot and a pair of vertically spaced arms, a pair of jaw members pivotally mounted between said arms in spaced relation to move about vertically disposed axes, the rear ends of said jaw members being extended into said slot with the opposing faces of the jaw members adjacent the rear ends each having a laterally disposed boss, and a coil spring, the ends whereof are seated on said bosses for normally forcing the forward ends of the jaw members toward each other.

---

1,691,725. METHOD OF PRODUCING METAL TUBES. JOHN WYCLIFFE LEIGHTON, Port Huron, Mich. Filed Sept. 30, 1926. Serial No. 138,675. 2 Claims. (Cl. 207—6.)

1. A method of extruding metal tubes, consisting in placing a heated billet in a die, then partly extruding the same from the die, by means of a punch, then withdrawing the punch, leaving the partly extruded billet in place, then reheating the unextruded portion of the metal, then placing a heated billet in the die above said reheated unextruded portion and returning the punch into the die against said heated billet to complete the extrusion of the preceding tube and effect the partial extrusion of said heated billet.

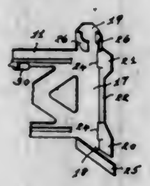


---

1,691,726. ART OF PROTECTING AND FIREPROOFING MATERIALS. CHARLES LICHTENSTADT, Chicago, Ill. Filed Feb. 10, 1928. Serial No. 253,525. 5 Claims. (Cl. 134—78.6.)

4. A composition for the purpose stated comprising zinc ammonium phosphate, mono-ammonium phosphate and ammonium chloride.

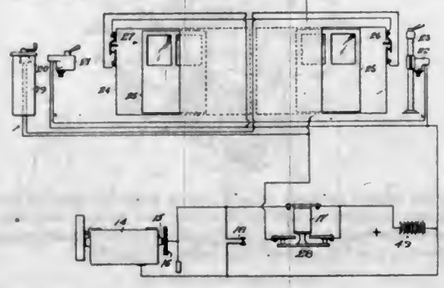
---



1,691,727. FRUIT-CLEANING MACHINE. JOHN R. LITTY and TRUED B. LUNDIN, Philadelphia, Pa. Filed Mar. 22, 1927. Serial No. 177,244. 2 Claims. (Cl. 146—194.)

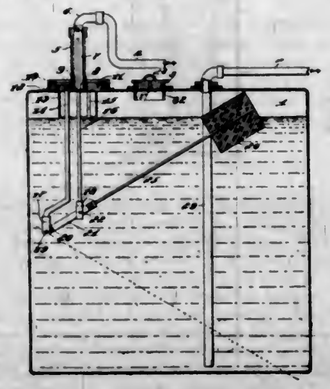
2. A fruit cleaning machine including a frame, a shaft rotatable therein, means for rotating the shaft, a cleaning drum surrounding the shaft, means for delivering fruit and water to the interior of the machine, brushes secured to the shaft longitudinally thereof with their bristles in contact with the drum, beaters having their outer edges spaced from the walls of the drum, and stems formed integral with the beaters for securing the beaters to the shaft; each beater extending substantially the entire length of the drum and making nearly a complete turn around the shaft.

---



1,691,728. MINIATURE OR TOY FENCE SECTION. JOHN CLARKE MATTHAI, Baltimore, Md., assignor to The Homeland Mfg. Co., Baltimore, Md., a Corporation of Maryland. Filed Apr. 29, 1927. Serial No. 187,420. 5 Claims. (Cl. 256—24.)

1. In a miniature fence formed of sheet metal sections each having engaging lugs projecting from one end thereof and at the opposite end each section being provided with a back-turned flange with slots therein to receive the lugs of another section and at said slots each section having a grip tang to engage the lug that enters said slot.

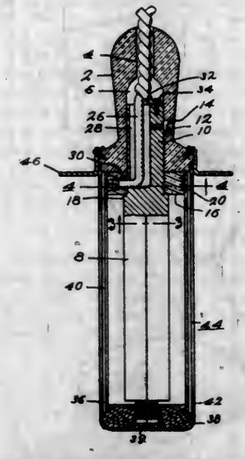


1,691,729. SAFETY MECHANISM FOR STREET CAR AND DOOR OPERATION. GEORGE WASHINGTON MEYERS, Rahway, N. J., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Aug. 20, 1919. Serial No. 318,774. 3 Claims. (Cl. 180—82.)

1. In a car having a driving motor therefor, the combination with a car door, and means for opening and closing the same, of an electrically operated locking device for locking said means against operation, a circuit for said device including a source of current, said locking device being released when current is supplied thereto, a normally open switch included in said circuit, a magnet for controlling said switch whereby when said magnet is energized said switch is closed, and means on the motor shaft actuated by the motor coming to a full stop for energizing said magnet to thereby render operative said locking device.

---

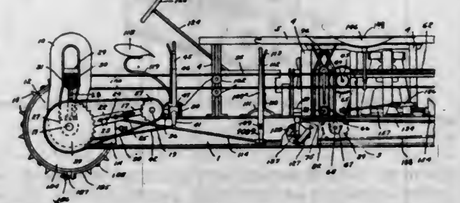
1,691,730. GASOLINE GAUGE. WILLIAM H. MUZZY, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed May 23, 1921. Serial No. 471,780. 1 Claim. (Cl. 73—82.)



In an automobile the combination with an engine and its intake manifold, of a fuel tank, a pressure responsive vacuum gauge for indicating the depth of fuel in the tank, a vacuum pipe connected to the manifold and the gauge, a float in the tank, an air controlling device operated by the float and connected to the vacuum pipe for regulating the flow of air to the vacuum pipe to inversely correspond to the depth of fuel in the tank.

---

1,691,731. ELECTRIC WATER PURIFIER. WILLIAM M. MYERS, St. Joseph, Mo., assignor to Earle H. Rorabaugh, Kansas City, Mo. Filed May 21, 1927. Serial No. 193,324. 4 Claims. (Cl. 204—25.)

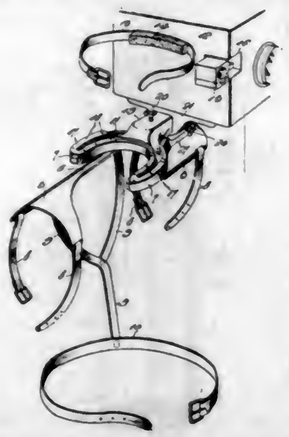


1. A device of the character described consisting of an inner electrode adapted to be immersed in water within a container, an outer electrode surrounding said inner electrode and adapted to be immersed in the water, a handle secured to the inner electrode and abutting one end of said outer electrode, a cover for the container secured to said

handle, a cap nut threaded upon the inner electrode and adapted to force the inner electrode firmly against said handle, and an insulating housing adapted to be forced by said cap nut against the handle.

---

1,691,732. PORTABLE-MACHINE FRAME. JAMES NICKELS, Silvis, Ill. Filed Feb. 3, 1927. Serial No. 165,517. 2 Claims. (Cl. 180—41.)

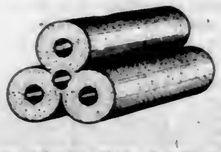


1. In a machine of the class described, a frame and superstructure mounted thereon, running gear at the ends thereof, connections between said frame and running gear permitting a vertical movement of the frame, gearing for raising or lowering the forward end of said frame, gearing for raising or lowering the rear end of said frame, a motor supported in said frame and transverse engine shaft driven thereby, a secondary shaft rotatably mounted in said frame, means connecting said engine shaft with said secondary shaft to rotate the same in a given direction, means connecting said engine shaft with said secondary shaft to rotate the same in a reverse direction, both of said means being normally out of play, clutch devices for actuating one or other of said means, as desired, a third shaft rotatably supported, and means connecting the same with said secondary shaft to impart the movement thereof to said third shaft at a reduced rate of speed, and mechanism connecting said third shaft with the raising and lowering gearing at both ends of the machine, to simultaneously operate the same.

---

1,691,733. CAMERA SUPPORT AND MANIPULATOR. NILS ALBIN NORDIN, Seldovia, Territory of Alaska. Filed July 25, 1927. Serial No. 208,368. 7 Claims. (Cl. 95—86.)

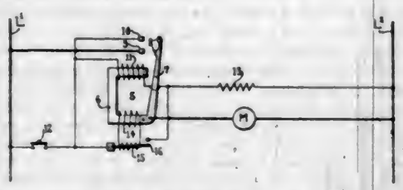
1. A camera support and manipulator comprising a body-carried support having an arcuate track for disposition in



substantially concentric relation with the user's neck, a camera-supporting shoe connected with said track for movement along the same, and camera-manipulating means for

engagement with the user's head, whereby upon turning of the head the shoe will be moved along the track and the camera consequently swung horizontally.

---

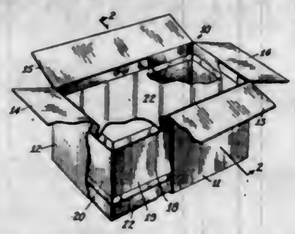


1,691,734. PEAT FUEL. RAYMOND E. OBER, Crosby, Minn. Filed Aug. 15, 1927. Serial No. 212,937. 4 Claims. (Cl. 44—14.)

1. A unit of peat fuel initially in substantially the form of multiple hollow cylinders.

---

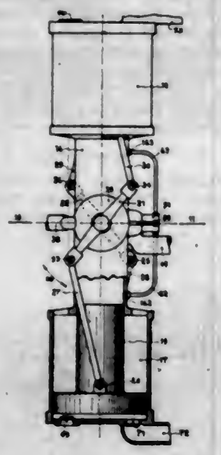
1,691,735. ELECTRICAL CONTROLLER. FREDERICK H. OBERSCHMIDT, Cleveland, Ohio, assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 22, 1924. Serial No. 700,985. 7 Claims. (Cl. 200—122.)



1. In a controller for electric motors and the like, the combination with control means for the motor and thermo-responsive timing inductive means for said control means, of means to subject said thermo-responsive means to thermic influence of a value substantially independent of the value of energy consumed by the controlled motor.

---

1,691,736. CONTAINER. FERDINAND S. OPPENHEIM, New York, N. Y. Filed Dec. 17, 1924. Serial No. 756,462. 3 Claims. (Cl. 229—14.)



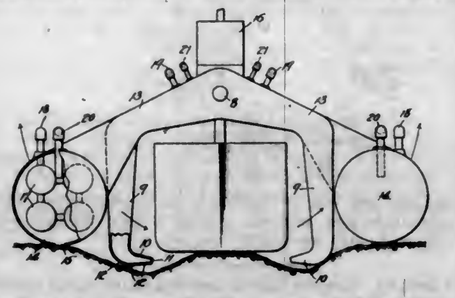
1. A packing and shipping box comprising an outer casing having side and end walls and a relatively stiff, one-piece lining member folded to form a shell having a packing space of substantially rectangular cross-section adapted to receive the contents, said member including double bracing portions extending outwardly from and along the corner edges of said shell, said portions arranged to fit into ad-

jacent corner portions of said casing walls for spacing and rigidly supporting said shell within the casing, and flaps outwardly bent from the rim of said shell to serve as supplementary bracing and spacing supports therefor.

---

1,691,737. FLUID-ACTUATED COMPRESSOR. RAUL PATERAS PESCARA, Paris, France. Filed June 2, 1927, Serial No. 195,981, and in France June 17, 1926. 11 Claims. (Cl. 230—56.)

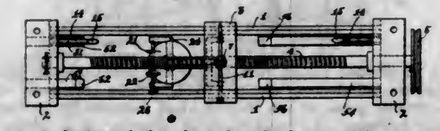
1. In a compressor of the type described a plurality of compressing cylinders, a common motor cylinder coaxially disposed with respect thereto, a piston in each of said compressing cylinders, a second driving piston integral with each of said first mentioned pistons and extending into said common cylinder, a stud shaft mounted on said motor cylinder midway between said compressing cylinders, a plurality of two armed levers mounted loosely on said stud shaft, means for pivotally connecting each extremity of said levers pivotally to said pistons on the compressing portion thereof whereby synchronous movement of said pistons is assured, means for supplying a fluid under pressure to said motor cylinder and means operated by said levers for causing said fluid to drive said pistons in opposite directions at regular intervals.



---

1,691,738. SALVAGING APPARATUS. GEORGE G. POWELL, New York, N. Y., assignor to Antoinette M. Powell, New York, N. Y. Refile of abandoned application Serial No. 259,538, filed Oct. 24, 1918. This application filed Mar. 3, 1923. Serial No. 622,668. 9 Claims. (Cl. 114—53.)

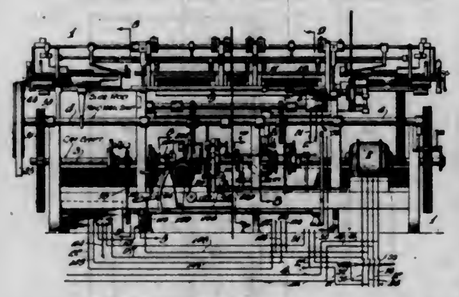
1. A salvaging apparatus comprising elongated pontoons, the length of said pontoons being approximately that of the wreck to be salvaged, a series of hollow tong-like members extending between said pontoons and having one of their ends rigidly secured to the same, means



for pivotally connecting said hollow tong-like members intermediate said pontoons, means for carrying air under pressure in said pontoons, means for releasing air within said pontoons, means for carrying air under pressure to said hollow tong like members, means for releasing air

from said hollow tong like members, a central station to which all of both said means is operatively connected, said air permitting the admission of water and ejection thereof from said pontoons and said hollow tongs whereby the specific gravity of the same may be varied, and means dividing said pontoons into compartments.

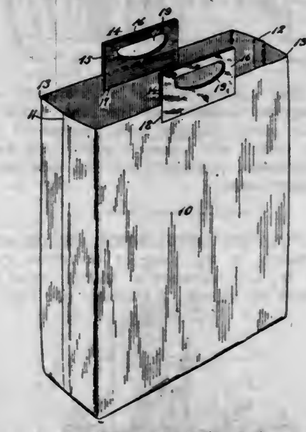
---



1,691,739. METHOD AND APPARATUS FOR TESTING THE SPREAD OF INK. MILTON O. SCHUR, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Dec. 16, 1921. Serial No. 522,867. 13 Claims. (Cl. 33—36.)

1. A device of the class described comprising a shaft, a pair of wheels spaced apart on said shaft, one of said wheels having a circumferential ink-receiving slot therein, and means for exerting a drawing effort on said shaft, said means including a pivotal connection between said shaft and said means midway of said wheels through which said effort is exerted.

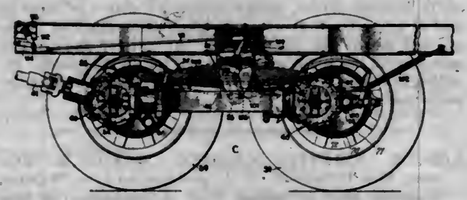
---



1,691,740. AUTOMATIC CONTROLLING AND TIMING MECHANISM FOR FULL-FASHIONED HOSIERY MACHINES. JAMES E. SHOEMAKER, Philadelphia, Pa. Filed July 16, 1923. Serial No. 651,705. 3 Claims. (Cl. 66—167.)

1. The described mechanism for controlling knitting machines for producing full fashioned hosiery which comprises the combination with a knitting mechanism, of a narrowing mechanism, adapted to co-operate with the former, an electric motor, adapted to drive said knitting mechanism, a primary set of rotary electric circuit controlling means, connected with the knitting mechanism to be operated thereby, an electromagnetic switch operatively connected with said electric motor and circuit controlling means, the latter being adapted to automatically control successive working periods of the knitting machine in accordance with the specific number of courses to be made respectively in the welt, the garter top, the leg, the high splice and the heel section of the stocking, a second set of rotary electric circuit controlling means, connected with the knitting mechanism to be driven thereby, an electromagnetically operated pawl, operatively connected with said narrowing mechanism and the second set of circuit controlling means, the later being adapted to automatically control the narrowing mechanism in accordance with the designed shape of the stocking.

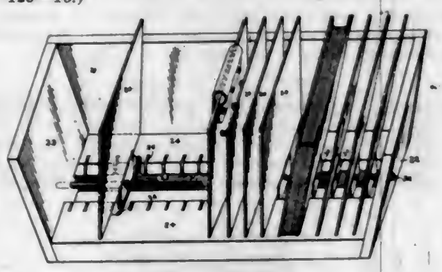
---



1,691,741. CARRYING BAG AND HANDLE THEREFOR. GEORGE C. SNYDER, Long Island City, N. Y., assignor to Kaelma Manufacturing Company, Inc., New York, N. Y., a Corporation of New York. Filed May 9, 1924. Serial No. 712,038. 4 Claims. (Cl. 229—54.)

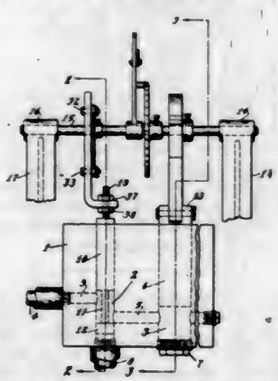
1. In a carrying bag, a bag-body, and opposite handles having hand-holes, each handle comprising sheet members of separate material secured together beyond the mouth of the bag and having separated bag-attaching portions straddling the bag material and secured thereto, the hand-holes being located between the outer edges of the handles and the edge of the mouth of the bag.

---



1,691,742. RUNNING GEAR FOR MOTOR VEHICLES. ELLIS W. TEMPLIN, Philadelphia, Pa., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed June 30, 1921, Serial No. 481,519. Divided and this application filed Nov. 9, 1925. Serial No. 67,930. 13 Claims. (Cl. 188—2.)

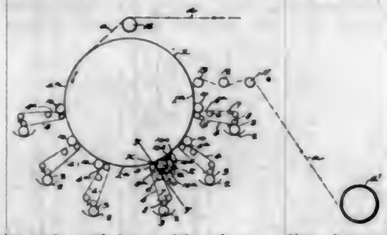
1. In a motor vehicle, the combination with a chassis, including a driving truck mounted to oscillate thereon about a horizontal axis, of a plurality of axles for the truck, a housing for each axle, individual brake mechanisms for the truck wheels mounted upon the associated housings, reach rods pivoted together adjacent the axis



of oscillation of the truck and connecting the brake mechanisms of all the wheels on one side of the truck, and devices upon the chassis operable to move the pivot of the reach rods into concentric relation with said axis of oscillation to set said brake mechanisms.

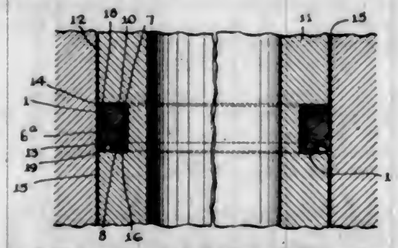
1,691,743. PLANFILE. ROY E. ULRICH, Jamestown, N. Y., assignor to Ulrich Planfiling Equipment Company, Jamestown, N. Y., a Corporation of New York. Filed Mar. 8, 1926. Serial No. 93,020. 5 Claims. (Cl. 129—16.)

5. In a filing system, a base longitudinally recessed, laterally disposed notches cut into the walls of said recess; a tab, means engaging said notches for positioning said tab within said recess; a guide card secured to said tab and means removably securing said guide card and tab in said base.



1,691,744. PUMPING MECHANISM. WALLACE B. VAN ARSDEL, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed May 13, 1925. Serial No. 29,895. 3 Claims. (Cl. 103—1.)

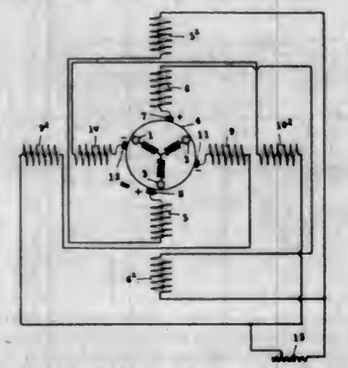
1. Apparatus for pumping hot fluid, comprising a block having bores therein disposed in a plurality of substantially parallel planes, means associated with the bores in one of said planes actuable to pump fluid supplied thereto, and means for plugging all but two of the surface openings of the bores in each of the remaining planes, the unplugged openings being available as inlet and outlet ports for heating fluid.



1,691,745. PRINTING MACHINE. WILLIAM H. WALDRON, New Brunswick, N. J., assignor to John Waldron Company, New Brunswick, N. J., a Corporation of New Jersey. Filed Aug. 8, 1927. Serial No. 211,422. 3 Claims. (Cl. 101—178.)

1. In a printing machine, the combination of a platen surface; a color depositing element adjacent said platen surface and having a portion arranged in such a manner with respect to said platen surface as to form therewith a pair of convergent surfaces for the reception of a design cylinder therebetween, which, regardless of its diameter, will contact with both of said convergent surfaces

and its axis will be positioned on a line, intermediate said convergent surfaces, bearing a fixed relation with respect to said convergent surfaces.

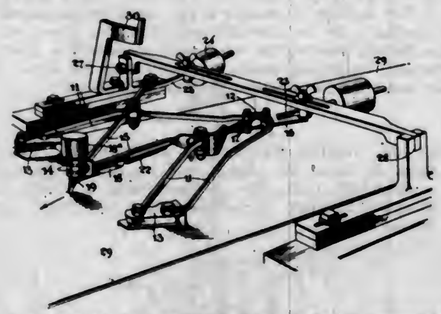


1,691,746. PISTON RING AND METHOD OF MAKING THE SAME. ROBERT B. WASSON, Cranford, N. J. Filed Dec. 17, 1920. Serial No. 431,399. 15 Claims. (Cl. 29—156.6.)

1. A divided piston ring of substantially uniform rectangular radial cross section, condensed on both sides of the middle plane of the ring to exert uniform radial outward pressure, the condensations existing to a greater degree on one side of the middle plane of the ring than the other, whereby unbalanced stresses are introduced into adjacent annular portions.

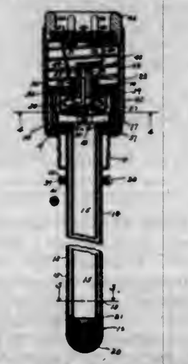
12. A new and useful method of making piston rings, which consists in so condensing said ring between the flat sides of the ring, on both sides of, and offset with respect to, the middle plane of the ring as to distort the oil side of the ring.

1,691,747. ALTERNATING-CURRENT MOTOR. HANS WEICHSEL and BRADLEY MCCORMICK, St. Louis, Mo., assignors to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed Jan. 14, 1926. Serial No. 81,179. 2 Claims. (Cl. 172—280.)

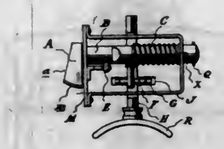


1. In an alternating current motor, the combination of an inducing member provided with a commutator and brushes, an induced member provided with a plurality of exciting windings adapted to produce an N-pole magnetization of more than two poles, each pole of the machine being provided with two exciting windings in good inductive relation to each other, said windings being connected to comutator brushes to magnetize in the same direction but not connected in series with the same set of brushes, and an adjustable resistance arrangeil to connect the exciting windings which are directly connected to brushes of positive polarity in circuit with the exciting windings which are directly connected with brushes of negative polarity.

2. In an alternating current motor, the combination of an inducing member provided with a commutator and brushes, and an induced member provided with a plurality of exciting windings adapted to produce N-pole magnetization of more than two poles, each pole of the machine being provided with two exciting windings in good inductive relation to each other and connections between the commutator brushes and exciting windings so arranged that the exciting circuits have a common point to which each brush is connected through at least one winding, the windings on each pole being connected to different brushes but brushes of like polarity and said windings being arranged to magnetize in the same direction.

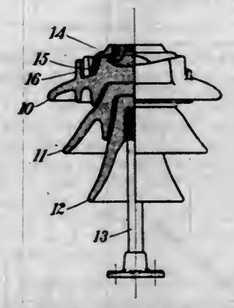


1,691,748. MARKING DEVICE. DAYTON L. WILLIAMS, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 31, 1925. Serial No. 19,667. 10 Claims. (Cl. 33—191.)



1. A device for marking sheet material comprising means for marking the material and means actuated by the marking means during movement of the material for automatically centering the marking means upon the material.

1,691,749. ELECTRIC HEATER. JOHN A. WILLIAMS and EUGENE LEQUORNIK, Richmond Hill, N. Y. Filed Nov. 24, 1926. Serial No. 150,510. 41 Claims. (Cl. 219—41.)



1. In an electric heater of the class described, a metal tube, a smaller metal tube located concentrically within said first tube and electrically insulated therefrom, said inner tube closed at one end and provided with a diaphragm at the other end, a quick expanding substance placed in said inner tube, a switch actuated by said diaphragm, and means for connecting said outer tube and said switch to an electric current, the circuit being completed when the tubes are immersed in a liquid.

1,691,750. LOCK AND LATCH. CHARLES R. ALLEY, Washington, D. C. Filed July 1, 1925. Serial No. 40,846. 5 Claims. (Cl. 70—29.)

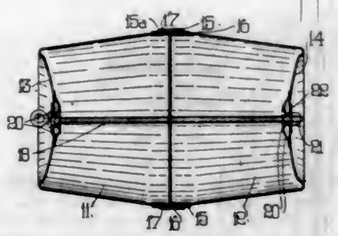
1. A lock comprising a rotatable and longitudinally movable bolt, a spring exerting an axial and torsional pressure on the bolt, a latch-seat for securing the bolt in retracted position, said spring exerting its torsional pressure to hold the bolt to its latch-seat, a keeper formed with a cam-surface for coacting contact with the end of the bolt for rotating the bolt to release it from its latch-seat and permit axial projection of the bolt into its keeper

1,691,751. INSULATED CONTROL. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Aug. 11, 1924. Serial No. 731,509. 12 Claims. (Cl. 173—318.)

1. An insulator comprising a dielectric member, an electrode, and means providing separate paths of discharge from said electrode, said paths being arranged adjacent one another so that the discharge along one path will be diminished by the influence of the discharge in an adjacent path.

8. An insulator comprising an electrode, a dielectric member connected with said electrode and having the upper surface thereof extending laterally from said electrode and ribs on said surface arranged to form separate over-lapping paths of discharge from said electrode, the lowermost portions of said paths being open to provide drainage.

11. An insulator having a dielectric barrier thereon provided with a drainage passage, said passage being shielded by a charged surface, one end of said passage being open adjacent said surface and having direct connection therewith.

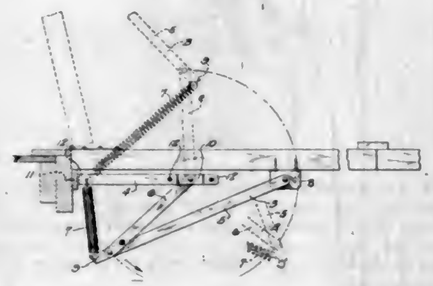


1,691,752. PROCESS FOR MAKING WATERPROOF-PAPER BOARD. EDMUND BACHE, St. Paul, Minn., assignor to Waldorf Paper Products Company, St. Paul, Minn., a Corporation of Minnesota. Filed May 8, 1925. Serial No. 28,836. 8 Claims. (Cl. 92—21.)

1. The process of making impervious paper stock which consists in preparing a quantity of bitumen emulsion in which the emulsoid particles carry an electro-negative

charge, preparing paper pulp carrying an electro-positive charge on the fibres and then intimately mixing the so-prepared emulsion and pulp to uniformly distribute the bitumen upon the surfaces of the paper fibres.

---



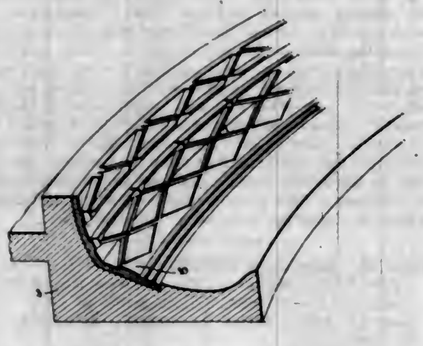
1,691,753. BARREL, DRUM, CASK, OR THE LIKE. JOSEPH EDWARD BLINCOW, Wolverhampton, England. Filed Oct. 14, 1926. Serial No. 141,569, and in Great Britain Oct. 14, 1925. 1 Claim. (Cl. 220—5.)

A container comprising in combination a pair of sections, a flat cylindrical metallic ring on one section, a second flat cylindrical metallic ring of slightly smaller diameter, on the other section, a hollow bolt having a continuous unperforated wall and passing longitudinally through the container and adapted to pass steam or heated fluid through said container without coming in contact with the contents of the container and a nut engaging with said bolt and situated at one end of the container and externally of this in order to obtain a fluid-tight joint between the two sections.

---

1,691,754. GARAGE-DOOR HOLDER. EMIL A. BUSACKER, Milwaukee, Wis. Filed Aug. 25, 1926. Serial No. 131,436. 4 Claims. (Cl. 16—80.)

1. The combination of a door frame, a door pivoted thereto, and a door holder comprising a stationary arm fixed to said door frame, an intermediate movable arm pivoted at one end to said stationary arm, a movable door operated arm pivoted at one end to the intermediate movable arm, and at the other end to the door, a yielding member between the movable door operated arm and the stationary arm for normally holding the door yieldingly and releasably in either a closed or an open position.

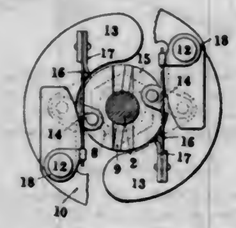


---

1,691,755. DENTAL PLATE AND PROCESS FOR PLATING SAME. HENRY F. BUTTNER, Kellogg, Idaho. Filed July 5, 1927. Serial No. 203,690. 1 Claim. (Cl. 91—68.3.)

The process of coating a surface of vulcanized rubber with metal which comprises first subjecting the surface to the combined action of an ammoniacal silver nitrate solution and an aqueous solution containing sugar, alcohol and a small proportion of nitric acid, and thereafter subjecting the so treated surface to the combined action of a silver nitrate solution and gallic acid.

---

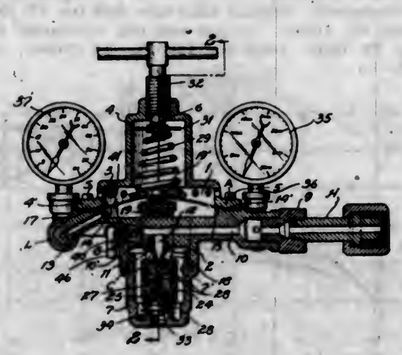


1,691,756. MOLD AND METHOD OF MAKING SAME. WALLACE H. CAMPBELL, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 10, 1927. Serial No. 218,807. 6 Claims. (Cl. 18—47.)

1. The method of making a tire mold which includes supporting a tire in a metallic mold blank in spaced relation thereto, packing the intervening space with a plastic substance containing casein and subjecting the whole to heat and pressure to harden the plastic substance.

---

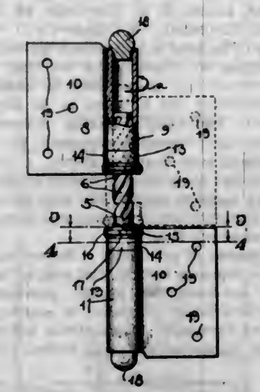
1,691,757. IGNITION-CONTROL MECHANISM. BURNS DICK, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed Oct. 22, 1923. Serial No. 669,907. 4 Claims. (Cl. 264—16.)



1. In a centrifugal governing device for the ignition means of an internal combustion engine, the combination of a pivotally mounted weight, a resilient member having one end fixed to the free end of the weight to be nonrotatable with respect thereto, and means forming a curved stop engaged by the spring, said stop being so positioned relative to the spring that the point of contact between the spring and stop moves toward the fixed end of the spring as the weight travels outward under the influence of centrifugal force.

---

1,691,758. REDUCING VALVE. ARTHUR J. FAUSEK and IRWING F. FAUSEK, St. Louis, Mo. Filed June 24, 1926. Serial No. 118,190. 8 Claims. (Cl. 50—23.)



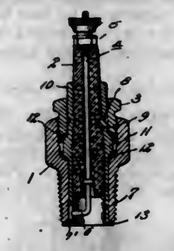
1. A reducing valve comprising a housing having inlet and discharge passagewnys, a diaphragm arranged within said housing, a closure member adapted to close communication between said inlet and discharge passageways, and a loose connection between said diaphragm and said closure member, said loose connection comprising an element extended from said closure member and a bolt having an approximately spherical portion extended through apertures in said elements, said spherical portion of said bolt being located

within the aperture in one of said elements and being adapted to permit said element to move universally with respect to the associated element.

---

1,691,759. GRAVITATING HINGE. ERNEST FISCHER, Salem, Oreg. Filed July 31, 1926. Serial No. 126,327. 5 Claims. (Cl. 16—153.)

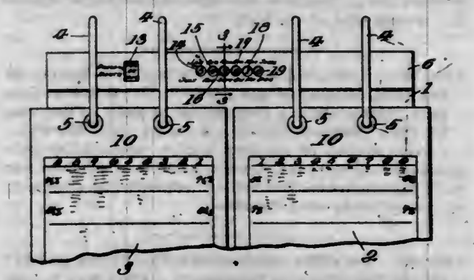
2. A gravitating hinge comprising a vertical pintle having a spiral groove in one end portion thereof, a hinge leaf having a rigid barrel in which the other end portion of the pintle is mounted, a second hinge leaf having a rigid barrel horizontally rotatable and vertically slidable on the first named end portion of the pintle, said barrel of the second leaf having a transverse opening, a bearing ball loosely arranged in said transverse opening and engaged in the spiral groove of the pintle, and means associated with said barrel of the second leaf to removably hold the bearing ball in place, an end portion of the second leaf being separated from the adjacent end portion of the barrel thereof by a vertical slot, and said bearing ball holding means comprising a sleeve removably slidably fitted on said adjacent end portion of the barrel over the bearing ball.



---

1,691,760. SPARK PLUG. FREDERICK L. FOX, Washington, D. C. Filed Aug. 12, 1922. Serial No. 581,529. 16 Claims. (Cl. 123—169.)

3. A spark plug of the class described comprising a shell having a part of its lower wall forming the ground electrode, an insulated body in the shell, an electrode carried



thereby, and a covering member for the wall of the shell having an opening for exposing a portion of the wall

adjacent the main electrode and means for moving the said member with the insulated body to bring the opening over a new portion of the wall.

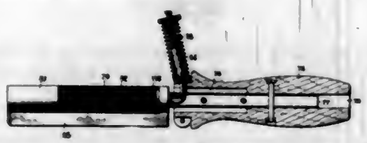
---

1,691,761. DEVICE FOR COMPUTING INTEREST. THEODORE B. HARPER, Hartford, Conn., assignor to The Harper Manufacturing Co., Inc., Hartford, Conn., a Corporation of Connecticut. Filed Apr. 24, 1926. Serial No. 104,465. 2 Claims. (Cl. 235—61.)

1. A device for computing interest comprising a series of day cards, each card representing a stated day in the month and having indicated thereon the interest on a unit amount and multiples thereof, at various given rates, for the period of days in the month preceding the stated date, and also for each added month from maturity, and means associated with any selected card for indicating a line on the day card opposite a given rate containing the calculated interest on a unit amount or multiples thereof from the date of maturity.

---

1,691,762. RANGE CONSTRUCTION. SHERMAN HARTER, Mansfield, Ohio, assignor to New Method Stove Company, Mansfield, Ohio. Filed Sept. 2, 1927. Serial No. 217,179. 2 Claims. (Cl. 126—304.)



1. In a range construction, a base band having a corner, two threaded studs integral with said band and projecting inwardly therefrom at opposite sides of said corner, said studs being disposed at right angels to each other, a leg having an upper end fitting snugly in said corner and formed with horizontally elongated slots through the outer

remote ends of which said studs project, the shortest distance between said slots being substantially the same as the shortest distance between said studs, permitting easy disassembling and assembly of leg and band regardless of the integral connection between band and studs, and nuts threaded on said studs and bearing against the inner side of the leg.

---

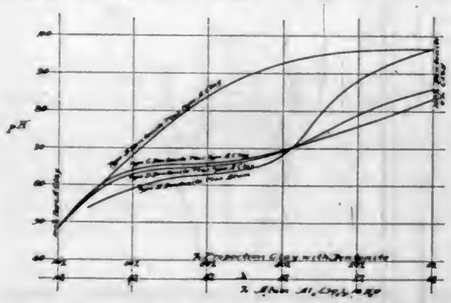
1,691,763. ELECTRICAL CUTTER FOR CIRCULAR-MANDREL TUBES. EDWARD C. KASTNER, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 29, 1926. Serial No. 157,690. 12 Claims. (Cl. 18—2.)

1. A cutting tool provided with a metallic blade of relatively low electrical conductivity, terminals associated therewith adapted to direct an electrical current therethrough and means adapted to confine the flow of energy between the terminals to the region immediately adjacent the cutting edge of the blade.

---

1,691,764. GAS-CELL FABRIC. WILLIAM J. KELLY, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 23, 1925. Serial No. 39,151. 2 Claims. (Cl. 91—98.)

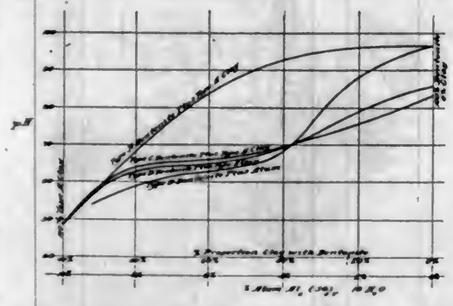
2. The method of treating balloon fabric which comprises coating the fabric with a solution of cellulose xanthate containing acidified sodium sulphate and re-generating the cellulose upon the fabric.



---

1,691,765. PROCESS OF MAKING EMULSION PAINTS. LESTER KIRSCHBRAUN, Chicago, Ill. Filed May 7, 1925. Serial No. 28,736. 5 Claims. (Cl. 134—1.)

1. A process of making an aqueous emulsion paint which comprises dispersing a paint base in an aqueous medium by means of a finely divided pigment in an aqueous paste form adjusted to a predetermined hydrogen ion concentration, said pigment being of such character as to impart a distinct color to the final product.



---

1,691,766. PROCESS OF PRODUCING EMULSIONS OR DISPERSIONS. LESTER KIRSCHBRAUN, Chicago, Ill., and HAROLD L. LEVIN, Passaic, N. J.; said Levin assignor to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 17, 1925. Serial No. 76,012. 10 Claims. (Cl. 134—1.)

1. In the process of producing a dispersion of a pitchy substance in an aqueous vehicle, the step of adjusting the hydrogen ion concentration of the system after dispersion to a predetermined pH value.

1,691,767. PROCESS OF PRODUCING EMULSIONS OR DISPERSIONS. LESTER KIRSCHBRAUN, Chicago, Ill., and HAROLD L. LEVIN, Passaic, N. J., assignors to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Original application filed Dec. 17, 1925, Serial No. 76,012. Divided and this application filed Oct. 12, 1926. Serial No. 141,138. 16 Claims. (Cl. 134—1.)

1. In the process of producing a dispersion of a pitch-like substance in an aqueous vehicle, the step of maintaining the hydrogen ion concentration of the aqueous dispersion means at a predetermined pH value.

---

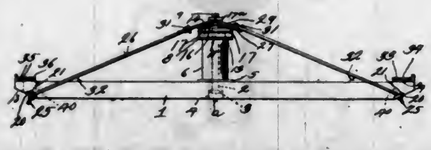
1,691,768. PROCESS OF PRODUCING EMULSIONS OR DISPERSIONS AND PRODUCT THEREOF. LESTER KIRSCHBRAUN, Leonia, N. J. Filed Mar. 16, 1928. Serial No. 262,320. 22 Claims. (Cl. 134—1.)

1. A process of forming a bituminous type emulsion comprising combining a plurality of coacting emulsifying agents in predetermined proportions in accordance with the characteristics of the bitumen to be dispersed, said co-acting agents individually having different emulsive characteristics, and dispersing bitumen in an aqueous medium containing said co-acting agents.

7. In the process of producing a dispersion of a pitchy substance in an aqueous vehicle, the step of adjusting the hydrogen ion concentration of the aqueous dispersion means to a predetermined pH value.

15. In the process of producing a dispersion of a pitchy substance in an aqueous vehicle, the step of adjusting the hydrogen ion concentration of the aqueous dispersion means to a predetermined pH value, by combining a second dispersing agent therewith, in quantities sufficient to produce a modified dispersion means of desired pH value.

---

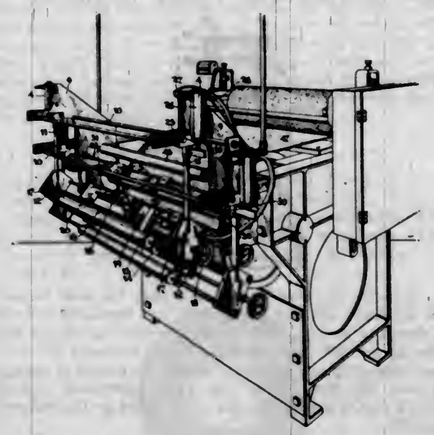


1,691,769. ARROW GUN. ALFRED P. LARSON, Jamestown, N. Y. Filed Mar. 8, 1926. Serial No. 93,069. 2 Claims. (Cl. 124—14.)

1. An arrow gun having a barrel, a guide at the top of said barrel to receive a projectile, and having horizontal notches therein, said gun being provided with a vertical slot which extends into said guide in front of said notches, a looped extensible cord fixed to the outer end of said barrel and adapted to be put under tension with the loop inserted in said notches, trigger mechanism in said slot and including a hammer having a rearwardly inclined tip, which enters said guide in front of said notches, whereby the operation of said mechanism retracts said hammer so that the tip thereof draws said cord out of said notches and allows it to return to the outer end of the barrel, striking in its travel the butt of a projectile in said guide and driving it forwardly from said gun.

1,691,770. WALKING BEAM. CHARLES L. LONSINGER, Walhonding, Ohio. Filed May 4, 1927. Serial No. 188,741. 5 Claims. (Cl. 74—5.)

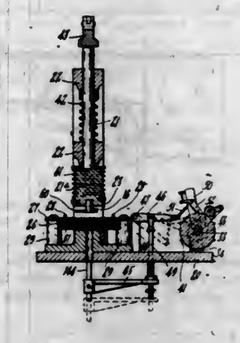
2. The combination with a flexible walking beam having an upwardly extending support, a yieldable crown plate on said support, tie rods extending over said crown plate and inclining downwardly and outwardly and anchored to the beam adjacent its ends and members secured to the upper side of the beam and extending beyond the opposite sides of the beam in engagement with the undersides of the tie rods.



---

1,691,771. PAINT AND VARNISH REMOVER CONTAINING AN ALKALI METAL BENZOATE AS A THICKENING AGENT. BORIS N. LOUGOVOY, Montclair, N. J., assignor to Chadeloid Chemical Company, a Corporation of West Virginia. Filed Feb. 25, 1926. Serial No. 90,618. 6 Claims. (Cl. 87—5.)

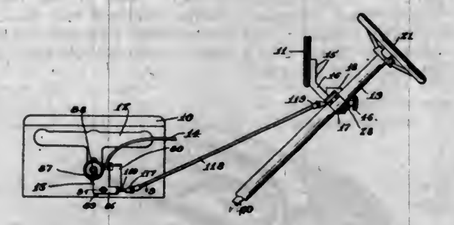
1. A paint and varnish remover comprising alcohol, acetone and sodium benzoate, the latter being partly in a precipitated condition, and said remover being substantially free from substances affecting the stability of the benzoate, and the benzoate being present in amount sufficient to give a substantial thickening effect.



---

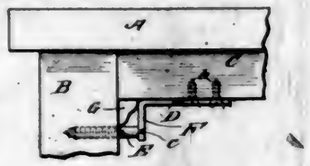
1,691,772. ALIGNING DEVICE. ELOY F. MAAS, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 23, 1926. Serial No. 32,433. 7 Claims. (Cl. 271—26.)

1. A machine for disposing a plurality of fabric sheets in superposed alignment including a frame, a plurality of guide members, movably mounted on the frame, a plurality of valves having arm members operated by frictional contact with the edges of the fabric, and a pair of pistons controlled by the valves for actuating the guide members.



1,691,773. MACHINE FOR PATCHING SHIPPING TAGS, ETC. LEONARD A. MACLEAN, Reading, Mass. Filed Oct. 24, 1927. Serial No. 228,154. 1 Claim. (Cl. 93—92.)

A patching machine comprising in combination, a pair of punching dies, one fixed and the other movable, adapted to cut a hole in a body of sheet material, a reciprocating plunger guided in a predetermined path and carrying the movable die, said fixed die and plunger having opposed pressing faces, a body-locating pocket between the dies, strip guiding means beside the pocket including an upper guide located at one side of the pocket and adapted to guide an upper patch strip and a lower guide located at the opposite side of the pocket and adapted to guide a lower patch strip, a feed member for engaging flexible patch strips, and operating mechanism including means for reciprocating the plunger, and means for moving the feed member step by step, in timed relation with the movements of the plunger, to advance the patch strips step by step in the guiding means and cause registration of a patch in each strip with the punching dies, the arrangement being such that when the patch strips are engaged with the feed means and inserted in the guiding means and a body is inserted in the pocket said mechanism causes the punching of the body by the dies, the separation of a patch from each patch strip and pressure of the separated patches against the body by the pressing faces, means being provided for causing the separated patches to adhere to the body.

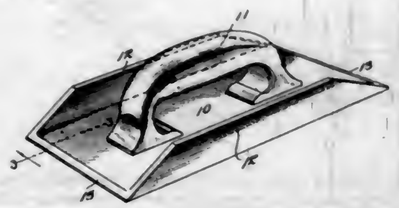


---

1,691,774. SAFETY LOCKING DEVICE FOR AUTOMOBILES. CARL A. MATSON, Lynnfield, Mass. Filed May 12, 1927. Serial No. 190,755. 3 Claims. (Cl. 70—127.)

1. In a device of the kind described, the combination of an enclosing casing, a permutation device, including a shaft extending through said casing mounted on and within said box, an ingnition circuit having terminals located within and sealed in said casing, a steering rod, a locking device therefor sealed within said casing, a carburetor valve, controlling means therefor connected to and operated by said shaft, said permutation device associated with said shaft and simultaneously controlling the steering rod locking means, the ignition circuit, and said carburetor valve.

1,691,775. DEVICE FOR SECURING TOGETHER PIECES OF MATERIAL. JULIA B. MATTINGLY, Washington, D. C. Filed Oct. 15, 1924. Serial No. 743,761. 2 Claims. (Cl. 85—41.)

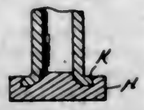


2. A bracket of the character described comprising a flat body portion having openings therein for the reception of securing means, and having at one end the laterally turned portion extending at right angles thereto and provided with a kerf on its outer faces, and a screw threaded shank carried by the opposite face and extending parallel with the body portion.

1,691,776. SPIRIT LEVEL. JOHN MAYES, Port Austin, Mich., assignor to Mayes Brothers Tool Manufacturing Company, Port Austin, Mich., a Corporation of Michigan. Filed Nov. 6, 1926. Serial No. 146,775. 1 Claim. (Cl. 33—211.)

A spirit level comprising a relatively thin hollow stock formed of a single piece of material and having an integral annular oval shaped wall at its center and a similar wall adjacent each end, each of which oval shaped walls defines an opening between the sides of the level, inwardly projecting opposed vial holding lugs formed integrally in each side of the oval shaped walls at the ends of the stock, inwardly projecting opposed longitudinally disposed vial holding lugs formed at the ends of the central oval shaped wall, a centrally disposed relatively thin strengthening web between the central oval shaped wall and the oval shaped wall adjacent each end of the stock and connecting the same, and an inwardly extending strengthening web between the oval shaped walls adjacent the ends of the stock and the adjacent end of the stock defining a substantially rectangular handle opening.

1,691,777. PLASTERER'S FLOAT. JOHN MAYES, Port Austin, Mich., assignor to Mayes Brothers Tool Manufacturing Company, Port Austin, Mich., a Corporation of Michigan. Filed Feb. 3, 1928. Serial No. 251,652. 2 Claims. (Cl. 72—136.)



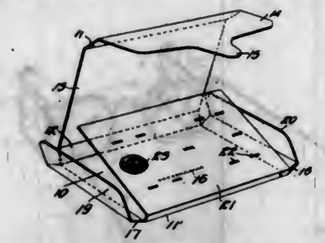
1. A device of the class described comprising a flat elongated body formed of relatively thin material having its side edges upturned, said elongated body having its ends beveled to form thin cutting edges, and a handle fastened between said upturned side edges intermediate the ends of the body, substantially as set forth.

1,691,778. METHOD OF FORMING VALVE TAPPETS. CHARLES B. MCDONALD, Detroit, Mich., assignor to Wilcox Products Corporation, Detroit, Mich., a Corporation of Michigan. Filed Apr. 18, 1927. Serial No. 184,705. 6 Claims. (Cl. 219—10.)

1. The method of mechanically uniting metal members which consists in first forming one of said members with spaced end portions of wedge shaped cross section, the axes of said wedges being inclined to each other, in contacting said wedge portions with the complementary member, passing electrical current therethrough to locally heat and soften the adjacent metal and in pressing the members together to force said wedge portions into interlocking engagement with the complementary member.

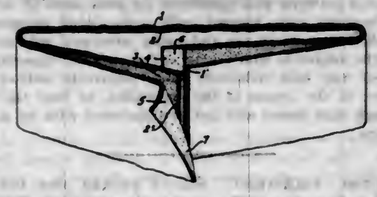
1,691,779. VALVE TAPPET AND METHOD OF FORMING THE SAME. CHARLES B. MCDONALD, Detroit, Mich., assignor to Wilcox Products Corporation, Detroit, Mich., a Corporation of Michigan. Filed Mar. 19, 1928. Serial No. 262,933. 5 Claims. (Cl. 219—10.)

1. A tappet comprising a preformed disk head of white cast iron and a hollow or tubular stem having a laterally enlarged head portion welded to said disk and forming a reinforcement therefor.



1,691,780. CLOSURE FOR CONTAINERS. ANTHONY FRANCIS MCDONNELL, Dunmore, Pa., assignor of one-third to William Aloysious Quinn, Scranton, Pa. Filed Apr. 17, 1928. Serial No. 270,750. 7 Claims. (Cl. 215—39)

1. A bottle or other container having its neck formed with shoulders inclined peripherally and upwardly toward the mouth to be engaged by inward projections on the rim of the cap and lift the same when turned and with parts inclined outwardly and upwardly toward the mouth to engage and lock the rim of the cap when contracted around the neck and to expand the rim when lifted by the inclined shoulders.



1,691,781. PACKAGE. NATHAN S. MEYER, New York, N. Y. Filed Mar. 13, 1926. Serial No. 94,611. 1 Claim. (Cl. 206—44.)

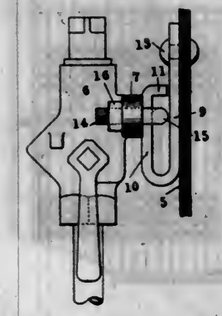
A container and display box for buttons comprising a strip of card board or the like foldable to form a closed box-like container having integral top, bottom, side and end walls with an integral spacer strip and a perforated button supporting shelf held by said strip between the top and bottom of the container, the bottom being slitted and the top having a flap adapted to be folded under the bottom with

a tongue engaging in said slit, the shelf being adapted also to rest against the flap when in open position and to be inclined rearwardly to serve as a display device for the buttons, substantially as set forth.

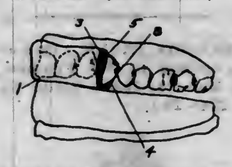
1,691,782. BAG. PHILIP E. MORRILL and ROBERT E. PIERCE, St. Louis, Mo., assignors to Bemis Bros. Bag Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 17, 1925. Serial No. 56,843. 1 Claim. (Cl. 229—53.)

A new article of manufacture comprising a sheet of material shaped to produce a bag having a seam where the edges of said sheet of material are joined together, said sheet of material comprising a plurality of sheets of material having a layer of adhesive water-proofing material therebetween whereby said sheets of material are secured together, the edge portion of one of said sheets being extended beyond the adjacent edge of the associated sheet and beyond the adjacent edge of the layer of waterproofing material, and a layer of paste whereby said extended portion of said sheet is secured in place to form said seam, said paste and said waterproofing material being arranged adjacent to the same face of said sheet of material having the extended portion.

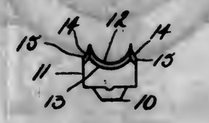
1,691,783. INSULATING STRUCTURE. OLIVER F. MOTTWEILER and DANIEL C. DRILL, Alexandria, Ind., assignors to General Insulating and Manufacturing Company, Alexandria, Ind., a Corporation of Indiana. Filed Nov. 25, 1927. Serial No. 235,552. 9 Claims. (Cl. 154—44.)



1. An insulating structure adapted for use in circular form comprising a body portion formed of insulating material, a layer of material arranged in contact with one surface of said body portion, a plurality of rods arranged in spaced relation in contact with the opposite surface of said body portion, and anchor means extending through said body portion and connecting said layer of material and said rods together, said rods being movable when the structure is arranged in circular form to points removed inwardly from the inner face of said body portion.

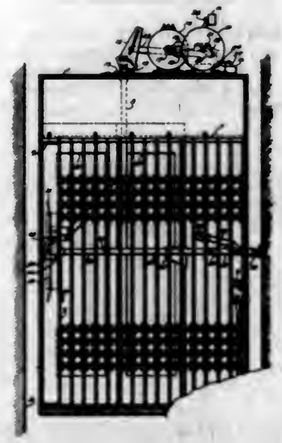


1,691,784. RETAINING-VALVE HOLDER. FRANK H. PIETZSCH and STERLING H. CAMPBELL, St. Louis, Mo., assignors to Western Railway Equipment Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 3, 1927. Serial No. 223,828. 4 Claims. (Cl. 303—1.)



1. In a device of the class described, the combination with a plate adapted to be secured to a railway car, said plate having a portion bent over to form an integral loop and an end bent down to close the loop, of a U-bolt adapted to be inserted through the loop, and nuts engaging the U-bolt, the parts being so proportioned and related that said nuts will prevent the bolt from passing out of the loop.

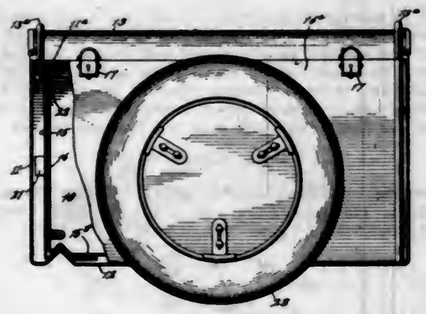
1,691,785. DENTAL MASSAGE DEVICE. ORRIN REMENSNYDER, Saginaw, Mich. Filed Sept. 14, 1925. Serial No. 56,333. 4 Claims. (Cl. 128—67.)



1. A gum-massaging device comprising a compressible elastic base pad member and a wall member secured to said pad member, the rim of said wall member adapted to extend up to and contact with the free margin of the gum tissue and to exert variable pressure against said free margin when a tooth indents and compresses a part of said base pad member by biting upon said base pad member.

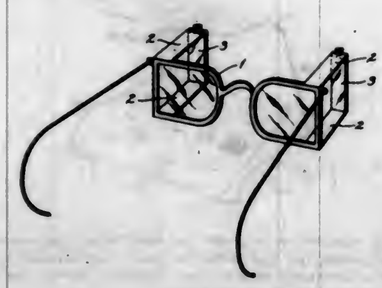
1,691,786. DENTAL INSTRUMENT. ROBERT TRUMAN ROTH, Philadelphia, Pa. Filed Oct. 25, 1927. Serial No. 228,563. 1 Claim. (Cl. 32—10.)

A dental instrument comprising a handle and a longitudinally curved blade having a main concaved cutting edge in its forward end, and contiguous supplementary concaved cutting edges in its sides.



1,691,787. DOOR-CONTROL MEANS FOR ELEVATORS. HAROLD W. SHONNARD, Montclair, N. J., assignor to Elevator Supplies Company, Inc., Hoboken, N. J., a Corporation of New Jersey. Filed Dec. 15, 1927. Serial No. 240,305. 8 Claims. (Cl. 187—52.)

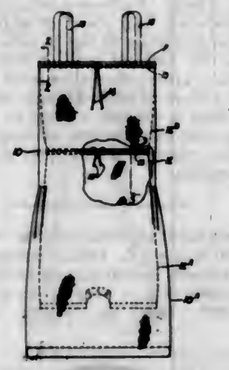
5. In combination with an elevator gate and a landing door, a member projecting outwardly from said gate and movable with said gate, means on the elevator for opening said gate, and means for moving said landing door in unison with said gate comprising a lever pivotally connected to said landing door and a member attached to said lever and adapted to serve as the driving connection between the outwardly projecting member on the elevator and said pivotally connected lever on the landing door, said outwardly projecting member operating to swing said lever in response to the operation of said gate opening means.



---

1,691,788. EXTENSION TRUNK. PHILMORE F. SPERY, Chicago, Ill., assignor to Will Freeman, Des Moines, Iowa. Filed Mar. 26, 1927. Serial No. 178,744. 7 Claims. (Cl. 224—29.)

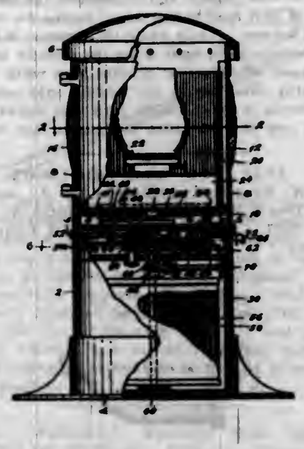
1. An extensible auto trunk comprising a main section, a hinged cover therefor, a section extensible from the main section, and a cover for the extensible section hinged from the free end of the main cover and foldable within the latter.



1,691,789. SPECTACLES. CHARLES HENRY ALBERT TEIBER, St. Louis, Mo. Filed June 24, 1926. Serial No. 118,228. 2 Claims. (Cl. 88—41.)

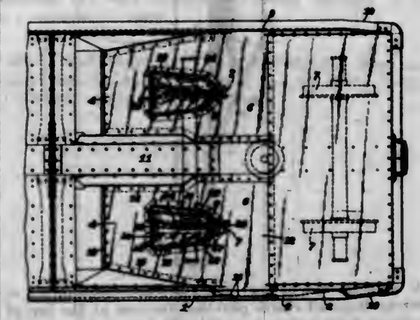
1. Spectacles comprising a frame supporting a pair of lenses, pairs of spaced arms located at the opposite ends of said frame and extended forwardly thereform, said pairs of spaced arms comprising each an arm fixed to said frame at the upper portion thereof and an arm fixed to said frame at the lower portion thereof, and reflectors interposed between and supported by said pairs of arms at the forward ends thereof, said arms being permanently attached to said frame and being arranged substantially at right angles to said frame at the extreme opposite ends thereof and said reflectors being relatively narrow with respect to the lenses of the spectacles, so that the vision through said lenses will not be interfered with by said reflectors.

---



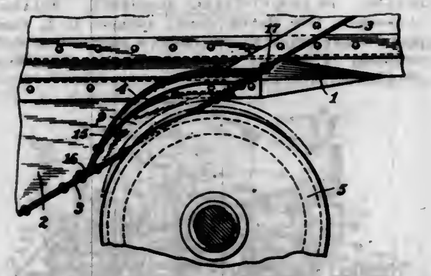
1,691,790. GARMENT. SYLVIA VOLKER, Oak Park, Ill. Filed Jan. 31, 1927. Serial No. 164,699. 2 Claims. (Cl. 2—73.)

1. A unitary fabric garment comprising an outer garment, means on the upper edge of said outer garment for drawing in said upper edge for close fit on the wearer, a single pair of shoulder straps attached to the upper end of said outer garment, said inner garment being secured to said upper edge of said outer garment and the lower portion of said inner garment being formed into bloomers, a laterally extending pocket on said inner garment above the waist line and below the bust thereof, said outer garment extending downwardly below the lower end of said bloomer portion, and a ribbon in said pocket for drawing in said inner garment below the bust of the wearer.



1,691,791. AUTOMATIC TRAFFIC SIGNAL. JOHN T. WAYLAND and TOM D. JONES, Kansas City, Mo. Filed Nov. 14, 1927. Serial No. 233,171. 6 Claims. (Cl. 116—63.)

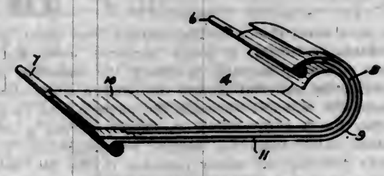
1. In a device of the character described, a corrugated tubular signal element, a table upon which said signal element is mounted, and mechanism for rotating said table step by step.



---

1,691,792. SLOPE SHEET FOR FREIGHT CARS. WILLIAM E. WINE, Toledo, Ohio. Filed Mar. 13, 1928. Serial No. 261,265. 9 Claims. (Cl. 105—247.)

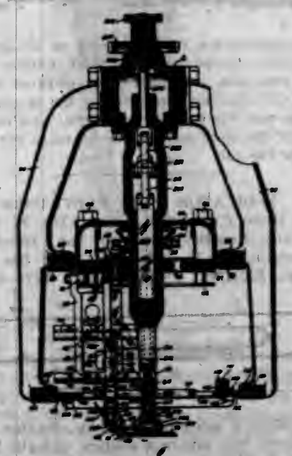
1. A slope sheet having a crown formed therein, the side walls of the crown being vertical, and the top surface of the crown sloping towards the side walls, the front edge of the crown having sloping top walls and the rear end of the crown having its top wall horizontal throughout its width.



1,691,793. SLOPE SHEET AND METHOD OF MAKING THE SAME. WILLIAM E. WINE, Toledo, Ohio. Filed Mar. 26, 1928. Serial No. 264,605. 14 Claims. (Cl. 105—247.)

1. A slope sheet having an opening therein, the walls about the opening bent to form side walls and flanges to support a cover, and a cover secured to said flanges.

---

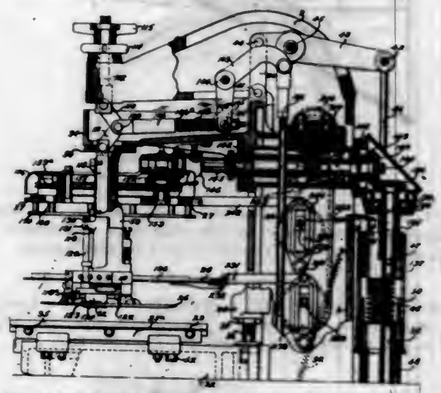


1,691,794. STORAGE BATTERY. JOSEPH LESTER WOODBRIDGE, Philadelphia, Pa. Filed Sept. 30, 1925. Serial No. 59,467. 4 Claims. (Cl. 136—69.)

1. An element for a storage battery cell comprising two electrodes of sheet lead and thin wood veneer spacing said electrodes, and the electrodes and veneer rolled into cylindrical form with the grain of the veneer substantially parallel with the axis of the cylinder.

---

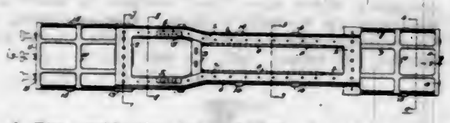
1,691,795. BLANK-CUTTING MACHINE. ROLAND G. ANDERSON, Morris Cove, Conn., assignor, by mesne assignments, to Wellman Company, Medford, Mass., a Corporation of Maine. Filed Mar. 6, 1923. Serial No. 623,141. 45 Claims. (Cl. 12—24.)



45. In a machine for cutting blanks of sheet rubber, in combination, means for cutting a blank with an under-

bevel or with an over-bevel without reversing the stock, and means for retracting the knife when using an undercut bevel to prevent injury to the fully cut soles.

---



1,691,796. BLANK-CUTTING MACHINE. ROLAND G. ANDERSON, New Haven, Conn., assignor to L. Candee and Company, New Haven, Coun., a Corporation of Connecticut. Filed Jan. 7, 1927. Serial No. 159,577. 20 Claims. (Cl. 12—25.)

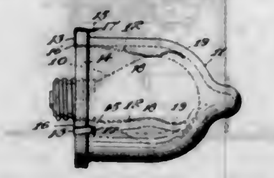
20. In a machine for cutting blanks from sheet, plastic and elastic material, a plane surfaced work bed and pattern relatively movable to clamp the material, means for cutting the material around the pattern while clamped, a female die movable through the pattern and cooperating with the bed to emboss the blank during a cutting operation, and actuating means for imparting a preliminary yielding but heavy pressure to the die, said actuating means being retractable prior to the completion of a cutting operation, whereby the pattern acts as a stripper for the die.

---

1,691,797. LOCOMOTIVE CAB DECK. CONRAD C. C. BURKHARDT and EDWARD O. ELLIOTT, Philadelphia, Pa. Filed Nov. 10, 1927. Serial No. 232,391. 7 Claims. (Cl. 105—172.)

6. The combination in a cab deck of an internal combustion-electric locomotive, said deck having two transsoms and two sills, said sills being elevated between the transoms and forming supports for the internal combustion engine and the electric generator; and extensions at each end of the deck beyond the transom for supporting the ends of the cab.

---



1,691,798. INDICATOR FOR ELEVATORS OR THE LIKE. HUGO F. CYPSER, Jersey City, N. J., assignor to Elevator Supplies Company, Inc., Hoboken, N. J., a Corporation of New Jersey. Filed Dec. 16, 1926. Serial No. 155,238. 2 Claims. (Cl. 177—336.)

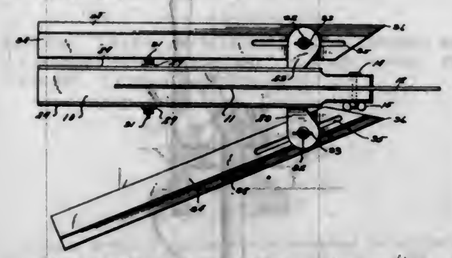
1. An indicator mechanism for an elevator comprising a fixed screen, two separate sources of light behind said screen, a movable pointer positioned between said screen and said sources of light so as to cast a shadow on said screen, means for confining the light rays from one of said sources to the portion of said fixed screen lying on one side of the shadow cast by said pointer, thereby forming an illuminated area terminating at one edge of said shadow, means for confining the light rays from the other of said sources to the portion of said fixed screen lying on the other side of the shadow cast by said pointer, thereby forming a second illuminated area terminating at the other edge of said shadow and situated in the longitudinal projection of said first named area; means for energizing one of said sources of light while the elevator is ascending and the other source of light while the elevator is descending so that one of said areas remains dark while the other is illuminated; and means for moving said pointer and confining means in synchronism with said elevator, thereby causing one of said areas to expand into the other.

---

1,691,799. CLIP FOR ELECTRIC-LIGHT BULBS. HENRY W. FALSTROM, Bloomfield, N. J., assignor to Eastern Tool & Mfg. Company, Bloomfield, N. J. Filed Apr. 6, 1927. Serial No. 181,347. 2 Claims. (Cl. 240—138.)

1. The combination of a cup-shaped globe and an electric light bulb, with a clip having one end to hook over the rim of the globe and with the major portion thereof within the globe and disposed so that it is pressed against the inside of the globe and under a tension when placed over the bulb whereby the globe is detachably secured to the bulb.

---



1,691,800. STORAGE BATTERY. BRUCE FORD, Philadelphia, Pa. Filed July 11, 1923. Serial No. 650,757. 2 Claims. (Cl. 16—125.)

1. In a storage battery container the combination of oppositely disposed cleats provided the one at the top of the container wall and the other at the face of the container wall, two relatively movable metallic elements of plate form and arranged in overlapping relation and of which each is provided with a jaw and of which one is rigidly provided with a handle and with a shank for contact with the face of the wall below the recess and of which the other is provided with a foot for hold-down purposes, and screw means interposed between said elements and operative in a plane parallel to the container wall and arranged to move said jaws towards and away from each other.

1,691,801. MULTIPLANE BEVEL SQUARE. GEORGE W. FOTHERGILL, Louise, Tex. Filed June 24, 1926, Serial No. 118,293. Renewed May 1, 1928. 5 Claims. (Cl. 33—90.)

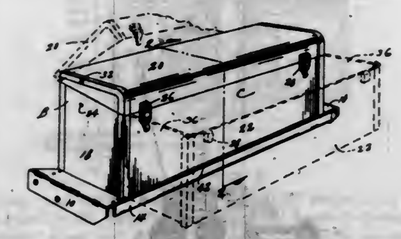
1. In a bevel square, a body, a blade pivotally and slidingly engaging the forward end of the body, the body being formed with a longitudinally extending groove on its side face, a shank slidably mounted in said groove and having a laterally projecting ear disposed in a plane at right angles to the plane of the blade, a blade pivotally and slidably mounted upon said ear, a plate extending over the side face of the body and over said groove and the shank therein, and means extending through said plate and engaging the shank to hold it in any desired adjusted position.

---

1,691,802. WADDING DEVICE FOR THE CARTRIDGES OF FOWLING PIECES. CHARLES GABEL, Paris, France, assignor to Société Anonyme Cartoucherie Francaise, Paris, France. Filed Dec. 28, 1926, Serial No. 156,643, and in Belgium Jan. 18, 1926. 2 Claims. (Cl. 102—42.)

1. A wadding device for the cartridges of fowling pieces, comprising a corrugated casing and elastic material in the state of fragments which is disposed within the said casing, and a sheath of lubricating material surrounding the said corrugated casing whereby it is given a cylindrical form.

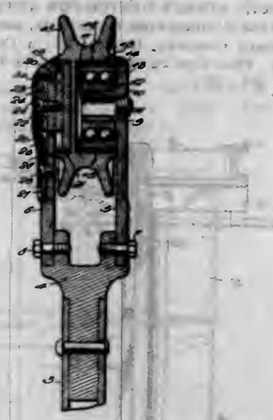
---



1,691,803. WAINSCOTING CONSTRUCTION. WILLIAM T. GRAY, Ballston Spa, N. Y. Filed Dec. 10, 1927. Serial No. 239,089. 4 Claims. (Cl. 20—4.)

2. In a wainscoting construction, a wainscoting element comprising a board having a tongue formed on one longitudinal edge and a complemental groove formed in the other longitudinal edge thereof, said tongue having outwardly converging front and rear sides respectively of convex and concave form, said tongue being of greater depth than the groove.

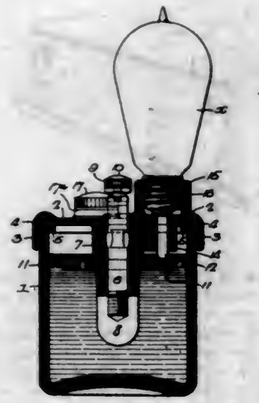
---



1,691,804. TRUNK AND LUGGAGE CARRIER. BENNIE P. HANSON, Cedar Falls, Iowa, assignor to Edward L. Moore, Waterloo, Iowa. Filed Oct. 17, 1927. Serial No. 226,719. 6 Claims. (Cl. 224—29.)

6. In a trunk of the class described, a fixed trunk section having a hinged lid thereon, a movable trunk section adapted to be moved longitudinally outwardly away from said fixed trunk section, one wall of said movable section serving as the rear wall for the fixed trunk section when in one position and as the rear wall of the movable section when in another position and means for retaining the moving section in its outward position, said means comprising a foldable bottom connecting the bottom of the trunk section to the lower edge of the rear wall of the movable trunk section.

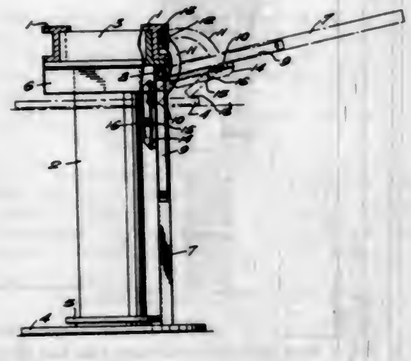
---



1,691,805. TROLLEY HARP AND WHEEL ASSEMBLY. THOMAS HAULTON, Johnstown, Pa., assignor to Penn Machine Company, Johnstown, Pa., a Corporation of Pennsylvania. Filed Dec. 19, 1927. Serial No. 241,118. 5 Claims. (Cl. 191—59.)

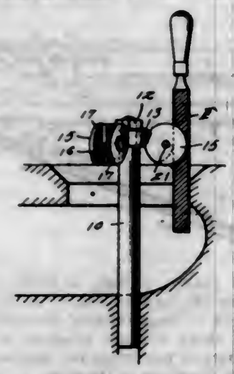
1. A trolley harp having a removable arm and a fixed arm, a trolley wheel between said arms having axially aligned recesses whose outer sides are closed thereby, bearing means in one of said recesses mounting said wheel on said fixed arm, a spring-pressed collector plate in the other of said recesses provided with a non-circular projection on its outer side, said removable arm having a non-circular opening through which said projection passes slidably and

non-rotatably, and a flexible conductor at the outer side of said removable arm secured at one end thereto and secured at its other end to the outer end of said projection.



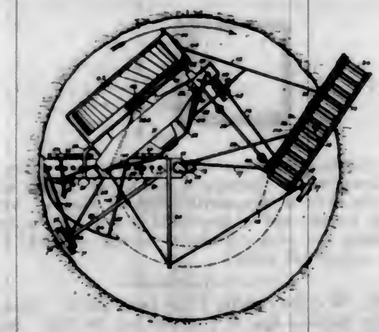
1,691,806. ELECTROLYTIC RECTIFIER. WALTER E. HOLLAND, Philadelphia, Pa., assignor to Philadelphia Storage Battery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 13, 1923. Serial No. 612,405. 20 Claims. (Cl. 175—318.)

1. An asymmetric cell including a non-film-forming electrode of iron containing at least 10% silicon.



7. An asymmetric cell comprising a container, a body of electrolyte, an electrode mounted in said container adjacent the normal initial surface level of the electrolyte, and a film-forming electrode so mounted in said container that its active portion is entirely below the electrode first named.

1,691,807. SAFETY DEVICE FOR AUTOMOBILE LIFTS. EDWARD E. HOLLISTER, Quincy, Ill., assignor to Hollister-Whitney Company, Quincy, Ill., a Corporation of Illinois. Filed Aug. 24, 1926. Serial No. 131,263. 8 Claims. (Cl. 254—93.)



1. In a vertically-movable lift of the class described, a safety device movable automatically during ascent of the lift, into a position to prevent descent of the lift and means held in released condition while the lift is in lowered position, for holding said device in inoperative position.

1,691,808. FILE HOLDER. WALTER M. HOWSER, La Porte, Ind. Filed Aug. 16, 1927. Serial No. 213,324. 4 Claims. (Cl. 29—80.)

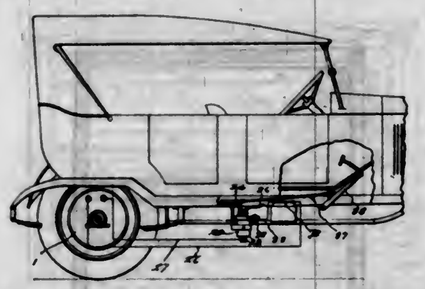
1. In a file holder for holding files for rotative treatment of surfaces, a stem having at one end a plurality of radiating arms, the outer end of each arm having a file receiving groove, said arms being split and means for contracting the split ends of the arms to clamp the files engaged therewith.

1,691,809. MACHINE FOR DIGGING PIT SILOS AND CISTERNS. CARL H. HUENEFELD and GEORGE CAMPBELL, Aurora, Nebr., assignors of two-thirds to said Huenefeld and one-third to said Campbell. Filed Feb. 21, 1927. Serial No. 169,936. 11 Claims. (Cl. 37—190.)

1. A digging machine of the class described including a frame mounted to turn about a vertical axis, a tractor wheel in the frame mounted to turn in a circular path about said axis, a digging means trailing said tractor wheel and an elevator trailing said digging means, and tractor wheel radially outward of the axis of rotation of said frame said digging means and elevator being mounted in the frame to turn about the same axis with the tractor wheel.

1,691,810. BANDAGE FASTENER. KARL H. ITZEROTT, Philadelphia, Pa. Filed Mar. 24, 1928. Serial No. 264,401. 2 Claims. (Cl. 24—87.)

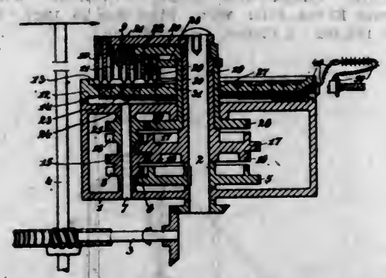
1. In a device of the character described, the combination with an elastic trip, of a clasp secured to each end thereof and comprising a body produced from a flat strip



of metal so fashioned as to provide hooks projecting back upon the body from one edge thereof, prongs at right angles thereto projecting from the edge opposite the hooks, and an integral clamping leaf projecting from the central portion of the body and overlying the prongs.

1,691,811. VALVE MECHANISM. ELMER JOHNSON, San Francisco, Calif. Filed Mar. 11, 1927. Serial No. 174,580. 2 Claims. (Cl. 221—60.)

1. In a device of the character described, a receptacle having a neck portion, a ball valve positioned in said neck portion, a rotatable member encircling said neck portion, a cam carried on said ball, and means associated with said rotatable member for engaging said cam for the purpose of rotating said ball when said rotatable member is actuated, ports formed in said rotatable member on said receptacle and adapted to coincide with a passage formed in said ball.

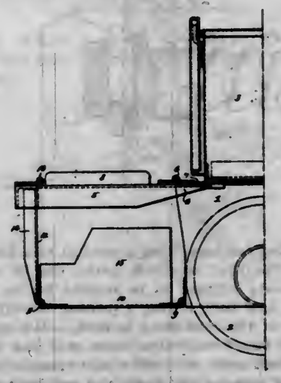


1,691,812. ELECTRIC BRAKE FOR AUTOMOBILES. HAROLD JOHNSON and LENNIE O. AUNE, Windom, Minn. Filed Oct. 26, 1927. Serial No. 228,906. 3 Claims. (Cl. 188—163.)

3. A brake of the class described comprising a pair of shoes for engaging the part to be braked, magnetic means comprising an upper coil and a lower coil and an armature connected with the lower coil and passing into the upper coil, adjustable means for causing the movement of the lower coil to press the shoes against the said part, a circuit for the two coils, a switch in the circuit, manually oeprated means for operating the switch, such means comprising a pedal, a link connecting the pedal to the switch arm and said switch comprising a casing, a plurality of pieces of carbon therein and a switch arm having a part engaging the pieces for pressing them together when the pedal is depressed.

1,691,813. APPARATUS FOR ELECTRICALLY TRANSMITTING SIGNALS INDICATING RESULTS OF OBSERVATION. HANS KARABETZ, Vienna, Austria, assignor to the Firm C. P. Goerz Optische Anstalt Aktiengesellschaft, Akciova Spolecnost K. P. Goerz, Opticky Ustav, Bratislava, Czechoslovakia. Filed Dec. 19, 1925, Serial No. 76,401, and in Austria Jan. 19, 1925. 4 Claims. (Cl. 177—337.)

1. In apparatus for electrically transmitting signals indicating results of observations, the combination of a transmitter, comprising a plurality of rotatable contact arms operatively connected by gearings adapted to impart to the following contact arm a unit of movement when the immediately preceding arm makes a plurality of units of movement and stationary contact rings, each consisting of a plurality of contact segments and cooperating with one of the said rotatable contact arms, with a receiver, comprising a plurality of concentric groups of stationary signals, each signal corresponding to one of the contact segments of the transmitter and being directly electrically connected thereto, radial arms one for each of the said groups of signals and means for bringing to coincidence each of the radial arms with the signal of its corresponding

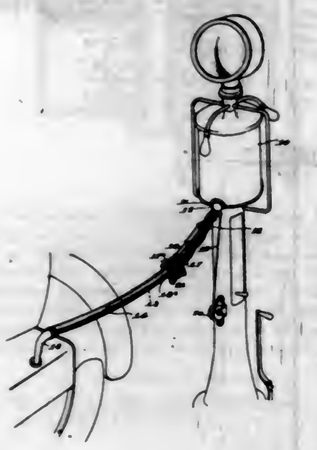


group, and with a source of electricity adapted to supply current to the signaling devices of the receiver through the contact arms and segments of the transmitter so that the attendant of the receiver knows at any time the position of the transmitter, the direction and speed of rotation of the contact arms, the point on which the radial arms of the receiver have to be adjusted and the difference existing between the former indication and the next following.

1,691,814. TOOTHBRUSH CASE. ORAL A. KING, South Norfolk, Va. Filed Feb. 7, 1927. Serial No. 166,446. 1 Claim. (Cl. 15—184.)

The combination with an open-ended cylindrical enclosure for a tooth-brush, of an insertable, hollow plug therefor, one face of said plug being centrally raised and apertured, a ring mounted in said apertures and projecting from said plug, and a brush-securing split tubular socket bodily carried by the cap and projecting in an opposite direction to the ring, said tube being disposed eccentrically of the plug.

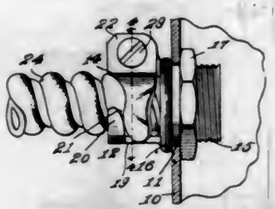
1,691,815. MINE LOCOMOTIVE. BENJAMIN K. KIRK, Philadelphia, Pa. Filed Jan. 3, 1928. Serial No. 244,199. 4 Claims. (Cl. 105—50.)



1. The combination in a mine locomotive, of a main frame; a platform pivotally connected to the main frame at one end; and a frame located above the platform and also

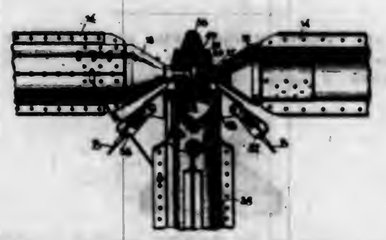
pivotally connected to the main frame, the outer end of the platform and the upper frame being pivotally connected together so that the platform can be lowered into position to be occupied by an operator or turned up against the end of the locomotive.

---



1,691,816. TELESCOPIC HOSE COUPLING. WILLIAM HENRY KLYCE, Flint, Mich. Filed May 25, 1927. Serial No. 194,162. 5 Claims. (Cl. 137—90.)

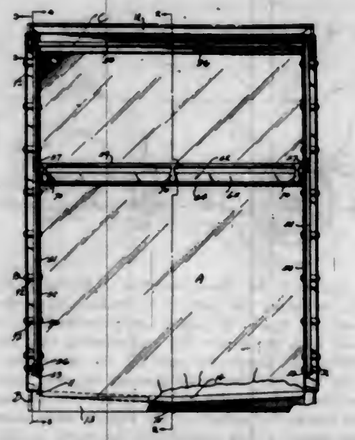
1. A telescopic hose coupling formed of two sections, one of the sections being telescopically received by the other section, means for supporting said one of the sections, and means for retaining the other section in operative relation with the first mentioned section, said last mentioned means including means for returning the sections to the normal inoperative position after said first mentioned section has been moved outwardly from the second mentioned section.



---

1,691,817. COUPLING. CHARLES KOSNICK, New York, N. Y. Filed Jan. 25, 1926. Serial No. 83,641. 2 Claims. (Cl. 247—25.)

1. A coupling for connecting a conduit to a junction box comprising a pair of separable parts, one of said parts including a body adapted to be secured in the wall of a junction box, said body having a passage therethrough for the insertion of the conduit to be held, a jaw provided on said body, a finger extending from said jaw and being spaced from said body, said other part constituting a loose jaw positioned between said finger and said body and engaging said finger, and means for holding said parts in co-acting clamping engagement, substantially as and for the purpose specified.



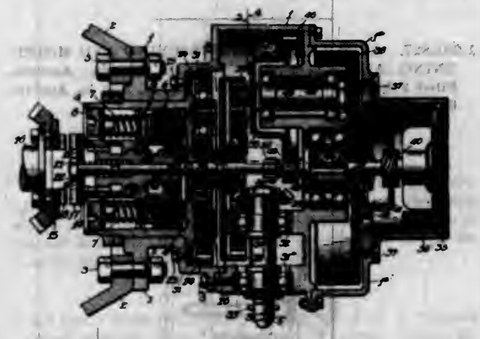
1,691,818. KEEL COLUMN. HERMAN T. KRAFT, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 20, 1924. Serial No. 744,570. 13 Claims. (Cl. 189—1.)

1. A fabricated structure comprising hollow sheet metal columns, a plurality of said columns being symmetrically tapered, sockets for interconnecting the end portions of a plurality of the columns of similar construction and a socket having a universal joint operatively connected thereto for connection to the remainder of the columns.

---

1,691,819. WINDOW CLEANER. FREDERICK LANGLEY, Cohoes, N. Y. Filed May 7, 1924. Serial No. 711,682. 3 Claims. (Cl. 15—252.)

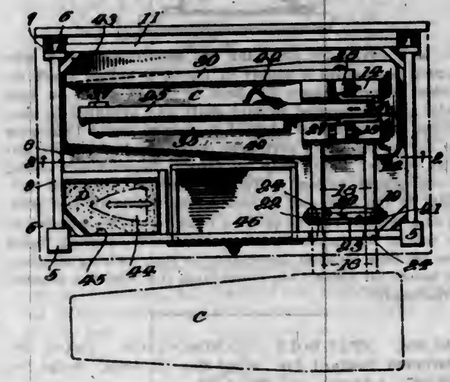
1. In a window cleaner, a pair of guide casings for attachment to one side of the pane of a window at each side edge thereof, each having an endless slot, the endless slots of the guide casings being in facing relation, pulleys in said guide casings, endless belts rotatably mounted in said casings about said pulleys, a rod extending transversely from guide casing to guide casing and at the ends thereof extending into the slots of said guide casings and being connected to the endless belts therein, and means supported by said rod for engaging the facing side of the window to scrape against and cleanse the same during rotation of said belt.



---

1,691,820. ENGINE STARTER. RAYMOND P. LANSING, Montclair, N. J., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Jan. 20, 1926. Serial No. 82,394. 37 Claims. (Cl. 290—48.)

1. An engine starter including a drive or transmission having a centrally located driving member mounted for longitudinal movement to engage a member of the engine

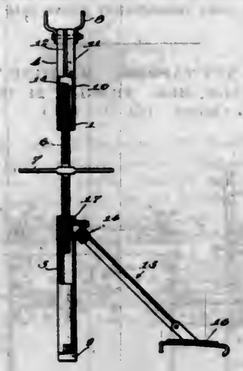


to be started and for rotary movement for cranking such engine member, a rotatable inertia device operatively connected with such drive, and a power means operatively

connected with the inertia device for operating it for the starting operation, said driving member, inertia device and power means having the same axis of rotation.

---

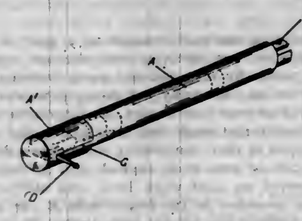
1,691,821. COMBINED TABLE AND IRONING BOARD. ADOLPH FREDERICK LIND, Kittanning, Pa. Filed May 14, 1926. Serial No. 109,076. 4 Claims. (Cl. 68—10.)



4. The combination with a table having a swinging top and a compartment below the same, of an ironing board pivotally mounted within said compartment and adapted to swing upwardly and outwardly to a position beyond the front of said table, a leg pivotally connected to said board and provided with means at its upper end for locking it in vertical position when in use, a second leg movably connected to said board and adapted to be moved to an extended position at an incline to said board when in use, means at the upper end of said second leg for locking it in said inclined extended position, a brace leg having pivotal connection with the board at one end and a sliding and locking connection with the second leg at a point medially of its ends, and said brace leg and said second leg arranged approximately at right angles to one another when in their extended positions.

---

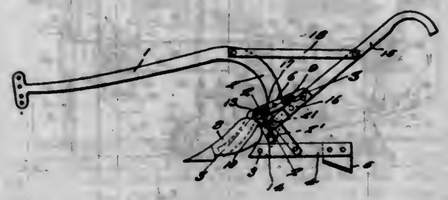
1,691,822. PEDAL HOLDER. LOUIS W. LINDMEYER, Butte, Mont. Filed Oct. 17, 1925. Serial No. 63,154. 2 Claims. (Cl. 74—81.)



1. A device of the character described comprising a pair of tubes each having an internally threaded bushing, a turnable right and left threaded screw engaging the bushing and disposing the tubes in axial alignment for use between a pedal and the steering wheel of an angularly disposed steering column, a socket forming part of one of the tubes and extending therefrom laterally, and an extension

fitted in the socket being disposed at an angle to the axis of said tubes to reach a pedal and the steering wheel of a vertically disposed steering column.

---

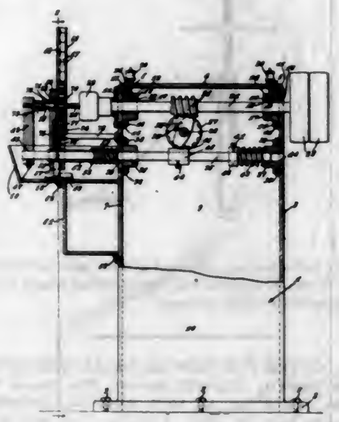


1,691,823. COVER FOR DENTAL DRILL HANDPIECES. WILLIAM OGILVIE, Edgecliff, Sydney, New South Wales, Australia. Filed Jan. 13, 1927, Serial No. 160,968, and in Australia Mar. 23, 1926. 1 Claim. (Cl. 32—10.)

A cover for a dental drill handpiece consisting of two mutually telescoping tubular parts of suitable aseptic material, one of said parts being open at both ends and the othere closed at one end and formed with an aperture registering with the drill socket in the handpiece when the parts are adjusted thereon.

---

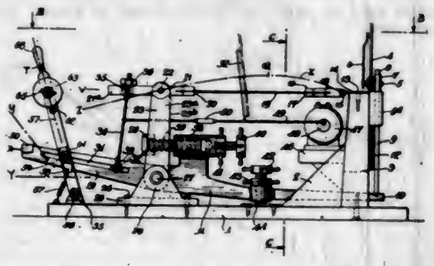
1,691,824. PLOW. JAMES S. PARKER, Corsicana, Tex. Filed June 10, 1925. Serial No. 36,226. 1 Claim. (Cl. 97—109.)



In combination, a plow beam having a downwardly extending standard provided with spaced apertures, a furrow bar projecting rearwardly from the lower end of the standard and supporting a blade, a stock comprising a substantially U-shaped member straddling the standard and having a plurality of openings, bolts passed through said openings and contacting with the opposite edges of the

standard to hold the parts associated, a substantially U-shaped brace having its closed end flattened and received between the spaced parallel arms of the U-shaped member of the stock and pivotally secured thereto, said brace having its arms straddling the standard and pivotally connected thereto at a point immediately above said furrow bar.

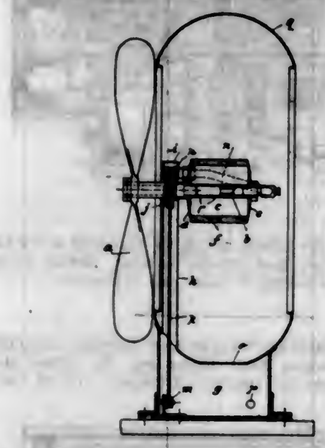
---



1,691,825. NUT-TAPPING MACHINE. HARVEY E. PRUITT, Fenton, Mich. Filed Dec. 24, 1926. Serial No. 156,848. 5 Claims. (Cl. 10—130.)

1. A nut tapping machine comprising a pair of spring controlled shiftable nut carriers, each carrier being provided with a vertically disposed nut guide terminating at its lower end in an outwardly extending downwardly inclined discharge groove for the nut, an intermittently operable spring controlled work feed for shifting the carriers against the action of their controlling springs in a direction to position a pair of nuts to be tapped, said carriers being slidably supported on said work feed, and shiftable nut holding means mounted in the lower ends of the carriers for normally holding the tapped nuts within the carriers and adapted when shifted from normal position to permit of discharge of the tapped nuts.

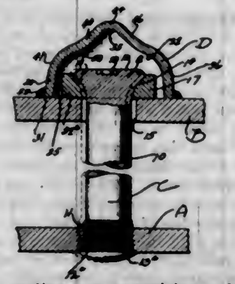
---



1,691,826. MUSICAL INSTRUMENT. OSCAR A. ROSS, New York, N. Y. Filed Mar. 4, 1927. Serial No. 172,755. 21 Claims. (Cl. 84—408.)

4. A bowed musical instrument comprising a tone producing reed, means for supporting each end thereof whereby the unsupported portion thereof is arranged to be tensioned, means affecting the supporting means for varying the degree of the tension whereby varying pitch tones are produced as the rosined bow is drawn across the unsupported portion, and means for producing a vibration of the reed for producing a vibrato effect of the tone independently of the tone vibration produced by drawing the bow across the unsupported portion of the reed.

---



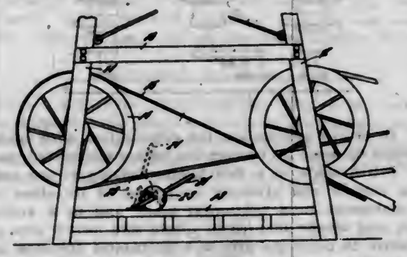
1,691,827. APPARATUS FOR PURIFYING AND MOISTENING AIR. ALBERT SCHÜCKHER, Vienna, Austria. Filed Feb. 15, 1924, Serial No. 693,143, and in Austria Feb. 19, 1923. 2 Claims. (Cl. 261—88.)

1. In a device for purifying and moistening air, a base adapted to contain a supply of liquid, a hollow shaft rotatably mounted above the base, a fan mounted on said shaft, a drum secured to said shaft and arranged in connection therewith and adapted to receive liquid therefrom and having the outer periphery constructed of porous material so that liquid may be forced therethrough owing to centrifugal action, a tubular support arranged vertically in the base and in connection therewith and serving as a support for the shaft, a liquid receiving member at the top of the tubular part, means for conducting liquid from the base through the support to the receiving member, and means for conducting liquid from the receiving member to the shaft.

---

1,691,828. STAY-BOLT CONSTRUCTION. FRANK W. SHUPERT, Sanford, Fla. Filed Mar. 22, 1926. Serial No. 96,647. 1 Claim. (Cl. 85—1.5.)

A stay bolt sealing cap comprising a hollow ring-like base portion in the form of the frustum of a cone, and an integral hollow approximately conical outer portion the external surface of which is inclined to a greater degree with respect to the axis of the cap than the external surface of the base portion, said base and conical portions having internal surfaces substantially conforming in angularity to the external surfaces of said portions to provide a compartment in the cap which is largest at the base portion and therefrom restricted to the top of the conical portion.



1,691,829. NUT. GEORGE W. SILBAUGH, Charleroi, Pa. Filed June 19, 1926, Serial No. 117,209. Renewed July 9, 1928. 2 Claims. (Cl. 85—36.)

2. A nut member having notches in the outer end thereof, a lever pivoted in each notch and having a cam part which is toothed and which will extend within the bore of the nut when the lever is in closed position and means for holding the levers in closed position.

---

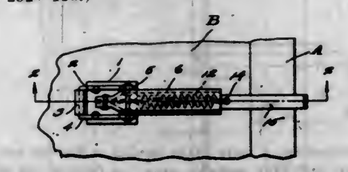
1,691,830. THROWING-OFF DEVICE. GUY P. SLATER, Sand Springs, Okla. Filed July 28, 1926. Serial No. 125,498. 1 Claim. (Cl. 64—4.)

A device for throwing a rope from a wheel, said device comprising a spirally grooved drum mounted to impart lateral movement to the rope with reference to the drum, and a lever controlled rock shaft of the crank shaft type mounting the drum for movement in an arc-shaped path while said drum maintains parallel relation with the axis of rotation of the wheel.

---

1,691,831. SANITARY TOOTHPICK HOLDER. FURMAN Q. SLAY, Weathersby, Miss. Filed Oct. 9, 1925. Serial No. 61,549. 1 Claim. (Cl. 312—77.)

In a device of the class described, a housing having an opening in the top thereof, a hopper extending into the housing thru said opening, a transversely extending element loosely supported within the lower part of the housing, an apertured cap for the hopper, self-closing closure means for the aperture of the cap, a pin fixedly mounted in the transverse element and positioned to pass through the lower end of the hopper and into the latter incident to downward movement of the hopper, and a spring holding the hopper in an upper position, the spring having its lower end bearing on the transverse element and acting as a retaining device therefor.



1,691,832. AUTO HEADLIGHT DIMMER. JAMES C. SWEET, Flint, Mich., assignor of one-half to Ida E. Sweet, Flint, Mich. Filed Aug. 5, 1926. Serial No. 127,431. 1 Claim. (Cl. 176—34.)

In an electric bulb of the character described, a body having a non-light emitting portion lying concentrically substantially over the entire forward end of the bulb and extending longitudinally of the wall of said body in a direction toward its rear end, said portion being gradually tapered from the forward to the rear end of the body.

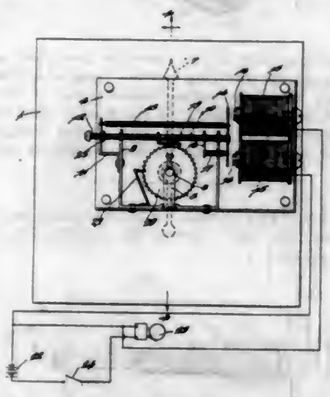
---

1,691,833. FASTENER. EARL VOSBURG, Ada, Mich. Filed Mar. 26, 1927. Serial No. 178,741. 2 Claims. (Cl. 292—113.)

1. A fastener of the character described comprising a body plate, means for securing said body plate to a closure, a bail pivotally secured to said body plate and having the free ends of its arms formed with eyes, a substantially U-shaped in cross section handle pivotally secured to said arms through the medium of the eyes thereof, a pin transversing said handle, a coil spring pivotally secured to said pin and adapted to be received in the handle which acts as a housing therefor, and a penetrating means secured to said coil spring for gripping the frame of the closure.

---

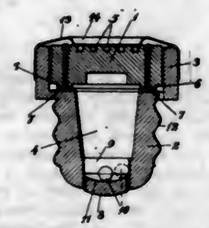
1,691,834. POWER-TRANSMISSION MEANS. BENJAMIN O. WARD, Cheoah, N. C. Filed May 25, 1928. Serial No. 280,587. 2 Claims. (Cl. 74—34.)



1. Transmission means of the class described comprising a shaft, means for rotatably supporting the shaft, a pair of brake drums rotatably mounted on the shaft, a pinion on the shaft connected with one of the drums, a second pinion on the shaft loosely associated with the other drum and fastened to the shaft, a hollow shaft rotatably mounted on the first shaft, a pinion at each end of the hollow shaft, these pinions being of the same size and oppositely arranged to the first mentioned pinions, planetary gearing keyed to the first shaft and meshing with one of the pinions of the hollow shaft and with the pinion which is connected with its drum, planetary gear-

ing meshing with the other pinion of the hollow shaft and with the pinion which is keyed to the first shaft, means for applying power to one shaft and take-off means connected with the other shaft.

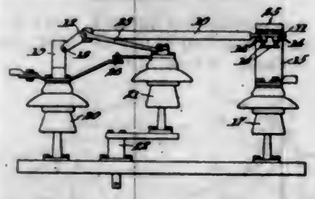
---



1,691,835. REGISTER. JESSE S. WINER, Sturgis, Mich. Filed Mar. 27, 1925. Serial No. 18,896. 1 Claim. (Cl. 177—328.)

In combination, a body plate having a dial on one face thereof, an indicator movable over the face of the dial, a supporting member carried by the body plate, a U-shaped bracket, a rotatable shaft supported by said bracket and carrying said indicator, another substantially U-shaped bracket, a rod slidably supported by said last mentioned bracket, an arm on said rod, a pin on said rod adapted to extend through an opening in one leg of said bracket whereby rotation of said rod may be prevented, a ratchet wheel mounted on said shaft, a pawl on said rod adapted to engage said ratchet wheel, a pawl adapted to prevent retroactive movement of said ratchet wheel, electromagnets, an armature on the end of said rod, means for supporting said electromagnets such that when energized they will attract said armature, a spring adapted to be expanded by said attraction of said armature on said rod whereby said rod will be moved to cause said pawl to move said ratchet after said magnets have been deenergized after they have attracted said armature whereby said indicator will be moved over said dial in a step by step manner, a bracket carried by a leg of said second named U-shaped bracket, and an adjustable screw carried by said bracket adapted to engage the end of said rod whereby movement of said rod as caused by said spring may be limited.

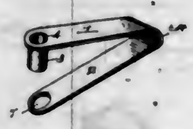
---



1,691,836. ELECTRIC CIGAR AND PIPE LIGHTER WITH EXCHANGEABLE INCANDESCENT BODY. HEINZ AGATZ, Berlin-Friedenau, Germany. Filed Apr. 6, 1926. Serial No. 100,128, and in Germany Apr. 7, 1925. 3 Claims. (Cl. 200—52.)

3. In a circuit closer a hollow circular body, a conductor sleeve carried thereby, a conductor ring held within the hollow body adjacent one end thereof, and having electrical connection with the conductor sleeve, a base contact member closing one end of the hollow body and disposed in close relation to the conductor ring and constituting the other terminal of said electrical circuit, the inner face of the base contact member being concave, and a spherical circuit closing element resting on the concave face and normally retained by gravity in a central position thereon where it will not contact with the conductor ring, the circuit closing element being movable to positions to engage the ring and base contact member at the same time to complete an electric circuit upon tilting the body with respect to the vertical.

---

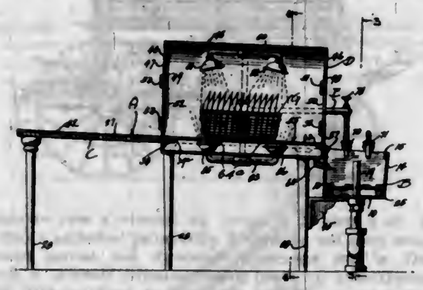


1,691,837. HIGH-TENSION SWITCH MECHANISM. DAVID BEATTIE, Greensburg, Pa., assignor to Railway and Industrial Engineering Company, Greensburg, Pa., a Corporation of Pennsylvania. Filed Jan. 13, 1926. Serial No. 81,027. 5 Claims. (Cl. 200—48.)

1. In switch mechanism, the combination with contact elements disposed for cooperation with a horizontally movable switch blade, of a switch arm defining at one end a blade portion and pivotally supported at its other end for movement in a horizontal plane and in a vertical plane, and means adapted to rotate said switch arm and operative to move the arm in a horizontal direction into and out of contact with the contact elements and in a vertical direction during the balance of the opening and closing movement.

---

1,691,838. ANIMAL TAG. CHARLES RALPH BOSHART, Lowville, N. Y. Filed Sept. 19, 1925. Serial No. 57,325. 1 Claim. (Cl. 40—3.)

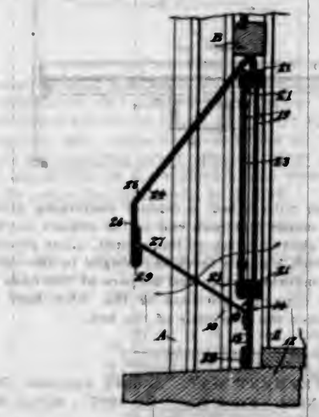


An animal marker comprising a flexible element bent intermediate its ends to form upper and lower members to provide a loop, the free extremity of the upper members being formed with an opening, a sleeve of uniform diameter surrounding said opening and extending therefrom, the free extremity of the lower member being formd with an opening through which said sleeve is adapted to project and sufficiently beyond the exterior surface thereof for crimping purposes, a seal embodying a head and a shank, the head being adapted to contact the exterior surface of the upper member and the shank extending through the sleeve and the opening in the lower member to the exterior thereof, the free end of the shank being formed with a head of sufficient diameter to overlie the crimped end of said sleeve, said head cooperating therewith to maintain the upper and lower members in interlocked parallel relation.

---

1,691,839. DISHWASHING APPARATUS. LANGDON CASKIN, Haverford, Pa. Filed Dec. 22, 1925. Serial No. 77,086. 7 Claims. (Cl. 141—9.)

1. Dish washing apparatus comprising a trough, drain means for the trough, a spray cabinet, having a bottom, a tray for the spray cabinet disposed in a plane substantially above the said bottom and the trough, said spray cabinet having an entrance opening adjacent the trough and facing the same and an exit opening at its opposite end aligning with the entrance opening and likewise disposed above said tray, means for spraying water in said

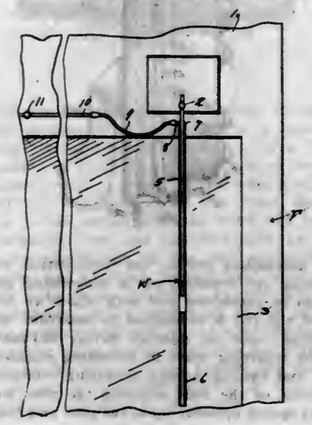


cabinet upon articles passing therethrough, a table outwardly of the exit opening of the spray cabinet for receiving dishes as they exit from said exit opening, said table and spray cabinet bottom inclining towards and each directly extending to the trough for drain of water thereinto.

---

1,691,840. WINDOW VENTILATOR. FRANK M. CRUMLEY, Urbana, Ind., assignor, by direct and mesne assignments, of one-third to Gilbert Grandstaff and one-third to E. V. Sholty, Urbana, Ind. Filed Nov. 27, 1926. Serial No. 151,120. 7 Claims. (Cl. 98—99.)

1. A ventilator for the purpose set forth comprising a pair of interfitted extensible sections, each of said sections consisting of a pair of spaced, superposed plates, a screen panel extending across the space between said plates, vertically and longitudinally extending means secured to the plates for fixedly securing the panel in position, said vertically extending means, connecting the plates together at the ends thereof, and an angle shaped canopy extension projecting from one of said plates and opposing and spaced from said panel.

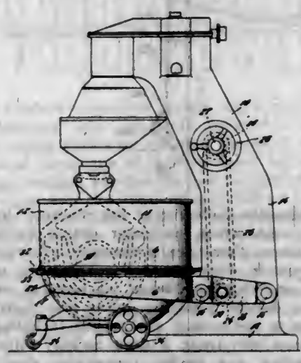


---

1,691,841. PROCESS FOR PRODUCING PURE LEAD CARBONATE FROM CRUDE LEAD SULPHATE. RENÉ DALOZE, Uccle, Brussels, Belgium. Filed Oct. 18, 1926, Serial No. 142,527, and in France July 3, 1926. 3 Claims. (Cl. 23—69.)

1. A process for the manufacture of pure lead carbonate, comprising the steps of treating crude lead sulphate (for example, slime, from lead chambers) with a solution of alkali-earth metal acetate the bases of which form insoluble sulphates such as calcium acetate, barium acetate, etc., in excess to effect a double decomposition between the lead sulphate and said alkali-earth metal acetate, separating the resulting solution from the insoluble matter (comprising insoluble alkali-earth metal sulphate derived from the said double decomposition), treating the separated solution with an alkali-earth metal base; and decomposing by carbon dioxide the tri-basic lead acetate formed in solution, to precipitate lead carbonate.

---

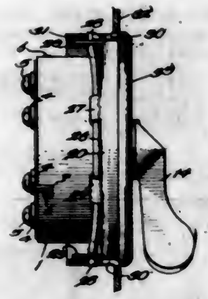


1,691,842. WINDSHIELD-WIPER HEATER. JOSEPH C. DAMUSH, Shenandoah, Pa. Filed Feb. 18, 1928. Serial No. 255,457. 1 Claim. (Cl. 15—255.)

In combination with a windshield wiper including a wiping element movable across a face of a windshield, tubes extending along opposite sides of the wiping element and having their outer ends closed, the walls of the tubes having jet openings disposed toward the adjacent surface of the windshield, a return bend connecting the inner ends of the tubes and constituting a continuation thereof, a nipple extending outwardly from the bend and in communication therewith, and means for delivering a heated fluid within the tubes through the nipple for discharge through the jet openings upon the adjacent surface of the windshield.

---

1,691,843. MIXING MACHINE. WALTER F. DEHUFF, Glen Rock, Pa. Filed June 10, 1927. Serial No. 197,932. 11 Claims. (Cl. 259—93.)



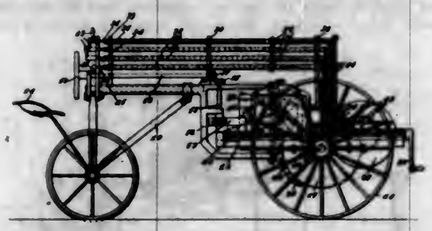
2. In a mixing machine, a frame, relatively movable saddle arms carried by the frame, a mixing bowl adapted to be supported by said arms, means to move the saddle

arms relatively inward and outward to engage or release the bowl and interengaging means on said arms and bowl whereby engagement of the saddle arms with the bowl will elevate said bowl, and position the same to receive the mixing mechanism of the mixing machine.

---

1,691,844. ATTACHING MEANS FOR CASINGS. HARRY A. DOUGLAS, Bronson, Mich. Filed Aug. 2, 1926. Serial No. 126,730. 1 Claim. (Cl. 248—30.)

In an assembling device, the combination with an arcuate spring rod terminating in assembling pins; of an element to be assembled and with which an intermediate portion of the rod is assembled to constrain the rod into one position; and an element having bayonet channels having pin receiving seats in actuating engagement with the pins and thereby having actuating relation with the end portions of the rods carrying the pins whereby the rod exerts spring pressure upon the pins and the pin seats.



---

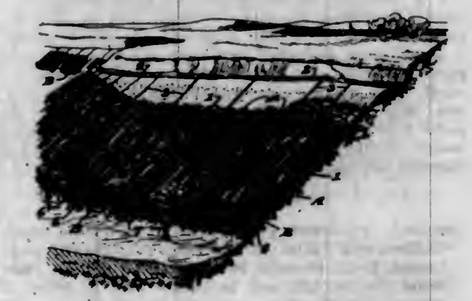
1,691,845. DIRECTION INDICATOR FOR VEHICLES. ANDREW GALLEY, Buffalo, N. Y. Filed June 16, 1928. Serial No. 286,015. 7 Claims. (Cl. 116—43.)

1. In a direction indicator of the character herein described, in combination, an outer casing having front and rear windows diametrically disposed, a rotatable drum having oppositely disposed similar signaling means of translucent material, and means for rotating said drum to bring any desired signaling means into registry with the openings in the casing, said means including a cord extending from the drum, a fixed member adjacent the driver's position and having converging slots therein, a rotatable member in said fixed member and connected with the cord, and a handle on said rotatable member extending thru and movable along said slots.

1,691,846. TRACTOR. HENRY R. HALVORSEN, Finley, N. Dak. Filed Oct. 5, 1927. Serial No. 224,217. 2 Claims. (Cl. 180—77.)

1. In a tractor, a clutch, an operator's seat arranged remote from the machine, a differential including a driven shaft, a disk associated therewith and having spaced concentrically arranged gears mounted thereon, a drive shaft, pinions mounted thereon and meshing with said concentric gears, a sliding clutch mounted on the drive shaft for each pinion, means for selectively operating said clutches from a point adjacent the seat, to regulate the speed and direction of movement of said tractor, means for steering the tractor, and a clutch operating shaft controlled from said seat.

---



1,691,847. TABLE AND DRAWERS FOR BEDS. MINNIE EVA HENDRICKS, Greenville, S. C. Filed Nov. 16, 1927. Serial No. 233,715. 1 Claim. (Cl. 5—308.)

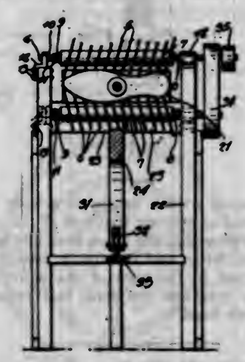
In combination with a bed, a cabinet containing drawers, a U-shaped member at each end of the cabinet having its bight spaced above the top of the cabinet, a bar pivoted to each end of each bight, a latch bar hinged to the outer end of the first mentioned bar and keepers at the ends of the cabinet for engaging portions of the latch bars to hold the parts over the side rails of the bed.

---

1,691,848. REVETMENT MAT. AUGUST JOHNSON, Nebraska City, Nebr. Filed Sept. 10, 1927. Serial No. 218,708. 2 Claims. (Cl. 61—38.)

1. A revetment-mat having a plurality of fascines, cables passing around the fascines to secure them together, a fascine transverse to and superposed on the first mentioned fascines adjacent the lower longitudinal edge of the mat to retain ballast, said cables having loops securing the transverse fascine to the first mentioned fascines.

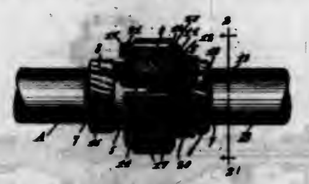
---



1,691,849. TYPOGRAPHICAL MACHINE. GEORGE P. KINGSBURY, Hollis, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed June 22, 1927. Serial No. 200,521. 18 Claims. (Cl. 199—45.)

1. In a linotype machine, a series of movable main magazines and a series of movable auxiliary magazines, in combination with power-actuated means for bringing any selected magazine of either series into operative position, together with means for establishing an operative connection between said power-actuated means and either series of magazines, or for rendering said means inactive upon both series simultaneously, as desired.

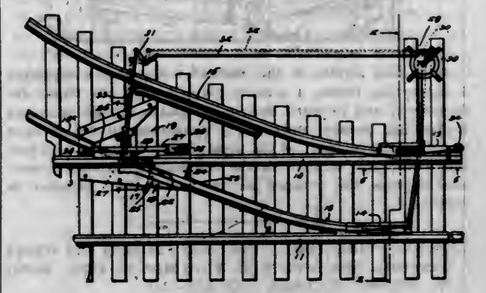
---



1,691,850. WOODWORKING APPARATUS. GEORGE KRASNOSKY, Pensacola, Fla. Filed July 16, 1927. Serial No. 206,224. 5 Claims. (Cl. 144—236.)

1. In a woodworking apparatus, a rotatable driving and supporting shaft, a gang of disk cutters of different diameters mounted obliquely of and in spaced parallel relation upon said shaft to be driven by the latter, certain of said cutters further being of non-circular form, and embodying similar peripheral cutting teeth projecting outwardly for different distances into a circular cutting zone, concentric with the axes of the said certain cutters and defined by circular lines intersecting the inner and outer ends of the teeth which project outwardly for the greatest distance.

---

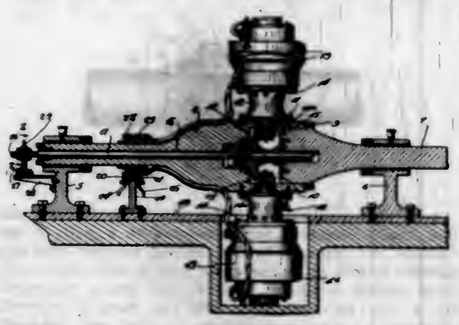


1,691,851. SELF-TIGHTENING PIPE UNION. GEORGE A. MCCUEAN, Sharpsburg, Pa. Filed Oct. 29, 1926. Serial No. 145,080. 2 Claims. (Cl. 285—122.)

1. A pipe coupling comprising interiorly threaded male and female members for connection to a pair of pipe sections and arranged in end opposed relation, said male member formed at its inner end with a head and said female member formed at its inner end with a rim providing a seat for said head, said rim being peripherally threaded, a collar surrounding the head and threadedly engaging with the rim and provided with an inwardly extending annular flange at one end surrounding said male member and abutting against said head and provided with lengthwise extending tangentially disposed peripheral notches, and a tensioning device surrounding said female member, anchored at one end thereto and having at its upper end a U-shaped stirrup selectively engaging in said notches and abutting against the ends of said collar to prevent a loosening rotation of said male and female members relatively to each other.

---

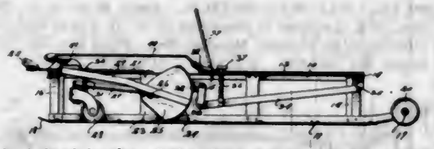
1,691,852. RAILWAY SWITCH. JOHN MCMURTNY, Mission, Tex., assignor of one-third to W. H. Parks and one-third to A. H. Strahle, Mission, Tex. Filed Dec. 28, 1927. Serial No. 243,191. 6 Claims. (Cl. 246—383.)



1. A frogless cross-over switch mechanism comprising in combination with the main rails of a right-of-way, tapered switch points for coaction therewith one of which is arranged outwardly of the associated rail and when in switching position overlies the rail, a pair of castings arranged upon opposite sides of said rail at points spaced from said switch point, said castings having their upper faces co-planar with the head of the rail, a rail section connected to the other of said switch points and extending to the casting disposed between the rails, the head of said rail sections extending above the upper surface of the casting, a second rail section secured to the other of said castings and aligning with the first named rail section, the second rail section likewise having its head extending above the surface of its casting, a switch point pivoted to the last named casting and movable from a position where it parallels said main rail of the right-of-way to a position where it extends over said main rail and bridges the

gap between the heads of said rail sections and means upon one of the castings engaging the outer face of said switch point to limit movement thereof when in the last named position.

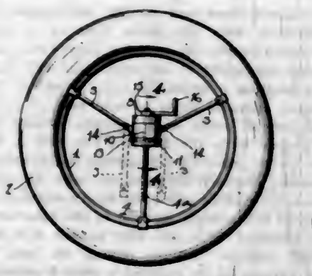
---



1,691,853. ROTARY ELECTRIC ENGINE. ERROL M. MOLLETT, Sacramento, Calif. Filed Dec. 22, 1927. Serial No. 241,840. 5 Claims. (Cl. 172—36.)

1. The combination with a chambered rotary drive shaft, of a stationary track gear in the chamber of said shaft, an electric motor fixed on said shaft with its armature shaft arranged radially to said drive shaft and projecting into the chamber of the latter, a pinion carried by the armature shaft of said motor and engaged with said stationary track gear, and electric connections to said motor.

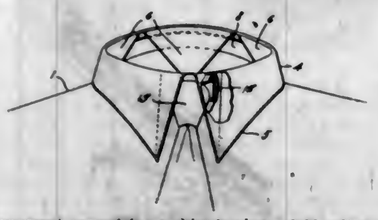
---



1,691,854. LAND LEVELER. EDWARD OVERMAN, Los Angeles, Calif. Filed Dec. 22, 1927. Serial No. 241,910. 14 Claims. (Cl. 37—150.)

1. A land leveler of the character described comprising a supporting frame, a scraper pivoted upon the frame for downward and forward movement, and a ground engaging controlling member operatively connected to the scraper and disposed in front of the pivotal center thereof and acting to lift the scraper as the controlling member lowers and depress the scraper as the controlling member is raised.

---



1,691,855. TIRE TOOL. BERNARDO POLISENA and HENRY CAMPEDEL, New York, N. Y. Filed Mar. 30, 1928. Serial No. 265,940. 2 Claims. (Cl. 157—1.)

1. In a tire tool, a plurality of radial arms having rim engaging heads at their outer ends, one of said arms being threaded, a block threaded thereon, having a reduced annular neck, a collar rotatable on the reduced neck, a bottom plate threaded on the arm and having a key-shaped recess in its upper face, a key-shaped extension on the lower end of the block received in the recess cross-pins for locking the bottom plate to the block and retaining the collar in position, a pivotal connection between the collar and other arm, and means for rotating the block and plate.

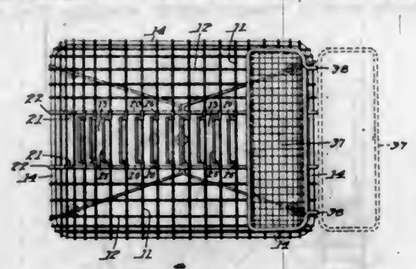
---

1,691,856. COLLAR. MAURICE ROBBINS, Boston, Mass. Filed Dec. 13, 1927. Serial No. 239,732. 1 Claim. (Cl. 2—116.)

A garment comprising a shirt having a fold collar around the neck portion thereof, the inner fold of the collar having its lower edge stitched to the neck portion of the shirt, and the outer fold of the collar having its lower edge stitched to both the neck portion and front of the shirt, the inner fold, at the open front of the collar having extending portions which are designed to be connected and which have openings therethrough inward of the confronting ends of the outer fold for the passage of the band of a necktie, and stiffening and reinforcing tabs stitched to the inner fold of the collar and to the inner face of the shirt below the neck portion thereof and between which tabs and the inner fold of the collar the strap of the necktie is guided.

---

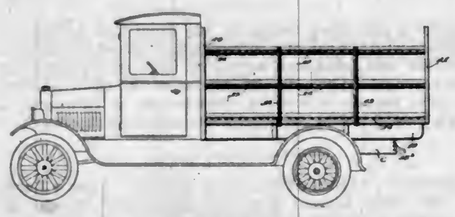
1,691,857. ATTACHMENT FOR PAINTBRUSHES. PAUL A. ROSAI, Campbell, Ohio. Filed Apr. 3, 1928. Serial No. 267,018. 1 Claim. (Cl. 15—248.)



The combination with a brush, of a split band spaced from and adapted to encircle the head of the brush, a compressible strip connecting the brush head and band adjacent one edge of the latter and defining a trough, and means pivotally attached to the ends of the split band to connect said ends, compress the strip and clamp the latter around the brush head.

---

1,691,858. DISH DRAINER. EUGENE H. RYERSON, Worcester, Mass. Original application filed Apr. 27, 1923, Serial No. 635,141. Divided and this application filed Oct. 8, 1926, Serial No. 140,361. Renewed Sept. 15, 1928. 1 Claim. (Cl. 141—11.)



As an article of manufacture, a dish drainer comprising a bottom having a series of transverse wires with spaces between them and a plate rack mounted above the bottom, having a series of upwardly extending looped wires for separating the plates from each other and engaging them near their centers to hold them in upright position, said rack having transverse wires forming a series of spaces

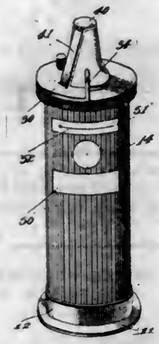
in the bottom registering with the spaces in the bottom of the dish drainer and spaced therefrom whereby a series of dish drainers can be nested together without removing the racks, the looped wires of each dish drainer projecting through the bottom of the one above.

---

1,691,859. TRUCK BODY. FRED SCHELBEN, Greenville, Miss. Filed Sept. 28, 1927. Serial No. 222,596. 5 Claims. (Cl. 296—3.)

1. A truck body comprising longitudinally extending side channel beams, transverse skeleton trusses, supporting said side beams, transverse T-beam slats supported on said side beams, longitudinally extending T-beams supporting said slats intermediate their ends, and angled guard beams supported at each end of said transverse slats.

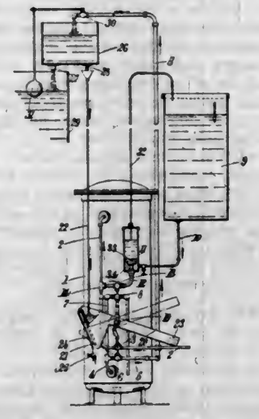
---



1,691,860. COMBINED LIGHTING AND IGNITION SYSTEM FOR AUTOMOTIVE VEHICLES. WILLIAM SCHMID, Coldwater, Mich., assignor to Caskey-Dupree Manufacturing Company, Coldwater, Mich., a Corporation of Ohio. Filed Nov. 22, 1924. Serial No. 751,638. 1 Claim. (Cl. 200—44.)

An electric switch including a casing, a rotatable contact actuating ring within said casing, the inner peripheral face of said ring having a recess formed therein providing a pair of spaced stop shoulders at the ends thereof, a member located within said ring and mounted on said casing for movement into and out of said recess whereby the ring has limited rotary movement when said member is disposed within said recess, and a lock controlling the movement of said member.

---

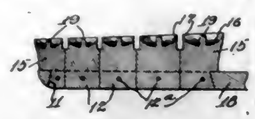


1,691,861. DISPENSING CONTAINER. HARRY S. STOUT, Huntington, W. Va. Filed Dec. 21, 1927. Serial No. 241,739. 4 Claims. (Cl. 221—79.)

1. A dispensing container comprising a barrel, a screw within the barrel, a piston having means engaging threads of the screw whereby rotation of the screw will cause movement of the piston longitudinally of the barrel, a dispensing head mounted for rotation on one end of the barrel and rigid with the screw, said head having a discharge passage for liquids, a closure for said passage, a lever pivotally connected with the head for moving the closure to an inoperative position, while providing means for manually rotating the head and likewise the screw.

---

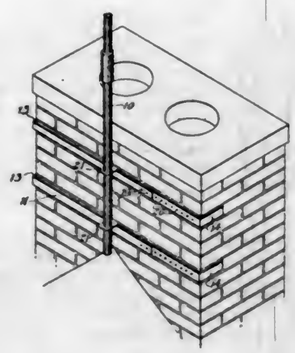
1,691,862. APPARATUS FOR THE SOFTENING OR PURIFYING OF WATER OR FOR CARRYING OUT PROCESSES BASED UPON EXCHANGE REACTIONS. ROBERT HUNTER THOMSON, Kingston-on-Thames, and HAROLD SYDNEY LAWRENCE, Ilford, England, assignors to United Water Softeners Limited, London, England, a British Company. Filed Mar. 15, 1928, Serial No. 261,858, and in Great Britain Mar. 11, 1927. 11 Claims. (Cl. 210—24.)



1. An apparatus for the treatment of liquid by a base exchange material, consisting of a container for the base exchange material, inlet and outlet pipes for the liquid to be treated connected to said container, a control valve arranged in said inlet pipe, a balance lever mechanism

linked to said valve, a receptacle mounted upon said mechanism, and means for supplying a predetermined proportion of the liquid flowing from the treating apparatus to said receptacle.

---

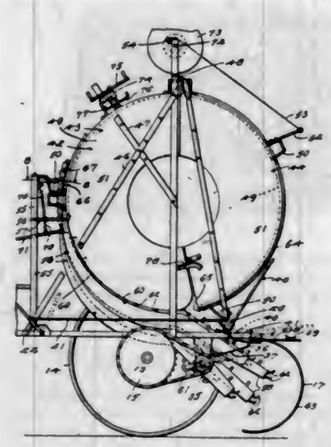


1,691,863. TOOTHBRUSH. ROBERT H. VAN SANT, Chicago, Ill. Filed Nov. 23, 1923. Serial No. 676,546. 1 Claim. (Cl. 15—188.)

A tooth brush of the class described, comprising a series of spaced moulded members having spherical depressions in the faces thereof, pointed projections in the center of said depressions, and sharp edged rims composed of a flexible material.

---

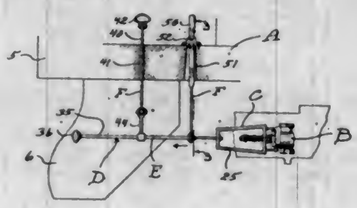
1,691,864. RADIO AERIAL SUPPORT. CARL WICKE, New York, N. Y. Filed Sept. 4, 1926. Serial No. 133,596. 3 Claims. (Cl. 248—38.)



2. A radio aerial mast support, including a pair of sections each having a rearwardly extending angularly disposed arm at the outer end and having the inner ends overlapped, the inner terminal of the innermost overlapped end having upper and lower outwardly projecting ears between which the other overlapped end is positioned, the said upper ear having an aperture snugly receiving the mast, and interengaging means on the overlapped ends of the sections engageable by relative movement of the sections toward each other into parallel contact for retaining the same against longitudinal or vertical movement, the said mast serving when positioned in the apertured ear to prevent lateral relative separation of the overlapped ends of the sections whereby to retain the connecting means in interengaged relation.

---

1,691,865. HAY-BALING DEVICE. JOHN M. WOLF, Devils Lake, N. Dak. Filed Feb. 4, 1928. Serial No. 251,957. 12 Claims. (Cl. 100—65.)



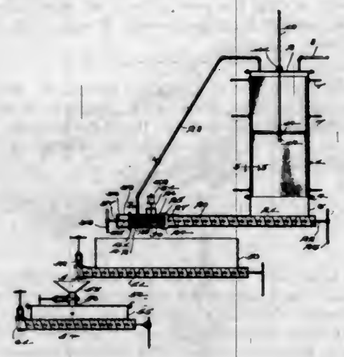
5. In a hay gathering and baling apparatus, a wheel supported platform, a rake supported thereby, a horizontally disposed bale forming drum supported by the platform and horizontally longitudinally split into two sections one of which is movable to permit discharge of a bale formed in the drum, said sections when in closed position having adjacent edges thereof at the lower ends spaced to form a mouth and means operating during movement of the machine conveying hay from the rake through said mouth to the interior of the drum and causing the same to move perimetrically of the drum, circumferentially extending tubes secured to the movable section of the drum and held against movement with relation thereto, longitudinally movable circumferentially extending tubes se-

cured to the other section of the drum and movable to engage with the end of a corresponding tube of the movable section, said tubes each having its inner wall slotted and in communication with the interior of the drum whereby a wire may be introduced therethrough to encompass a bale formed within the drum while contained therein.

---

1,691,866. VALVE-OPERATING MEANS. JOSEPH BENTLEY, Sioux Lookout, New Ontario, Ontario, Canada, assignor of one-half to Edwin Pierson, Sioux Lookout, New Ontario, Canada. Filed June 27, 1927. Serial No. 201,798. 9 Claims. (Cl. 137—139.)

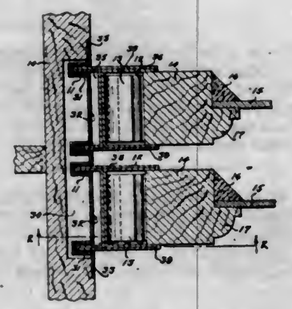
1. In a valve operating means, the combination with a valve including a rotatable stem projecting from the face of the valve body, of a yoke movably mounted on the stem for rotation thereof and having a keeper pin projecting from the inner end of the yoke for engagement with an abutment on the valve body, and spring means acting upon the yoke for normally urging the same toward the valve body and the keeper pin to a position for engagement with the abutment on the valve body.



---

1,691,867. FILTER. CHARLES ST. CLAIR BURNS, Port Arthur, Tex., assignor of one-half to Foist Kay, Port Arthur, Tex. Filed Jan. 23, 1926, Serial No. 83,403. Renewed Sept. 28, 1928. 7 Claims. (Cl. 210—183.)

1. A filter including a closed filtering chamber, filtering means therein, means for supplying fluid to be filtered to the chamber, means for cleaning off the excess solids from the filtering means, means for discharging said solids, having a discharge outlet, a valve cooperable with the outlet

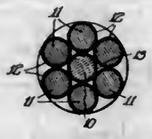


for controlling the discharge of the solids, one side of the valve being subjected to the pressure within the chamber exerted through the solids being discharged, means for

subjecting the opposite side of the valve to the pressure within the chamber, and yieldable means tending to close the valve.

---

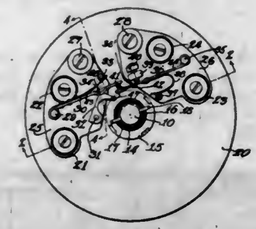
1,691,868. FRAME AND SASH CONSTRUCTION. AXEL G. DAWSON, Jamestown, N. Y. Filed Apr. 26, 1927. Serial No. 186,764. 2 Claims. (Cl. 20—5.2.)



1. The combination with a frame having a plate secured thereto, said plate being provided with a plurality of recesses; of a sash provided with adjustable sleeves and take up members, said sleeves being each provided with two oppositely faced longitudinal pockets formed from continuous flanges, the edge of said sash being slidably engaged within one of said pockets in said sleeve, said continuous flanges removably engaging certain of said recesses in said plate and said take up member operably secured within said sash receiving pocket between said sleeve and said sash, whereby said sleeve may be shifted longitudinally of said sash and said sash caused to reciprocate in said pocket.

---

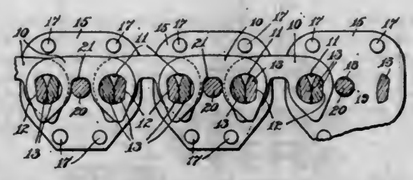
1,691,869. ELECTRICAL CONDUCTOR. FRANK F. FOWLE, Chicago, Ill. Filed July 3, 1924. Serial No. 723,863. 16 Claims. (Cl. 173—13)



1. A composite electrical conductor comprising two metals, one having the quality of relatively high electrical conductivity and the other being an iron-base metal of relatively great mechanical strength and containing at least as much as thirty hundredths per cent content of

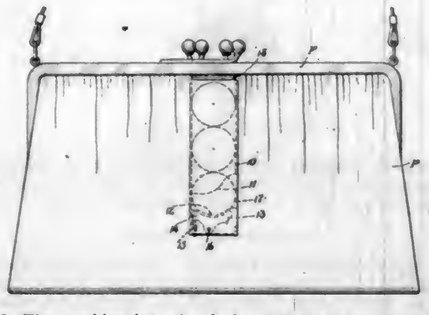
chemically combined carbon, said iron-base metal being so disposed in the body of the conductor that the metal of high conductivity is substantially enclosed thereby.

---



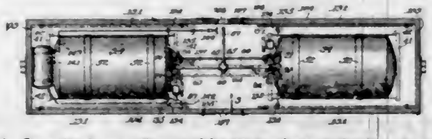
1,691,870. IGNITION DEVICE. GEORGE GADKE, Philadelphia, Pa., assignor to William Gadke, Philadelphia, Pa. Filed Feb. 25, 1922. Serial No. 539,066. 12 Claims. (Cl. 200—30.)

2. In an ignition device, a timer shaft, a cam mounted thereon and insulated therefrom, means for driving the cam by the timer shaft, a bearing for the timer shaft, terminal plates on the bearing insulated therefrom, stiff contact members on the terminal plates spring pressing into contact engagement, an adjustable stop for the position of one of these contact members and a pivoted stiff member on one terminal plate engaging the cam on one side and the other contact member on the other to separate the contact members from engagement.



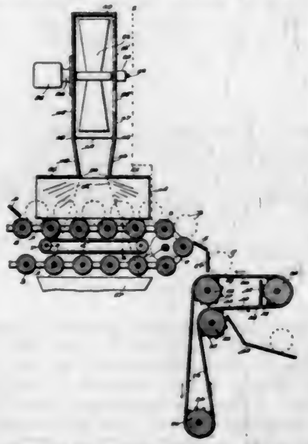
---

1,691,871. DRIVING BELT. MILTON O. REEVES, Columbus, Ind.; Paul B. Reeves, administrator de bonis non of said Milton O. Reeves, deceased, assignor to Reeves Pulley Company, Columbus, Ind., a Corporation of Indiana. Filed July 23, 1924. Serial No. 727,838. 7 Claims. (Cl. 74—32.)



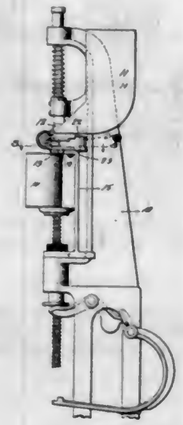
1. A drive belt comprising a plurality of pressure bars each consisting of a plurality of links and a centrally located bridge rod extending between the outer links and engaging the same to limit approach of said outer links and passing through the intermediate links laterally of the bar, connecting series of links between and interdigitated with links of adjacent pressure bars, and means connecting the pressure bar links and interdigitated links.

1,691,872. HAND BAG AND SIMILAR ARTICLE OF LUGGAGE. ABRAHAM MELVIN SIMS, Brooklyn, N. Y. Filed Jan. 7, 1928. Serial No. 245,060. 5 Claims. (Cl. 150—37.)



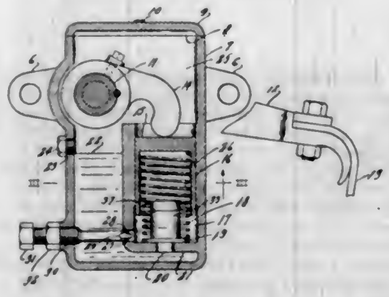
1. The combination of a body of a hand-bag, a puller hinged to said body, said puller having a hollow body, a series of coins in said hollow body and means by which said coins may be successively removed.

1,691,873. RAILWAY CAR. ROBERT R. WEAVER, Chicago, Ill., assignor to General American Tank Car Corporation, Chicago, Ill., a Corporation of West Virginia. Filed Nov. 21, 1924. Serial No. 751,260. 13 Claims. (Cl. 105—358.)



1. In a tank car, the combination of an underframe comprising a center-sill structure, a unitary cradling structure having a centrally-disposed depending portion superposed on, and connected with, said center sill, a platform carried by said underframe and extending beneath the side portions of said cradling structure substantially to said depending portion, a tank mounted on said cradling structure, and a tank band engaging said tank and connected at its ends to said cradling structure.

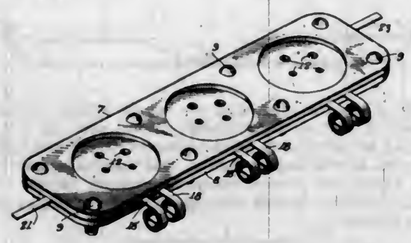
1,691,874. FRUIT-DRYING MACHINE AND METHOD. EDWARD A. WHITE, Lewiston, Idaho. Filed Jan. 27, 1928. Serial No. 249,979. 12 Claims. (Cl. 34—12.)



1. In a fruit drying apparatus, a carrier for relatively slowly advancing wet fruit to be dried, fan means for directing an undivided drying air blast stream free from abutting interference onto a relatively limited number of all the fruit integers being advanced and in one general direction thereagainst, and mechanism for causing relative rapid turning movement of those advancing fruit integers which are directly within the zone of said air blast stream to insure exposure of total peripheries of such fruit to said blast stream.

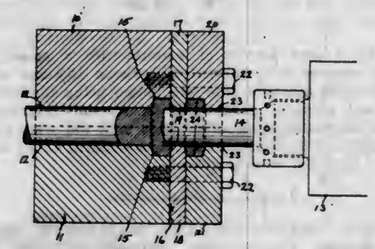
1,691,875. CAPPING MACHINE. GEORGE A. WILLIAMS and ROLAND E. HILL, Decatur, Ill., assignors to Williams Sealing Corporation, Decatur, Ill., a Corporation of Illinois. Filed Oct. 11, 1926. Serial No. 140,741. 4 Claims. (Cl. 226—129.)

4. In a device of the kind described, the combination with means for raising and lowering a container, of a pair of movable gripping jaws carried by and movable with said means, and stationary means for causing said jaws to move toward and away from each other as said raising and lowering means moves up and down.

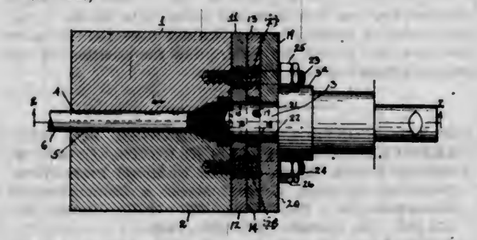


1,691,876. REBOUND-DEVICE RELIEF VALVE. ERNEST W. ACKERMAN and GRIFFITH C. NICHOLSON, Monroe, Mich., assignors to Hydro-Check Corporation, Monroe, Mich., a Corporation of Michigan. Filed Dec. 13, 1926. Serial No. 154,428. 6 Claims. (Cl. 267—8.)

1. A dash-pot device comprising a piston and cylinder, a first port for one thereof to said cylinder, a flanged member at said port having a tubular portion therefrom as a guide and provided with a lateral second port from the cylinder spaced from the first port by a region in said cylinder, a plunger directed by said guide in its movement to open and close said second port, and a spring normally urging the plunger to shut off communication between said ports.

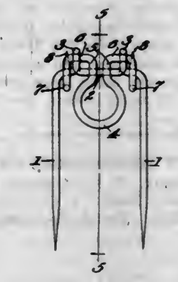


1,691,877. VACUUM-TUBE SOCKET. MILTON ALDEN, Springfield, Mass., assignor to Alden Manufacturing Company, Brockton, Mass., a Corporation of Massachusetts. Filed June 11, 1926. Serial No. 115,381. 8 Claims. (Cl. 173—328.)



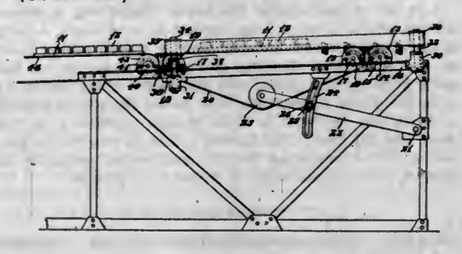
1. A socket construction comprising two plates secured together flatwise and having registering apertures for the pin of a tube, one of said plates having a recess at one edge of its aperture and a spring contact strip having a shank clamped between said plates, an arched portion located in said recess, and a contact tip portion having its free end extending into one of the apertures.

1,691,878. METAL WORKING. JOHN R. BLAKESLEE, Cleveland, Ohio, assignor to The Ajax Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 11, 1923. Serial No. 656,881. 2 Claims. (Cl. 78—61.)



1. In a mechanism of the character described, the combination of relatively movable dies having complementary gripping recesses of substantially uniform diameter formed in their inner faces, two mutually equal-diametered sets of enlarged gripping recesses of substantially uniform diameter formed at one end of said gripping recesses; a punch plate separating said sets of enlarged recesses; and a punch co-operating with said dies and said punch plate.

1,691,879. FORGING MECHANISM. JOHN R. BLAKESLEE, Cleveland, Ohio, assignor to The Ajax Manufacturing Company, Euclid, Ohio, a Corporation of Ohio. Filed Apr. 5, 1924. Serial No. 704,368. 3 Claims. (Cl. 78—61.)



1. In mechanism of the character described, the combination of relatively movable die-members having complementary recesses formed in their juxtaposed faces adapted to fit around a stock bar, and two sets of enlarged recesses at the forward end of such first-named recesses, such enlarged recesses having approximately the shape of the article desired; plates movable towards and from the forward faces of said die-members and forming one confining wall for the adjacent set of enlarged recesses; and a punch co-operating with said die-members and carrying a collar adapted to engage said plates and force the same against said die-members.

1,691,880. HINGED-PIN FASTENER. GEORGE BODEN and GEORGE A. KING, Waterbury, Conn., assignors to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Mar. 8, 1928. Serial No. 260,104. 5 Claims. (Cl. 24—150.)

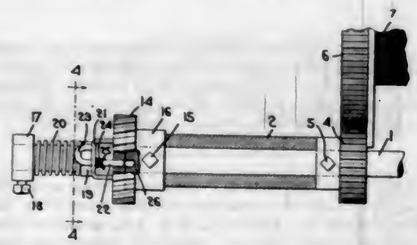
1. A snap fastener element comprising a resilient socket member provided with the pintle members of a hinge, and a double-pointed pin having a head provided with eyes serving as knuckles in which the socket member by means of its pintle members is hingedly mounted.

1,691,881. OFF-BEARING CONVEYER. CLAUD E. FULLER, New York, N. Y., assignor to New York Brick Handling Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 18, 1927. Serial No. 176,493. 1 Claim. (Cl. 198—19.)

In an improved conveying apparatus, the combination with a feeding conveyer, of a take off belt associated therewith, said take off belt being inclined and with a portion adjacent the feeding conveyer higher than the delivery end thereof and an elevated platform arranged adjacent and parallel to the take off belt, said elevated platform lying parallel to the upper reach of the take off belt.

1,691,882. PROCESS OF PRODUCING THICKENED LUBRICATING OIL. ROBERT W. HENRY, Port Arthur, Tex., and ELFORD D. STREETER, Bayonne, N. J., assignors to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Mar. 24, 1926. Serial No. 97,116. 7 Claims. (Cl. 87—9.)

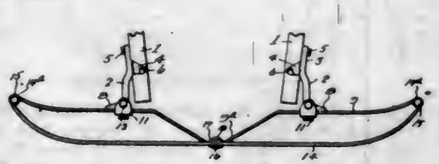
6. The process of preparing a thickener for mineral castor oils which comprises making a basic aluminum soap and a less basic aluminum soap, and mixing to form a product of the desired fatty acid to aluminum ratio.



1,691,883. BANK-SCREEN-LIGHTING DEVICE. PAUL M. HOTCHKIN, Chicago, Ill., assignor to Curtis Lighting, Incorporated, Chicago, Ill., a Corporation of Illinois. Filed June 19, 1923. Serial No. 646,377. 16 Claims. (Cl. 240—4.)

1. A fixture of the class described, comprising front and rear walls, end caps into which said front and rear walls are fitted, the lower edges of the front and rear walls affording an opening at the bottom of the fixture, light-transmitting panels arranged at said opening for closing the same, a mullion arranged intermediate the end caps and affording support for the front and rear walls intermediate of the end caps, the adjacent ends of the light-transmitting panels being supported by said mullion, and illuminating units within the fixture.

---



1,691,884. LET-OFF MECHANISM FOR LOOMS. IVEY O. HUCKS, Rosemary, N. C., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 14, 1927. Serial No. 226,105. 3 Claims. (Cl. 139—110.)

1. A let-off mechanism for looms comprising a transmitting shaft, a warp beam geared to said shaft, a pair of spaced collars fast on said shaft, a driven pinion loose on the shaft and abutting one collar, a spring on the shaft between the pinion and the other collar acting to force the pinion against the first collar, the pinion having a clutch pin mounted to slide therein parallel with the shaft and the first collar having a hole to receive the pin, and a spring engaging the pin and acting normally to force it into, and maintain it seated in, said hole.

---

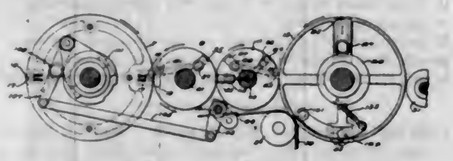
1,691,885. BUMPER-SUPPORTING MEANS. HERBERT S. JANDUS, Detroit, Mich., assignor to The C. G. Spring and Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Sept. 7, 1926. Serial No. 134,051. 9 Claims. (Cl. 293—55.)

6. The combination, with a bumper bar, of a support arm therefor, said arm having an eye in its outer end portion and having a lateral extension adapted to engage the adjacent face of the bumper bar and provide an elongated or extended bearing therefor.

1,691,886. VEHICLE BUMPER. HERBERT S. JANDUS and ROBERT A. FLUM, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Nov. 30, 1927. Serial No. 236,754. 29 Claims. (Cl. 293—55.)

29. A bumper comprising an impact section including a pair of bars having vertically spaced portions, a reinforcing bar adapted to be connected at its end and middle portions to said impact section, said reinforcing bar having folded end connectors with apertures therein, and means passing through said apertures for clamping said bars together.

---

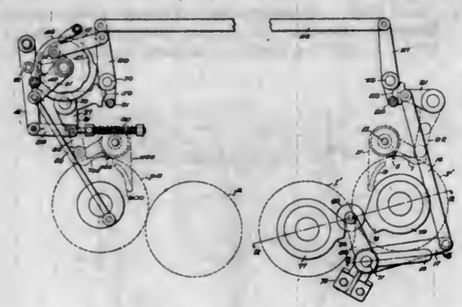


1,691,887. YARN-CUTTING MEANS FOR KNITTING MACHINES. HOWARD W. MATTHEWS, Lansdale, Pa., assignor to Dexdale Hosiery Mills, Lansdale, Pa., a Corporation of Pennsylvania. Filed Oct. 22, 1926. Serial No. 143,330. 6 Claims. (Cl. 66—107.)

6. As a new article of manufacture a special web holder adapted for co-operation between adjacent needles of a knitting machine, said web holder being characterized by a web engaging notch with an overshot retaining nib and a projection upstanding from said nib with a knife edge adapted for cutting float yarn incident to an inward thrust imparted to said holder.

---

1,691,888. SHEET-HANDLING MECHANISM. OTTO C. F. MEISEL, Boston, Mass., assignor to Meisel Press Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 25, 1926. Serial No. 131,368. 19 Claims. (Cl. 270—47.)

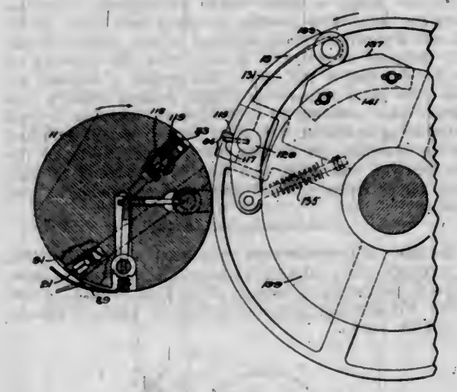


1. In a sheet handling mechanism a cylinder having a reciprocating pin-carrying rod therein and a plunger movable towards and from the center line of the cylinder having a surface acting against said rod to move the same and a cam for controlling the position of the plunger relative to such center line.

---

1,691,889. CONTROLLING MECHANISM FOR SUCCESSIVELY-ACTING PRINTING UNITS. OTTO C. F. MEISEL, Boston, Mass., assignor to Meisel Press Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 25, 1926. Serial No. 131,369. 23 Claims. (Cl. 101—76.)

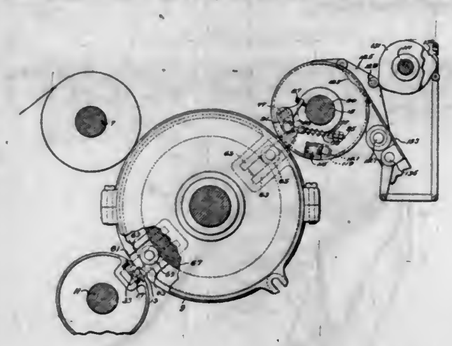
1. In combination with a pair of successive printing couples each having a periodically actuated mechanism associated therewith and a cam for actuating the mechanism, means to throw off the cam for one couple, a device for throwing off the cam of the second couple, mechanism for driving the same in timed relation to move-



ment of the couples and means actuated from said first throw-off means to render such driving mechanism effective.

---

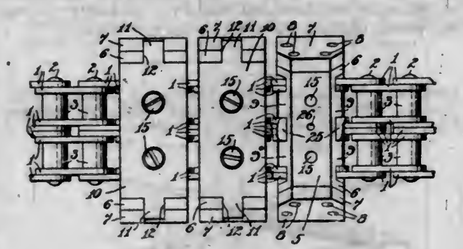
1,691,890. TUCKER. OTTO C. F. MEISEL, Boston, Mass., assignor to Meisel Press Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Original application filed Aug. 25, 1926, Serial No. 131,368. Divided and this application filed Dec. 20, 1927. Serial No. 241,371. 2 Claims. (Cl. 270—71.)



1. In combination with a tucker blade a carrier therefor having a slot wider than the thickness of the blade, the blade being held therein at its inner part spaced from a wall of the slot, and yielding means supporting the blade away from said wall.

---

1,691,891. SHEET-HANDLING MECHANISM. CHARLES A. MEISEL, Milton, Mass., assignor to Meisel Press Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 2, 1927. Serial No. 172,004. 4 Claims. (Cl. 270—60.)



1. In paper handling mechanism, an accumulating cylinder having reciprocating pins, a rock shaft longitudinal of the cylinder connected to said pins to reciprocate the same, a lever on the rock shaft at one end of the cylinder, a second rock shaft longitudinal of the cylinder, stripper arms carried thereby, a lever on the said second shaft at

the other end of the cylinder, followers on said levers, swinging arms cooperating therewith and a shaft adjacent the cylinder having cams for positioning said arms.

---

1,691,892. TRANSMISSION BELT. PAUL B. REEVES, Columbus, Ind., assignor to Reeves Pulley Company, Columbus, Ind., a Corporation of Indiana. Filed Mar. 5, 1926. Serial No. 92,393. 8 Claims. (Cl. 74—64.)

1. A drive belt comprising an endless series of pivotally connected links the pivotal bearing points of which are in axial alignment, two series of friction faces arranged in the edges of said belt, thrust receiving bridge members transversely spanning the tops and bottom of said links and having the friction faces secured thereto and means independent of said links for directly securing said bridge members to the pivots of said links.

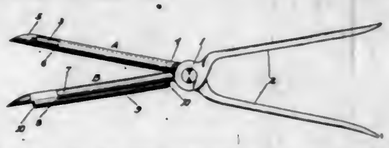
---

1,691,893. SAFETY LOCK. SVEN J. STRID, Chicago, Ill., assignor, by mesne assignments, to E. Payson Smith, Chicago, Ill. Filed Sept. 10, 1926. Serial No. 134,618. 3 Claims. (Cl. 85—5.)

2. A pin lock comprising a sheet metal member having a slot therein and the metal within said slot struck up to

form an integral bendable tongue, the metal defining said slot at opposite sides being corrugated diagonally to foreshorten said member and stiffen the side walls against longitudinal bending.

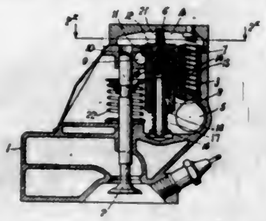
---



1,691,894. OVERSHOE. HERMAN WESTLING, Watertown, Mass. Filed Jan. 19, 1928. Serial No. 247,772. 3 Claims. (Cl. 36—5.)

1. An overshoe having a bellows top, two straps secured to the ankle portion of said top at opposite sides of the bellows portion thereof, said straps extending diagonally across the front of the overshoe and downwardly from the points at which they are secured to the overshoe and crossing each other approximately opposite the central part of the ankle, and fastening means for releasably securing said straps together where they cross each other.

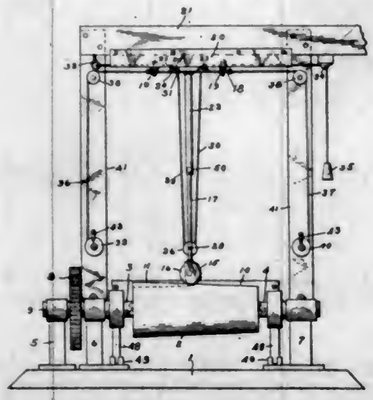
---



1,691,895. MARCEL IRON. DELBERT J. MARTIN, Sacramento, Calif. Filed Mar. 28, 1928. Serial No. 265,296. 3 Claims. (Cl. 132—32.)

1. A hair curling iron including a pair of cooperating jaws between which the hair to be curled is passed, means for moving the jaws into close relationship with each other, and means provided with the jaws for clamping engagement with the individual hairs when pressure is exerted against the jaws to tightly close the same.

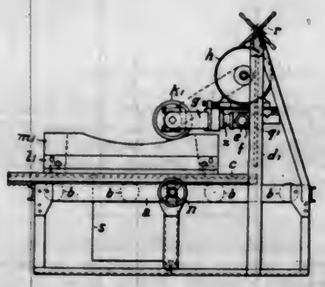
---



1,691,896. HYDRAULIC ACTUATING MEANS. WARREN NOBLE and LEON V. PITTMAN, Detroit, Mich.; said Pittman assignor to said Noble. Filed Apr. 11, 1927. Serial No. 182,667. 18 Claims. (Cl. 123—90.)

1. Means for bleeding air from a hydraulic fluid casing wherein fluid is subjected to pulsating pressure, comprising an outlet valve opening from a region of air accumulation in said casing, said valve being normally closed, a fluid supply manifold having a passageway to said casing, and valve-unseating means sensitive to pressure in the manifold in excess of that in said casing.

---

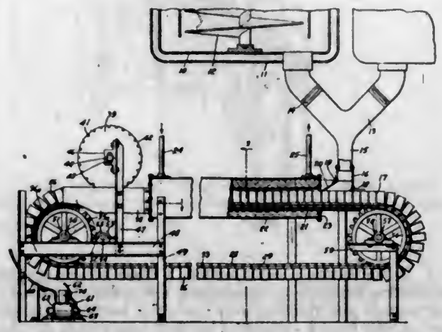


1,691,897. VENEER-LOG-SCORING MECHANISM. HENRY C. BREIDENBACH, Dayton, Ohio. Filed Nov. 17, 1926. Serial No. 148,881. 1 Claim. (Cl. 143—47.)

In a scoring device for veneer forming material, a circular saw, a motor for supporting and driving said saw, a hollow rod supporting said motor, said rod having a transverse slot through its walls adjacent its juncture with the motor, a hollow sleeve telescopically receiving said rod, a movable carriage to which said sleeve is attached, a sheave pivotally mounted in said transverse slot the diameter of which is greater than the diameter of said rod, whereby the sheave will project a distance beyond the walls of the rod, a cable passing beneath said sheave and upwardly to said carriage, one end of said cable being anchored, a counter balance weight attached to the opposite end of said cable, guide wheels on the carriage for said cable, and feed wires passing through said hollow sleeve and rod and being collapsible in said sleeve.

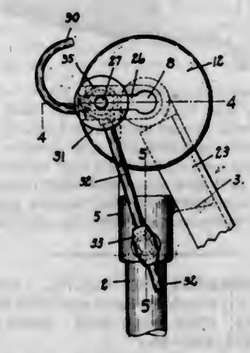
---

1,691,898. MACHINE FOR SHAPING AND GRINDING STONES FOR BLAST FURNACES. WILHELM KOSFELD, Dortmund, Germany. Filed Jan. 20, 1927, Serial No. 162,402, and in Germany Nov. 16, 1925. 2 Claims. (Cl. 51—100.)



1. A machine for automatically shaping stones and the like comprising a bed for the article to be shaped, a grinding roller above the bed, said bed and said roller being relatively movable in the direction of the longitudinal axis of the machine, means for supporting the grinding roller, said means including means permitting rising and falling movement of the roller and means permitting tilting of the roller, templates mounted upon the bed, means movable with the roller in its up and down and tilting movements and cooperating with the templates to cause any predetermined rising and falling and tilting movement thereof, and means for rotating the grinding roller.

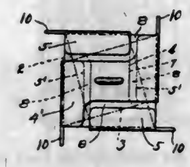
---



1,691,899. SOAP-MOLDING APPARATUS. LEWIS A. PALEY, Manhasset, N. Y. Filed Mar. 23, 1922. Serial No. 546,089. 14 Claims. (Cl. 18—26.)

1. In an apparatus for the manufacture of soap and the like, an endless chain of molds, the side wall of each mold also serving as a side wall of an adjacent mold, the bottom of each mold being removable and secured to the side wall of the adjacent mold, means for pivotally connecting said molds, a pair of flexible wings associated with each mold adapted to form end walls for each mold, a plurality of sprocket wheels adapted to receive said endless chain of molds, means for rotating one of said sprocket wheels so as to cause a continuous movement of said endless chain of molds, means for introducing hot liquid soap into said chain of molds, means for cooling the soap in said endless chain of molds as said chain is moved, so as to form cakes, means for stamping said cakes of soap in said molds after they are cooled, and means for discharging said cooled cakes of soap from said molds.

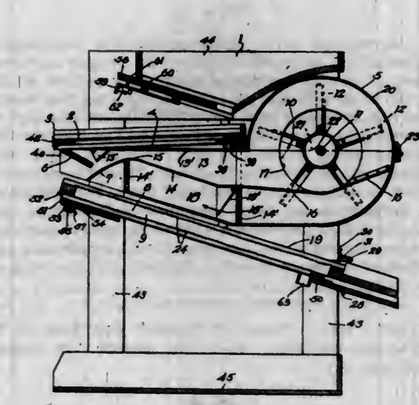
---



1,691,900. EXERCISING MACHINE. WILLIAM STUEBING, Jr., Cincinnati, Ohio. Filed Jan. 14, 1927. Serial No. 161,108. 2 Claims. (Cl. 128—63.)

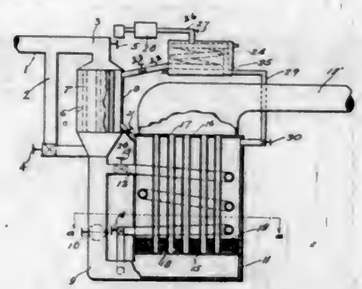
1. In an exercising machine, hook supports, means for moving each of said hook supports in a circular path, a hook carried by each support, a rod fixed to each support, sleeves through which the rods slide, and mounting means for the sleeves permitting the latter to rock about fixed axes.

---



1,691,901. ELECTRICAL CONDENSER. ALEXANDER NYMAN, New York, N. W., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 11, 1926. Serial No. 93,914. 4 Claims. (Cl. 175—41.)

3. A condenser comprising a stack containing conductive elements of opposite polarity, sheets of insulating material separating said conductive elements, the elements of one polarity projecting from the sides of the stack adjacent diagonally opposite corners and the elements of opposite polarity being arranged transversely of the first-named conductive elements, and having their ends projecting from the stack adjacent diagonally opposite corners; and clamping members for the opposite faces of the stack, each of said members engaging the projecting ends of the conductive elements of one polarity, whereby the condenser can be connected into circuit through said clamps.



---

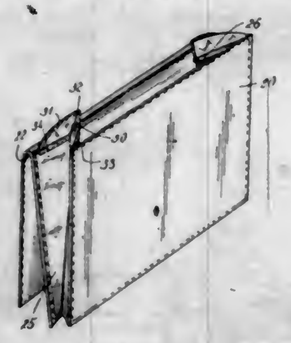
1,691,902. GRAIN AND SEED CLEANER. JOHN H. PENNY, Fountain City, Ind. Filed Mar. 5, 1927. Serial No. 173,064. 10 Claims. (Cl. 209—318.)

1. In a grain and seed cleaner, upper and lower vibratory shoes having screens, a transverse drum having at one end thereof an air inlet chamber and at the opposite end a fan chamber horizontally and transversely aligned and communicating therewith, a longitudinal air duct located between said shoes and having its mouth adjacent the approximated ends of said shoes, and at its inner end communicating with said air inlet chamber, and a fan located in said fan chamber, the latter having a discharge passage located between said shoes and discharging laterally of the machine.

1,691,903. PROCESS FOR PERFORMING CHEMICAL REACTIONS. CHARLES W. MORTIMER, Brooklyn, N. Y. Filed Apr. 17, 1923. Serial No. 632,620. 5 Claims. (Cl. 260—172.)

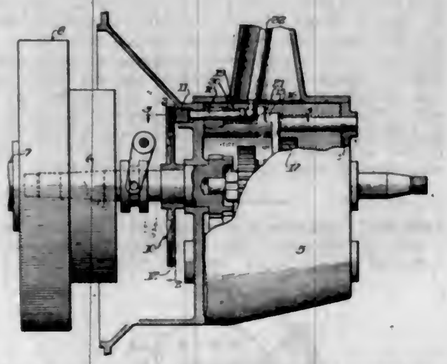
1. In a process for utilizing the heat generated in exothermic catalytic reactions between gases in which the reaction temperature is regulated by the boiling point of a liquid; the steps which comprise dividing the vapor of said liquid, dividing the incoming gases, heating a portion of the incoming gases with one portion of the vapor and separately condensing the other portion of the vapor.

1,691,904. COLLAPSIBLE HAT BAG. HELEN C. GAMBLE, New York, N. Y. Filed Nov. 24, 1921. Serial No. 517,420. 17 Claims. (Cl. 206—8.)



1. An envelope of the character described comprising a peripheral band and a circular side, said circular side being formed of non-self-sustaining material, a portion of the material of said circular side forming a closure flap having a free edge extending from a location adjacent said peripheral band to another location adjacent said peripheral band, stiffening means secured to said peripheral band, said stiffening means extending longitudinally and transversely relative to said peripheral band, and means for suspending said envelope in its closed and distended position, said means including an element secured to said closure flap between the ends of the free edge of said closure flap and a series of fasteners mounted adjacent the free edge of said closure flap.

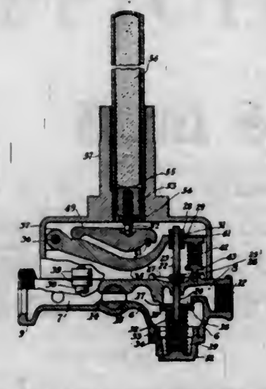
1,691,905. BAG. HELEN C. GAMBLE, New York, N. Y. Filed Dec. 15, 1922. Serial No. 607,050. 23 Claims. (Cl. 206—8.)



23. A hand bag of the character described comprising a peripheral band, flexible disk sides seamed at their edges to the edges of said band, a portion of the material of one of said sides forming a closure flap, and a handle comprising a strap secured at its one end at one side of the bag and a second strap secured at its one end to an opposite side of the bag, and means on the free ends of said handle straps for detachably securing them to one another.

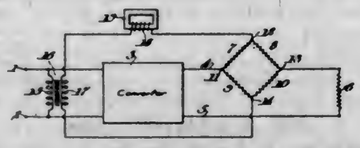
1,691,906. BAG. AARON LEFKOWITZ, by judicial change of name Aaron Landis, New York, N. Y. Filed June 16, 1927. Serial No. 199,259. 9 Claims. (Cl. 150—30.)

1. A bag having a back section, a front section, gussets connecting the ends of the sections, and a flap connected to one section and foldable over the other section, said gussets having hinged extensions at their upper ends for closing the space beneath the flap.



1,691,907. REVERSE BRAKE. MARTIN A. MIKESH, Jersey City, N. J. Filed July 18, 1927. Serial No. 206,485. 12 Claims. (Cl. 192—4.)

2. In an automobile, a transmission lever, a transmission shaft, a braking disk fixed on said shaft, said disk having radial corrugations formed therein, a braking member for engaging said disk, said disk and said member having cam surfaces engaging each other which tend to force said member away from said disk when said disk rotates in either direction, and means between said member and said lever whereby said member may be moved by said lever.

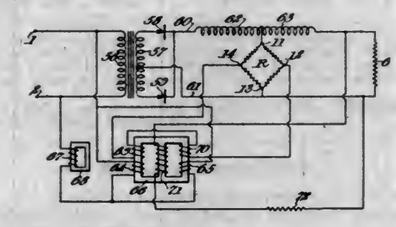


1,691,908. THERMOSTATIC VALVE. ADOLF BELER, Pittsburgh, Pa.; Elizabeth Beler executrix of said Adolf Beler, deceased. Filed Apr. 5, 1923. Serial No. 630,019. 10 Claims. (Cl. 236—48.)

1. A thermostatic valve comprising a valve for controlling the delivery of a heating agent, a spring for normally yieldingly closing the valve, a thermal responsive means having a lost-motion connection to the said valve for actuating the valve, a spring for normally yieldingly retaining the thermal responsive means in retracted position, and an

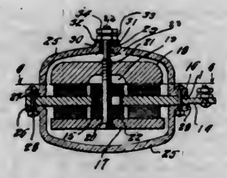
over center spring for actuating the valve with a snap action in response to a predetermined movement of the thermal-responsive means.

1,691,909. VOLTAGE REGULATOR. GEORGE B. CROUSE, Woodcliff, and JACOB L. JATLOW, Elizabeth, N. J., assignors to Conner Crouse Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 8, 1926. Serial No. 134,249. 21 Claims. (Cl. 175—363.)



1. In a voltage regulator for electrical systems comprising a source of energy, a load line, and circuit elements for energizing said load line from said source, the combination of a static resistance included in said circuit elements, and a circuit additional to said circuit elements for delivering a current to said static resistance to directly effect regulation by the potential across said resistance, said additional circuit being so coupled with said circuit elements that the voltage of said additional circuit varies automatically with variations of an electrical condition which tends to alter the voltage across said load line.

14. A voltage regulator for an electrical system of the type including a converter connected between a source of alternating current and a load, comprising an element connected in series between the converter and the load and



means for varying the voltage drop across the element in accordance with voltage variations of the source, said element also preventing the introduction into the load circuit of alternating components from the source.

1,691,910. VOLTAGE REGULATOR. GEORGE B. CROUSE, Woodcliff, and JACOB L. JATLOW, Elizabeth, N. J., assignors to Conner Crouse Corporation, New York, N. Y., a Corporation of New York. Original application filed Sept. 8, 1926, Serial No. 134,249. Divided and this application filed Sept. 15, 1926. Serial No. 135,691. 22 Claims. (Cl. 175—363.)

1. A voltage regulator for an electrical system of the type including a line and a filter having a resistance as one element thereof, characterized by the fact that a regulating circuit is provided across said resistance to determine the effective voltage drop to which line current is subjected on passage through said resistance.

1,691,911. ELECTRICAL CONDENSER. HARRY R. VAN DEVENTER, New York, N. Y., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 11, 1925. Serial No. 14,814. 10 Claims. (Cl. 175—41.)

10. In a condenser, a circular plate, housings on the opposite faces of the plate, the plate carrying a terminal, condenser sections mounted upon opposite sides of the plate within the housings, means for compressing the condenser sections upon the plate, one of the housings having an aperture, and a terminal associated with the compression means projecting through said aperture.

Patents Nos. 1,691,912 to 1,692,801.

THE

# OFFICIAL GAZETTE

OF THE

# United States Patent Office.

Vol. 376—No. 3. TUESDAY, NOVEMBER 20, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

## International Convention—Adhesion.

### Kingdom of the Serbs, Croats, and Slovenes.

This Office has been notified by the Secretary of State of the receipt of a notice from the Swiss Legation that the Kingdom of the Serbs, Croats, and Slovenes has adhered to the Convention of the Union for the Protection of Industrial Property, as revised at The Hague November 6, 1925, the adhesion to take effect October 29, 1928.

THOMAS E. ROBERTSON,
*Commissioner of Patents.*

## Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,540,631, A. E. Johnson, Controller for hoisting engines, decided October 16, 1928, claim 10.

Pat. 1,565,364, J. C. Henderson, Drawing sheet glass, decided October 13, 1928, claims 1 to 5, inclusive.

Pat. 1,589,925, R. R. Batcher, Radio receiving apparatus, decided October 10, 1928, claims 1, 2, 3, and 4.

## Notices of Cancellation.

U. S. Patent Office, *Washington, Nov. 5, 1928.*

*Frederick Edward Vesey Baines, his assigns or legal representatives, take notice:*

A cancellation proceeding having been instituted by this Office upon the application of The Apex Electrical Manufacturing Company, of Cleveland, Ohio, to effect the cancellation of the trade-mark registration of Frederick Edward Vesey Baines, of 2 Orchard Road, Blackheath, county of Kent, England, No. 70,762, dated October 6, 1908, and the notice of such proceeding sent by registered mail to the said Frederick Edward Vesey Baines at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Frederick Edward Vesey Baines, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
*First Assistant Commissioner.*

U. S. Patent Office, *Washington, Oct. 19, 1928.*

*United States Compound Company, its assigns or legal representatives, take notice:*

A cancellation proceeding having been instituted by this Office upon the application of The Apex Electrical Manufacturing Company, of Cleveland, Ohio, to effect the cancellation of the trade-mark registration of United States Compound Company, of 1426 Seneca St., Buffalo, N. Y., No. 89,162, dated November 12, 1912, and the notice of such proceeding sent by registered mail to the said United States Compound Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said United States Compound Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
*First Assistant Commissioner.*

U. S. Patent Office, *Washington, Oct. 19, 1928.*

*Murray Wire Co., its assigns or legal representatives, take notice:*

A cancellation proceeding having been instituted by this Office upon the application of The Apex Electrical Manufacturing Company, of Cleveland, Ohio, to effect the cancellation of the trade-mark registration of Murray Wire Co., of Newark, N. J., No. 94,658, dated December 23, 1913, and the notice of such proceeding sent by registered mail to the said Murray Wire Co. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless the said Murray Wire Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
*First Assistant Commissioner.*

# DECISIONS IN PATENT AND TRADE-MARK CASES.

## Commissioner's Decision.

### EX PARTE ELLIS.

*Decided March 30, 1927.*

1. PATENTABILITY—INVENTION—SOLUTION OF PHENOL-SULPHUR-HALIDE RESIN.

A claim broadly drawn to a solution of phenol-sulphur-halide resin in a composite solvent embracing a plurality of liquids *Held* not patentably distinguished from the prior art by the statement that "one at least" of the liquids is a nonsolvent of the resin since "there is nothing of record to show that the solution defined by the claim possesses properties or characteristics different from the solutions disclosed by McCoy. To merely mix with the McCoy solvents a liquid nonsolvent of his resin, obviously is a noninventive act."

2. SAME—SAME—LIQUID COATING COMPOSITIONS.

A claim drawn broadly to a liquid coating composition containing a resinous body which contains sulphur *Held* not patentably distinguished from the prior art by functional statements respecting the resistant properties of the composition to certain specified chemicals, since "the McCoy composition being the same their resistant properties must be the same."

[This application has resulted in Patent No. 1,663,160.]

APPEAL from Examiners in Chief.

Application for patent for coating and impregnating medium filed December 7, 1920, Serial No. 428,852.

*Mr. A. B. Foster* for the appellant.

MOORE, *Assistant Commissioner:*

This is an appeal from the decision of the Examiners in Chief affirming the decison of the Examiner finally rejecting claims 1, 2, 4, 13, 14, and 15.

The invention relates to a composition of matter adapted for coating purposes.

Claims 1 and 13 are examples of the appealed claims:

1. A solution of phenol-sulphur-halide resin in a composite solvent, such solvent embracing a plurality of liquids one at least of which is a nonsolvent of such resin.

13. A liquid coating composition containing a resinous body which contains sulphur, such coating composition when applied to a base and dried, producing a coating which is resistant to strong sulphuric and hydrochloric acids, and resistant to ammonia and to sodium carbonate and to soapy detergents.

The references relied upon in the rejection of the claims are: McCoy, No. 1,194,201, August 8, 1916; Pratt, No. 1,340,909, August 17, 1920.

The McCoy patent is the reference principally relied upon in the rejection of the appealed claims.

A comparison of the McCoy and Ellis inventions shows that broadly considered they are identical. Both include a resinous base formed by reacting on a phenol with sulphur chloride, and a solvent.

The resinous base, which is the essential element of the appellant's composition, was invented by McCoy, so far as appears of record. McCoy states:

I have discovered sulphur chloride will react upon phenol or its homologues to form products that may be transformed into resinous substances * * *.

Claim 8 of the McCoy patent is drawn broadly to such a substance.

Both inventors discovered that the reaction between phenol and sulphur chloride is extremely violent, making it desirable to add a solvent. The appellant states:

The violence of the reaction is reduced by adding a solvent such as benzol to the sulphur chloride.

McCoy states:

However, the reaction between phenol and the sulphur chloride is extremely violent and rapid and I prefer to moderate its action by the use of an oil or fat or other suitable means.

McCoy states, however:

Furthermore, I may react directly upon phenol with sulphur chloride, either with or without the use of a suitable solvent, such as carbon tetra-chloride, for the purpose of moderating the action, to form a resin-like substance which may be redissolved in an excess of phenol * * *.

Both inventors recognize that the properties and qualities of the resinous products may be greatly varied according to their intended use by varying the proportions of the ingredients and the modes of treatment. McCoy states:

Those skilled in the art will readily understand that the manner of treatment and mode of procedure may be widely varied in accordance with the desired characteristics of the intermediate or final products, and such variations which do not depart from the spirit and scope of my invention are intended to be covered in the appended claims.

Neither McCoy nor Ellis has confined his broad claims to any specific proportions of phenol and sulphur chloride in forming resinous substances, nor to any specific solvent.

The Examiner has recognized patentable novelty in the appellant's invention, specifically considered, as evidenced by the allowance of a large number of claims. The question for decision is as to whether the claims on appeal distinguish the appellant's invention in patentable respects from the cited patents.

Claim 1 is drawn broadly to a solution of phenol-sulphur-halide resin in a composite solvent, such solvent embracing a plurality of liquids, one at least of which is a nonsolvent of such resin.

The claim is not confined to any specific proportions of the ingredients forming the resin nor to any specific solvent. The appellant contends that the claim distinguishes the invention patentably from McCoy in the limitations that the solvent embraces a plurality of liquids, and that one at least of the liquids is a nonsolvent of the resin.

This claim is drawn to a solution, but there is nothing of record to show that the solution defined by the claim possesses properties or characteristics different from the solutions disclosed by McCoy. To merely mix with the McCoy solvents a liquid nonsolvent of his resin, obviously is a noninventive act. If the appellant has discovered that by mixing a specific liquid nonsolvent with a specific solvent of the resin defined by this claim a solution having new and desirable properties is obtained, he is entitled to claim either the solution having such new and desirable properties, or a solution having such specific ingredients; but he certainly is not entitled to

claim McCoy's solution with the addition to the solvents therein disclosed of a liquid nonsolvent of the resin. The solution defined by this claim may have the same essential characteristics as McCoy's solution; that is, the liquid nonsolvent may or may not vary materially McCoy's solution.

Claims 2 and 4 also fail to distinguish the invention over McCoy. McCoy discloses a solution comprising both a resin and a solvent, each having the essential characteristics defined by these claims. As pointed out by the Examiner, there is no invention in a solution of resins of this type in the usual solvents or the mixture of such solvents.

Each of the claims 13, 14, and 15 is drawn broadly to:

A liquid coating composition containing a resinous body which contains sulphur.

McCoy discloses a liquid composition "containing a resinous body which contains sulphur," and it is old to use like compositions for coating purposes, as disclosed by Pratt.

The appellant attempts to distinguish his composition from the McCoy composition by certain functional statements respecting the resistant properties of the composition to certain specified chemicals; but the composition defined by these claims and the McCoy composition being the same their resistant properties must be the same. In other words, the appellant's composition "containing a resinous body which contains sulphur," broadly considered, can have no resistant properties not possessed by McCoy's composition containing a resinous body which contains sulphur.

From the above it appears that the appellant is attempting to obtain broad claims on a comparatively limited invention.

The decision of the Examiners in Chief is affirmed.

## Patent Suits.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

945,570, J. C. Miller, Ice-cream freezer, D. C., S. D. N. Y., Doc. E 38/130, *The H. H. Miller Industries Co.* v. *Emery Thompson Machine & Supply Co.* Patent held valid and infringed Oct. 5, 1928.

1,010,768, A. S. Isaacs, Heater, D. C., S. D. N. Y., Doc. E 33/241, *The Chamberlin Co. et al.* v. *B. T. Babbitt, Inc.* Dismissed Oct. 3, 1928.

1,012,433, E. Prendergast, Truncated box for street valves, fire plugs, etc., C. C. A., 8th Cir. (St. Louis), Doc. 8001, *The City of St. Louis, Mo.*, v. *E. Prendergast.* Reversed Oct. 4, 1928.

1,018,502, Just & Hanaman, Incandescent body for electric lamps; 1,180,159, I. Langmuir, Incandescent electric lamp, filed Oct. 10, 1928, D. C., S. D. N. Y., Doc. E 47/16, *General Electric Co.* v. *I. N. Marks et al. (Imperial Merchandising Co.).*

1,022,866, H. M. Norris, Automatic spindle stops; Re. 14,755, same, Friction clutch; 1,058,254, same, Radial drill; 1,140,906, D. C. Klausmeyer, Combined locking and clamping device, D. C., S. D. N. Y., Doc. E 40/180, *The Cincinnati Bickford Tool Co.* v. *Morey & Co.* Consent decree for plaintiff Oct. 4, 1928.

1,041,748, G. Dalen, Automatic valve, filed Oct. 2, 1928, D. C., S. D. N. Y., Doc. E 46/394, *American Gasaccumulator Co.* v. *Interflash Signal Corp.*

1,046,615, T. F. Litaker, Drill, D. C., S. D. Calif. (Los Angeles), Doc. E H-36-J, *Rotary Disc Bit Co.* v. *U. S. Tool Co.* Dismissed Oct. 5, 1928, Doc. K-77-H, *Rotary Disc Bit Co.* v. *Craig Oil Tool Co.* Dismissed Oct. 5, 1928.

1,055,351, O. E. Pease, Awning support, filed Oct. 2, 1928, D. C., S. D. N. Y., Doc. E 46/395, *F. J. Kloes, Inc.*, v. *B. Epstein et al.*

1,058,254. (See 1,022,866.)

1,082,933, W. D. Coolidge, Tungsten and method of making same, C. C. A., 3d Cir., Doc. 3654, *General Electric Co.* v. *The De Forest Radio Co. et al.* Claims 14, 16, 24, 26, 27, and 28 held invalid, claims 1 to 7, incl., 9 to 12, incl., 17 to 23, incl., held valid and infringed Sept. 18, 1928.

1,089,405, W. S. Ferguson, Reenforced-concrete dock or pier, D. C., S. D. N. Y., Doc. E 40/40, *W. S. Ferguson et al.* v. *The City of New York.* Dismissed without prejudice Oct. 10, 1928.

1,111,638, G. A. Landenberger, Stocking, filed Oct. 2, 1928, D. C., S. D. N. Y., Doc. E 46/396, *Gotham Silk Hosiery Co., Inc.*, v. *Holeproof Hosiery Co.*

1,140,906. (See 1,022,866.)

1,180,159. (See 1,018,502.)

1,218,880, J. E. McGinness, Heating apparatus, D. C., W. D. N. Y., Doc. 1142-F, *The Buckeye Blower Co.* v. *Arensmeyer, Warnock & Jahrndt, Inc.* Decree for defendant Oct. 5, 1928.

1,225,682, J. Schulde, Show-case refrigerator; 1,447,733, same, Refrigerator, appeal filed Sept. 29, 1928, C. C. A., 8th Cir. (St. Louis), Doc. 8362, *Eskimo Refrigerator Co. et al.* v. *H. L. Hussmann Refrigerator & Supply Co.*

1,231,764, F. Lowenstein, Telephone relay; 1,456,528, H. A. Arnold, Electric discharge device; 1,459,412, A. McNicolson, Thermionic translating device, filed Oct. 8, 1928, D. C., S. D. N. Y., Doc. E 47/3, *Radio Corp. of America et al.* v. *H. Chirelstein (Sonatron Tube Co.).*

1,274,410, A. A. Griswold, Flexible shingle, appeal filed Oct. 11, 1928, C. C. A., 2d Cir., Doc.— *Griswold et al.* v. *Buckle Proof Shingle Co., Inc.*

1,307,733, A. V. Guilborg, Lubricating apparatus; 1,307,734, same, Lubricating means, filed Sept. 27, 1928, D. C., S. D. Calif. (Los Angeles), Doc. E O-46-M, *The Bassick Mfg. Co.* v. *W. H. Nielsen.* Doc. E O-47-M, *The Bassick Mfg. Co.* v. *D. B. Kilpatrick,* Doc. E O-48-M, *The Bassick Mfg. Co.* v. *P. G. Wagner.* Doc. E O-49-M, *The Bassick Mfg. Co.* v. *Curtis & Christensen, Inc.*

1,307,734. (See 1,307,733 and Re. 14,667.)

1,354,027, E. V. Crowell, Gas-energy control head for oil wells; 1,482,674, same, Gas-energy control for flowing oil or gas wells, D. C., S. D. Calif. (Los Angeles), Doc. E L-54-M, *E. V. Crowell* v. *Pacific Oil Tool Co. et al.* Dismissed Oct. 4, 1928.

1,377,361, E. L. Miller, Timer brush, D. C., S. D. Iowa (Council Bluffs), Doc. E 4156, *E. L. Miller* v. *G. M. Gilliland et al.* Dismissed Oct. 9, 1928.

1,402,067, C. D. Hibbs, Fabric-stripping machine, D. C. Tex. (Fort Worth), Doc. E 517, *Rubber Products Co. et al.* v. *Penbcy Auto Boot Co. et al.* Dismissed Aug. 24, 1928.

1,403,582, W. L. Wright, Closure disk for containers, filed Oct. 10, 1928, D. C., N. D. Ohio, W. Div., Doc. E 928, *Oswego Falls Corp.* v. *Toledo-Baltimore Bottle Cap Co.*

1,431,260, 1,483,522, H. Rosen, Button-making machine; 1,536,530, same, Button, D. C., S. D. N. Y., Doc. E 40/227, *H. Rosen et al.* v. *M. Pearlstein (International Button Co.).* Patents held valid and infringed Oct. 4, 1928.

1,432,674. (See 1,354,027.)

1,447,733. (See 1,225,682.)

1,456,528. (See 1,231,764.)

1,459,412. (See 1,231,764.)

1,477,556, 1,666,057, 1,666,058, 1,666,059, E. Griesinger, Sound-projecting apparatus and method; 1,553,770, same, Apparatus for reproducing, amplifying, and projecting sound waves, filed Oct. 9, 1928, D. C., W. D. N. Y., Doc. 1431-H, *E. Griesinger* v. *Neal, Clark & Neal Co.*

1,483,522. (See 1,431,260.)

1,498,283, T. G. Robinson, Process and apparatus for making button blanks from pearl stock, filed Oct. 1, 1928, D. C., S. D. N. Y., Doc. E 46/390, *T. H. Robinson* v. *Paragon Button Corp.*

1,494,670, Delaney & Rasneor, Separator for flowing oil wells, filed Oct. 6, 1928, D. C., N. D. Tex. (Fort Worth), Doc. E 558, *Water Knockout Co.* v. *The Pure Oil Co.*

1,497,273. (See Re. 15,982.)

1,503,510, A. S. Margason, Windshield for closed motor cars; 1,552,382, Miller & Harvey, Air deflector, filed Oct. 4, 1928, D. C., S. D. Calif. (Los Angeles), Doc. E O-52-M, *L. M. Harvey et al.* v. *J. E. Wrightsman (Automobile Glass Co.).*

1,507,826, L. J. Grubman, Sound-producing device for dolls, etc.; 1,588,354, same, Sound-producing device, D. C., S. D. N. Y., Doc. E 38/201, *Voices, Inc.*, v. *Uneeda Doll Co.* Bill dismissed on merits Oct. 6, 1928. Doc. E 38/232, *Voices, Inc.*, v. *Well Made Doll Co.* Decree as above.

1,517,659, F. C. Warne, Disk harrow, filed Feb. 1, 1928, D. C., S. D. Calif. (Los Angeles), Doc. N-33-M, *The Roderick Lean Co.* v. *H. F. Towner.*

1,536,530. (See 1,431,260.)

1,537,708, W. Schottsky, Thermionic vacuum tube, filed Oct. 8, 1928, D. C., S. D. N. Y., Doc. E 47/4, *Radio Corp of America* v. *H. Chirelstein (Sonatron Tube Co.).*

1,539,309, I. S. Goldman, Process of treating fruit, D. C., S. D. Calif. (Los Angeles), Doc. E C-37-M, *I. S. Goldman Co.* v. *W. C. Cook & Co.* Dismissed Sept. 29, 1928.

1,552,382. (See 1,503,510.)

1,553,770. (See 1,477,556.)

1,558,437, I. Langmuir, Electrical discharge apparatus, filed Oct. 8, 1928, D. C., S. D. N. Y., Doc. E 47/2, *Radio Corp. of America et al.* v. *H. Chirelstein (Sonatron Tube Co.).*

1,569,280, W. S. Holdaway, Disk bit, D. C., S. D. Calif. (Los Angeles), Doc. E N-37-J, *H. H. Holdaway et al.* v. *Rotary Disc Bit Co.* Dismissed Oct. 5, 1928.

1,573,341 (a), E. B. Hiatt, Device for packing fruit, D. C., S. D. N. Y., Doc. E 36/397, *Carpenter-Hiatt Sales Co.* v. *F. A. Read, Inc.* Dismissed on merits Sept. 28, 1928.

1,573,341 (b), E. B. Hiatt, Device for packing fruit; 1,593,302, same, Basket liner; 1,603,693, same, Ring packing lid, D. C., W. D. N. Y., Doc. 1051-F, *Carpenter-Hiatt Sales Co.* v. *Alling & Cory, Inc.* Dismissed Oct. 9, 1928.

1,576,135, Corson & Wright, Mechanism for drilling and applying brake-band linings; 1,576,138, A. C. McBride, Brake-band-relining machine, C. C. A., 3d Cir., Doc. 3685, *W. A. Wright et al.* v. *Thermoid Rubber Co.* Claims 10, 11, 18, 19, and 20 of 1,576,138 and claims 6 and 10 of 1,576,135 held invalid Oct. 6, 1928.

1,576,138. (See 1,576,135.)

1,588,354. (See 1,507,826.)

1,593,302. (See 1,573,341 (b).)

1,600,265, W. T. Woods, Well-drilling bit, D. C., S. D. Calif. (Los Angeles), Doc. E L-2-J, *U. S. Tool Co.* v. *Rotary Disc Bit Co.* Dismissed Oct. 5, 1928.

1,603,246, L. Rocke, Method and apparatus for attaching separable fastener tapes, filed Oct. 5, 1928, D. C., S. D. N. Y., Doc. E 46/400, *Hook & Eye Devices Corp.* v. *J. Glover (Glover Brassiere Co.).*

1,603,693. (See 1,573,341 (b).)

1,636,770, Fox & Stark, Thermostatic pilot control system for burners, filed Oct. 1, 1928, D. C., N. D. Ohio, E. Div., Doc. 2672, *The Bryant Heater & Mfg. Co. et al.* v. *B-Line Boiler Co.*

1,646,416, Monckmeier, Automatic thrust bearing, filed July 20, 1928, D. C., S. D. Ind. (Indianapolis), Doc. E 1157, *Ever-Tite Bolt Co. et al* v. *Adjustable Bearing Co.*

1,659,496, Oishei & Hueber, Automatic windshield wiper, filed Oct. 6, 1928, D. C. Nebr. (Omaha), Doc. E 994, *Trico Products Corp.* v. *Jubilee Mfg. Co.*

1,666,057. (See 1,477,556.)

1,666,058. (See 1,477,556.)

1,666,059. (See 1,477,556.)

1,676,485, D. J. Finucane, Leader-pipe strap, filed Oct. 8, 1928, D. C., S. D. N. Y., Doc. E 47/5, *D. J. Finucane* v. *D. Levow.*

Re. 14,667, F. D. Winkley, Lubricating system; 1,307,734, same, Lubricating means, D. C., N. D. Ohio, E. Div., Doc. 1000, *The Bassick Mfg. Co.* v. *The Lyman Mfg. Co. et al.* Claim 7 of 1,307,734 infringed (notice dated Oct. 8, 1928).

Re. 14,755. (See 1,022,866.)

Re. 15,982, M. Hawie, Rustless buckle; 1,497,273, same, Buckle, appeal filed Oct. 1, 1928, C. C. A., 2d Cir., Doc. 10187, *The Hawie Mfg. Co.* v. *The Hathaway Mfg. Co. et al.*

Re. 16,879, E. Mayer, Device for optically measuring light, photometer, D. C., S. D. N. Y., Doc. E 45/360, *Drem Produkte Corp.* v. *C. Hopfen et al.* Consent decree for plaintiff Oct. 2, 1928.

## Adjudicated Patents.

(D. C. N. Y.) McGuinness patent, No. 1,218,880, for unitary heating and ventilating apparatus, *Held* not infringed. *Buckeye Blower Co.* v. *Arensmeyer, Warnock & Zahrndt,* 28 F. (2d) 209.

(D. C. Ohio.) Adams patent, No. 1,133,251, for road grader, claims 5, 6, 9, 12, 15, 20, 22, 23, 26, 31, 32, 35, 38, and 41 *Held* invalid. *Adams* v. *Galion Iron Works & Mfg. Co.*, 28 F. (2d) 225.

(D. C. Del.) Thompson patent, No. 1,429,175, relating to natural-gas gasoline, *Held* invalid. *Carbide & Carbon Chemicals Co.* v. *Phillips Petroleum Co.*, 28 F. (2d) 218.

(D. C. Del.) De Brey patent, No. 1,465,598, for process of making gasoline from natural gas, *Held* invalid. *Id.*

(D. C. Del.) De Brey patent, No. 1,465,599, for process of making gasoline from natural gas, *Held* invalid. *Id.*

(D. C. Del.) Thompson patent, No. 1,523,314, relating to natural-gas gasoline, *Held* invalid. *Id.*

(D. C. Ohio.) Adams reissue patent, No. 16,200, for ditch former, claims 9, 13, and 15 *Held* invalid. *Adams* v. *Galion Iron Works & Mfg. Co.*, 28 F. (2d) 225.

## Changes in Classification.

Order No. 3,085, October 30, 1928, directs:

In *class 81, Tools* (Division 29), abolish the following subclass, with its definition, the patents formerly contained in this subclass having been placed for the most part in class 81, subclass 48, Tweezers, established in this order:

Special
5 Tweezers.

In *class 294, Handling, Hand and Hoist-Line Implements* (Division 1), abolish the following subclasses, with their definitions, the patents formerly contained in subclass 35 having been placed for the most part in class 81, Tools, subclass 48, Tweezers, established in this order, and those formerly contained in subclasses 36-48 having been placed in similarly-entitled subclasses 44-52, in class 81, Tools, established in this order:

35 Tweezers.
36 Pliers and tongs
37 Parallel pivoted rods,
38 Tandem levers,
39 Multiple jaw,
40 Expanding,
41 Locked jaws,
42 Sliding jaw,
43 Crossed handles
44 Adjustable pivot,
45 Pivoted jaw piece,
46 Parallel jaws,
47 Spring pressed,
48 Jaw attachments.

In *Class 81, Tools* (Division 29), establish the following subclass and definition, the patents contained in this subclass having been taken for the most part from class 81, subclass 5, Special, Tweezers, abolished in this order,

and class 294, Handing, Hand and Hoist-Line Implements, subclass 35, Tweezers, abolished in this order:

43 Tweezers.

43. TWEEZERS. Miscellaneous lightly-constructed grasping tools, the arms of which are usually of elastic material, having a tendency to open or close.

Search Classes—
128—SURGERY, subclass 354, Instruments, Tweezers.
294—HANDLING, HAND AND HOIST-LINE IMPLEMENTS, subclass 99, Grapples, Resilient.

In *Class 81, Tools* (Division 29), establish the following subclasses and definitions, the patents contained in these subclasses having been taken from class 294, Handling, Hand and Hoist-Line Implements, subclass 36, Pliers and tongs, and the subclasses indented thereunder, abolished in this order:

44 Pliers and tongs
45 Parallel pivoted rods,
46 Tandem levers,
47 Multiple jaw,
48 Expanding,
49 Locked jaws,
50 Sliding jaw,
51 Crossed handles
51.3 Adjustable pivot,
51.4 Pivoted jaw piece,
51.5 Parallel jaws,
51.6 Spring pressed,
52 Jaw attachments.

44. PLIERS AND TONGS. Tools for holding or manipulating objects, embracing those pincers and grasping devices known in the arts as "pliers" and "tongs."

Note.—Pliers specially constructed for bending are found in this class, subclass 15, and for cutting, in this class, subclass 187, and the subclasses indented thereunder.

Note.—Compare class 294, HANDLING, HAND AND HOIST-LINE IMPLEMENTS, subclass 86, Grapples, and the subclasses indented thereunder.

Search this class, subclass 3, for pliers and tongs specialized to handling particular articles.

Search Classes—
7—COMPOUND TOOLS, subclass 3, Type, Pliers, for pliers combined with cutters or other devices and not classifiable in any single class.
16—MISCELLANEOUS HARDWARE, subclass 116, Handles, Insulated.
29—METAL WORKING, subclass 86.2, Assembling, Pin inserters and removers, Pliers.
32—DENTISTRY, subclass 10, Tools, for pliers specialized to dental use.
86—AMMUNITION AND EXPLOSIVE CHARGE, MAKING, subclass 22, Loading fireworks and bursting charges, Implements, Fuse.
128—SURGERY, subclass 321, Instruments, Forceps, and the subclasses indented thereunder.
140—WIRE WORKING, subclass 121, Joining wire, Implements, Plier type.
152—RESILIENT TIRES AND WHEELS, subclass 27, Tires, Repairing, Tools.
164—CUTTING AND PUNCHING SHEETS AND BARS, appropriate subclasses, for plier structure applied to cutting and punching implements.
218—BUTTON, EYELET, AND RIVET SETTING, subclass 22, Implements, Button, Pliers.
294—HANDLING, HAND AND HOIST-LINE IMPLEMENTS, subclasses 3, Miscellaneous compound Implements, Plier or tong type, and 27, Plate and receptacle lifters, and the subclasses indented thereunder.

45. PLIERS AND TONGS, PARALLEL PIVOTED RODS. Parallel rods pivotally related to each other having jaws at one end and offset or cranked handles at the other.

Note.—Compare class 294, HANDLING, HAND AND HOIST-LINE IMPLEMENTS, subclass 30, Plate and receptacle lifters, Pivoted graspers, Axially-extending handle.

Search Class—
294.—HANDLING, HAND AND HOIST-LIKE IMPLEMENTS, subclass 119, Grapples, Pivoted jaws, Crossed levers, Tandem tongs.

46. PLIERS AND TONGS, TANDEM LEVERS. Having a secondary set of levers attached to and operating the primary article-grasping levers.

Search Class—
294—HANDLING, HAND AND HOIST-LINE IMPLEMENTS, subclass 119, Grapples, Pivoted jaws, Crossed levers, Tandem tongs.

47. PLIERS AND TONGS, MULTIPLE JAW. Having a plurality of simultaneously-acting jaws, usually to be used selectively.

Note.—Compare class 294, HANDLING, HAND AND HOIST-LINE IMPLEMENTS, subclass 87, Grapples, Multiple object.

48. PLIERS AND TONGS, EXPANDING. The jaws move away from each other in seizing objects.

Search this class, subclass 3, for specialized expanding devices, such as boiler-tube spreaders, piston-ring removers, and the like.

Search Classes—
29—METAL WORKING, subclass 87.1, Assembling, Spring appliers and removers.
42—FIREARMS, subclass 95, Implements, Shell-extracting.
168—FARRIERY, subclass 47, Tools, Hoof and shoe expanders.
294—HANDLING, HAND AND HOIST-LINE IMPLEMENTS, subclasses 3, Miscellaneous compound implements, Plier or tong type; 15, Hand bars and hand barrows; and 93, Grapples, Expanding, and the subclasses indented thereunder.

49. PLIERS AND TONGS, LOCKED JAWS. The tool is provided with means for locking the jaws in their closed or operative position.

Search this class, subclasses 18 and 111 and the subclasses indented thereunder.

Search Class—
294—HANDLING, HAND AND HOIST-LINE IMPLEMENTS, subclass 3, Miscellaneous compound implements, Plier or tong type.

50. PLIERS AND TONGS, SLIDING JAW. The jaws have a relatively sliding movement, one or both jaws moving on guides.

Note.—Compare class 294, HANDLING, HAND AND HOIST-LINE IMPLEMENTS, subclass 103, Grapples, Fixed and movable jaw.

Search this class, subclass 85, and the subclasses indented thereunder.

Search Class—
294—HANDLING, HAND AND HOIST-LINE IMPLEMENTS, subclasses 3, Miscellaneous compound implements, Plier or tong type, and 34, Plate and receptacle lifters, sliding graspers.

51. PLIERS AND TONGS, CROSSED HANDLES. The handles cross each other.

Search this class, subclass 79, and the subclasses indented thereunder.

Search Class—
294—HANDLING, HAND AND HOIST-LINE IMPLEMENTS, subclasses 3, Miscellaneous compound implements, Plier or tong type; 28, Plate and receptacle lifters, Pivoted graspers, and the subclasses indented thereunder; and 106, Grapples, Pivoted jaws, and the subclasses indented thereunder.

51.3. PLIERS AND TONGS, CROSSED HANDLES, ADJUSTABLE PIVOT. The pivots of the handles are movable to adjust the spread of the jaws.

Search Class—
294—HANDLING, HAND AND HOIST-LINE IMPLEMENTS, subclass 3, Miscellaneous compound implements, Plier or tong type.

51.4. PLIERS AND TONGS, CROSSED HANDLES, PIVOTED JAW PIECE. One or both jaw carriers have pivoted jaw pieces to enable the tool to fit the surfaces of wedge-shaped or irregular objects.

Search Class—
294—HANDLING, HAND AND HOIST-LINE IMPLEMENTS, subclass 3, Miscellaneous compound implements, Plier or tong type.

51.5. PLIERS AND TONGS, CROSSED HANDLES, PARALLEL JAWS. The jaws are parallel in all positions.

Search this class, subclass 50.

Search Class—
294—HANDLING, HAND AND HOIST-LINE IMPLEMENTS, subclass 3, Miscellaneous compound implements, Plier or tong type.

51.6. PLIERS AND TONGS, CROSSED HANDLES, SPRING PRESSED. The jaws are pressed by a spring.

Search Class—
294—HANDLING, HAND AND HOIST-LINE IMPLEMENTS, subclass 3, Miscellaneous compound implements, Plier or tong type.

52. PLIERS AND TONGS, JAW ATTACHMENTS. Parts attached to the jaw holders and capable of replacement when worn or when a jaw piece of different type is desired.

## Changes in Classification.

Order No. 3,086, October 30, 1928, directs:

In *class 113, Sheet-Metal Ware, Making* (Division 14), establish the following subclass and definition, the patents contained in this subclass having been taken for the most part from class 113, subclass 116, Processes:

Processes
119 Electrical contacts, connecters, and terminals.

119. PROCESSES, ELECTRICAL CONTACTS, CONNECTERS, AND TERMINALS. Processes coming under the class definition for making electrical sockets, connecters, terminals, and contacts of sheet metal.

Note.—See class 29, METAL WORKING, subclass 155.5, Blanks and processes, Electrical devices.

# TRADE-MARKS

OFFICIAL GAZETTE, NOVEMBER 20, 1928.

[VOL. 376. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

## CLASS 1.

### Raw or Partly-Prepared Materials.

Ser. No. 249,476. THE HATCH & BAILEY COMPANY, South Norwalk, Conn. Filed May 24, 1927.

No rights are asserted to the exclusive use of the word "Products" apart from the trade-mark as shown in the drawing. The lines shown in the drawing indicate shading and no particular color scheme.

For Rough Lumber and Timber.

Claims use since Nov. 2, 1926.

Ser. No. 261,555. COMPAGNIE DES MINES DE VICOIGNE, NOEUX & DROCOURT, Noeux-les-Mines, France. Filed Feb. 11, 1928.

ANTHRACINE

For Combustible Matter—viz, Coal or Charcoal Agglomerates.

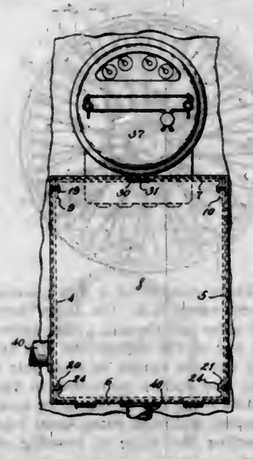
# REISSUES

## NOVEMBER 20, 1928.

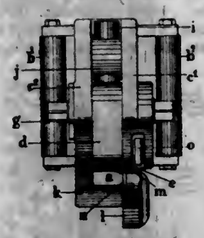
17,137. **BUILDING BLOCK AND CONSTRUCTION.** JOHN EISENMANN, deceased, Cleveland, Ohio, by The Manell Building Block & Tile Company, assignee, Cleveland, Ohio. Filed Sept. 29, 1928. Serial No. 309,281. Original No. 1,456,373, dated May 22, 1923, Serial No. 367,064, filed Mar. 19, 1920. 12 Claims. (Cl. 72—41.)



12. A composite brick and hollow tile wall comprising a hollow tile part and a brick facing part including courses of header brick extending into the tile part and five courses of stretcher brick laid between adjacent header courses and disposed without the tile part, said hollow tile part comprising blocks all shaped alike and each having horizontal bearing portions formed with an offset equal to half the height of one course of brick and each block having a maximum height equal to the thickness of three brick plus two mortar joints, said blocks being arranged in vertically disposed pairs with the offset bearing portions of adjacent blocks facing each other and bonding the upper and lower faces of the inner ends of the header brick between them and having between them a mortar joint opposite the header bricks, each pair of tile blocks being disposed between like pairs above and below and bearing along mortar joints in the same horizontal plane, which pairs of blocks in turn have bonded between them the inner ends of the next adjacent header courses of brick, the vertical height of each pair of blocks plus the mortar joint opposite the header bricks being equal to the thickness of six brick plus five mortar joints, every header course in the wall being bonded between separate and distinct pairs of blocks and every separate pair of blocks embracing a distinct header course of brick.

---

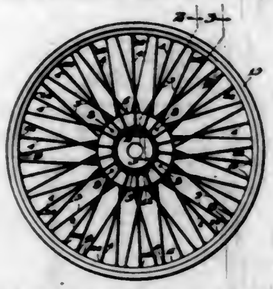
17,138. **CONVERTIBLE ELECTRIC-APPLIANCE-RECEIVING BOX.** JOSEPH SACHS, Hartford, Conn. Filed Apr. 4, 1925. Serial No. 20,843. Original No. 1,206,323, dated Mar. 4, 1919, Serial No. 111,386, filed July 26, 1916. 6 Claims. (Cl. 247—2.)



1. An electric appliance-receiving box constituted of a body portion comprising back and opposite walls and two mutually interchangeable intermediate walls, one of said intermediate walls being provided with means adapting it to function as a meter adapter element, and means for

removably securing said intermediate walls to said body, said means being independent of the connection of said opposite walls to the back wall.

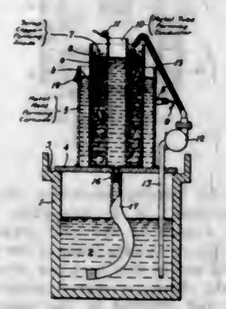
---



17,139. **SHEARS.** HUBERT GASTON RAPHAEL VULLIET and FRANÇOIS ALEXIS HENRI DESCHÂTRES, Paris, France, assignors to André Gueneau, Paris, France. Filed Oct. 25, 1927. Serial No. 228,680. Original No. 1,493,171, dated May 6, 1924, Serial No. 598,474, filed Nov. 2, 1922. 6 Claims. (Cl. 164—57.)

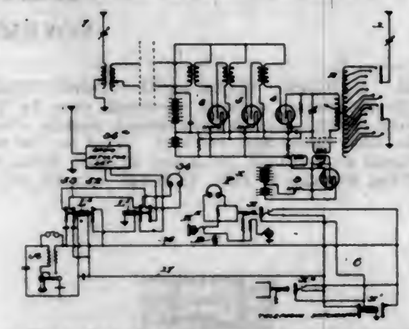
1. A shears for cutting sheet-iron plates and other materials comprising: a frame,—guide handles,—two parallel cheeks formed in the said frame,—a hook at the base of the frame,—a fixed blade of the shears, obliquely secured at the end of this hook,—a driving shaft journaled in the said cheeks, a central eccentric bearing on the said shaft and situated in the interval separating the said cheeks, a blade-carrier mounted on the central bearing of the driving shaft and receiving from the latter a reciprocating movement moving it towards and from the fixed blade,—a movable blade secured in an inclined position at the base of this blade-carrier,—means for imparting to this movable blade, simultaneously with the above reciprocating movement, a reciprocating movement in the direction of advance and recoil of the shears,—

means permitting to turn the shears, during the cutting operation, on the material to be cut, in very small radii for cutting out curved outlines,—means for guiding and releasing the material cut without distorting the same.



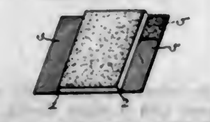
17,140. METAL WHEEL. JAMES M. JONES, Manchester, Ky., assignor, by direct and mesne assignments, of twenty-seven and one-half per cent to Ralph A. Kennedy, Hamilton, Ohio, and twelve and one-half per cent to Richard C. Kennedy, Cincinnati, Ohio. Filed Mar. 31, 1928. Serial No. 266,404. Original No. 1,642,207, dated Sept. 13, 1927, Serial No. 148,002, filed Nov. 12, 1926. 12 Claims. (Cl. 301—59.)

1. A metal wheel comprising a hub provided with enlarged inner and outer ends, the inner hub end being larger than the outer end thereof, a rim, spokes extending from the inner end of the hub to the rim and being arranged in pairs and the spokes of each pair arranged in crossed relation, and spokes connected to the other hub end and rim, there being one of the outer spokes for each pair of inner spokes and each outer spoke being arranged in a plane bisecting the angle of crossing of each pair of inner spokes.



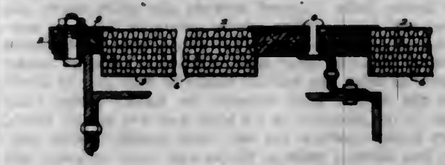
12. An all metal wheel comprising a rim, an elongated sleeve hub and a circumferential series of individual three-member spoke groups, each group comprising a radial brace rod and a pair of spokes crossing in the radial plane of said rod, the opposite ends of said rods and spokes being upset in the metal of the hub and rim ends respectively, providing tension securance of the rim in relation to the hub.

17,141. APPARATUS FOR PRODUCING ARTICLES BY ELECTROLYTIC DEPOSITION. GUNNAR ROSENQVIST, Pittsburgh, Pa. Filed Aug. 11, 1927. Serial No. 212,326. Original No. 1,594,509, dated Aug. 3, 1926, Serial No. 11,000, filed Feb. 24, 1925. 6 Claims. (Cl. 204—11.)



1. An apparatus of the character described, comprising in combination a container for an electrolytic solution, a metal mold capable of holding a solution disposed outside of said container, a support disposed within said metal mold and adapted to contain scrap copper, means for causing the circulation of the solution from said container through said support and means for electrically connecting said scrap copper and mold with a source of current.

17,142. RADIO BROADCAST SELECTING AND DISTRIBUTING SYSTEM. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Jan. 5, 1927. Serial No. 159,249. Original No. 1,522,361, dated Jan. 6, 1926, Serial No. 690,076, filed Feb. 29, 1924. 12 Claims. (Cl. 250—6.)

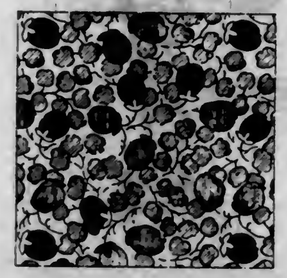


4. The method of relaying messages from primary transmitting stations using various wave lengths to a plurality of receiving stations in a local area permanently tuned to a fixed wave length, which comprises receiving any one of the primary waves, changing the frequency of the received wave by amounts depending upon the particular wave received to produce a wave always the same and corresponding in wave length to that of the receiving stations, and transmitting the wave at the changed frequency to the receiving stations.

17,143. SHINGLE OR BLOCK CONSTRUCTION. ALBERT C. FISCHER, Des Plaines, Ill. Filed Mar. 6, 1925. Serial No. 13,647. Original No. 1,447,290, dated Mar. 6, 1923, Serial No. 229,681, filed Apr. 20, 1918. 16 Claims. (Cl. 108—8.)

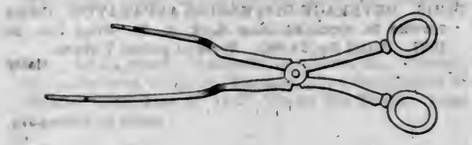
1. A roof comprising shingles, each of which comprises a body portion having a flexible backing portion extending from opposite side edges thereof, said shingles being arranged with one of the extending portions of certain of said shingles lying between the body portion and the backing of an adjacent shingle.

17,144. PANEL. WALTER M. SCHWARTZ, Philadelphia, Pa., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 5, 1928. Serial No. 310,637. Original No. 1,652,055, dated Dec. 6, 1927, Serial No. 107,675, filed May 8, 1926. 4 Claims. (Cl. 72—16.)



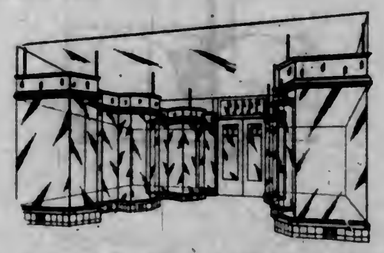
1. The combination in a panel of two plates spaced apart forming the front and the back of the panel; a wall extending from the front to the rear plate around the edges of the panel; an extension on one of said plates beyond said edge wall; a flange on said extension projecting toward the other of said plates, whereby a channel is formed around the panel outside said edge wall; and an insert of non-conducting material located in said channel having a bearing surface extending outwardly from and at an angle with respect to said edge wall.

# DESIGNS



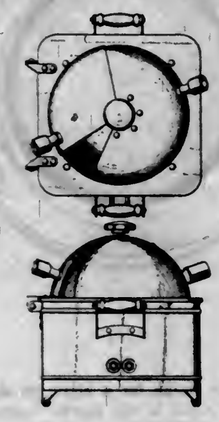
## NOVEMBER 20, 1928.

76,908. TEXTILE FABRIC. LINCOLN BARKER, New York, N. Y., assignor to Trippe, Barker & Co., New York, N. Y., a Corporation of New York. Filed Feb. 20, 1928. Serial No. 25,498. Term of patent 3½ years.



The ornamental design for a textile fabric substantially as shown.

76,909. COMBINATION FOOD SERVER. PETER H. BENDERO, Minneapolis, Minn. Filed June 2, 1928. Serial No. 26,972. Term of patent 7 years.

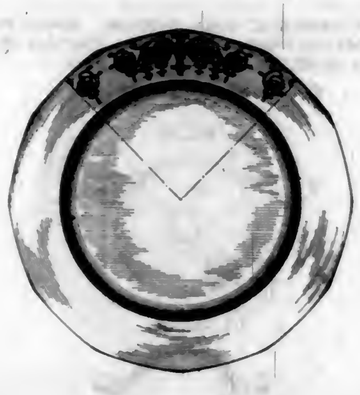


The ornamental design for a combination food server, as shown.

76,910. STORE FRONT. JACOB B. BERLAND, St. Louis, Mo. Filed Dec. 9, 1927. Serial No. 24,423. Term of patent 14 years.

The ornamental design for a store-front substantially as shown.

76,911. ELECTRIC CORN POPPER. ALFRED BERSTED and MARTIN BERSTED, Chicago, Ill. Filed July 16, 1928. Serial No. 27,506. Term of patent 7 years.



The ornamental design for an electric corn popper, as shown.

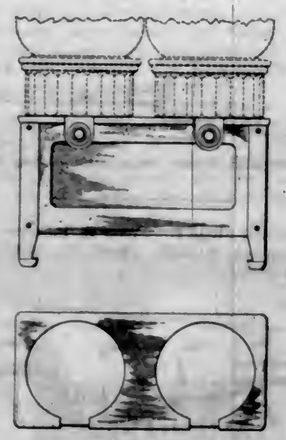
76,912. TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE. ALBERT H. BIEN, Philadelphia, Pa. Filed Apr. 5, 1928. Serial No. 26,135. Term of patent 14 years.

The ornamental design for textile fabric or similar article of manufacture, substantially as shown and described.

76,913. PLATE. EDGAR M. BOTTOME, Moundsville, W. Va., assignor to Fostoria Glass Company, Moundsville, W. Va., a Corporation of West Virginia. Filed Aug. 17, 1928. Serial No. 27,869. Term of patent 14 years.

The ornamental design for a plate, as shown and described.

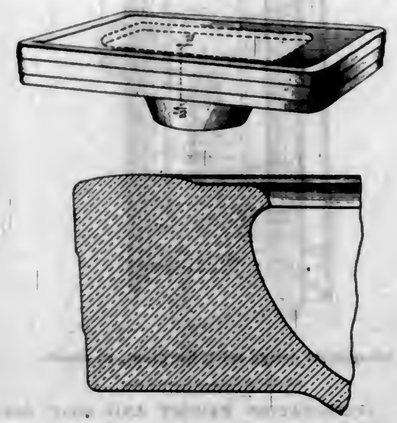
76,914. DRESS. KATHERINE E. BURNS, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 1, 1928. Serial No. 27,663. Term of patent 3½ years.



The ornamental design for a dress substantially as shown and described.

76,915. LAMP STAND. ANTONIO COLUCCI, Brooklyn, N. Y. Filed July 28, 1928. Serial No. 27,611. Term of patent 14 years.

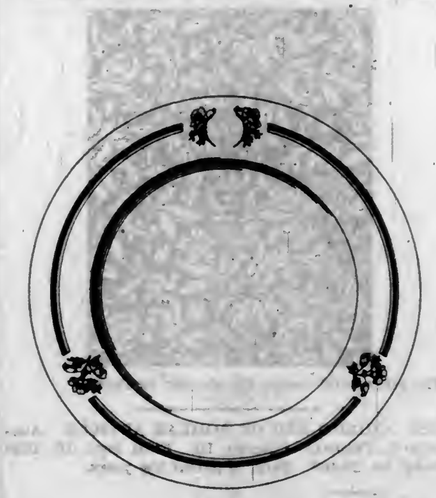
The ornamental design for a lamp stand substantially as shown.



76,916. BEVERAGE-DISPENSING APPARATUS. CHRISTOPHER M. CORDLEY, New York, N. Y. Filed Dec. 29, 1927. Serial No. No. 24,685. Term of patent 7 years.

The ornamental design for a beverage dispensing apparatus, as shown.

76,917. LAVATORY. CHARLES R. CRANE, 2d, Chicago, Ill., assignor to Crane Co., Chicago, Ill., a Corporation of Illinois. Filed July 22, 1927. Serial No. 22,842. Term of patent 14 years.



The original design for a lavatory as shown and described.

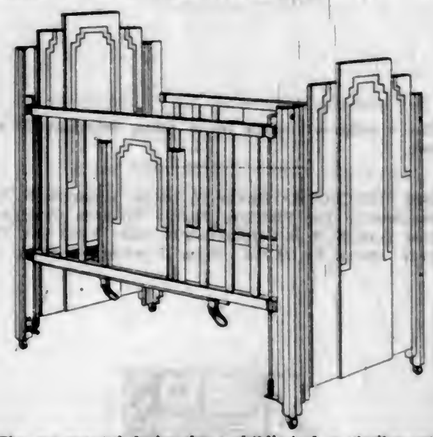
76,918. LAVATORY. CHARLES R. CRANE, 2d., Chicago, Ill., assignor to Crane Co., Chicago, Ill., a Corporation of Illinois. Filed July 22, 1927. Serial No. 22,843. Term of patent 14 years.

The ornamental design for a lavatory as shown and described.

76,919. PLATE. EUGENE A. DE LAN, New Castle, Pa., assignor to Shenango Pottery Company, New Castle, Pa., a Corporation of Pennsylvania. Filed Aug. 16, 1928. Serial No. 27,834. Term of patent 7 years.

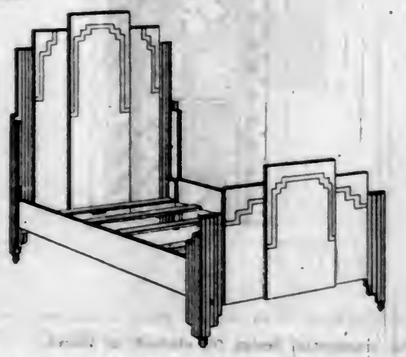
The ornamental design for a plate, substantially as shown.

76,920. OILCLOTH. HENRY W. DIECK, Brooklyn, N. Y., assignor to The Standard Textile Products Company, New York, N. Y., a Corporation of Ohio. Filed Nov. 17, 1927. Serial No. 24,154. Term of patent 3½ years.



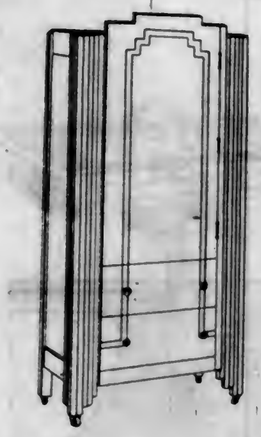
The ornamental design for oilcloth, as shown.

76,921. OILCLOTH. HENRY W. DIECK, Brooklyn, N. Y., assignor to The Standard Textile Products Company, New York, N. Y., a Corporation of Ohio. Filed Nov. 17, 1927. Serial No. 24,161. Term of patent 3½ years.



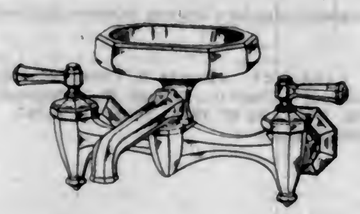
The ornamental design for oilcloth, as shown.

76,922. CHILD'S BED OR SIMILAR ARTICLE. ABRAHAM G. FELDMAN, Chicago, Ill. Filed Sept. 10, 1928. Serial No. 28,103. Term of patent 3½ years.



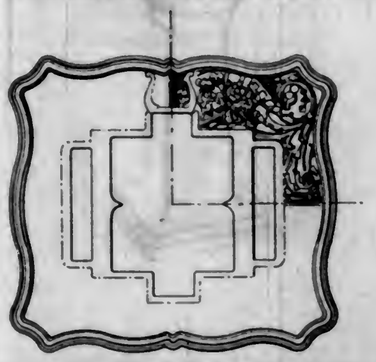
The ornamental design for a child's bed or similar article, as shown.

76,923. BED. ABRAHAM G. FELDMAN, Chicago, Ill. Filed Sept. 10, 1928. Serial No. 28,104. Term of patent 3½ years.



The ornamental design for a bed, as shown.

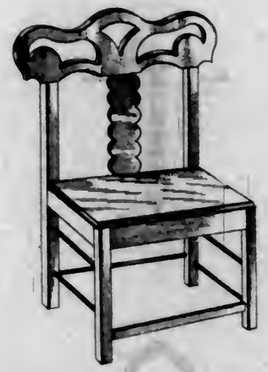
76,924. WARDROBE. ABRAHAM G. FELDMAN, Chicago, Ill. N. Y. Filed July 28, 1928. Serial No. 27,611. Term 3½ years.



The ornamental design for a wardrobe, as shown.

76,925. COMBINATION FAUCET AND SOAP DISH. FRED W. FRANKENBERGER, Louisville, Ky., assignor to Standard Sanitary Manufacturing Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Feb. 8, 1928. Serial No. 25,281. Term of patent 14 years.

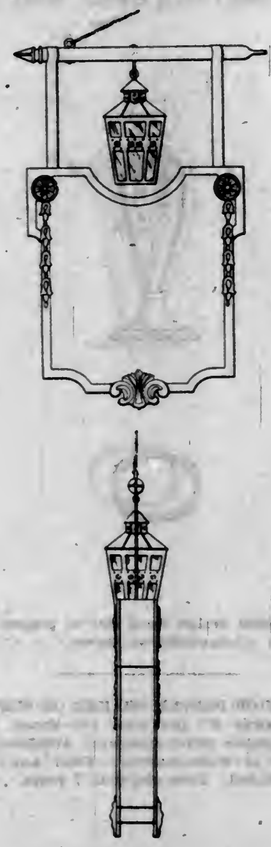
The ornamental design for a combination faucet and soap dish substantially as shown.



76,926. ESCUTCHEON PLATE FOR A VERNIER DIAL. JOHN GELOSO, New York, N. Y. Filed Nov. 16, 1927. Serial No. 24,145. Term of patent 3½ years.

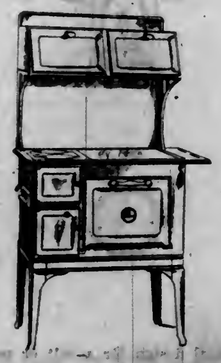
The ornamental design for an escutcheon plate for a vernier dial, as shown and described.

76,927. CHAIR. CLARA B. YOUNG GROSVENOR, River Point, R. I. Filed Sept. 19, 1928. Serial No. 28,213. Term of patent 3½ years.



The ornamental design for a chair as shown.

76,928. STATUETTE. HARRIS C. GREEN, Hubbardston, Mass. Filed May 28, 1928. Serial No. 26,880. Term of patent 7 years.



The ornamental design for a statuette as shown.

76,929. ADVERTISING SIGN. JOSEPH HUEFNER, Buffalo, N. Y., assignor to City Dairies Company, St. Louis, Mo., a Corporation of Indiana. Filed Mar. 17, 1928. Serial No. 25,897. Term of patent 14 years.

The ornamental design for an advertising sign, as shown.

76,930. STOVE. ULYSSES N. HOWELL, Rome, Ga. Filed Aug. 4, 1927. Serial No. 22,997. Term of patent 14 years.

The ornamental design for a stove, as shown.

76,931. SALT OR PEPPER SHAKER OR SIMILAR ARTICLE. JAMES W. JENNINGS, Providence, R. I., assignor to Quaker Silver Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Aug. 31, 1928. Serial No. 28,002. Term of patent 7 years.

The ornamental design for a salt or pepper shaker or similar article substantially as shown.

---

76,932. SALT OR PEPPER SHAKER OR SIMILAR ARTICLE. JAMES W. JENNINGS, Providence, R. I., assignor to Quaker Silver Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Aug. 31, 1928. Serial No. 28,003. Term of patent 7 years.

The ornamental design for a salt or pepper shaker or similar article substantially as shown.

76,933. SALT OR PEPPER SHAKER OR SIMILAR ARTICLE. JAMES W. JENNINGS, Providence, R. I., assignor to Quaker Silver Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Aug. 31, 1928. Serial No. 28,005. Term of patent 7 years.

The ornamental design for a salt or pepper shaker or similar article substantially as shown.

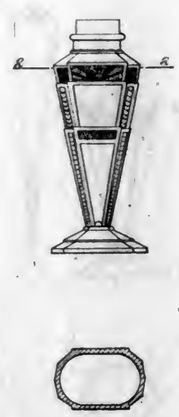
---

76,934. SALT OR PEPPER SHAKER OR SIMILAR ARTICLE. JAMES W. JENNINGS, Providence, R. I., assignor to Quaker Silver Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Aug. 31, 1928. Serial No. 28,006. Term of patent 7 years.

The ornamental design for a salt or pepper shaker or similar article substantially as shown.

76,935. SALT OR PEPPER SHAKER OR SIMILAR ARTICLE. JAMES W. JENNINGS, Providence, R. I., assignor to Quaker Silver Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Aug. 31, 1928. Serial No. 28,007. Term of patent 7 years.

The ornamental design for a salt or pepper shaker or similar article substantially as shown.



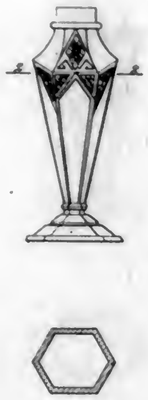
---

76,936. SALT OR PEPPER SHAKER OR SIMILAR ARTICLE. JAMES W. JENNINGS, Providence, R. I., assignor to Quaker Silver Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Aug. 31, 1928. Serial No. 28,008. Term of patent 7 years.

The ornamental design for a salt or pepper shaker or similar article substantially as shown.

76,937. SALT OR PEPPER SHAKER OR SIMILAR ARTICLE. JAMES W. JENNINGS, Providence, R. I., assignor to Quaker Silver Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Aug. 31, 1928. Serial No. 28,009. Term of patent 7 years.

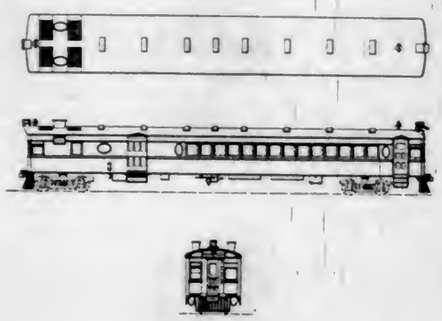
The ornamental design for a salt or pepper shaker or similar article substantially as shown.



---

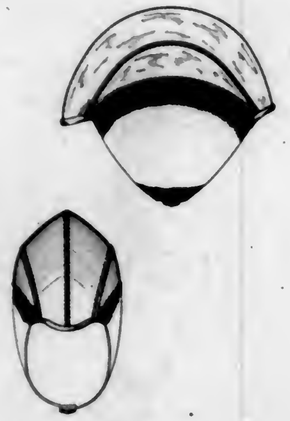
76,938. SALT OR PEPPER SHAKER OR SIMILAR ARTICLE. JAMES W. JENNINGS, Providence, R. I., assignor to Quaker Silver Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Aug. 31, 1928. Serial No. 28,010. Term of patent 7 years.

The ornamental design for a salt or pepper shaker or similar article substantially as shown.



76,939. SALT OR PEPPER SHAKER OR SIMILAR ARTICLE. JAMES W. JENNINGS, Providence, R. I., assignor to Quaker Silver Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Aug. 31, 1928. Serial No. 28,011. Term of patent 7 years.

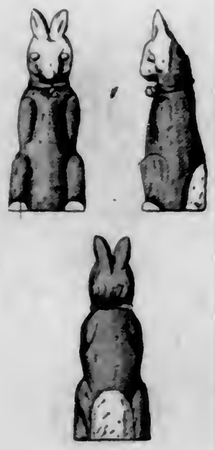
The ornamental design for a salt or pepper shaker or similar article substantially as shown.



---

76,940. RAILWAY-CAR BODY. WILLIAM B. JUPP, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 26, 1927. Serial No. 24,285. Term of patent 14 years.

The ornamental design for a railway car body as shown.



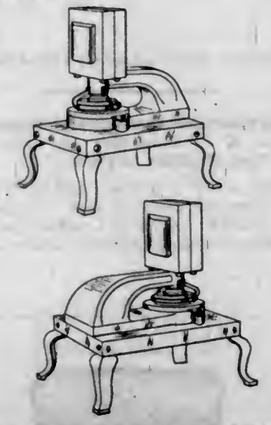
76,941. CAP. DAVID KARGER, Milwaukee, Wis. Filed July 20, 1928. Serial No. 27,540. Term of patent 7 years.

The ornamental design for a cap, as shown.

---

76,942. MARSHMALLOW CANDY. WILLIAM W. KNORPP, Brooklyn, N. Y., assignor to Knorpp Candy Company, New York, N. Y., a Corporation of New York. Filed May 6, 1927. Serial No. 21,872. Term of patent 14 years.

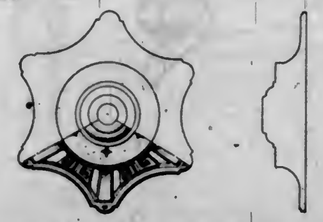
The ornamental design for marshmallow candy as shown.



76,943. CANDLE. SUSIE T. LANE, San Diego, Calif. Filed Sept. 19, 1928. Serial No. 28,195. Term of patent 7 years.

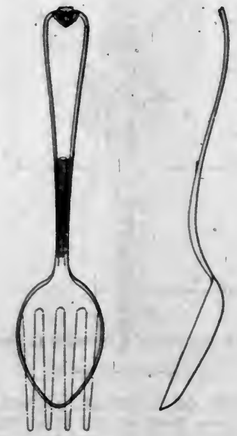
The ornamental design for a candle, substantially as shown.

---



76,944. COMBINED FRAME AND CASING FOR PUNCHING MACHINES. LEO R. LE TANG, Cincinnati, Ohio. Filed Aug. 27, 1928. Serial No. 27,974. Term of patent 14 years.

The ornamental design for a combined frame and casing for a punching machine, substantially as shown.



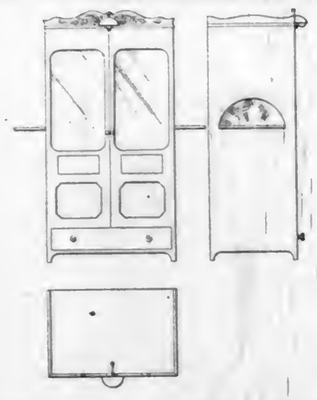
---

76,945. CANDLE CUP OR ARTICLE OF ANALOGOUS NATURE. NORMAN LIPSKY, New York, N. Y., assignor to Halcolite Company, Inc., a Corporation of New York. Filed Sept. 18, 1928. Serial No. 28,186. Term of patent 7 years.

The ornamental design for a candle cup or article of analogous nature, substantially as shown and described.

76,946. SPOON OR LIKE ARTICLE. HARRY A. MALINOWSKI, North Attleboro, Mass., assignor to Frank M. Whiting & Company, North Attleboro, Mass., a Corporation of Massachusetts. Filed Sept. 19, 1928. Serial No. 28,207. Term of patent 14 years.

The ornamental design for a spoon or like article as shown.



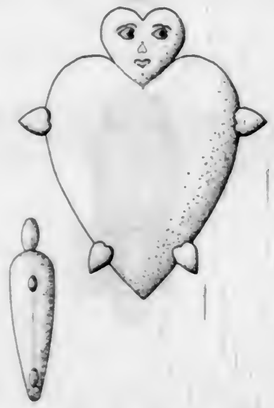
---

76,947. ELECTRON-EMISSION DEVICE. FREDERICK THEODORE MAY, Montclair, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Oct. 7, 1927. Serial No. 23,664. Term of patent 14 years.

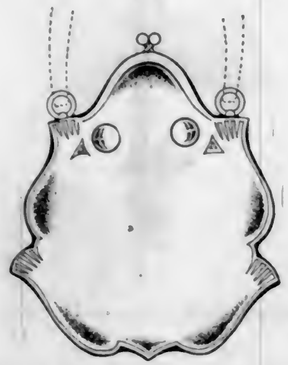
The ornamental design for an electron emission device as shown.

76,948. DRESSING CABINET. JOHN J. MCDONALD, Elizabethton, Tenn. Filed Apr. 10, 1928. Serial No. 26,213. Term of patent 7 years.

The ornamental design for a dressing cabinet, as shown.

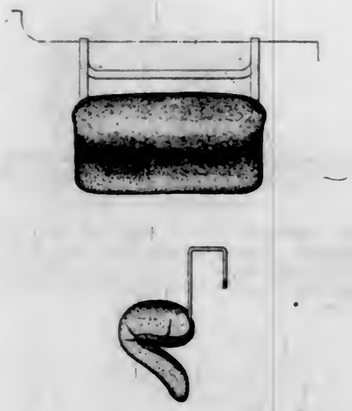


76,949. BROOCH OR SIMILAR ARTICLE. BERNAT MECHLOVITS, New York, N. Y. Filed July 26, 1928. Serial No. 27,588. Term of patent 3½ years.



The ornamental design for a brooch or similar article as shown.

76,950. DOLL. JUANITA MILLER, Oakland, Calif. Filed June 9, 1926. Serial No. 17,992. Term of patent 3½ years.



The ornamental design for a doll, as shown.

76,951. LADY'S HAND BAG. GILBERTO PALAU, New York, N. Y. Filed May 24, 1928. Serial No. 26,840. Term of patent 3½ years.

The ornamental design for a lady's hand bag, as shown.

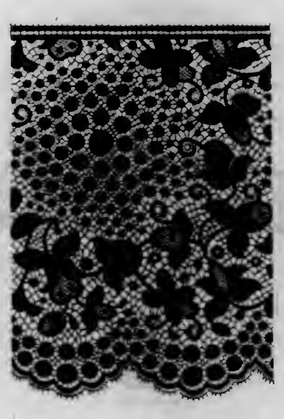
76,952. AUTOMOBILE ARM REST. BERNARD H. PAYTON, Providence, R. I. Filed Mar. 13, 1928. Serial No. 25,827. Term of patent 14 years.

The ornamental design for an automobile arm rest, as shown.

76,953. PICTURE FRAME. JOHN MICHAEL PELLETIER and MICHAEL DESTIN PELLETIER, New York, N. Y. Filed Nov. 9, 1927. Serial No. 24,057. Term of patent 14 years.

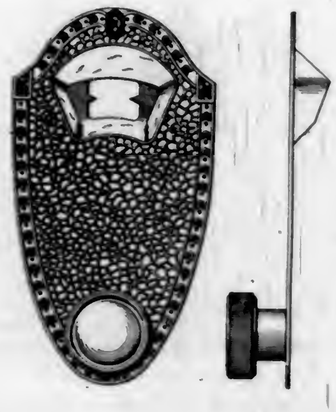
The ornamental design for a picture frame, as shown.

76,954. BEDSTEAD. GEORGE J. PIKE, Grand Rapids, Mich., assignor to Star Furniture Company, Jamestown, N. Y., a Corporation of New York. Filed May 25, 1928. Serial No. 26,856. Term of patent 3½ years.



The ornamental design for a bedstead as shown.

76,955. PIN OR ARTICLE OF SIMILAR NATURE. PERRY O. POWELL, Milwaukee, Wis. Filed July 14, 1926. Serial No. 18,360. Term of patent 14 years.



The ornamental design for a pin or article of similar nature, as shown.

76,956. LACE. JOHN V. PRICE, Providence, R. I., assignor to Rhode Island Lace Works, Inc., West Barrington, R. I., a Corporation of Rhode Island. Filed July 17, 1928. Serial No. 27,507. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

76,957. ESCUTCHEON PLATE FOR A DIAL MECHANISM. WILLIAM A. READY, Brookline, Mass. Filed July 24, 1928. Serial No. 27,568. Term of patent 7 years.

The ornamental design for an escutcheon plate for a dial mechanism, as shown and described.

76,958. TREE STAND. ABRAHAM ROSENBERG, New York, N. Y. Filed June 30, 1928. Serial No. 27,337. Term of patent 7 years.

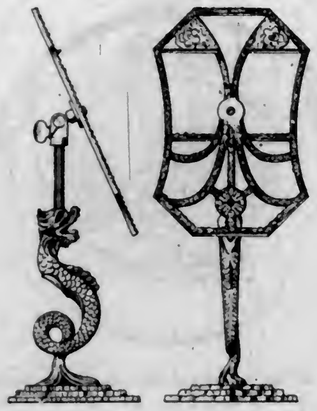
The ornamental design for a tree stand as shown.

76,959. DOME LIGHT FOR AN AUTOMOBILE. WILLIAM SCHNELL, Detroit, Mich., assignor to Ternstedt Manufacturing Co., Detroit, Mich., a Corporation of Michigan. Filed July 27, 1928. Serial No. 27,599. Term of patent 7 years.

The ornamental design for a dome light for an automobile substantially as shown.

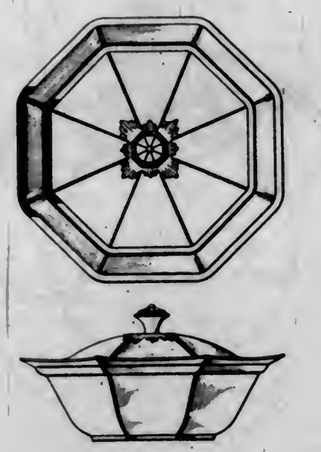
76,960. NECKLACE OR SIMILAR ARTICLE. EMIL ARTHUR SCHUELKE, Meriden, Conn., assignor to The Napier Co., Meriden, Conn., a Corporation of Connecticut. Filed Feb. 9, 1928. Serial No. 25,308. Term of patent 7 years.

The ornamental design for a necklace or similar article as shown.

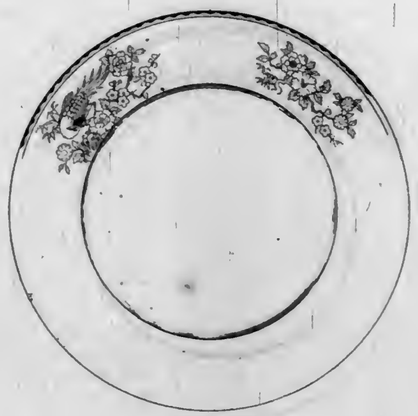


76,961. BENCH. FREDERICK SCHWARTZ, Brooklyn, N. Y., assignor to Robert Findlay Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 10, 1928. Serial No. 27,785. Term of patent 7 years.

The ornamental design for a bench, as shown.

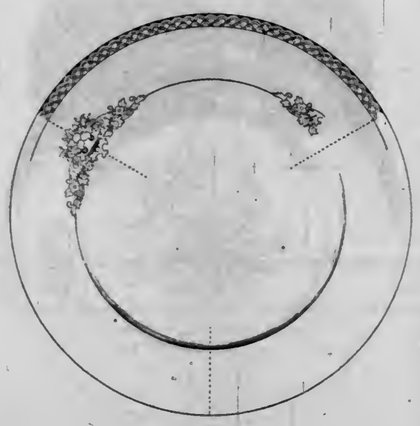


76,962. DISPLAY STAND. FRANK SOBEL, Brooklyn, N. Y., assignor to Metal Artcraft Fixture Co., New York, N. Y., a Corporation of New York. Filed Sept. 1, 1928. Serial No. 28,029. Term of patent 7 years.



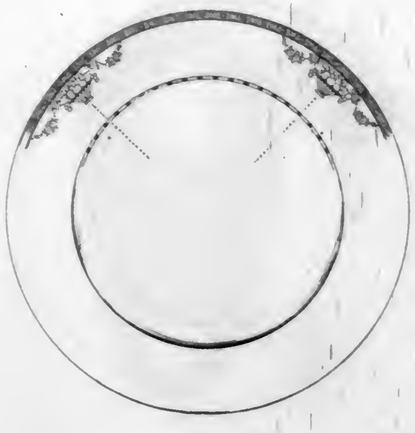
The ornamental design for a display stand, as shown.

76,963. COVERED DISH OR ANALOGOUS ARTICLE. GEORGE C. THOMPSON, East Liverpool, Ohio, assignor to The C. C. Thompson Pottery Co., East Liverpool, Ohio. Filed June 1, 1928. Serial No. 26,954. Term of patent 14 years.



The ornamental design for a covered dish or analogous article, as shown and described.

76,964. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,371. Term of patent 7 years.

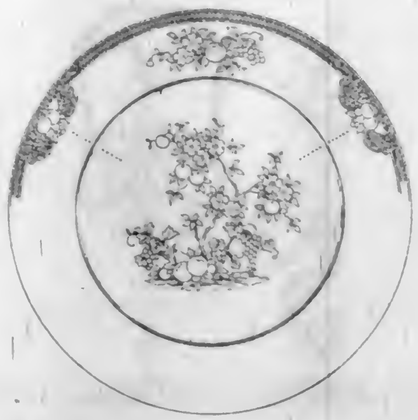


The ornamental design for a plate or similar article, as shown and described.

76,965. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,372. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown and described.

76,966. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,376. Term of patent 7 years.



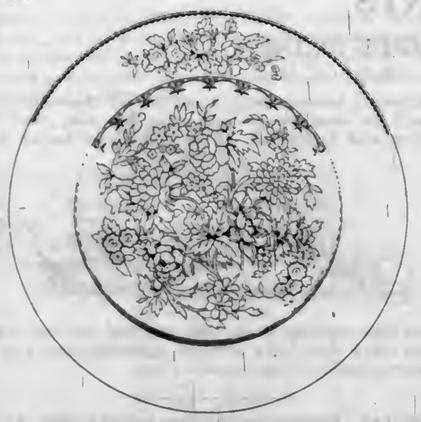
The ornamental design for a plate or similar article, as shown and described.

76,967. PLATE OF SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,386. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown and described.

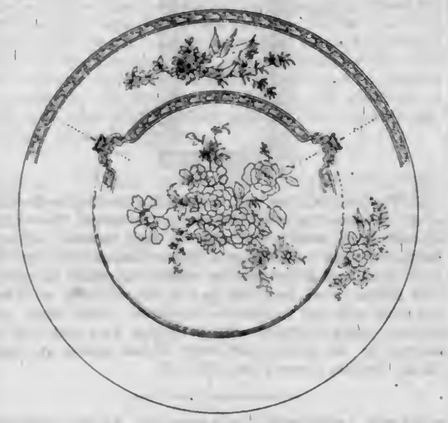
76,968. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,390. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown and described.

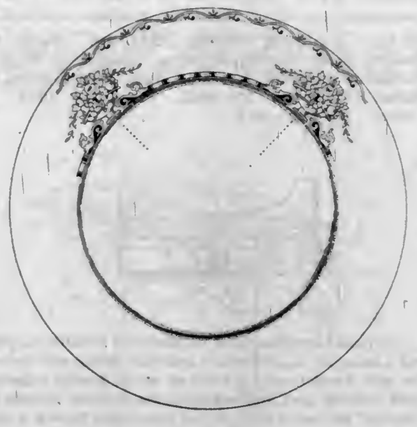


76,969. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,393. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown and described.



76,970. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,394. Term of patent 7 years.



The ornamental design for a plate or similar article as shown and described.

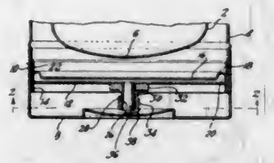
76,971. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Feb. 10, 1928. Serial No. 25,395. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown and described.

76,972. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, Astoria, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Aug. 16, 1928. Serial No. 27,838. Term of patent 7 years.

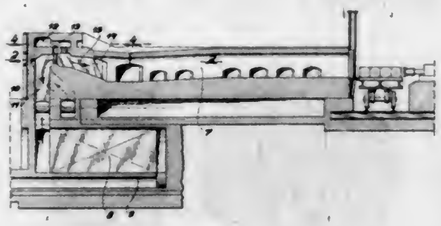
The ornamental design for a plate or similar article, as shown and described.

76,973. GLASS BOWL. JOSEPH ZWEIG, Brooklyn, N. Y., assignor to Metropolitan Lamp Co., Inc., New York, N. Y., a Corporation of New York. Filed Sept. 5, 1928. Serial No. 28,053. Term of patent 3½ years.



The ornamental design for a glass bowl substantially as shown.

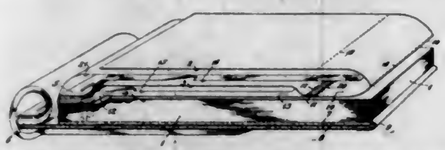
# PATENTS



## GRANTED NOVEMBER 20, 1928.

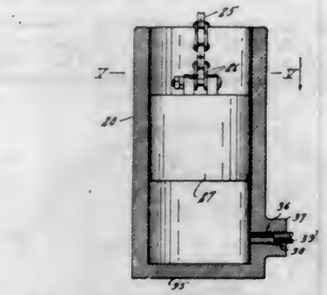
1,691,912. VACUUM VESSEL SEALING. HARRY M. BADGER, Great Barrington, Mass., assignor to Stanley Insulating Company, Berkshire, Mass., a Corporation of Maine. Filed Feb. 12, 1925. Serial No. 8,703. 2 Claims. (Cl. 220—10.)

1. A circular baffle plate for a cylindrical metallic vacuum vessel having an outer shell, a granular filling and an exhaust port, consisting of a sheet of metal located adjacent to said exhaust port and engaging the interior surface of the wall of the outer shell of the vessel and having a plurality of slits with contacting edges permitting air to pass but preventing the passage of the granular material, the faces of the slits being of the same metal as the body portion of the plate.



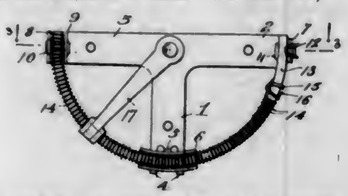
1,691,913. REGENERATIVE FURNACE. HEINRICH BANGERT and GUSTAV HUHN, Dusseldorf, Germany. Filed Dec. 30, 1927, Serial No. 243,539, and in Germany Jan. 20, 1923. 5 Claims. (Cl. 158—7.5.)

1. A regenerative furnace having two passages for alternate communication with a source of gas supply and with a stack, and connected with separate regenerator chambers, a burner passage communicating with the furnace, and a passage for supplying air, all the said passages meeting at a common air and gas mixing and mixture ignition point and the three first-named passages being so relatively arranged as to effect a division of the products of combustion into two portions supplied respectively to the burner passage and that passage of the first-named passages which at the time being communicates with the stack.



1,691,914. MANIFOLDING SALES BOOK. EDWARD KIRBY BOTTLE, Elmira, N. Y., assignor to American Sales Book Company, Limited, Toronto, Canada, a Corporation of Canada. Filed Jan. 5, 1926. Serial No. 79,447. 3 Claims. (Cl. 282—9.)

1. In a salesbook, a sheet folded upon itself to form an upper and a lower record leaf, an auxiliary leaf having attachment to the upper face of said lower record leaf intermediate between the fold and the end thereof to leave space for inscription on said upper face both above and below said attachment, all of said leaves having their

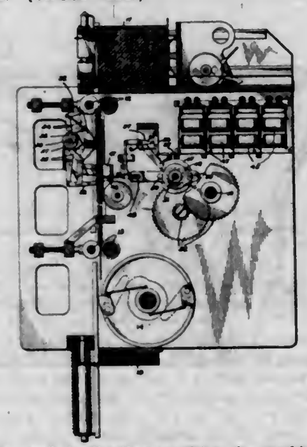


free ends extending in the same direction, the free end of said lower sheet being extended beyond the free ends of the other sheets for binding into a pad.

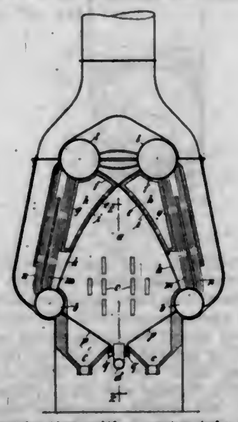
1,691,915. SWITCH-OPERATING MECHANISM. CLARENCE H. BOURGEOIS, Toledo, Ohio, assignor to The Haughton Elevator & Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 25, 1926. Serial No. 97,481. 8 Claims. (Cl. 200—34.)

3. The combination with a switch operating rock shaft, of an actuator for the shaft, means retarding the rocking of said shaft when acted upon by said actuator, said retarding means embodying a piston connected with the rock shaft and a cylinder in which the piston is guided, said piston, when near one end of the cylinder, cooperating with said end to form a completely closed space, said cylinder being provided with a leakage port which is uncovered by the piston only after it has moved an appreciable distance away from said end.

1,691,916. RHEOSTAT. ARTHUR C. BRADY, Brooklyn, N. Y., assignor to Chas. Freshman Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 26, 1927. Serial No. 171,167. 1 Claim. (Cl. 201—55.)

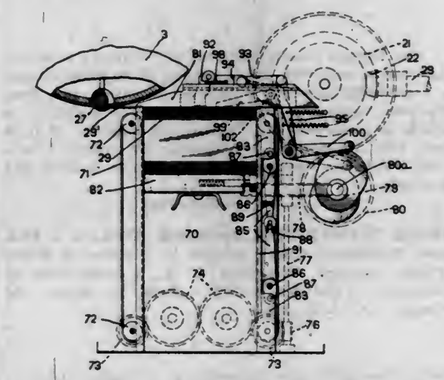


In a rheostat, the combination with a support having upturned ends, of a resistance unit secured to said ends, an arm for contacting with said unit, a hollow post se-



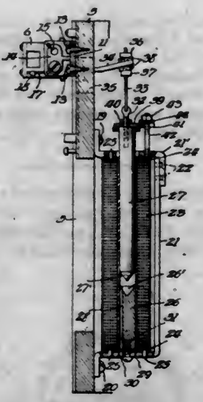
cured to said support, means for securing said arm to said post, said means being slotted to receive actuating means, and current terminals secured to said support and unit.

1,691,917. DUPLICATING MACHINE. OTTO E. BRAITMAYER, New York, N. Y., assignor to The Tabulating Machine Company, New York, N. Y., a Corporation of New Jersey. Filed July 23, 1923. Serial No. 653,063. 2 Claims. (Cl. 164—113.)



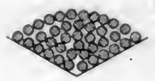
1. In a card duplicating machine, in combination with means for automatically and successively feeding punched and unpunched cards into and through the machine, means for reading desired fields of punched data upon the punched cards, means controlled by the reading means for punching said data or selected portions thereof upon any desired fields of the initially unpunched cards, and supplemental means independent of said punchings in the initially punched cards and including selective set up devices adjustable by the operator for effecting the punching of repetition data upon desired fields of the initially unpunched cards.

1,691,918. BOILER STRUCTURE WITH PULVERIZED-COAL-BURNING FURNACE. GEORG CANTIENY, Berlin, Germany, assignor to Kohlenscheidungs-Gesellschaft m. b. H., Berlin, Germany, a Corporation of Germany. Filed Oct. 21, 1925, Serial No. 63,867, and in Germany Oct. 25, 1924. 8 Claims. (Cl. 122—325.)



1. The combination with a water tube boiler formed by two separate boiler elements of a pulverized coal burning furnace arranged between said boiler elements, extending downwardly into two ash hoppers, upwardly directed fuel burners arranged between said ash hoppers, water cooled screens above said ash pits connected with the circulation of the boiler including headers adjacent the burners.

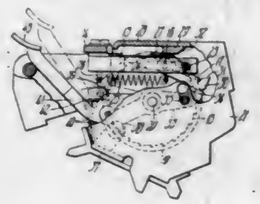
1,691,919. RECORD-FEEDING MACHINE. FRED M. CARROLL, Yonkers, N. Y., assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Original application filed Dec. 2, 1922, Serial No. 604,563. Divided and this application filed Dec. 10, 1926. Serial No. 153,804. 8 Claims. (Cl. 271—43.)



1. In a sheet feeding device, a supply container having a wall compressible against a stack of sheets, and means for moving said wall for advancing the sheets.

1,691,920. ELECTROMAGNETICALLY-ACTUATED SWITCH. GEORGE H. CHAPMAN, Chicago, Ill. Filed May 5, 1921. Serial No. 466,885. 2 Claims. (Cl. 200—111.)

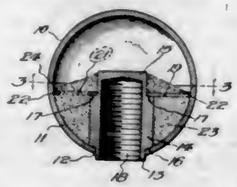
2. In a switch-actuating mechanism for musical instruments, the combination of a pivoted switch bar, a laterally projecting apertured arm thereon, a solenoid magnet including an endwise movable plunger, an eye screw mounted in the outer end of said plunger, a screw-threaded pull rod articulated at one end to said eye screw and extending through the aperture of said arm, nuts on said pull rod above and below said arm whereby the effective length of said pull rod may be adjusted, and means to prevent turning movement of said plunger.



1,691,921. STRANDED SECTOR-SHAPED CONDUCTOR. NORMAN C. DAVIS, Perth Amboy, N. J., assignor, by mesne assignments, to General Cable Corporation, a Corporation of New Jersey. Substitute for application Serial No. 402,832, filed Aug. 11, 1920. This application filed Apr. 20, 1927. Serial No. 185,096. 4 Claims. (Cl. 173—13.)

1. The method herein described of producing a sector-shaped cable conductor which consists in helically stranding a plurality of wires to tubular formation and then, while the component wires continue in a condition of freedom to move relatively both in the direction of their length and transversely, compressing the tubular bundle to sector shape at the expense of the tubular space within the bundle.

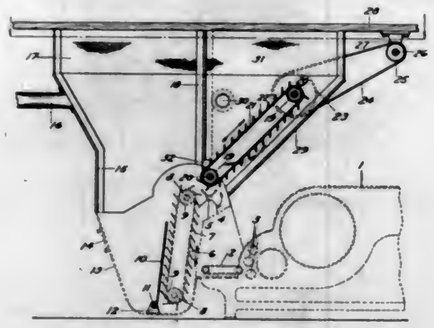
---



1,691,922. TYPEWRITING MACHINE. WILLIAM A. DOBSON, Bridgeport, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 8, 1925. Serial No. 61,191. 16 Claims. (Cl. 197—114.)

1. In a typewriting machine, the combination with a rotatable platen, of a line-space wheel rotatable therewith, means to actuate the line-space wheel to line-space the platen, a detent engaging the line-space wheel to prevent overthrow, and means to disengage the detent, said disengaging means being automatically releasable upon actuation of the line-spacing means.

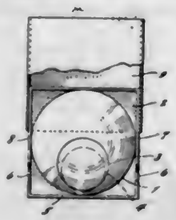
---



1,691,923. HANDLE FOR OPERATING LEVERS. KARL EKLUND, Forest Park, Ill., assignor to W. E. Keough Company, Forest Park, Ill., a Corporation of Illinois. Filed Mar. 19, 1928. Serial No. 262,849. 9 Claims. (Cl. 74—33.)

1. A handle for operating-levers comprising an upper and a lower shell, the lower shell being apertured, lever engaging means of greater diameter in its body portion than the diameter of the aperture, located in the shell adjacent said aperture, filling material in the shell engaging the walls of the lever engaging means, and means extending inwardly from the shell member for engaging the filling material.

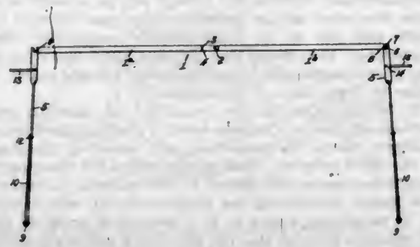
---



1,691,924. MACHINE FOR MAKING MATTRESSES. ERWIN H. FALK, Davenport, Iowa. Filed Dec. 16, 1927. Serial No. 240,474. 4 Claims. (Cl. 19—78.)

1. In a machine for making mattress fillers, the combination of two hoppers in each of which there is a feeding conveyor for delivering filler stock at a common, given point, the conveyor in one hopper being provided with a shield for preventing access of the material to a portion of the conveyor corresponding in width and location to the stream of material fed by the conveyor in the other hopper.

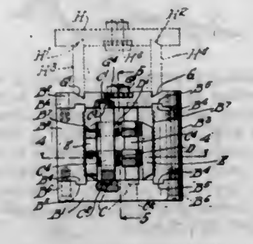
---



1,691,925. CONTAINER FOR FUSED-BIFOCAL-LENS BLANKS. WILLIAM C. GAMBLE, New York, N. Y., assignor to General Optical Company, Inc., a Corporation of New York. Filed Jan. 27, 1925. Serial No. 5,010. 5 Claims. (Cl. 206—46.)

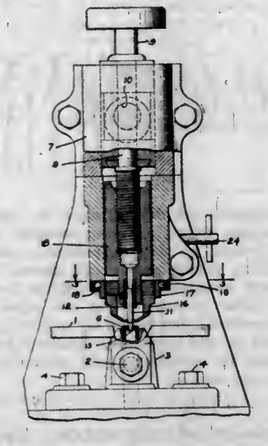
1. The combination of a shallow, substantially square, open-top box having in its bottom and near one side a circular light-transmitting blank-inspecting hole the diameter of which is approximately half the length of a side of the box, a fused bifocal lens blank fitting snugly in the box and frictionally gripped and held by the four sides thereof, such lens blank having its segment of smaller diameter than and in register with the said hole, and a sliding cover for the box slidable completely thereover in a direction normal to the side of the box near which the said hole is disposed.

1,691,926. FOLDABLE BARRICADE. HERMAN P. GEISER, Lima, Ohio. Filed Apr. 28, 1928. Serial No. 273,476. 6 Claims. (Cl. 256—64.)



1. In a device of the character described, a cross-bar, supporting legs for the cross-bar foldable along opposite sides thereof, a foot-bar foldably attached to the lower end of each leg in transverse relation to the cross-bar and adapted to be swung into lengthwise relation to the leg, and means for releasably holding the foot-bar in set-up relation to the leg.

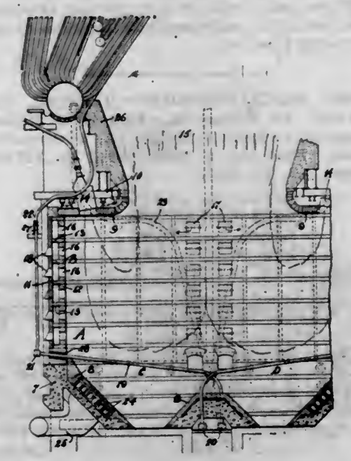
6. In a device of the class described, a cross-bar having sections of flat metal pivoted together in lapping relation at their inner ends to permit a folding thereof and having provision for limiting the unfolding movements thereof, a leg pivoted at its inner end to the free end of each of said sections in lapping relation to the outer side thereof and having stop coaction with the section to limit the relative unfolding movements of the leg, said legs adapted to be folded alongside of the respective section in longitudinal relation thereto and being of flat metal with the lower end thereof formed with a quarter turn about the longitudinal axis of the leg and outward from the outer side of the cross-bar section to which attached, a foot-bar pivoted to the outer side of each leg at its lower end transverse to the cross-bar and adapted to be placed in folded relation longitudinally of the leg, a brace-link connected to each leg and its foot-bar to releasably retain them in set-up relation and adapted to be folded therewith into longitudinal relation to each other, and an arm foldably connected to each leg and adapted to support a signal device.



---

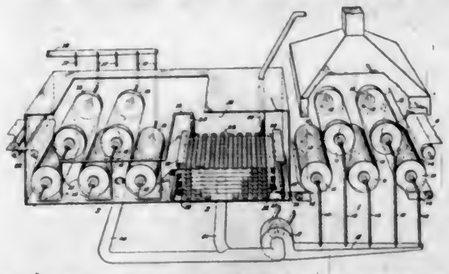
1,691,927. SHAPER HEAD FOR WOODWORKING MACHINERY. WILLIAM E. GLATT and ERNST HERMANN, Chicago, Ill. Filed Sept. 28, 1925. Serial No. 58,957. 4 Claims. (Cl. 144—231.)

1. A cutting head comprising, in association with a rotary shaft, a plurality of plates spaced along said shaft, spacing members between said plates, cutting members and means for clamping them against said spacing members, including carriers adapted to be moved from side to side of the head, along planes parallel with the opposed faces of said spacing members.



1,691,928. NIBBLING MACHINE. GLEN N. HUTCHINSON, Montclair, N. J., and GUY S. CARDEN, Endicott, N. Y., assignors to International Time Recording Company of New York, Endicott, N. Y., a Corporation of New York. Filed Jan. 6, 1925. Serial No. 780. 7 Claims. (Cl. 164—110.)

1. In a punching machine, a reciprocating punch holder, a work stripper and means for releasably mounting said stripper adjacent to said holder to permit it to be released when engaged by the holder.



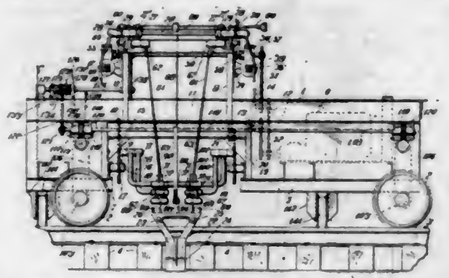
---

1,691,929. PULVERIZED-FUEL-BURNING APPARATUS. GEORGE P. JACKSON, Flushing, N. Y., assignor to Combustion Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 29, 1924. Serial No. 695,969. 2 Claims. (Cl. 110—28.)

1. In combination, a combustion chamber, means for introducing pulverized coal downwardly simultaneously from opposite sides, and said combustion chamber having a bottom in the form of a double hopper the outer wall portion of which is hollow, together with means for admitting a cooling medium into said hollow portion.

1,691,930. METHOD OF PAPER DRYING AND APPARATUS THEREFOR. ALVIN E. MONTGOMERY, Oak Park, Ill. Filed July 21, 1927. Serial No. 207,463. 9 Claims. (Cl. 34—48.)

1. In an apparatus for drying paper, in combination a plurality of drying drums, a drying chamber having surfaces therein heated by high temperature steam, a plurality of finishing drying drums and means for passing steam from said surfaces to said finishing drying drums whereby the latter are heated by the steam which is cooled by said surfaces, and means for subjecting the paper to the influence of said surfaces to generate steam therefrom and means for conducting said generated steam to said initial drying drums.



1,691,931. BEARING-METAL ALLOY. KARL MÜLLER and WILHELM SANDER, Essen, Germany. Filed Sept. 30, 1921, Serial No. 504,374, and in Germany Oct. 1, 1920. 6 Claims. (Cl. 75—1.)

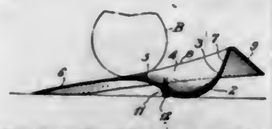
1. A bearing metal alloy comprising about 70 to 75 per cent of lead, about 15 to 25 per cent of antimony, about 3 to 6 per cent of tin, about 1 to 3 per cent of a metal of the cobalt type, and about 0.6 to 2 per cent of copper.

1,691,932. BEARING-METAL ALLOY. KARL MÜLLER and WILHELM SANDER, Essen, Germany. Filed Sept. 2, 1922, Serial No. 586,036, and in Germany Sept. 15, 1921. 5 Claims. (Cl. 75—1.)

1. A bearing metal alloy comprising approximately from 70 to 75 per cent of lead, 15 to 25 per cent of antimony, 3 to 6 per cent of tin, and appreciable quantities of cadmium not exceeding 5 per cent.

1,691,933. BALLAST-REMOVING MACHINE. EMMONS OVERMIER, La Grange, Ill., assignor to Maintenance Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 5, 1926. Serial No. 127,352. 18 Claims. (Cl. 37—104.)

1. An apparatus for removing material from between the ties of a railway track comprising a supporting frame, digging mechanism mounted in the frame, power means for operating the digging mechanism also carried in the frame, wheels for movably supporting the frame on the track rails, a lifting jack interposed between each wheel and the frame, each jack comprising a vertical guide on the frame, a journal support for the wheel having a post slidable vertically in the guide, a nut in the post, a screw mounted in the frame and threaded in the nut, means comprising a plurality of countershafts and gears for simultaneously rotating the several screws, a shaft driven from the power means, driving connections between this shaft and one of the countershafts comprising clutch mechanism, and means for automatically throwing out the clutch mechanism when the frame reaches either the upper or lower limit of its movement.

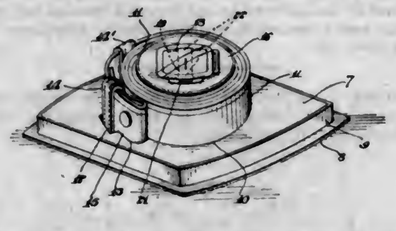


7. In an apparatus for removing the material from between the ties of a railway track, a supporting structure, a digger, means for supporting and operating the digger in the space between pair of ties, means for lowering the supporting means and digger as the material is removed, and means for shifting the digger laterally with relation to its supporting means as it is lowered to bring its path of operation beneath the rail, said latter means comprising a member pivotally supported at its upper end and adapted to swing at its lower end longitudinally of the ties, the lower portion of this member embodying cam slots engaged by portions of the digger and supporting means respectively.

1,691,934. BOILER FURNACE. EDWIN A. PACKARD, Yonkers, N. Y., assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 5, 1925. Serial No. 66,929. 3 Claims. (Cl. 122—235.)

1. In a boiler furnace, water walls defining combustion space and comprising tubes having longitudinal fins of such width that in normal operation of the furnace a portion thereof would burn off and means shading said fins to prevent such burning off.

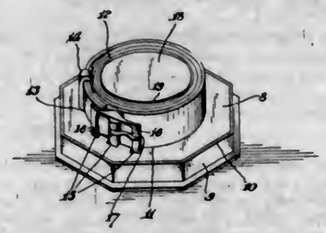
1,691,935. GOLF CUP. CHARLES J. PATERSON, Cleveland, Ohio. Refiled for abandoned application Serial No. 514,911, filed Nov. 14, 1921. This application filed Apr. 6, 1928. Serial No. 268,086. 17 Claims. (Cl. 273—36.)



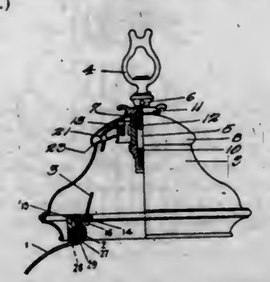
1. An unstable golf putting cup consisting of an integral structure intended to be gravitationally supported in its entirety and fashioned with a spherical cavity fitted to a standard golf ball, said cavity having a spherically surfaced bottom adapted during use always to be in contact with the floor, said cup adapted to be tilted on said bottom and to occupy one of two positions of rest depending upon the differing center of gravity owing to the presence or absence of a golf ball therein.

1,691,936. BELT BOX. HENRY A. PETER, Philadelphia, Pa., assignor to Pioneer Suspender Company, a Corporation of Pennsylvania. Filed July 22, 1927. Serial No. 207,653. 5 Claims. (Cl. 206—44.)

1. A belt box for containing a belt and a buckle in fixed relative positions for display, including a relatively shallow element provided with a flange extending from near

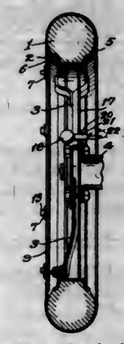


the top margin of its sides to a central circular opening for receiving the lower edge of the coiled belt, said flange having recesses in its margin for receiving the loops of



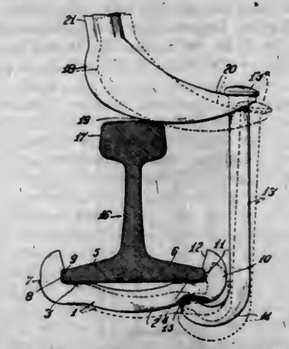
the belt, a central formation positioned within the coil of the belt and extending to near the top thereof, and means for disengageably securing the buckle to the top of said formation.

1,691,937. BELT BOX. HENRY A. PETER, Philadelphia, Pa., assignor to Pioneer Suspender Company, a Corporation of Pennsylvania. Filed July 22, 1927. Serial No. 207,654. 5 Claims. (Cl. 206—44.)



1. A belt box for containing a belt with its buckle attached in fixed position for transportation and display including a relatively shallow container element provided with a flange extending from near the top margin of its sides to a central circular opening for receiving the lower edge of the belt in coiled formation, said flange having recesses in its inner margin for receiving the loop of the belt and the cross-bars of the buckle, and means for maintaining the outer layer of the coil in tight engagement with the inner margin of the flange.

1,691,938. LIGHTING FITTING. EDGAR LANGLEY RANDALL, Muswell Hill, England, assignor to The General Electric Company Limited, London, England, a British Company. Filed July 7, 1926, Serial No. 120,919, and in Great Britain Mar. 31, 1926. 9 Claims. (Cl. 240—146.)

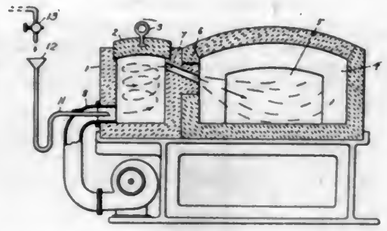


1. A lighting fitting comprising a compact unit including a canopy for covering an opening in the top of an illumination appliance, flexible means, a support for the said appliance connected to the flexible means, and contained within the canopy a member arranged to be rotated by hand in the one or the other direction about the axis of the lighting fitting, and adapted by such rotation to change the flexible means from the extended position to raise the support to the canopy, and to allow the flexible means to extend to lower the support.

1,691,939. DETACHABLE SIGN FOR VEHICLES. ROMAN L. SANCHEZ, Los Angeles, Calif., assignor of one-third to Miriam R. Egbert, Los Angeles, Calif. Filed Aug. 14, 1926. Serial No. 129,194. 1 Claim. (Cl. 40—129.)

The combination with a tire including a cover and supporting arms for the tire; of a circular translucent sign sheet provided around its edge with swivel fasteners and adapted to close the front of the cover orifice; tabs disposed on said cover around the said orifice and being provided with openings adapted to receive said swivel fasteners; a plate closing the rear end of the cover orifice and having its inner face provided with a reflecting surface and a lamp on said plate adapted, when lighted, to diffuse light to the translucent sheet.

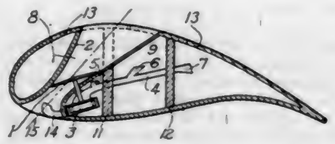
1,691,940. APPLYING TOOL FOR RAIL ANCHORS. RICHARD T. SCHOLES, Hinsdale, Ill. Original application filed Jan. 8, 1926, Serial No. 79,999. Divided and this application filed May 24, 1926. Serial No. 111,453. 6 Claims. (Cl. 81—3.)



1. A means for applying rail anchors to a rail, comprising a member having an anchor engaging hook at its lower end, and an enlarged head at its upper end, and an operating lever adapted to be fulcrumed on the rail head and having a short forked arm to engage the head of the first member.

1,691,941. OIL FURNACE. VLADIMIR B. SOUNITZA, Pasadena, Calif. Filed July 23, 1927. Serial No. 208,025. 1 Claim. (Cl. 158—4.)

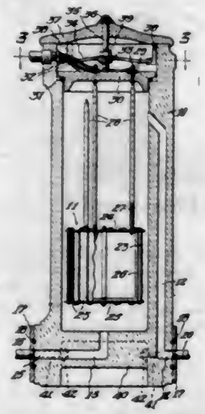
In an oil furnace, the combination, with a combustion chamber, one wall of said combustion chamber being provided with an aperture in its upper portion, said aperture



being inclined towards the bottom of said combustion chamber, of a vertical cylindrical chamber adjacent to said combustion chamber, said aperture extending into the upper portion of said chamber, an air pipe introduced into

said cylindrical chamber at the bottom and tangentially to the inner cylindrical walls of said cylindrical chamber, an oil pipe placed within said air pipe, and means to introduce oil into said oil pipe.

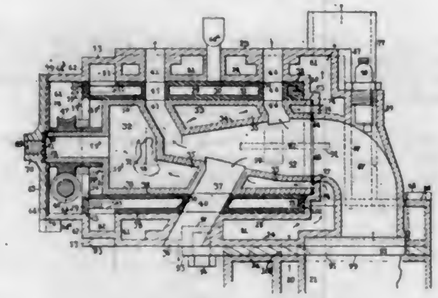
---



1,691,942. AIRPLANE WING. EDWARD A. STALKER, Ann Arbor, Mich. Filed Sept. 12, 1927. Serial No. 218,906. 6 Claims. (Cl. 244—12.)

1. In combination in a wing possessing one or more compartments, perforations in the wing surface bounding said compartments, a passage connecting the upper and lower surfaces of the wing, an air turbine located in said passage and actuating a means of creating a suction in said compartments.

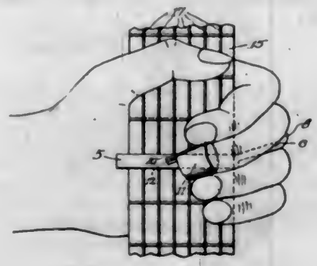
---



1,691,943. ELECTRICAL WATER HEATER. ERNEST CHARLES STEERE, Sydney, New South Wales, Australia. Filed Mar. 10, 1926, Serial No. 93,550, and in Australia Mar. 19, 1925. 4 Claims. (Cl. 219—39.)

1. An electric water heater comprising a water container formed of electrically insulating material, an extended water outlet passage formed in and of the material of the container, an inner lid in the container, a removable cover plate for the container, a plate mounted on the cover plate, arms on the plate, bayonet slots in the container wall to receive the ends of the arms, a locking bolt carried by the cover plate and threaded through the armed plate, and a removable heating element suspended from said inner lid.

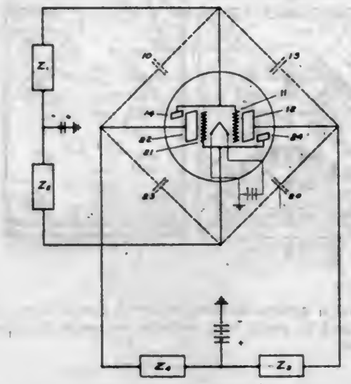
---



1,691,944. GAS ENGINE. BURNHAM C. STICKNEY, Portsmouth, N. H. Filed Sept. 11, 1925. Serial No. 55,698. 33 Claims. (Cl. 123—80.)

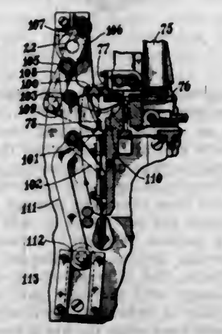
1. The combination with an engine cylinder, of an engine head, a water-enclosed chest in said head, a pressure-balanced rotary barrel valve in said chest, a seat within said valve, the axis of said valve being crosswise of the axis of said engine cylinder, said seat having inner and outer shells forming a water compartment and ported on its opposite sides through both shells, and a conduit through which gas flows past one end of the valve between said inner shell and the engine cylinder, means being provided to cause circulation of water around said chest and through the water compartment in said seat and out from one end of the latter.

---



1,691,945. FINGERING STEEL FOR GUITARS AND SIMILAR STRINGED INSTRUMENTS. JULIUS TIMM, Chicago, Ill. Filed Feb. 7, 1927. Serial No. 166,353. 7 Claims. (Cl. 84—319.)

1. In a device of the class described, the combination of a relatively long and narrow body portion, a wing extending from one end of said body portion, and a finger grip mounted on the top of said body portion.

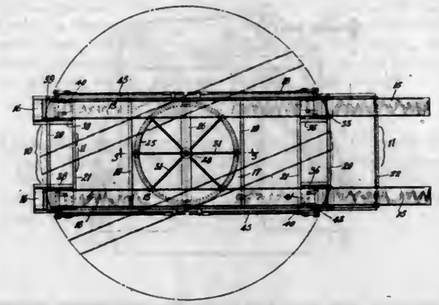


1,691,946. AUDION. JACK R. TOLMIE and TYNG M. LIBBY, Seattle, Wash. Filed Feb. 11, 1926. Serial No. 87,504. 1 Claim. (Cl. 250—27.5.)

An audion comprising an enveloping casing, a filament, two grids, two plates, and two wings contained therein, said plates and wings being arranged in pairs, one of said grids being connected within the envelope with a remote wing, and the other grid being similarly connected with the other remote wing.

---

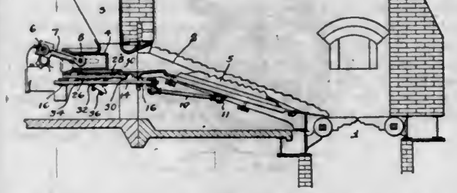
1,691,947. FEEDING MECHANISM. JOHN VAN BUREN, Brooklyn, N. Y. Filed Sept. 23, 1926. Serial No. 137,190. 8 Claims. (Cl. 198—224.)



1. In a mechanical movement, a rotatable driving member, a driven member, driving connections between said members and means for guiding the driven member in a manner whereby the rotational movement of the driving member will impart to the driven member a substantially straight line movement in one direction and a backing off and curved movement in the opposite direction.

---

1,691,948. TURNTABLE. WILLIAM MAYO VENABLE, Pittsburgh, Pa., assignor to Blaw-Knox Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed May 21, 1927. Serial No. 193,121. 8 Claims. (Cl. 104—44.)

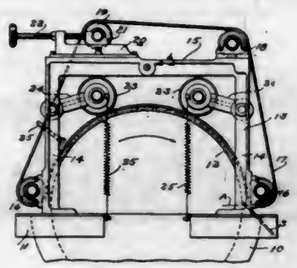


1. A roadway turntable comprising a base structure with ramps adapted to rest directly on the ground, a table structure rotatably mounted thereon, four ground wheels for said base structure swingable up and down relative

thereto, into and out of ground-engaging position, and hand lever mechanism for shifting said ground wheels as aforesaid.

---

1,691,949. UNDERFEED STOKER. SIGURD J. A. WIEBE, East Orange, N. J., assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 3, 1925. Serial No. 12,814. 2 Claims. (Cl. 110—44.)

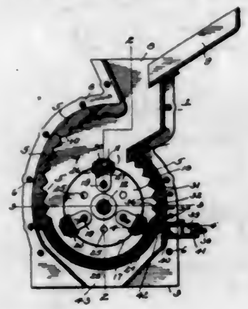


1. An underfeed stoker having, in combination, a fuel hopper, a reciprocable primary pusher for feeding fuel into the furnace from said hopper, a reciprocable secondary pusher for feeding the fuel within the furnace in a direction away from said hopper, a reciprocable member, suitable connections between said secondary pusher and said reciprocable member for operating the secondary pusher, and a lost motion conenction between the primary pusher and said reciprocable member for actuating the latter, comprising a sliding carrier mounted to move with the primary pusher, co-operating abutments on the carrier and reciprocating member for moving the latter in one direction during the movement of the primary pusher in the same direction, the abutment on the carrier being pivotally mounted and provided with a plurality of abutment faces spaced different distances from the axis of the pivoted abutment and arranged to permit any one of them to be presented to the abutment on the reciprocating member upon turning the pivoted abutment, and means comprising a controllable member and suitable connections mounted on said carrier for thus turning said pivoted abutment and holding it in the position to which it is moved.

---

1,691,950. FILTRATION APPARATUS. ARTHUR WRIGHT, Upper Montclair, and FRANK W. YOUNG, Verona, N. J. Filed Sept. 10, 1921. Serial No. 499,753. 27 Claims. (Cl. 210—199.)

1. The process of treating a filter cake formed on the filtering medium of a rotary drum filter which comprises overlaying the cake on the filtering medium with a com-

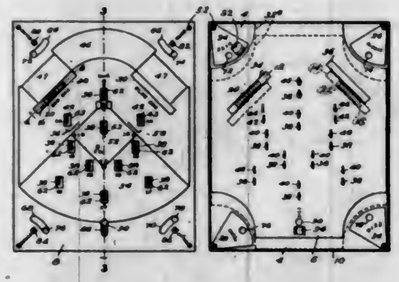


pression member and thereby compressing the cake, moving the compression member with the cake by its contact

therewith, and then separating the compression member and filtering medium and stripping the cake from the filtering medium.

---

1,691,951. PULVERIZER. THEODORE C. ALFRED, Lancaster, Ohio. Filed Dec. 12, 1925. Serial No. 75,125. 3 Claims. (Cl. 83—11.)



1. In a pulverizer, a housing including a pulverizing chamber, a reducing rotor mounted for rotation about a fixed axis disposed within said chamber, an outlet screen for said chamber consisting of a plurality of spaced transversely extending parallel bars having the ends thereof positioned within recesses provided in the side walls of said housing, a wedge member slidably mounted in connection with said housing, means permitting of the adjustment of said wedge member so as to place said bars under compression, and a removable door carried by said housing above said wedge member and mounted in said housing independently of said wedge member.

---

1,691,952. BASEBALL GAME. SIGURD ANDERSON, Leavenworth, Kans. Filed Nov. 14, 1927. Serial No. 233,104. 6 Claims. (Cl. 273—93.)

1. In a game of the character described, a top member having a representation of a baseball field with openings for displaying baseball teams in their respective playing positions, numeral display openings near its corners and arcuate slots near said numeral display openings; a longitudinally slidable intermediate member underlying said top member and having representations of two opposing baseball teams so arranged that when said intermediate member is moved in one direction one of said teams will appear at the openings in the baseball field and when moved in a reverse direction the opposing team will appear at the last-mentioned openings, said intermediate member being cut out at its corners; elements underlying said top member and arranged at said cut out corners of the intermediate members, said elements bearing numerals for exposure at the numeral display openings and provided with finger holes registering with the respective arcuate

slots; and a bottom member underlying said intermediate member and to which said movable elements are pivotally connected.

---

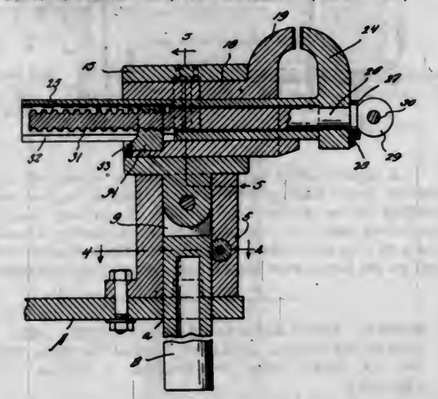
1,691,953. DECOMPRESSOR VALVE. ROMEO BACCI and GUIDO VACCA, Trieste, Italy. Filed Dec. 24, 1925, Serial No. 77,637, and in Italy Jan. 2, 1925. 3 Claims. (Cl. 123—182.)

1. A decompressor valve for internal combustion engine cylinders, comprising a cylindrical casing adapted to be secured to an engine cylinder and having an axial passage and a valve seat at the inner end thereof; an operating head having a threaded connection with said casing to enable its rotary and endwise adjustment with respect thereto; a valve stem extending through said passage and projecting beyond the outer face of said head and having its projecting portion threaded; a clamping nut fitted on said projecting portion and adapted to be tightened against said outer face to secure the stem rigidly to said head for movement with the same, said stem being adapted to move axially in either direction independently of and relatively to said head when the nut is turned on the stem; a valve body at the inner end of said stem for coaction with the valve seat to control communication between the interior of the cylinder and said passage; and a branch passage leading to the outside from the first-named passage to permit the gases within the cylinder to escape when the valve body is open.

---

1,691,954. PRODUCTION OF ERYTHRITOL TETRANITRATE. FRANK H. BERGEIM, Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 15, 1927. Serial No. 184,180. 5 Claims. (Cl. 260—145.)

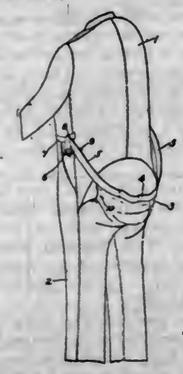
1. A process for the nitration of erythritol which comprises dissolving the alcohol in sulphuric acid, and adding the solution thus prepared to nitric acid.



1,691,955. EXPLOSIVE. FRANK H. BERGEIM, Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 15, 1927. Serial No. 184,181. 4 Claims. (Cl. 260—144.)

1. An explosive compound comprising a branched chain hydrocarbon to which is attached a nitro group and two nitrate groups.

---



1,691,956. VISE AND MOUNT THEREFOR. ZEPHIR A. BLANCHARD, Montreal, Quebec, Canada. Filed May 19, 1927. Serial No. 192,690. 3 Claims. (Cl. 81—41.)

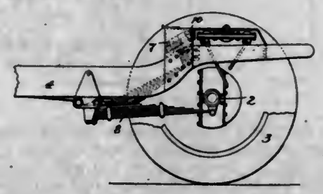
1. In combination with a vise including a stationary and a movable jaw, said stationary jaw being formed with a bushing and arranged within a bushing holder, said bushing holder being provided intermediate its ends with a lateral tongue, a hollow base member, a post movable freely within the base, a pivotal connection between one end of the post and the tongue of said bushing holder, said connection permitting the engagement of the tongue within the holder, said hollow base member being formed with a tangential opening communicating with the bore thereof, a member movable within said opening for engagement with the post for fixing or securing the same at a predetermined position within the base, and a threaded member projecting through said member and threadable into the base for moving said member into engagement with the post.

---

1,691,957. GARMENT. RUSSELL R. BLANSHAN, Buffalo, N. Y. Filed Sept. 9, 1926. Serial No. 134,457. 5 Claims. (Cl. 2—79.)

5. A garment having a drop seat, straps extending from said seat, adjacent its free end, forwardly and overlapping one another across the front of the garment, and guide straps extending beneath the seat straps from the sides of the garment forwardly and across the front of the garment into proximity to the center of the front, the ends of the guide straps being secured to the garment and free of the garment intermediate their ends, each guide strap having a sliding loop connection to the adjacent overlying seat strap, said garment and drop seat also having portions cooperating when the seat is drawn up for preventing sagging of the seat adjacent the sides thereof.

---



1,691,958. SHIRT-SLEEVE SUPPORTER. EVELYN DAVANT BOSTICK, Columbia, S. C., assignor of fifty-one per cent to Elizabeth Hamilton Bostick and one per cent to Charles Lemuel Prince. Filed Nov. 17, 1924. Serial No. 750,354. 1 Claim. (Cl. 2—123.)

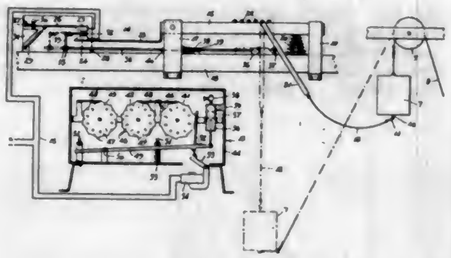
A shirt sleeve having a double cuff, a tab secured adjacent one edge of said cuff within the fold thereof having its free end provided with a buttonhole, a button secured to said cuff adapted to be engaged by said buttonhole for holding said tab in inoperative position and an additional button secured to the other edge of said cuff adapted to be engaged by said tab when said sleeve is raised to hold said cuff in position above the elbow.

---

1,691,959. VEHICLE SUSPENSION. STEPHEN LEONARD CHAUNCEY COLEMAN, Fredericton, New Brunswick, Canada. Filed June 23, 1922. Serial No. 570,457. 14 Claims. (Cl. 280—112.)

1. In a vehicle, the combination with running gear, and a vehicle frame yieldably supported in relation thereto, of stabilizer mechanism including an equalizer device connected with the vehicle frame, and strut rod connections between the equalizer device and the running gear, each strut rod comprising a rigid rod portion and a resilient portion at one end thereof.

---

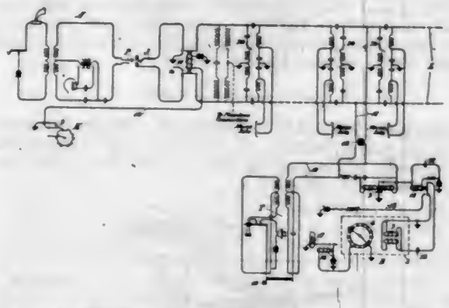


1,691,960. MANUFACTURE OF ALKALINE CYANIDES. SYLVAIN COULIER, Brussels, Belgium. Filed Feb. 18, 1926, Serial No. 89,234, and in Belgium Feb. 24, 1925. 6 Claims. (Cl. 23—80.)

1. In a process of making alkali metal cyanides, the steps of distilling nitrogenous organic matter; separating the relatively non-volatile, non-nitrogenous substances from the rest of the distillate; and causing the elemental nitrogen

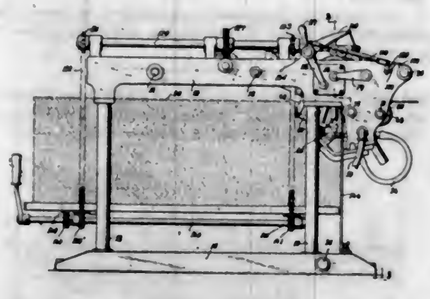
liberated in the course of distillation to act, at a temperature between 800–1000° C., upon the residue of distillation to effect cyanidation; the distillation step being carried out at a temperature considerably below that of the cyaniding step.

---



1,691,961. REGISTER MECHANISM. WILLIAM W. CROW, Treece, Kans. Filed Aug. 26, 1927. Serial No. 215,665. 12 Claims. (Cl. 235—92.)

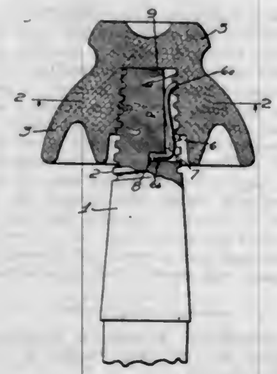
1. The combination with a hoist bucket and hoisting means therefor of means attachable to the lower portion of the bucket for suspending it in inverted position, a register, and controlling means for said register operated by said suspending means.



---

1,691,962. SELECTIVE SIGNALING SYSTEM. CHARLES S. DEMAREST, Ridgewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 25, 1923. Serial No. 641,473. 3 Claims. (Cl. 179—2.)

1. In a selectively controlled signal system comprising a central station and a plurality of way stations, a line circuit connecting the central station and way stations, phantom circuits and Morse circuits associated with the line circuit at the central station and way stations, telephone sets at the central station and way stations, a source of alternating current at the central station, a source of direct current at the way stations, switching means including a selector key and a relay serially associated therewith for controlling the application of alternating current to the line circuit, said relay also controlling the connection over the line circuit between the telephone sets at the central station and way stations, an alternating current relay at the way stations responsive to the application of alternating current to the line circuit, a direct current relay controlled by said alternating current relay, said direct current relay having a condenser bridged across its winding to maintain it operated during the vibration of the armature of said alternating current relay, and selectively operated devices at the way stations actuated by the direct current relay, said selectively operated devices being unaffected by the transmission of Morse signals over the line circuit.



1,691,963. PAPER-FEEDING MACHINE. TALBOT C. DEXTER, Pearl River, N. Y. Filed June 27, 1925. Serial No. 39,901. 19 Claims. (Cl. 271—28.)

1. A paper feeding device comprising a rotary roll with suction paper-holding perforations therein, suction controlling means within said cylinder comprising coacting stationary and rotary elements with ports therein cooperating with each other and with the perforations in said rotary roll as the latter pass the port in said stationary element.

---

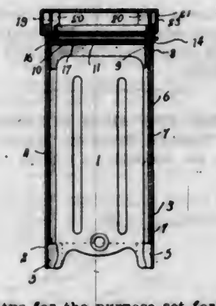
1,691,964. INSULATOR-LOCKING DEVICE. RAY S. DICKEY and PAUL A. CARNAHAN, Manhattan, Kans. Filed Oct. 15, 1927. Serial No. 226,364. 3 Claims. (Cl. 151—23.)

1. The combination with an insulator supporting pin having a slot and a bore communicating therewith, of an insulator having threads, a locking key having an end arranged to enter said bore, the opposite end being arranged to enter one of the threads of the insulator, a portion of said key between the ends serving as a fulcrum, and a portion of the key being arranged to be engaged by the threads of the insulator to rock the key on its fulcrum.

---

1,691,965. PROCESS FOR THE PRODUCTION OF CITRIC ACID. AUGUSTE FERNBACH, Paris, France, and JOHN LEWIS YUILL, York, England, assignors to Rowntree and Company Limited, of the Cocoa Works, York, England. Filed Nov. 3, 1925. Serial No. 66,665. 5 Claims. (Cl. 260—120.)

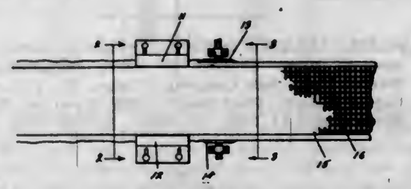
1. Process for the production of citric acid from solutions of cane sugar containing the necessary nutrient materials by means of fungi, which comprises adding to the solution hydrochloric acid in quantity sufficient to raise the hydrogen ion concentration to a point lying within the range pH=1.2 to pH=2.5, whereby sterilization of the solution by means of heat is rendered unnecessary.



1,691,966. PROCESS FOR THE PRODUCTION OF CITRIC ACID. AUGUSTE FERNBACH, Paris, France, and JOHN LEWIS YUILL, York, England, assignors to Rowntree and Company Limited, of the Cocoa Works, York, England. Filed Nov. 3, 1925. Serial No. 66,666. 9 Claims. (Cl. 260—120.)

1. Process for the production of citric acid from solutions of sugars and like substances containing the necessary nutrient materials by means of fungi, which comprises adding to the solution strong acid in quantity sufficient to raise the hydrogen ion concentration to a point lying within the range pH=1.2 to pH=2.5 whereby the solution is sterilized in absence of heating.

---

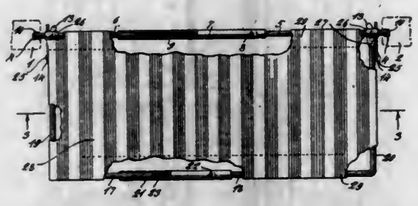


1,691,967. HUMIDIFIER. WILLIAM K. GAMMETER, Cadiz, Ohio. Filed Dec. 27, 1927. Serial No. 242,911. 6 Claims. (Cl. 237—79.)

1. An apparatus for the purpose set forth comprising a housing adapted to enclose a radiator, a dust arrester slidably mounted in the housing near the top thereof and removable through the front of the same, and a water pan supported in the housing immediately over the dust arrester.

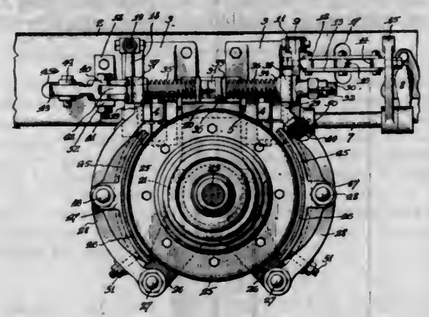
---

1,691,968. BELTING. EDWARD F. GINGRAS, Buffalo, N. Y. Filed Aug. 13, 1924. Serial No. 731,771. 1 Claim. (Cl. 154—4.)



The process of making a belting comprising a fabric backing and a leather facing consisting in uniting the backing and facing by a gum solution with the edges of the facing projecting beyond the edges of the backing, guiding the belting by contact with the side edges of the backing trimming the edges of the facing a pre-determined distance beyond the edges of the backing and stiffening the projecting edges of said facing.

---

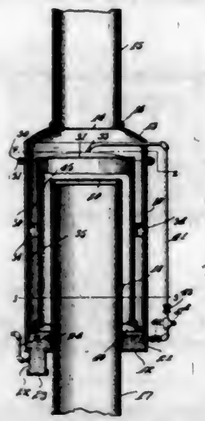


1,691,969. ADJUSTABLE AUTOMOBILE AWNING. WILLIAM M. GLOVER, Denver, Colo., assignor, by mesne assignments, to Sunbar Manufacturing Company, Denver, Colo., a Corporation of Colorado. Filed May 9, 1927. Serial No. 189,824. 12 Claims. (Cl. 156—15.)

1. An awning adapted to fit within a window opening provided with grooves at its sides to slidably mount a glass closure for the window opening, said awning comprising, in combination, a frame having one of its sides formed from two bars telescopically connected by means of a tubular member, a spring interposed between the ends of said members, said members having their outer ends bent to form downwardly extending fingers adapted to fit into the grooves and frictionally grip the side walls of the window opening to removably retain the awning in place, an elongated U-shaped frame hingedly seurced to the two part side member so that it may be rotated about the axis of said side member and adjustable means for holding the frame in any desired position.

---

1,691,970. PROPELLER-SHAFT-BRAKE MECHANISM. JOHN C. HAGGART, Jr., Alma, Mich., assignor, by mesne assignments, to Detroit Patents Holding Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 26, 1923. Serial No. 664,879. 1 Claim. (Cl. 188—18.)



In a brake mechanism, the combination with a propeller shaft, a brake drum rotatable with said shaft, of brackets adjacent said brake drum, a tubular support in said brackets, an operating rock shaft passing through said support, a hanger on said tubular support extending into said brake drum and assisting in supporting said propeller shaft, said hanger having a portion thereof extending out of said brake drum and thereunder, shoe supports attached to that portion of said hanger under said brake drum, shoes pivotally connected to said supports and engageable with said brake drum, and means supported from said hanger above said brake drum for adjusting said shoe supports.

---

1,691,971. AIR AND GAS CLEANER. CHARLES S. HANSARD and ARCHIE E. NETZEL, Avant, Okla. Filed Oct. 10, 1927. Serial No. 225,282. 5 Claims. (Cl. 183—30.)

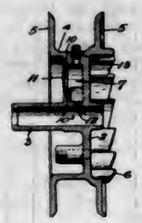
3. A cleaner for fluids comprising an outer shell, an inner shell spaced from and located within the outer shell, the inner shell having a closed top, and an open lower end spaced from the bottom of the outer shell, the lower end of the inner shell being flared outwardly thereby providing a restricted communication between the lower end of the inner shell and outer shell, an inlet pipe connected with the upper end of the outer shell, a discharge pipe projecting into the inner shell, means for spraying a liquid on the top

of the inner shell, the outer shell having a well at the lower end to store the liquid in spaced relation with the flared end of the inner shell, the inner shell being extended

above the periphery of the closed top and provided with slots for breaking up the liquid as said liquid leaves the top of the inner shell.

---

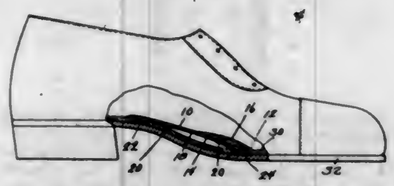
1,691,972. FISHING-TOOL GUIDE. RICHARD D. HILL and WALTER W. FOSTER, Wichita Falls, Tex. Filed Jan. 31, 1927. Serial No. 164,914. 1 Claim. (Cl. 294—102.)



An article of the character described for association with a fishing tool, comprising a cylindrical body arranged for mounting upon the lower end of said fishing tool and having its lower end slotted to define a pair of opposed parallel prongs, one of which is of greater length and width than the other, the shorter of said prongs being spear-shaped whereby to engage within an object and bring the latter against the longest of said prongs preparatory to raising said fishing tool to enable said object to enter the latter between said prongs for engagement by said fishing tool.

---

1,691,973. TROLLEY MECHANISM. JOSEPH HOLLIS, Canton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Jan. 11, 1923. Serial No. 611,928. 4 Claims. (Cl. 308—109.)



1. In mechanism of the class described, the combination of a drum comprising a web, a hub and a rim on which a rope may be wound, a lubricant holding chamber disposed on one side of said web and connected with a supply duct formed in said rim and a discharge duct formed in said hub through which the lubricant flows, the front wall of said chamber being formed with an opening which is rabbeted,

and a concavo-convex disk fitting said opening and adapted to be pressed into substantially flat condition to make the joint between its circumferential edge and the wall of said opening liquid-tight.

---

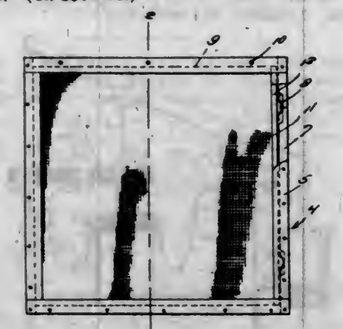
1,691,974. SHOE AND ARCH SUPPORT THEREFOR. WILLIAM M. HURLEY, Brockton, Mass. Filed Dec. 15, 1926. Serial No. 155,035. 8 Claims. (Cl. 36—71.)

4. A shoe having an arch support including a relatively long and narrow pad overlying the shank portion of the inner sole of the shoe along the longitudinal axis thereof and having means at its ends detachably connecting it with the inner sole.

---

1,691,975. LOCKING DEVICE. JUSTICE C. IRWIN, Minneapolis, Minn., assignor, by mesne assignments, to Stanton Home Safe Company, Chicago, Ill., a Corporation of Illinois. Filed June 1, 1925, Serial No. 34,044. Renewed May 14, 1928. 4 Claims. (Cl. 70—14.)

1. A locking device for a container cover comprising a locking member adapted to be mounted upon the cover for relative movement thereon, said member having a plurality of flexible arms adapted to be moved into locking engagement with the container walls, means for moving said arms and each arm having an inclined face cooperating with means on said cover whereby, when the locking member is relatively rotated by said means, said arms will yield radially and become disengaged from said container walls.

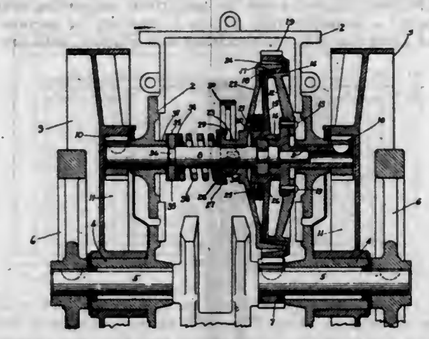


1,691,976. LADDER. SAMUEL KRAMER, Newark, N. J. Filed Aug. 3, 1926. Serial No. 126,778. 2 Claims. (Cl. 228—55.)

1. A ladder comprising a pair of metal tubes of rectangular cross section, said tubes having a plurality of equally spaced transverse openings in their adjacent sides, integral supports inclined outwardly from said tubes below the openings, a plurality of metal treads, and tenons on the ends of said treads to engage said supports through the openings.

---

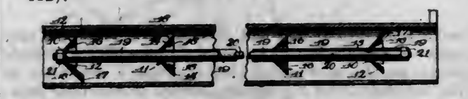
1,691,977. WINDOW SCREEN. LOUIS LEVI, Winthrop, Mass. Filed Mar. 10, 1928. Serial No. 260,648. 1 Claim. (Cl. 156—14.)



A window screen comprising an outer frame embodying frame bars, at least one of which is composed of spaced parallel parts, and a filler strip arranged removably therebetween, said side bars being of channel shaped cross section, an inner frame slidably received in the channels and held in place by said filler strip, and screen fabric carried by said inner frame, said outer frame being constructed of wood and said inner frame being constructed of metal, said outer frame having one of its side bars provided with resilient retaining clips extending into the adjacent channel and engaging the adjacent side bar of the metallic inner frame.

---

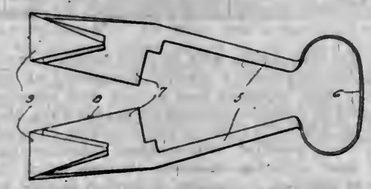
1,691,978. CLUTCH. ARTHUR JOHN LIEDTKE, West Allis, and CHARLES JACOB TRAVERS, Port Washington, Wis., assignors to Beeman Tractor Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Aug. 30, 1920. Serial No. 407,050. 14 Claims. (Cl. 180—19.)



1. A non-reversing traction machine comprising a frame, a crank shaft, traction wheels for said frame, a gear having a driving connection with said crank shaft and provided with opposing friction surfaces, clutch members having independent driving connections with said traction wheels and mounted to engage said friction surfaces respectively for driving said wheels from said gear, a spring mounted on one side of said clutch members to normally hold them in their clutching position, and mechanism for relieving the pressure of said spring on said clutch members and

transferring the pressure to said frame, whereby said clutch members may be moved freely and said traction wheels revolved forward or backward.

---

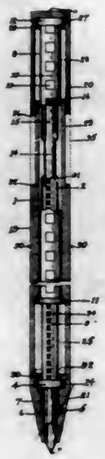


1,691,979. BAFFLE PLATE FOR BOILER FLUES. FRANK J. LOCHEN, Chicago, Ill., assignor to Ideal Oil Saver Company, a Corporation of Illinois. Filed Apr. 16, 1926. Serial No. 102,377. 5 Claims. (Cl. 137—112).

1. In combination, a plurality of baffles, each of said baffles being of a substantially cone shape, a spacing member disposed between adjacent baffles, and a rod passing through the baffles and spacing member for securing them together as a unitary structure, the baffles being provided with a plurality of extended and substantially V-shaped notches, said notches opening through the body of the baffles, said baffles forming with the flue gradually reduced passages for the gases and constituting the sole means of support for the baffles within the flue.

---

1,691,980. SHEARS FOR CUTTING JAR RINGS AND SIMILAR CIRCULAR WASHERS. HERVE A. LONSWAY, Berwick, Ohio. Filed July 25, 1927. Serial No. 208,384. 1 Claim. (Cl. 164—80.)

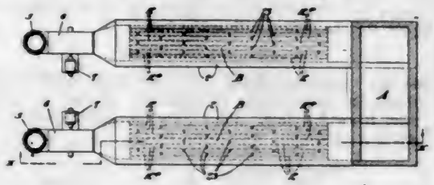


In a tool of the class described, a plurality of cutting blades arranged in pairs in opposed relation, the outer end of each pair of blades being curved in a semi-circular formation and retained in spaced parallel relation with each other, said blades co-acting with each other whereby to cut a circular washer from a sheet of material when arranged in folded position at one cutting operation.

---

1,691,981. MAGAZINE LEAD PENCIL. FRANK E. MAYOL, Franconia, N. H. Filed Sept. 19, 1927. Serial No. 220,292. 1 Claim. (Cl. 120—17.)

A magazine pencil comprising, in combination, a tubular plunger having an open forward end for the insertion of a writing lead, and parallel rear-extending flexible shanks,



said shanks terminating in oppositely directed detents; a barrel having a multiplicity of perforations along one side for engaging said plunger, and along its opposite longitudinal segment a slot for operatively supporting said plunger; a propeller tube having a plurality of perforations along one side for actuating said plunger, said pro-

peller tube surrounding and sliding operatively over said barrel and said plunger; an outer casing having a slidable breech section, said breech section having a breechway in the end thereof for the inward passage of a writing lead; and means for fastening said propeller tube and said barrel to, and within, said outer casing, all substantially as set forth.

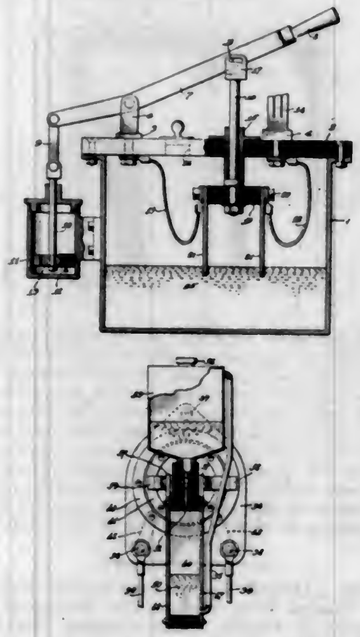
---

1,691,982. OPEN-HEARTH FURNACE. FRANK R. McGEE, Steubenville, Ohio. Filed Aug. 9, 1926. Serial No. 128,252. 6 Claims. (Cl. 263—19.)

1. The combination with an open hearth furnace, of at least one regenerative chamber comprising an enclosing shell, a dust collecting base in said shell composed of a plurality of transversely arranged spaced walls, the spaces between said walls forming dust collecting chambers, said shell being provided with openings communicating with said dust collecting chambers through which the dust may be removed, a plurality of vertical checker walls extending longitudinally of said shell above said first named walls and spaced one from the other to form longitudinally extending gas channels, said last named walls being provided with relatively widely spaced small openings forming communicating gas passageways between said channels adapted to equalize the pressure and flow in all of said channels.

---

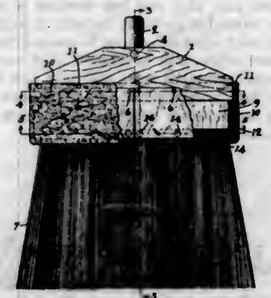
1,691,983. ROTARY CUTTER. FRANK P. MILLER, Meadville, Pa. Filed July 30, 1926. Serial No. 125,954. 4 Claims. (Cl. 29—105.)



1. A rotary cutter comprising a body having a slot, a blade in said slot and having side walls converging toward the outer edge of the blade, a wedge member tapered toward the inner edge thereof and having means engaging said blade, one side of said wedge member being provided with a longitudinal groove, a pin partially received in said

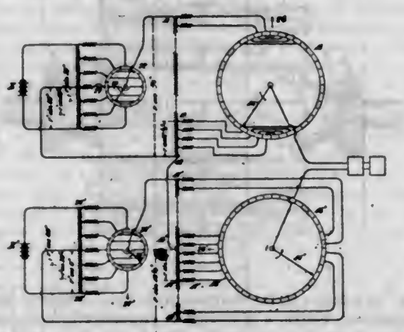
groove, and securing devices for forcing said pin laterally and inwardly into binding engagement with said wedge member.

---



1,691,984. ELECTRIC SWITCH. JOHN M. MILLER, Detroit, Mich., assignor of one-half to Frances C. Richardson, Detroit, Mich. Filed Aug. 19, 1925. Serial No. 51,103. 2 Claims. (Cl. 201—57.)

1. A rheostat comprising a liquid receiving receptacle adapted to contain a liquid, electrodes exposed to the liquid in said receptacle, a liquid discharge receptacle communicating with and adapted to place liquid in said receiving receptacle to establish an electrical connection between said electrodes, said receptacles being in superposed relation and mounted to permit inversion, whereby liquid may flow from one receptacle to the other.

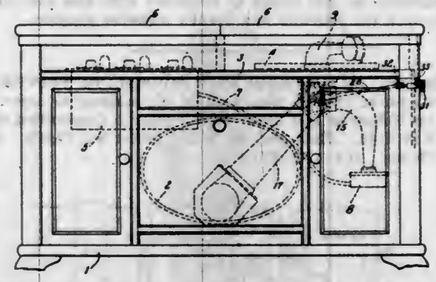


1,691,985. BROOM. MILO C. NEWTON and JOSEPH A. GREMLING, Delphos, Ohio, assignors to The E. & N. Manufacturing Company, Delphos, Ohio, a Corporation of Ohio. Filed Oct. 22, 1927. Serial No. 227,928. 7 Claims. (Cl. 15—171.)

1. A broom comprising a supporting block having a handle extending from the upper portion thereof and a brush receiving socket, a brush composed of a body of bristles bound together at their upper ends only, the bound portion being in the form of a solid mass of a shape corresponding to that of the socket and of less depth than the socket, a cushioning band of relatively thick pliable fabric interposed between said body of bristles and the wall of said socket, and means for securing said brush and band within the socket with the fabric extending in the socket below said bound portion of the brush to yieldingly restrain lateral movements of the bristles and prevent formation of sharp bends in the bristles.

---

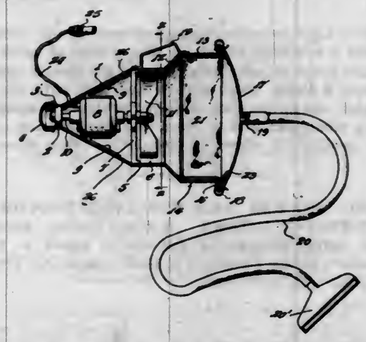
1,691,986. APPARATUS AND METHOD FOR GENERATING PURE SINE WAVES OF ELECTROMOTIVE FORCE. HARRY NYQUIST, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 30, 1922. Serial No. 548,156. 7 Claims. (Cl. 175—364.)



2. Apparatus for producing a pure sine wave electromotive force of low frequency comprising a potentiometer, a battery connected thereto, a circuit changing switch between them, a series of taps on the potentiometer, a distributor to make connection thereto in succession, means to operate said switch at the initial point of each distributor cycle, and means to separate higher harmonics from the distributor output.

---

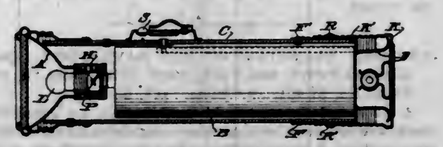
1,691,987. COMBINED PHONOGRAPH AND RADIO APPARATUS. MARTIN NYSTROM, Chicago, Ill., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 23, 1924. Serial No. 745,499. 9 Claims. (Cl. 179—100.1.)



1. In combination, a phonograph, a loud speaker, an amplifying horn, passageways from said horn to said phonograph and to said loud speaker, a rotary valve transversely disposed in and controlling both of said passageways, whereby sounds may be directed to said horn from

either said phonograph or said loud speaker, a pinion on said valve, an operating rod, and a pinion on said rod and meshing with said first named pinion to rotate said valve.

---

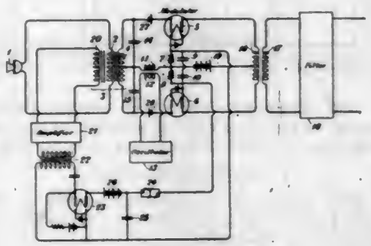


1,691,988. VACUUM CLEANER. VICTOR L. OLSON, Leigh, Nebr. Filed June 8, 1927. Serial No. 197,383. 1 Claim. (Cl. 183—36.)

A vacuum cleaner of the class described comprising a conical casing, a bearing mounted in the minor end of the casing, brackets carried by the casing, a motor supported by the brackets, an annular flange carried by the casing and having a cross bar therein, said annular flange defining a chamber, the motor shaft having one end journaled in the bearing and its other end journaled in the cross bar, a fan fixed to the shaft and rotatable in the chamber, a housing supported by the flange and in communication with the chamber, a flange carried by the outer end of the housing, a fabric sack located in the housing and having a ring carried thereby, a cover for the housing, resilient arms carried by the cover for yieldably engaging the ring for maintaining the sack within the housing when the cover is secured in closed position upon the housing.

---

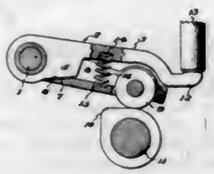
1,691,989. FLASH LIGHT. CHARLES OSEAN, Woodcliff, N. J., assignor to National Carbon Company, Inc., a Corporation of New York. Filed Feb. 2, 1923. Serial No. 616,566. 4 Claims. (Cl. 240—10.5.)



1. A flashlight comprising the combination of a lamp; a reflector; a battery in circuit with said lamp; a casing for said lamp, reflector and battery; an end cap adjust-

ably coupled to said casing and carrying means engaging said battery to adjust the latter and said lamp to vary the beam of the light therefrom, and a threaded ring adjustable on said casing to cooperate with said end cap and lock the latter in any desired adjusted position.

---

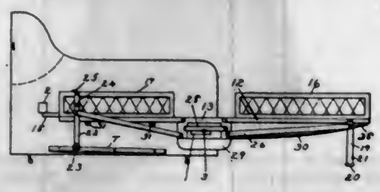


1,691,990. HIGH-FREQUENCY SIGNALING SYSTEM. RALPH K. POTTER, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 23, 1925. Serial No. 77,305. 6 Claims. (Cl. 179—171.)

1. In a high frequency signaling system, the combination with a balanced modulator of a source of carrier oscillations, the said modulator being of the carrier suppression type, a signal input circuit connected with the said modulator, and means controlled by the signal to unbalance the said modulator and to effect the transmission of the carrier oscillations whenever modulation takes place.

---

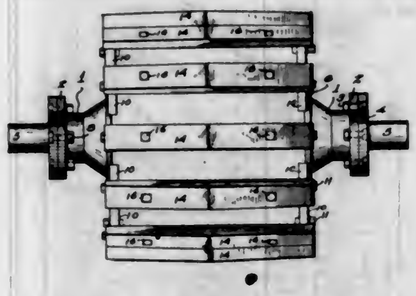
1,691,991. ROCKER ARM FOR INTERNAL-COMBUSTION-ENGINE VALVES. WILLIAM HENRY PUCKETT, Tulsa, Okla., assignor of one-half to David A. Kline, Muskogee, Okla. Filed May 6, 1927. Serial No. 189,360. 1 Claim. (Cl. 123—90.)



The combination with the cam shaft and valve stem tappet of an internal combustion engine, of a pair of upper and lower arms having a common pivotal connection for one of their ends, the lower arm having side flanges, and a beveled face, the upper arm having a web provided with a beveled face, said web being movable between the flanges, a shoe upon the upper arm for engagement with the tappet, a spring between the arms for holding the respective beveled faces apart, a roller mounted between the side flanges for engagement with the cam of the shaft for forcing the beveled faces into contact against the opposition of the spring for imparting movement to the shoe for operating the tappet.

---

1,691,992. OVERSTUFFED BED DAVENPORT. OSCAR EARNEST PUTTY, San Pedro, Calif. Filed June 16, 1925. Serial No. 37,451. 7 Claims. (Cl. 5—12.)



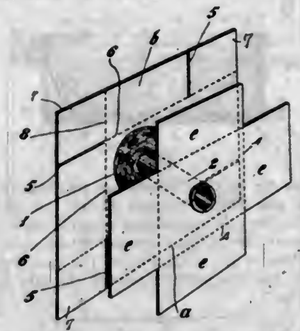
1. In a bed davenport, in combination, an upholstered back member, said back member comprising an upholstered top portion, a plain portion extending therefrom, a pair of upholstered arms extending from said back portion, a pair of stop elements positioned on said plain portion, a pair of tracks positioned on said arms, a combined locking and supporting bracket also positioned on each of said arms, and a combined extensible and collapsible seat and bed member associated with said back member, said combined seat and bed member being equipped with stop bars coacting with said stop elements, sets of collapsible legs associated with said seat and bed member to support the same when in extended position, certain of said legs being coacting with said tracks to assist in supporting said seat and bed member when said davenport is in extended position, and means associated with said seat and bed member coacting with said brackets for supporting and preventing said seat and bed member from movement when said bed member is extended.

6. A combined seat and bed device for use in connection with a bed davenport, a pair of outer sections and an intermediate section hinged together so that said sections may be folded or unfolded, collapsible legs pivoted to said outer sections for supporting said member when unfolded, a pad connected to said intermediate section at one end and resilient means for connecting the other end of said pad to one of said outer sections, said pad when said device is unfolded being loose and taut when said device is folded.

---

1,691,993. PULLEY. CHARLES B. ROGERS, Joplin, Mo. Filed Mar. 12, 1925. Serial No. 15,127. 3 Claims. (Cl. 64—17.)

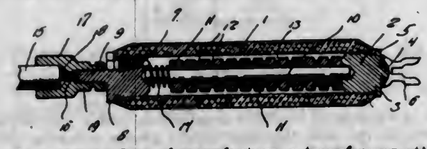
1. In a device of the character described, a pair of spaced coaxial hub plates, a plurality of circumferentially spaced U-shaped members arranged between said plates, said members having their base portions arranged outwardly of said plates and their arms extending inwardly radially with respect to said plates and secured thereto, reinforcing members carried by the arms of said U-shaped members between the outer edges of said plates and the outer ends of said arms, and relatively heavy shoes secured against the outer faces of the base portions of said U-shaped members and extending substantially throughout the length thereof.



---

1,691,994. SOFTENER FOR SILK AND PROCESS FOR MAKING SAME. ROBERT E. ROSE, Penns Grove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 17, 1925. Serial No. 69,711. 14 Claims. (Cl. 8—13.)

1. A softener for silk comprising a guanidine salt of sulfonated castor oil.

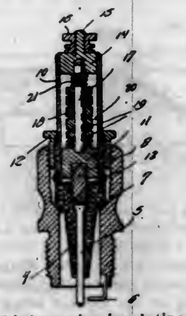


1,691,995. PACKING OF WIRE OR THE LIKE. ALFRED WALTER SAULTER, Rotherhithe, London, England. Filed Sept. 21, 1926, Serial No. 136,851, and in Great Britain Sept. 25, 1925. 3 Claims. (Cl. 206—52.)

1. A reel packet comprising a core member on and from which material is adapted to be wound and unwound, and a pair of blanks of sheet material rigidly secured respectively to the ends of said core member, said blanks having lateral flaps foldable to produce a container to house material wound upon said core member.

---

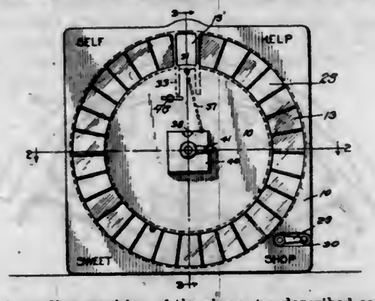
1,691,996. SPARK-PLUG TRANSFORMER. ANTON S. SIMSACK, Philadelphia, Pa., assignor of one-third to Morris Apt, Philadelphia, Pa. Filed Feb. 21, 1927. Serial No. 169,912. 1 Claim. (Cl. 123—148.)



As a new product of manufacture, a transformer attachment for ordinary spark plugs, comprising an elongated tubular casing of insulation material, plugs fitted into the opposite open ends of the casing, said plugs being of electricity conducting material, and an axially alined rod of insulation material located centrally on the interior of the casing and having its opposite ends connected with said plugs, a set of metallic rings assembled upon said rods, a ring on one end of said set being in electrical connection with the adjacent one of said plugs, a coiled spring surrounding the rod at the opposite end and engaging the adjacent rings and adjacent plugs, and insulation washers surrounding the rod and interposed between the rings for spacing the rings apart, to provide spark gaps between the peripheral edges of the ring, said washers being of a diameter less than the ring, and said rings being of a diameter, less than the cross sectional diameter of the interior of said casing to provide an annular sparking space around the peripheral portions of the rings, and washers.

---

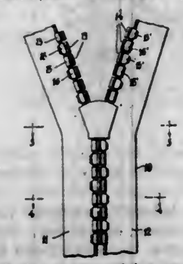
1,691,997. SPARK PLUG. ANTON S. SIMSACK, Philadelphia, Pa., assignor of one-third to Morris Apt, Philadelphia, Pa. Filed Feb. 21, 1927. Serial No. 169,913. 2 Claims. (Cl. 123—169.)



1. A spark plug comprising an annular metallic shell provided with an externally screw threaded neck adapted to be tapped into a cylinder head, a core of insulation material disposed within the shell and having its upper end terminating in inwardly spaced relation to the corresponding end of said shell, a main electrode embedded in said core, and having its lower end extending down below the bottom of the shell, a secondary electrode carried by the shell and co-operating with the first-named electrode, and a current transforming device comprising a hollow casing having upper and lower plugs of electricity conducting material fitted in its opposite ends, the lower plug and lower end portion of said casing telescoping into said shell and being disposed in abutting relation with the core and having electrical connection with said electrode, and current transforming means within the casing embodying a multiplicity of

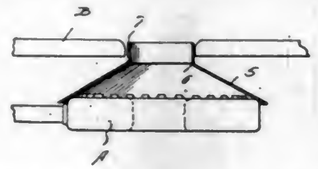
metallic discs and intervening insulating and spacing washers, having their peripheral portions spaced from the inner wall of the casing to provide a surrounding sparking space.

---



1,691,998. VENDING MACHINE. GOODWIN B. SMITH, Philadelphia, Pa. Filed May 6, 1924. Serial No. 711,493. 10 Claims. (Cl. 312—95.)

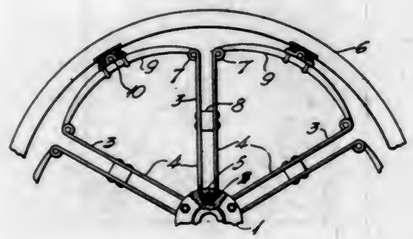
1. A vending machine of the character described comprising, a casing having a delivery opening, a rotatable drum within the casing having a set of pockets and provided with notches, means to turn the drum, a slidable closure element moving generally radially of the drum and having a longitudinally extending rib to engage within the notches of the pocket as the pockets are brought to the delivery opening, said rib remaining within the selected notch until the closure element is shifted to a substantially completely closed position, and means to move the slidable closure element to the opened and closed positions.



---

1,691,999. FLEXIBLE FASTENING DEVICE AND MEANS FOR OPERATING THE SAME. NOEL STATHAM, Irvington-upon-Hudson, N. Y. Filed Jan 31, 1925. Serial No. 5,910. 9 Claims. (Cl. 24—205.)

4. A flexible fastener comprising a plurality of flexible supporting members, and a plurality of hook fasteners carried by each of said supporting members, the hook portions of successive fasteners on each supporting member being pointed alternately in opposite directions.



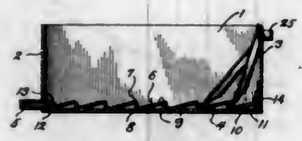
1,692,000. MANTLE FOR GAS BURNERS. JOSEPH E. STEFFENS, Hollis, N. Y. Filed Dec. 13, 1927. Serial No. 239,712. 1 Claim. (Cl. 126—214.)

In a mantle for gas burners wherein a pan supporting grating is arranged above the burner and wherein said grating is formed centrally with an opening, an inverted frusto-conical member adapted for disposition upon the burner, the edge thereof surrounding the edge of the burner, the reduced end of the member being formed with an opening, and a cylindrical flange extending upwardly from the edge of the opening for engagement within the opening of said grating.

---

1,692,001. RESILIENT WHEEL. ARVID E. STENBERG, Reed City, Mich. Filed June 18, 1927. Serial No. 199,648. 3 Claims. (Cl. 152—28.)

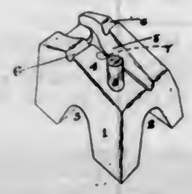
3. In a wheel, a resilient spoke comprising spaced and parallel radially extending resilient members fixed at their inner ends and rigidly connected intermediately their ends, the outer ends of each of said members being hingedly connected to the rim of the wheel.



---

1,692,002. SCARF HOLDER. EDWARD STRASSEL, Baldwin, N. Y. Filed Oct. 6, 1927. Serial No. 224,360. 2 Claims. (Cl. 24—64.)

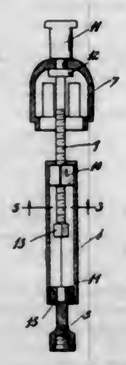
1. In a necktie holder, a resilient strip upon which the necktie may be placed and formed, a contractable buttonhole piece secured at the back of said strip, the buttonhole opening through said piece being smaller than the button head to which it is to be applied, and a resilient back strip connected with the first-mentioned strip, on which separate strip said buttonhole piece is directly mounted.



1,692,003. DISHPAN. WILLIAM S. THAYER, Scotia, N. Y. Filed Dec. 19, 1927. Serial No. 241,235. 4 Claims. (Cl. 141—9.)

1. A device for holding dishes for scalding and drying comprising a pan having a drain at one end, and a false bottom within the pan comprising a metal sheet having a series of supporting portions formed therein and inclined in the direction of the other end of the pan for supporting dishes in position inclined toward the last mentioned end of the pan.

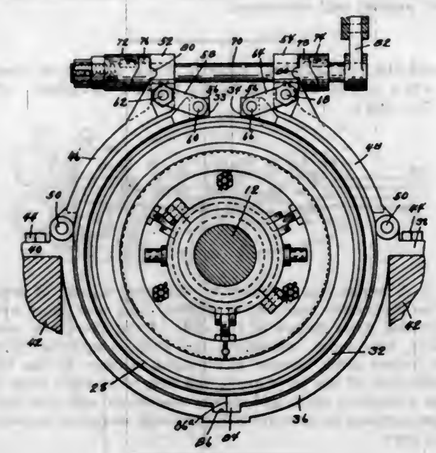
---



1,692,004. HAND ANVIL. RONALD C. TOLMIE, Rock Island, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Feb. 9, 1925. Serial No. 7,800. 4 Claims. (Cl. 78—6.)

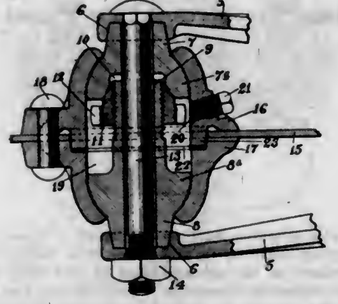
1. A hand anvil having a longitudinal and a transverse groove in its face, the longitudinal groove widening and increasing in depth toward the transverse groove, and a vertical hole through the anvil adjacent the intersection of said grooves.

---



1,692,005. STANDING-VALVE LIFTER. ORVAL M. TURNER and JOSEPH J. STEPHENS, Long Beach, Calif. Filed June 6, 1927. Serial No. 196,764. 6 Claims. (Cl. 103—180.)

1. In a well including a standing valve and a plunger, puller means on the plunger, a cage seated in the well tubing, a threaded post extending through said cage, means on said post adapted to be engaged by said puller means, and means secured to said standing valve and to said post whereby the standing valve is lifted when said post is rotated.

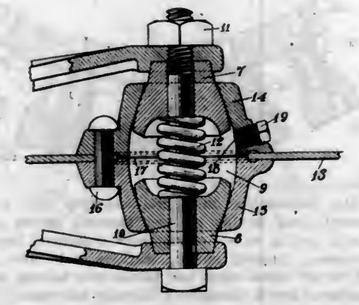


1,692,006. BRAKE MECHANISM. HENRY A. TUTTLE, Upton, Mass. Filed Apr. 4, 1927. Serial No. 180,704. 23 Claims. (Cl. 188—77.)

21. Brake mechanism comprising the combination of a brake drum, a brake band encircling said drum, and a saddle for supporting said brake band against rotation, said brake band having an axially-disengageable interlocking connection with said saddle.

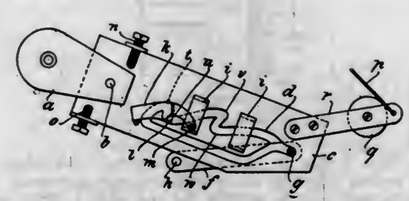
---

1,692,007. BEARING. WILLARD A. VAN BRUNT, Los Angeles, Calif., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed June 29, 1922. Serial No. 571,774. 9 Claims. (Cl. 308—19.)



1. In combination, a bearing spindle comprising two endwise-movable non-rotating members each having its inner end portion enlarged to form a head, said heads being spaced apart to form a reservoir for lubricant, a rotatable device mounted on said heads and extending over and forming a cover for said reservoir, and movable means located in said reservoir adapted when moved to force said spindle members in opposite directions, said movable means being supported by one of said members and bearing against the other member.

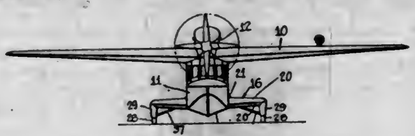
---



1,692,008. BEARING. WILLARD A. VAN BRUNT, Los Angeles, Calif., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed June 29, 1922. Serial No. 571,775. 6 Claims. (Cl. 308—19.)

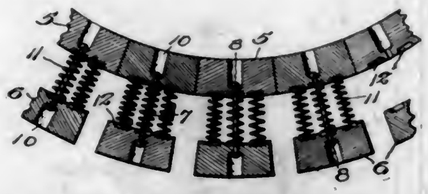
1. In combination, two endwise-movable non-rotating bearing members spaced apart to form a reservoir for lubricant, laterally-yielding supports for said bearing members, adjustable means for locking said members to their supports, means located in said reservoir for automatically moving said members in opposite directions when said locking means is adjusted in one direction, and a rotatable device mounted on said bearing members and extending over and forming a cover for said reservoir.

---



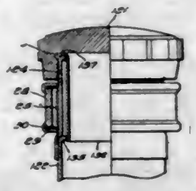
1,692,009. REMOTE CONTROL DEVICE FOR POWER WINCHES AND THE LIKE. EMIL WÄGELE, Sumpfohren, near Donaueschingen, Germany. Filed May 14, 1927, Serial No. 191,528, and in Germany May 20, 1926. 5 Claims. (Cl. 74—39.)

1. In a power-winch or the like, in combination, a control-lever, and a remote-control device comprising an operating-lever fulcrumed to the control-lever and provided with a cam-track presenting catches, and having a pivotal tumbler controlling the track, and a lever journaled to a stationary part, which cooperates with the said track and supports the operating-lever.



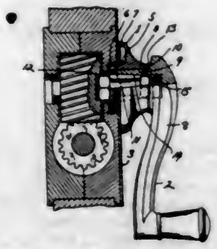
---

1,692,010. RETRACTABLE LANDING GEAR. WILLIAM WAIT, Jr., Garden City, N. Y., assignor to Curtiss Aeroplane & Motor Co., Inc., a Corporation of New York. Filed Feb. 14, 1925. Serial No. 9,120. 5 Claims. (Cl. 244—2.)



5. In an aeroplane landing gear, the combination, of a body, aerofoil surfaces hingedly fastened to and extending laterally out from said body, one each at opposite sides thereof, each said aerofoil surface being yieldingly movable under impact, retractable landing devices fastened, one to each said aerofoil surface and upon which, when extended, the weight of the aeroplane is supported while at rest, means for extending and retracting said landing devices, and shock absorbing mechanism for said landing gear arranged to yieldingly resist the impact movement of said aerofoil surfaces.

1,692,011. RESILIENT WHEEL. JAMES WARNER, Ogden, Utah. Filed Mar. 1, 1928. Serial No. 258,341. 2 Claims. (Cl. 152—8.)

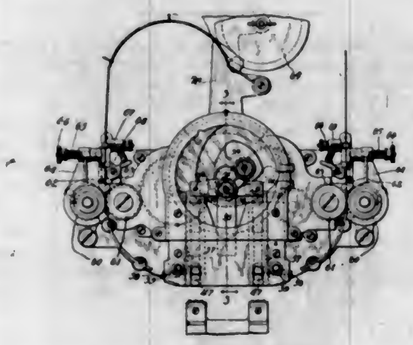


2. The combination in a resilient tire with an inner segmental block having recesses forming spring seats, a bolt hole, and a socket, of an outer segmental block having recesses forming spring seats, a bolt hole, and a socket, a bolt connecting said blocks and having heads in said sockets, and a plurality of springs interposed between said blocks and seated in said recesses.

1,692,012. INDICATING DEVICE. EDWARD C. WELLS, Dayton, Ohio, assignor to Platt Iron Works, Incorporated, Dayton, Ohio, a Corporation of New York. Filed Dec. 20, 1924. Serial No. 757,194. 6 Claims. (Cl. 116—114.)

1. In a device for indicating abnormal temperature of the cooling liquid of an internal combustion engine, the combination with a radiator for the cooling liquid, said radiator having a filling spout thereon, of a band of temperature indicating material about said spout, and means for substantially enclosing said band, comprising a band of transparent material surrounding said spout and supporting rings carried by said spout and embracing the edges of said band of transparent material to support said band in position, said rings being constructed to permit exposure of said band of transparent material about the circumference thereof.

1,692,013. HANDLE CONSTRUCTION. HERBERT WILSON, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed Sept. 4, 1923. Serial No. 660,869. 3 Claims. (Cl. 292—348.)

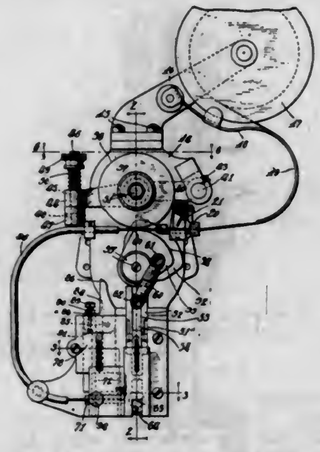


1. The combination with an escutcheon provided with a nipple at its inner end having a concentric recess therein, of a handle having a shank journalled in said escutcheon, said shank having an integral abutment at its outer end and an annular groove in its inner end, a transversely split spring clip insertable within said recess and into said annular groove, and means between said outer abutment and escutcheon for yieldably holding said spring clip against said escutcheon.

1,692,014. CALIPERS. LUKE R. WINN, Sioux City, Iowa. Filed Apr. 18, 1927. Serial No. 184,536. 5 Claims. (Cl. 33—148.)

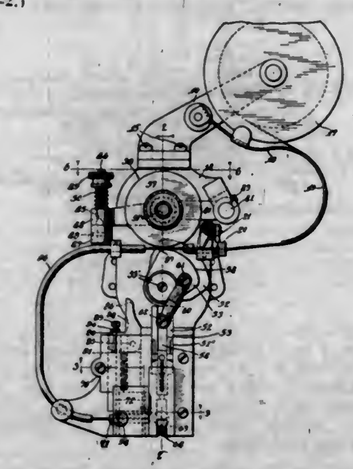
5. A measuring instrument comprising a pair of lever arms fulcrumed together to provide long and short arm portions, jaws hinged to the ends of the short arm portions, lazy tongs connecting the jaws, comprising pairs of crossed arms, crossed and hinged together at the fulcrum axis of the lever arms, and hinged at their ends to the respective jaws, and means associated with the long arm portions to indicate perpendicular distances between the jaws.

1,692,015. STITCHING MACHINE. ERNEST LESCHHORN, Chicago, Ill., assignor to Latham Machinery Company, a Corporation of Illinois. Filed Oct. 18, 1923. Serial No. 669,240. 11 Claims. (Cl. 1—2.)



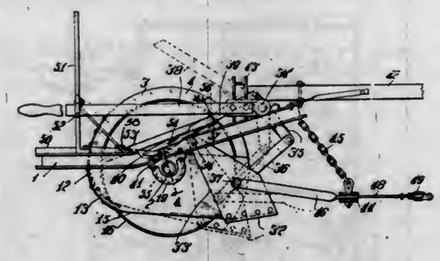
1. A wire stitching machine comprising a frame, a drive shaft located centrally in said frame, wire feeding mechanisms located on the opposite sides of said shaft and operatively connected therewith, staple forming and driving mechanisms located on the opposite sides of said shaft, cross bars slidably mounted on said frame for connecting said forming and driving mechanisms, and means for connecting said bars to said shaft in a manner to actuate said forming and driving mechanisms in co-operation with their respective wire feeding mechanisms.

1,692,016. STITCHING MACHINE. JOHN WOLF and ERNEST LESCHHORN, Chicago, Ill., assignors to Latham Machinery Company, a Corporation of Illinois. Filed Sept. 12, 1924. Serial No. 737,230. 14 Claims. (Cl. 1—2.)



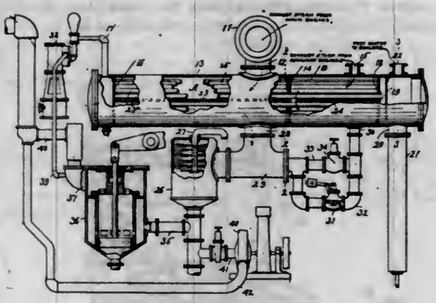
7. In a wire stitching machine, the combination with a frame, of a drive shaft mounted in said frame, a wire feeding mechanism comprising a plurality of co-operating feeding cams, one of said cams secured to said drive shaft, the other of said cams operatively geared to said shaft, staple forming and driving mechanism positioned below and operatively connected to said drive shaft, a cutting

mechanism positioned on one side of said staple forming and driving mechanism and actuated by the cam secured to said drive shaft for cutting the wire fed by said feeding mechanism, and means whereby said feeding mechanism and said cutting mechanism may be adjusted to vary the length of staples made by said stitching machine.



1,692,017. STITCHING MACHINE. JOHN WOLF, Chicago, Ill., assignor, by mesne assignments, of one-half to Latham Machinery Company, a Corporation of Illinois, and one-half to Frederick J. Greene, Racine, Wis. Filed Dec. 27, 1926. Serial No. 157,120. 4 Claims. (Cl. 1—2.)

3. In a wire stitching machine, the combination with a frame, of a drive shaft mounted in said frame, a wire feeding cam secured to said drive shaft, and staple forming and driving mechanism operatively connected to said drive shaft.

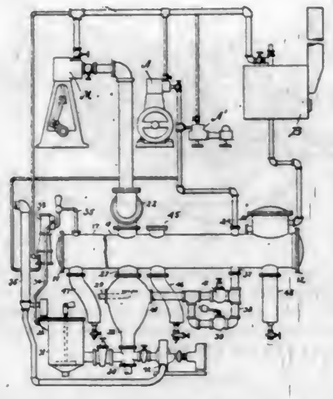


1,692,018. WHEELED SCRAPER. PHILIP C. ANDERSON, Lincoln, Nebr., assignor, by mesne assignments, to Western Wheeled Scraper Company, Aurora, Ill., a Corporation of Illinois. Filed Apr. 13, 1925, Serial No. 22,828. Renewed Aug. 7, 1926. 44 Claims. (Cl. 37—129.)

8. A scraper comprising a frame, a bucket carried by said frame, and a scraping member for directing the material to be loaded into said bucket, said scraping member being movable into and out of operative engagement with the front edge of the bucket.

19. A scraper comprising a frame, a bucket supported on said frame for rotative movement through a complete revolution, and means actuated by forward movement of the scraper for rocking the bucket to tip its front edge into engagement with the ground.

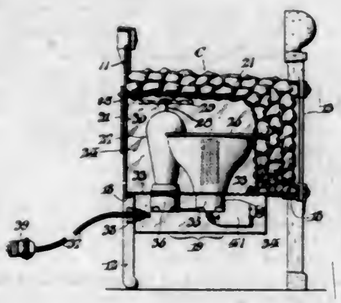
1,692,019. EXHAUST-TREATING APPARATUS FOR STEAM-POWER PLANTS. ALBERT J. ARMSON, Port Huron, Mich., assignor to The Armson Exhaust Heating Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 14, 1925. Serial No. 15,672. 4 Claims. (Cl. 60—95.)



1. In a steam power plant of the type having a main engine and a plurality of auxiliary engines adapted to be supplied with steam from boilers, pipes for delivering exhaust steam from said engines, condensing means, heating chambers between said pipes and the condensing means, one of said chambers receiving exhaust steam from the main engine and the other of said chambers receiving exhaust steam from the auxiliary engines, means between the condensing means and the chamber receiving steam from the auxiliary engines for maintaining in the second chamber relatively high temperature and pressure conditions, and feed water pipes extended through said chambers and adapted to be connected to the boilers.

1,692,020. EXHAUST-TREATING APPARATUS FOR STEAM-POWER PLANTS. ALBERT J. ARMSON, Port Huron, Mich., assignor to The Armson Exhaust Heating Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 20, 1925. Serial No. 44,713. 15 Claims. (Cl. 60—95.)

5. In a steam power plant of the type having a main engine and a plurality of auxiliary engines adapted to be supplied with steam from boilers, a feed water heating apparatus comprising two heating chambers with an intermediate settling chamber, and means for passing ex-

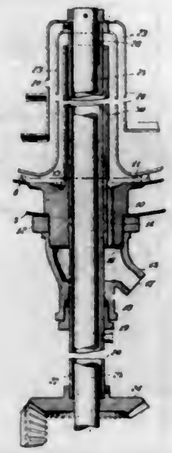


haust steam from the main engine through one heating chamber and the exhaust steam from the auxiliary engines through the other heating chamber, the first under con-

d. nsing conditions and the second under non-condensing conditions whereby the feed water is heated to a higher temperature in the second heating chamber.

---

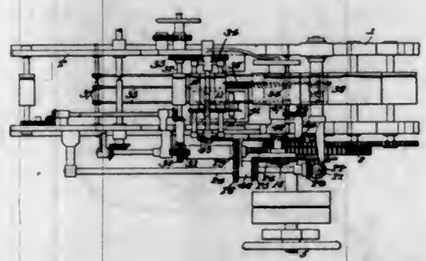
1,692,021. ORNAMENTAL FIREPLACE GRATE. RUDOLPH W. AUER, Philadelphia, Pa. Filed Dec. 17, 1925. Serial No. 76,113. 3 Claims. (Cl. 272—8.)



1. An ornamental electric fireplace comprising an open-topped housing with a grated front, a solid back and side walls, a separable corrugated bottom reflector plate having a recessed lower section; a foraminous partition extending across the top of the housing and down behind its grated front with provision of a horizontal supporting and a vertical frontal interspace, for translucent imitation coals, as well as an inner chamber; vertically-directed electric illuminating and heating means within said chamber to project light and heat through the translucent coals; pin wheels supported by angled brackets directly over the illuminating means to produce flickering; and a door protecting an opening in the back walls of the housing through which access is had to parts at the interior.

---

1,692,022. MIXING MACHINE. SAMUEL BABITZKY and VINCENT MATHE, Chicago, Ill. Filed June 25, 1924. Serial No. 722,306. 10 Claims. (Cl. 259—43.)



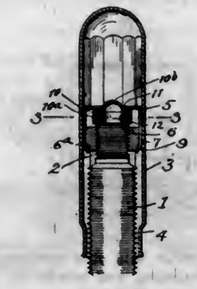
1. In a mixing machine, a pair of spaced shells, a closure for said shells, a spacer element disposed centrally of said shells at the bottom thereof, agitator driving means journaled in said element, and extending into said shells, means carried by said element for preventing the contents of said shells from coming in contact with said agitator driving means, and liquid withdrawing means

associated with said element, said liquid withdrawing means communicating with said inner shell through said element.

---

1,692,023. SHEET-FEEDING MECHANISM FOR PRINTING PRESSES. HOWARD M. BARBER, Pawcatuck, Conn., assignor to C. B. Cottrell & Sons Company, Westerly, R. I., a Corporation of Delaware. Filed Dec. 17, 1927. Serial No. 240,739. 6 Claims. (Cl. 164—68.)

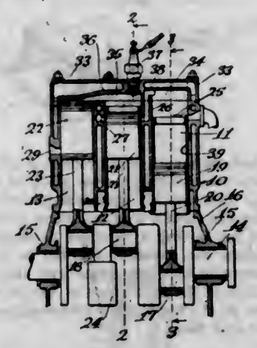
1. Mechanisms for feeding a web and cutting sheets therefrom, a sheet feeding mechanism, a sheet taking device, a carriage for the web feeding and cutting mechanisms adjustable toward and away from the sheet taking device along the sheet feeding mechanism, and a manually controlled variable speed mechanism for driving the sheet feeding mechanism.



---

1,692,024. QUICK-DETACHABLE DUST CAP. ADELBERT E. BRONSON, Cleveland, Ohio, assignor to The Dill Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 16, 1924. Serial No. 732,407. 9 Claims. (Cl. 152—12.)

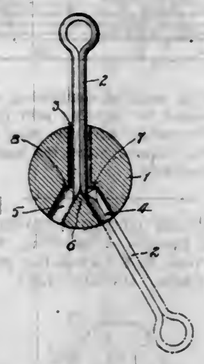
1. A quick detachable dust cap comprising a shell which is open at one end, a hollow member within the shell and having spring fingers adapted to engage with a wall thereof, said fingers having inwardly extending portions, a nut within the hollow member in engagement with the spring fingers and adapted to be screwed upon a valve stem, said nut being free to move longitudinally within said hollow



member to engage the inwardly extending portions of the fingers and to press said fingers against the wall of the shell, and means within the hollow member for engaging

with the end of a valve stem, interengaging parts of the shell, hollow member and nut holding the same against relative rotation.

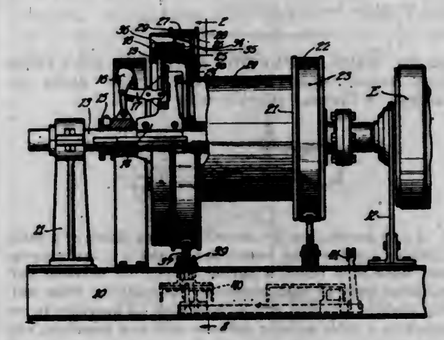
---



1,692,025. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Co., Los Angeles, Calif., a Voluntary Trust. Filed Oct. 23, 1924. Serial No. 745,343. 1 Claim. (Cl. 123—70.)

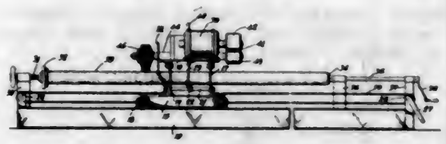
In a two stroke cycle internal combustion engine, a pair of combustion chambers and a pumping chamber, a head closing all of said chambers, there being a pocket formed in the underside of said head for connecting the head ends of the combustion chambers and providing a common compression and combustion clearance chamber for said combustion chambers, there being a recess formed in said head, which recess is coincident with and constitutes a head extension for the pumping chamber, a duct leading from the recess in the head above the pumping chamber downwardly through the wall between said pumping chamber and the adjacent combustion chamber, the lower end of which duct communicates with the combustion chamber in a plane below its upper end, an inlet port formed through the wall of the pumping chamber at a point below its lower end, a sleeve valve arranged for reciprocatory movement within the pumping chamber for controlling the charge volume inlet port thereto, a sleeve valve arranged for reciprocatory movement within the combustion chamber that is connected by the duct to said pumping chamber, which last mentioned sleeve valve controls the inlet of pumped fuel charges to the combustion chambers, pistons arranged for operation within the three chambers, a crank shaft to which said pistons are connected, a crank-shaft having two throws arranged 180° apart, connections between the pistons within the combustion chambers and one of said cranks, a connection from the piston in the pumping chamber and the other one of the two cranks and a diametrically arranged counterbalancing weight mounted on the intermediate portion of the crank to which the pistons in the combustion chambers are connected.

---



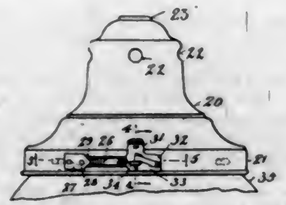
1,692,026. COTTER-PIN-LOCKING MEANS. GEORGE T. COOKE, Norwalk, Conn. Filed Apr. 12, 1928. Serial No. 269,380. 2 Claims. (Cl. 85—7.)

1. In a cotter pin locking device, a pin body designed to receive a cotter pin, said pin body having a cotter pin entrance bore proceeding part way through the same, two divergent exit bores for the two ends of a cotter pin, said exit bores communicating with the entrance bore, a cotter pin spreading wedge between said exit bores and facing the entrance bore, with a stop shoulder within each exit bore to prevent a cotter pin from being entered into the entrance bore through one of the exit bores.



---

1,692,027. COMBINATION BRAKE AND GUARD STRUCTURE. JAMES E. DE LONG, Waukesha, Wis., assignor to Waukesha Motor Company, Waukesha, Wis., a Corporation of Wisconsin. Filed May 19, 1927. Serial No. 192,511. 3 Claims. (Cl. 192—17.)



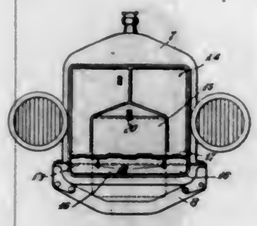
3. In combination, a shaft, a drum loose on the shaft and provided at one end with a head having an axially extending clutch rim, clutch means including elements movable into and out of operative relation to the outer face of the rim, a housing and brake drum member having a rim disposed adjacent and concentric with the clutch rim and a radial flange adjacent the inner face of the drum head, the two rims forming a housing enclosing the clutch members and associated parts, said housing and brake drum member being formed in two substantially semi-circular sections having radial flanges at their ends, means detachably securing said flanges together, and means removably securing said sections to the drum head.

1,692,028. PIPE-CLEANING APPARATUS. WALTON H. ELLIOTT, Port Arthur, Tex., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed July 16, 1926. Serial No. 122,774. 7 Claims. (Cl. 29—81.)

1. A pipe cleaning machine comprising means for supporting a pipe, means for rotating said pipe, a rotating hammer adapted to contact with the pipe, and means for moving the rotating hammer along the length of the pipe while in contact therewith.

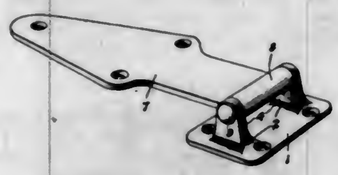
1,692,029. LIGHT OR GLOBE ATTACHING DEVICE. JAMES BARRETT EPSTEIN, Jersey City, N. J., and MOE SHENKIN, New York, N. Y. Filed Jan. 25, 1927. Serial No. 163,340. 1 Claim. (Cl. 240—128.)

In a light fixture for removably securing a globe in position, a supporting member having a depending skirt with a slit therein, fixed globe engaging members on the inner side of said skirt, a hasp adjacent said slit projecting outwardly from said skirt and a resilient globe engaging member having a portion of its resilient part extending through the slit and a portion surrounding the extending portion of said hasp and a hook on said resilient extending portion for engaging the hasp to thereby secure the resilient member in its globe holding position.



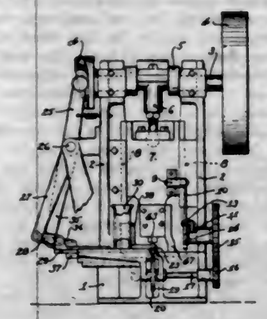
1,692,030. WIRE-INSULATION STRIPPER. LEON FRIEDMAN, Detroit, Mich. Filed Oct. 21, 1926. Serial No. 143,163. 8 Claims. (Cl. 81—9.5.)

1. A tool for slitting the outer insulating sleeve of a cable comprising a pair of jaw members channeled to embrace opposite sides of a cable, a spring connection between corresponding ends of said members, maintaining them normally slightly diverged and formed with an aperture to accommodate a cable passing between said jaw members, and a knife blade carried by one of said members upon its end portion opposite to that engaged by said spring connection disposed substantially in the central longitudinal plane established by both of said members.



1,692,031. APPARATUS FOR CONTROLLING THE VENTILATION OF AUTOMOBILE RADIATORS. CARL H. GAMBLE, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Mar. 21, 1925. Serial No. 17,176. 4 Claims. (Cl. 189—54.)

1. A ventilating apparatus for automobile radiators comprising a base plate adapted to be secured to the lower portion of a radiator, a shutter hinged to said base plate to swing toward and from the face of the radiator and having an opening therein somewhat less in width than the shutter, a smaller shutter for said opening hinged to



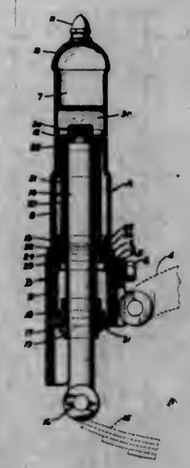
swing toward and from said first-mentioned shutter to open or close said opening, and means for securing said shutters together to swing in unison.

1,692,032. HINGE. CARL GESKE, Grand Rapids, Mich., assignor to Winters & Crampton Manufacturing Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Sept. 19, 1927. Serial No. 220,327. 2 Claims. (Cl. 29—11.)

2. The herein described method of producing a hinge member which consists in providing a base plate of flat metal having an opening therethrough, said base plate around the opening being raised to form a boss, inserting a lug through the opening, said lug having a shoulder between its ends with a section below the shoulder adapted to freely pass through the opening in the base plate and then riveting said reduced section at the under side of the base plate to draw the shoulder on the lug tightly into engagement with the upper side of said boss.

1,692,033. CLEAT-MAKING AND CLEAT AND HANDLE ASSEMBLING MACHINE. JAMES A. GRAY, San Francisco, Calif., assignor to American Can Company, San Francisco, Calif., a Corporation of New Jersey. Filed May 2, 1925. Serial No. 27,590. 20 Claims. (Cl. 153—13.)

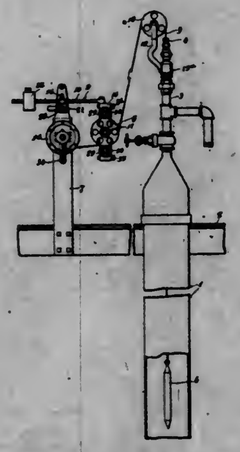
1. An apparatus for the described purpose comprising means for positioning a loop member and a cleat member in assembling relation, and means for uniting the said members by bending the cleat member and forming therein a bearing to embrace a portion of the loop member to an extent sufficient to prevent its removal therefrom, and means for forming the two ends of the cleat member as extensions to fit on a can to be soldered thereto.



1,692,034. DOOR ENGINE. PERCY M. GRIFFIN, Albany, N. Y., assignor, by mesne assignments, to Consolidated Car-Heating Company, Inc., Albany, N. Y., a Corporation of New York. Filed Nov. 12, 1921. Serial No. 514,691. 9 Claims. (Cl. 121—44.)

1. A door engine comprising a door closing cylinder, a door opening cylinder, pistons in the respective cylinders, means connecting the pistons, a duct connecting the two cylinders so that excess pressure in the door closing cylinder may be conveyed to the other cylinder, means for exhausting said last mentioned cylinder, and means in said duct operated at the end of the door closing movement of the pistons to close said duct so that a holding pressure may be maintained upon the piston in the door closing cylinder.

1,692,035. AIR SPRING. RAYMOND L. GRUSS, San Francisco, Calif., assignor, by mesne assignments, to Gruss Air Spring Company of America, San Francisco, Calif., a Corporation of California. Filed Sept. 10, 1924. Serial No. 736,883. 5 Claims. (Cl. 267—65.)

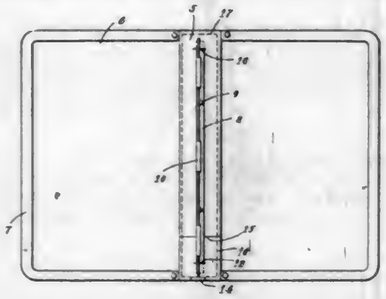


1. An air spring of the character described comprising an elongated cylinder divided into upper and lower sections of varying diameter and the upper section presenting the smallest diameter, a head forming a closure for the upper cylinder section, a piston rod extending through the lower cylinder section and into the upper section, said rod being of smaller diameter than the upper cylinder section, a piston on the upper end of the rod and operating within the upper section of the cylinder only, a second piston on the rod and operating in the lower cylinder section only, an upwardly turned cup-leather carried by the upper piston, a pair of cup-leathers carried by the lower piston, said cup-leathers being reversed so that one extends upwardly and one downwardly, a metallic annular extension on the upper piston forming a bearing for the upper cup-leather to relieve the same of all side thrust, and a metallic annular bearing extension on the lower piston to relieve the lower pair of cup-leathers of side thrust.

1,692,036. WINDOW-CLEANING DEVICE. LOUIS HACHENBERG, Throggs Neck, N. Y., assignor of one-half to William Brady, Ossining, N. Y. Filed Apr. 9, 1927. Serial No. 182,353. 8 Claims. (Cl. 15—255.)

1. A window cleaning device comprising, an arm adapted to be moved in a plane parallel to the window, a cleaning element mounted to oscillate on said arm, said element including oppositely disposed scrapers and a resilient wiper interposed between said scrapers, the contact surface of said wiper normally extending beyond the edges of the scrapers, whereby the movement of the arm will rock the element and bring one of the scrapers into contact with the window glass.

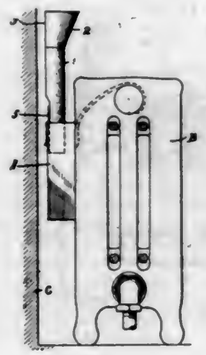
1,692,037. WELL-SOUNDING DEVICE. ERLE PALMER HALLIBURTON, Los Angeles, Calif. Filed June 15, 1926. Serial No. 116,156. 12 Claims. (Cl. 33—126.)



1. In a device for sounding a deep well, the combination of a reel, guiding means at the well, a measuring wheel located in a general horizontal direction between the reel and

the guiding means, a weighted sounding wire coiled on the reel, passing around the measuring wheel, over the said guiding means and into the well, and means for supporting the measuring wheel to oscillate to and fro before the reel about an axis substantially coinciding with the axis of the well, as the wire is drawn off from the same.

---



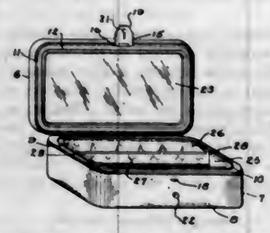
1,692,038. MENU-CARD HOLDER. RAY O. HARDING, Rockford, Ill., assignor of one-half to Joseph P. Corley, Rockford, Ill. Filed Nov. 22, 1926. Serial No. 149,860. 4 Claims. (Cl. 129—1.)

1. A loose leaf holder of the character described comprising a back of flexible material having a pair of cover members attached to the longitudinal edges thereof, a narrow flat strip of rigid material extending lenghtwise of the back midway between the covers and attached thereto, said strip serving to stiffen the otherwise limp material of the back as well as lend definite form there to so that the covers will fold properly onto one another, eyelets provided on said strip and arranged for engagement through apertures in a leaf to be inserted in the holder, and a pin approximately the length of the back passed through the eyelets over the leaf to retain the latter in place.

---

1,692,039. FILLER FOR RADIATOR PANS. WILLIAM H. HINZ, Oak Park, Ill. Filed Nov. 19, 1927. Serial No. 234,352. 1 Claim. (Cl. 226—31.)

A filling device for radiator pans comprising an open-ended tubular member having an enlarged upper end, the rear side of said enlarged end being in the same vertical plane as the rearmost vertical part of the said tubular member the lower end of the rear wall of the tubular member being displaced inwardly, and a vertical clip lying behind and secured at its upper end to said displaced part of the rear wall of said tubular member.



1,692,040. DRIED MARMALADE AND PROCESS OF PRODUCING THE SAME. HARVEY L. HULBURT, Monrovia, Calif., assignor to Murray California Food Products Inc., Azusa, Calif., a Corporation of California. Filed Sept. 20, 1926. Serial No. 136,730. 10 Claims. (Cl. 99—11.)

1. A process of producing dried marmalade, which comprises applying to fruit peel a dry admixture of jellifying ingredients, and then drying the peel.

10. A marmalade base comprising substantially dry sliced citrus fruit peels containing natural oils and coated with jellifying ingredients in quantity sufficient to form a jelly-like body when the marmalade base is heated with added water.

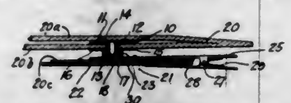
---

1,692,041. COMBINED CIGARETTE AND VANITY CASE. JAMES J. KLEIN, New York, N. Y. Filed July 3, 1926. Serial No. 120,277. 6 Claims. (Cl. 132—83.)

1. In a combined cigarette and vanity case, a container, a hinged cover for the container, lining members for the container and cover walls formed of yieldable material and having cooperating bead and groove edges cooperating to form a water tight joint substantially in the plane of meeting of the container and cover, whereby when the cover is closed the container will be substantially water tight.

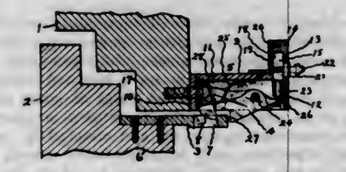
---

1,692,042. TOY GAME TARGET. MASUTARO KOIZUMI, Prosser, Wash. Filed Feb. 23, 1928. Serial No. 256,214. 1 Claim. (Cl. 273—102.)



In combination a toy game target, with perpendicular frame, and a plurality of target plates hinged at their bottoms to the frame, with latches pivotally attached to the frame above the plates; means for normally holding the latches from contact with plates, and means for normally compressing the tops of the plates away from the frame and against the latches to thereby retain the latches over the plates till the plates are struck on the front sides with a missile; pictures on the frame and concealed by the plates when held upward by the latches and disclosed when the plates are released from the latches; with a rod mounted in a tube attached to the frame and normally pressed upward by a spring, with a picture mounted on the top of the rod, and a hook for normally holding the rod down and the spring compressed and the picture concealed, with a target plate attached to the hook and actuated by impact from a missile, whereby the rod is released and the attached picture disclosed.

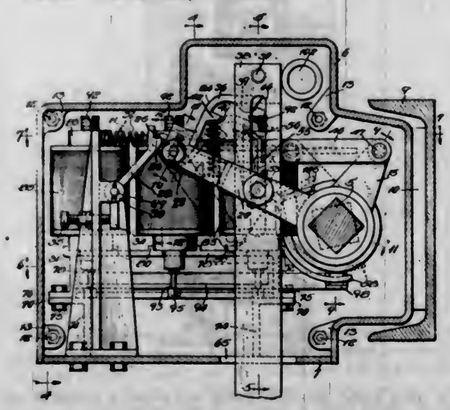
---



1,692,043. TIE FASTENER. FRANZ KREMSKI and HERMAN SIEMERING, New York, N. Y. Filed Mar. 7, 1927. Serial No. 173,375. 5 Claims. (Cl. 24—73.)

1. Tie fastening means comprising a disc having a pointed shank adapted to pierce the inside layer of the front flap of a tie, a companion disc having a socket for the reception of the said pointed shank, a clasp removably attached to a shirt and the back flap of the tie, and means to detachably secure the said companion disc to the said clasp.

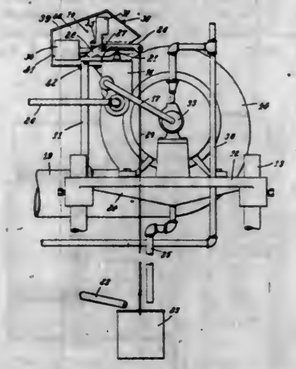
---



1,692,044. VAULT-DOOR SAFETY DEVICE. JOHN B. LISCHKE, Lancaster, Ky. Filed June 16, 1927. Serial No. 199,386. 9 Claims. (Cl. 109—3.)

1. A device of the character described and including in combination, a vault door, a keeper thereon, a vault body element, a latch mount carried by the vault body element, a latch tiltably mounted upon said latch mount intermediate its extremities and adapted to cooperate with said keeper, and lock controlled means for tilting said latch.

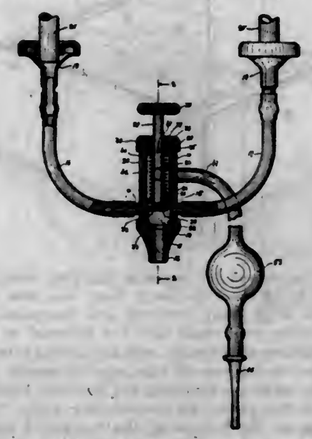
---



1,692,045. SWITCH-OPERATING MECHANISM. ALFRED F. C. LOTZ, Chicago, Ill., assignor to Electrical Engineers Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed May 1, 1924. Serial No. 710,334. 19 Claims. (Cl. 74—14.)

1. In combination, a rock shaft, a rocking member on said shaft, a detent for holding said rocking member set, a toggle connected between said rocking member and the shaft and adapted when the rocking member is set to hold the shaft in one position, latch means for holding said toggle in holding position, automatic means for tripping out said latch to release the toggle and shaft manually operable means for tripping said detent and latch to release the rocking member and the toggle.

---

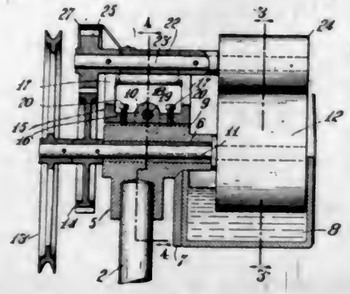


1,692,046. VALVE MECHANISM FOR OIL BURNERS AND THE LIKE. JOHN H. MCILVAINE, Lake Forest, Ill. Filed Aug. 23, 1926. Serial No. 130,835. 13 Claims. (Cl. 137—139.)

1. A shut-off valve of the character described comprising a lever pivoted intermediate its ends, said lever having a counterweight on one side of its pivot, a normally empty receptacle supported by said lever on the other side of its pivot and arranged to be loaded in a certain eventuality, said receptacle when empty being approximately counterbalanced by said weight, a valve member to be operated when said receptacle is loaded, and a weighted member for operating the same, said weighted member being pivoted and arranged to be raised to a dead center cocked position, and having a part moved by said lever as the same is tilted by the load of said receptacle whereby to cause said weighted member to drop and thereby operate said valve member, the parts being so arranged that the movement of the weight member to cocked position brings the lever with its counter-weight to normal position.

---

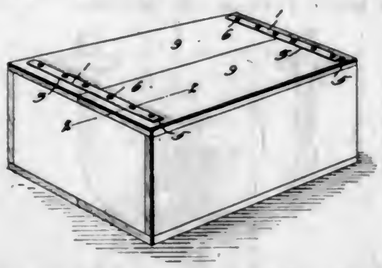
1,692,047. HYDROTEETH CLEANSER. GEORGE W. MOORE, New York, N. Y. Filed Sept. 30, 1925. Serial No. 59,576. 11 Claims. (Cl. 128—220.)



1. A device for cleansing teeth by the local application of a powerful jet of water, comprising a casing, hot and cold water tubes connected to said casing, a ported cham-

ber for mixing the hot and cold water and for determining the temperature and pressure of the mixed water, a valve in said casing, a second chamber normally closed by said valve to the admission of water thereto, said valve adapted to be moved to close the port from said first mentioned chamber and to enable the mixed water to be discharged into the second mentioned chamber, and a mouth cleansing and washing device connected to the second mentioned chamber.

---



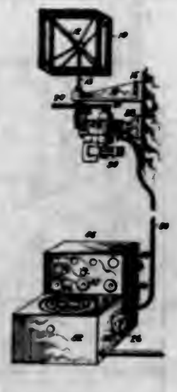
1,692,048. GLUE-APPLYING APPARATUS. LOUIS R. MUSKAT, Chicago, Ill., assignor to Triangle Packaging Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 31, 1927. Serial No. 229,822. 4 Claims. (Cl. 91—51.).

1. An apparatus of the kind described embodying therein a support, an open top container arranged at the front thereof, a driving shaft journalled in said support, a roll fixed to said shaft and arranged with a part of its periphery in said container, a saddle block mounted on the support and capable of an adjustable tilting movement about an axis at a right angle to said support, an arm pivotally mounted at one end on said saddle block about an axis parallel with said driven shaft, a second shaft journaled in the other end of said arm and arranged parallel with the driven shaft, a roll on said second shaft adapted for peripheral engagement with said first roll and means operatively connecting said shafts.

---

1,692,049. PACKING BOX. REDMOND H. PANGBORN, Tacoma, Wash. Filed Jan. 7, 1928. Serial No. 245,109. 1 Claim. (Cl. 217—66.)

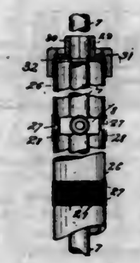
A fastening means for boxes or the like, comprising a metallic strip of concavo-convex form, the side and end edges of the strip being inturned and sharpened to provide for driving said edges into the material of the box in the application of the strip, said strip being formed with openings for the passage of the securing means, the material of the strips surrounding the openings being forced inwardly of the strip and terminating above the horizontal plane of the bottom of the sharpened side edges to provide for projections to engage with the surface of the box to prevent distortion of the strip under the blows incident to the application of the fastening means.



1,692,050. DEEP-WELL PUMP. WILLIAM C. PARRISH, Port Arthur, Tex. Filed Apr. 16, 1924. Serial No. 706,796. 2 Claims. (Cl. 172—126.)

1. An electric motor adapted to produce reciprocating motion of substantially uniform power over the entire range of an unidirectional stroke which comprises a movable shaft, a plurality of armatures mounted loosely upon said shaft, collars fixed on the shaft at equal intervals adapted to be engaged by the armatures, a plurality of solenoids connected in parallel and adapted to cooperate with said armatures, said solenoids being equally spaced at intervals less than the intervals at which the collars on the shaft are spaced, a source of electrical power for the solenoid, and contact means for energizing said solenoids during the working stroke of the shaft.

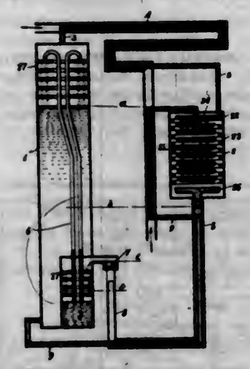
---



1,692,051. RADIO DIRECTION AND POSITION FINDER. MARTIN L. PATTERSON, Bogota, N. J., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed May 21, 1923. Serial No. 640,423. 3 Claims. (Cl. 250—11.)

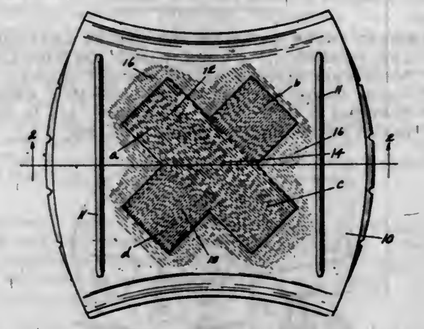
1. In a radio direction finder for ships, a rotatable antenna positioned beyond the effective wave-disturbing field of said ship, a motor for rotating said antenna mounted adjacent thereto, a bearing indicator operatively connected to said antenna and positioned within said field, and a controller in said field for controlling said motor.

1,692,052. AUTOMATIC FIRE-EXTINGUISHING APPARATUS AND SYSTEM. WILLIS J. PERKINS, Grand Rapids, Mich., assignor to Frances W. Perkins, Grand Rapids, Mich. Filed Sept. 2, 1922. Serial No. 585,898. 4 Claims. (Cl. 169—5.)



1. In a fire extinguishing apparatus, a series of flexible annular metallic bellows wafers hermetically connected together and closure means for the two terminal members of the series to form an expansible, elastic tank to enclose a fire extinguishing medium and when filled with same to exert a constant integral spring ejecting pressure on said medium, said tank having an outlet.

2. In a fire extinguishing apparatus, an expansible self collapsing tank enclosing a fire extinguishing medium, said tank operating to exert an inherent ejecting pressure on said medium, and a distributing pipe communicating with said tank and having a fusible element associated therewith, in combination with an alarm or signal device, and a pivotally mounted, spring pressed lever engaging said tank and normally restrained thereby from movement, but adapted on collapse of said tank to cause operation of said alarm or signal device.



---

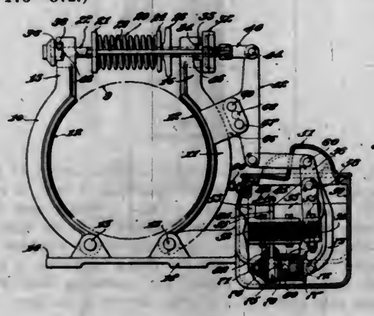
1,692,053. REFRIGERATING MACHINE. GUNNAR ROOS, Stockholm, Sweden. Filed Mar. 20, 1926, Serial No. 96,198, and in Sweden Mar. 28, 1925. 3 Claims. (Cl. 62—119.)

1. In an absorption refrigerating apparatus having the absorber and vaporizer in a common chamber, containing an inert gaseous agent, and in which the cooling agent is introduced in a liquid state, means on the walls of the chamber for distributing the liquid cooling agent in such a manner as to cause the liquid cooling agent to be distributed and vaporized on the walls of the chamber, and distributing means for the absorption liquid supported in spaced relation to the walls of the chamber.

1,692,054. TIRE-REPAIR PATCH. CLYDE M SEMLER, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 14, 1925. Serial No. 69,019. 8 Claims. (Cl. 152—26.)

7. A patch for tires comprising rubberized cord strips secured together in cross formation with the cords extending longitudinally in each strip.

---

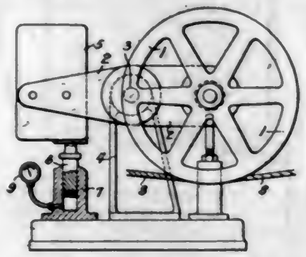


1,692,055. APPARATUS FOR WALKING ON WATER. ALBERT N. SHELDON, Ventura, Calif. Filed Dec. 13, 1927. Serial No. 239,635. 7 Claims. (Cl. 9—21.)

1. An apparatus for walking on water comprising floats, a fin movably mounted on each of the floats, a lever mounted in each of the floats operable in one direction by weight of the operator imposed thereon, and a means connected with each fin operable by movement of each of the levers in said direction to move the associated fin into extended position.

---

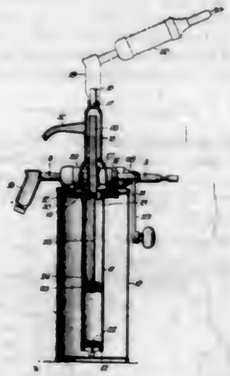
1,692,056. ELECTROMAGNET. WILLIAM S. SMITH, Cambridge, Mass. Original application filed July 28, 1922, Serial No. 578,121. Divided and this application filed Feb. 27, 1926. Serial No. 91,118. 5 Claims. (Cl. 175—372.)



1. An electro-responsive device comprising a magnet and an armature immersed in insulating liquid, one of said members being movable and the other fixed, and a dash-pot comprising a cylinder pivotally mounted on a fixed pivot and a pivotally mounted plunger movable therein and mounted on the movable one of said two first mentioned members; said cylinder being provided with an

outlet valve opening and with means for varying the size of said opening; said dash-pot being immersed in said insulating liquid and using it as a medium to retard the movement of said plunger when said magnet is energized.

---

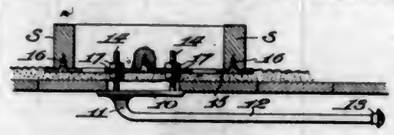


1,692,057. DYNAMOMETER FOR USE IN MEASURING THE TENSION IN A ROPE, CABLE, OR THE LIKE. WILLOUGHBY STATHAM SMITH, Newton Poppleford, and ALFRED DEVER SHUTER, Harrow-on-the-Hill, England. Filed May 5, 1927, Serial No. 188,968, and in Great Britain Feb. 26, 1927. 2 Claims. (Cl. 265—1.)

1. In a dynamometer for use in measuring the tension of a cable, the combination of a support, a lever pivoted thereto, a measuring sheave mounted on one arm of the lever, a counterweight on the other arm of the lever, and a fluid pressure device for measuring the moment of the thrust of the cable on the sheave about the fulcrum of the lever.

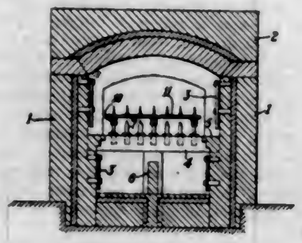
---

1,692,058. GREASE-GUN FILLER. CHARLES SPAETH, Cleveland, Ohio, assignor to The Marvel Equipment Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 12, 1925. Serial No. 68,494. 5 Claims. (Cl. 221—47.5.)



1. In a grease gun filler, the combination of a grease container, a pump cylinder mounted therein, a cover for said container connected to said cylinder and having a grease conducting portion terminating at its upper end in a substantially vertical discharge nozzle adapted for connection to a grease gun for filling purposes, a piston in said cylinder, and means for operating said piston to cause said piston to discharge grease to the gun.

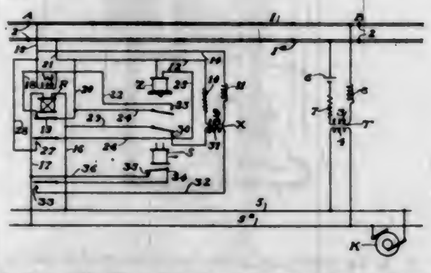
---



1,692,059. TOWEL BAR. VICTOR E. STARNER, Bell, Calif. Filed Oct. 5, 1926. Serial No. 139,594. 3 Claims. (Cl. 211—123.)

1. The combination with an anchor plate that is adapted to be embedded in a wall structure, of means for rigidly securing said anchor plate to parts of the wall structure, a plate adapted to occupy a portion on the face of the wall structure in which the anchor plate is embedded, threaded studs formed integral with said plate, which threaded studs pass through and are adjustably connected to the anchor plate, a short arm formed integral with and projecting forwardly from said plate, a horizontally disposed rail formed integral with and projecting laterally from said short arm, said rail being spaced apart from and lies parallel with the face of the wall structure, and the free end of said rail being spaced apart from the wall structure in order to provide an opening through which articles may be moved lengthwise of the rail when positioned thereon, or removed therefrom.

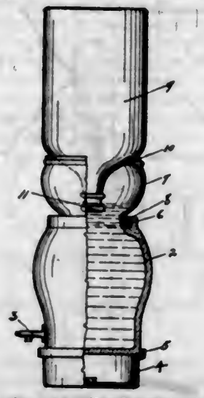
---



1,692,060. ENAMELING FURNACE. RANDAL E. TALLEY, Irwin, Pa. Filed Oct. 19, 1927. Serial No. 227,131. 4 Claims. (Cl. 25—132.)

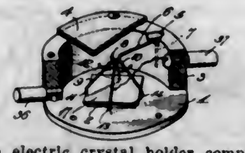
1. In an enameling furnace the combination with a permanent rack for supporting articles, of a plurality of bars for capping portions of said permanent rack, said bars being removably attached to said rack and being further disposed to constitute supports for removable rack members which are adapted to be charged into the furnace.

---



1,692,061. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HOWARD A. THOMPSON, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Aug. 26, 1926. Serial No. 131,626. 4 Claims. (Cl. 246—40.)

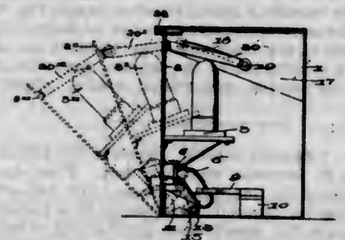
1. In combination, a section of railway track, a source of alternating current and a source of direct current constantly connected with one end of the section, an alternating current relay connected with the other end of the section, a direct current relay for controlling the alternating current relay, and means controlled by traffic in one direction only for supplying current to the relay end of the section only when both of said relays are de-energized.



1,692,062. DRINKING-WATER-SERVING OLLA. EDMUND J. TOBIN, Altadena, Calif. Filed Apr. 3, 1928. Serial No. 266,913. 4 Claims. (Cl. 62—91.)

1. In combination, an olla for drinking water, an intermediate member secured into the upper end thereof with a water tight joint, and adapted to support a reservoir of water therein and above the top of said olla, and a reservoir of water set into said intermediate member with its lowermost part above the top of said olla, whereby water completely fills said olla and rises into said intermediate member.

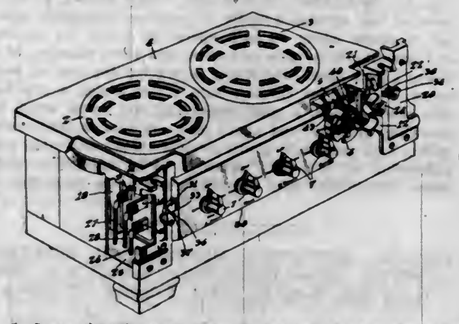
---



1,692,063. PIEZO-ELECTRIC-CRYSTAL APPARATUS. ARTHUR M. TROGNER, Takoma Park, Md., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 24, 1926. Serial No. 104,381. 10 Claims. (Cl. 171—327.)

1. A piezo electric crystal holder comprising in combination a conductive plate for supporting a piezo electric crystal element, a metallic plate for establishing electrical connection with the upper surface of said piezo electric crystal element, and a thread member secured through said conductive plate member to maintain said metallic plate and piezo electric crystal element in a selected position relative to each other and to said conductive plate.

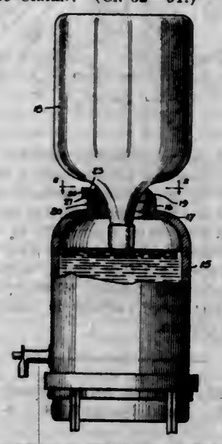
---



1,692,064. RADIO RECEIVING APPARATUS. ARTHUR M. TROGNER, Takoma Park, Md., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 5, 1927. Serial No. 166,110. 5 Claims. (Cl. 250—14.)

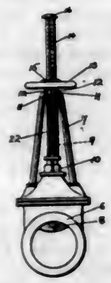
1. A radio receiving apparatus comprising a cabinet structure, a plurality of contacts mounted adjacent the base of said cabinet structure providing circuit terminals within said cabinet structure, a removable panel member for normally closing said cabinet structure carrying radio receiving apparatus thereon, said removable panel member having an insulated sub-panel thereon with connecting members projecting from said insulated sub-panel, said connecting members projecting horizontally into said cabinet structure and depending at an angle with respect to said sub-panel for engaging said contacts within said cabinet structure for establishing continuous slidable connection with said contacts within said cabinet structure while said panel member is being moved a substantial distance from said cabinet structure for permitting access to radio equipment carried by said panel while said connection is maintained between said connecting members and said contacts.

---



1,692,065. ELECTRIC RANGE. ARTHUR W. WALKER, Malden, and ALBERT L. SMITH, West Medway, Mass., assignors to Walker & Pratt Mfg. Co., Boston, Mass., a Corporation of Massachusetts. Filed May 7, 1924. Serial No. 711,590. 17 Claims. (Cl. 219—37.)

1. In an electric range, the combination of a switch board comprising a plurality of switches and bus bars supporting said switches, means for holding said switch board in its operative position in the range, said range having a compartment for the service wires into which compartment the supply ends of said bus bars project, and said switch board being readily releasable from said holding means to permit the removal of the switch board from the range.



---

1,692,066. WATER COOLER. ARTHUR L. WASHBURNE, Los Angeles, Calif. Filed Oct. 21, 1926. Serial No. 143,220. 10 Claims. (Cl. 62—91.)

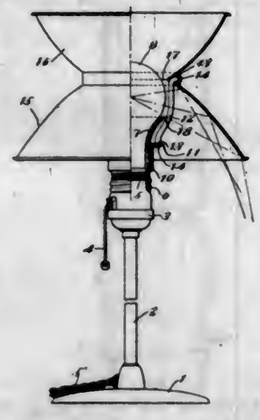
1. A water cooler comprising an olla and a bottle supported on the olla, a sealing ring for sealing the joint between the two against the admission of air, a port in the ring, and means for filtering air passing inwardly of the port.

1,692,067. GATE VALVE. RICHARD WELSH, Los Angeles, Calif. Filed Aug. 22, 1927. Serial No. 214,672. 2 Claims. (Cl. 251—55.)

1. In combination with a gate valve having a valve member and operating screw for moving said valve member, a screw wheel on said operating screw for raising and lowering it to open and close said valve member, of a sleeve guard upon said wheel to receive the end of said screw as it moves through said screw wheel, a cap for said sleeve guard, a yoke supporting said screw wheel in operating position, and guard members around said screw within said yoke, said guard members being separable and adjustable as to length whereby to be applied to said screw, within said yoke to protect said screw from dirt.

---

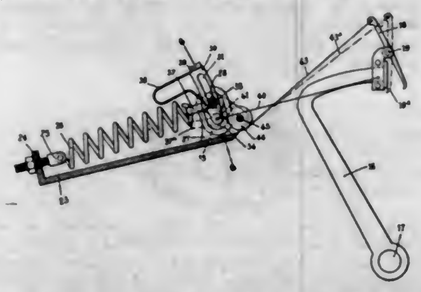
1,692,068. MULTIPOLE MULTIBRANCH ELECTRIC SWITCH. ARCHIE REXALD WOLFE, Summit, N. J. Filed Apr. 3, 1925. Serial No. 20,541. 5 Claims. (Cl. 200—6.)



5. In a multipole multibranch switch, comprising a base, an end plate mounted on said base, a central vertical support mounted on said base, alternate washer shaped conducting blades and insulating bushings surrounding said support, a second face plate, a plurality of columns of receptor contacts radially arranged about said center column and mounted between said face plates, terminals therefor, and means whereby any number of said columns of receptor contacts are moved radially to make contact with said distributing column.

---

1,692,069. LAMP. BUTLER AMES, Lowell, Mass. Filed June 19, 1926. Serial No. 117,006. 4 Claims. (Cl. 240—81.)

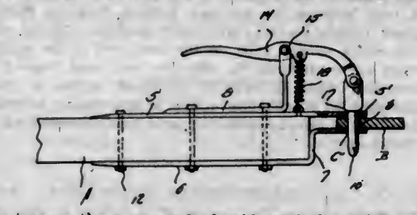


1. A lamp comprising a support, a source of light mounted on said support, a double reflector cooperating with said source of light, and comprising co-axial conic reflecting surfaces directed in opposite directions and intersecting along a circle of a diameter less than that of the mouths of either surface and a calyx carried by said support and surrounding the lower end of said source of light whereby all direct rays of light downward are cut off, said source of

light being so located that the majority of the rays from said source are thrown against said reflectors and diverted substantially upwardly or downwardly.

---

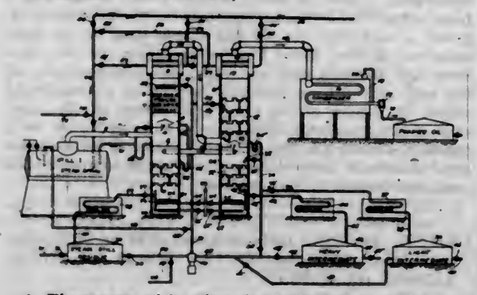
1,692,070. CONTROL MEANS FOR CLUTCHES, BRAKES, AND THE LIKE. FRANCIS ATHIMON, Paris, France. Filed Aug. 4, 1925, Serial No. 48,149, and in France Aug. 14, 1924. 5 Claims. (Cl. 74—81.)



1. In combination with a spring controlled mechanism a control member operatively connected with said mechanism and adapted to be actuated by the operator, a stationary frame provided with two trunnions in line with one another, a forked member operatively connected with said control member and the branches whereof are adapted to slide on and pivot about said trunnions, an intermediate branch provided on said forked holder, an elongated longitudinal opening in said intermediate branch, a rolling member contacting with the side edges of said opening and adapted to move thereon, a pin extending axially through said rolling member, a spring attached to said pin, means for normally maintaining said spring in the deformed state and said pin in alignment with said trunnions and means adapted to be actuated by the operator and attached to said pin for moving said rolling member within said opening.

---

1,692,071. TRAILER HITCH. THOMAS W. AUSTIN and MONROE F. SWINDLE, Chandler, Ariz. Filed Apr. 12, 1927. Serial No. 183,101. 1 Claim. (Cl. 280—33.15.)

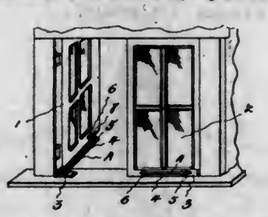


In a hitch for connecting the tongue of a trailer to a coupling plate that extends from the rear end of an automobile, a pair of longitudinally extending metallic straps disposed upon the top and bottom sides of the tongue at the forward end thereof, the outer ends of the straps projecting beyond the forward end of the tongue, the projecting end of the lower strap being bent upwardly for abutting engagement with the forward end of the tongue and then disposed laterally so as to be in slightly spaced parallel relation with respect to the projecting end of the upper strap, the coupling plate being adapted for disposition between the parallel spaced projecting ends of the straps, said ends and the coupling plate being formed with registering openings, an additional strap arranged on the uppermost strap, securing bolts extending through the straps and the tongue, the forward end of the third strap being disposed upwardly and arranged inwardly of the forward end of

the tongue, the upper end of said vertical portion of the third strap being bifurcated, a thumb lever pivotally supported intermediate its ends between the furcations, the forward end of the lever being disposed downwardly, a coupling pin adapted for disposition through the registering openings in the straps and coupling plate, the upper portion of the pin being enlarged and pivotally secured to the depending forward end of the lever, and a retractile coil spring secured at one end to the forward end portion of the pivoted lever and at its opposite end to the adjacent portion of the upper strap.

---

1,692,072. PROCESS AND APPARATUS FOR FRACTIONATING HYDROCARBON OILS. JOHN C. BLACK, Destrehan, La. Filed Feb. 2, 1924. Serial No. 690,207. 20 Claims. (Cl. 196—94.)

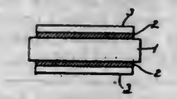


1. The process of fractionating hydrocarbons which comprises distilling the same and supplying fresh hydrocarbons to the still to replace the vaporized portions, partially condensing the vapors, passing the condensate to a separate still, redistilling a portion of the condensate and partially condensing the vapors by heat exchange with the fresh hydrocarbon supply to the still and finally condensing the residual vapors.

20. An apparatus for the separation of hydrocarbon vapors comprising fractionating towers, connected in series, means for passing vapors from one tower to the other, means for withdrawing liquid from said towers, means for distilling said withdrawn liquid, means for conducting vapors of an intermediate boiling range from said distilling means, and means for introducing said vapors into the first of said fractionating towers.

---

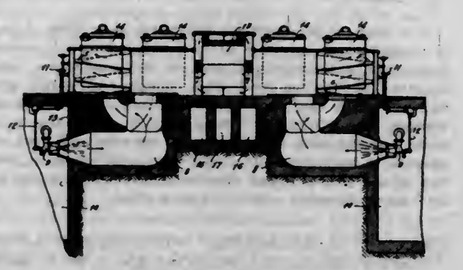
1,692,073. CASEMENT-WINDOW OPERATOR. REINHOLD F. BRENNER, New Haven, Conn. Filed Jan. 23, 1928. Serial No. 248,767. 2 Claims. (Cl. 268—119.)



1. An operating device of the class described rendered operative for windows moving in several or opposite directions by location of the device, said device having a body or base, a pivoted arm or outer member supported by and swinging from said base, a rod or inner member slidably mounted with relation to said arm, a pivoted bracket car-

ried at the outer end of said rod and means operative from either side of said base whereby operation of said arm is effected.

---



1,692,074. OSCILLATION GENERATOR. WILLIAM H. BURTIS, Plainfield, N. J. Filed Apr. 21, 1927. Serial No. 185,661. 6 Claims. (Cl. 171—327.)

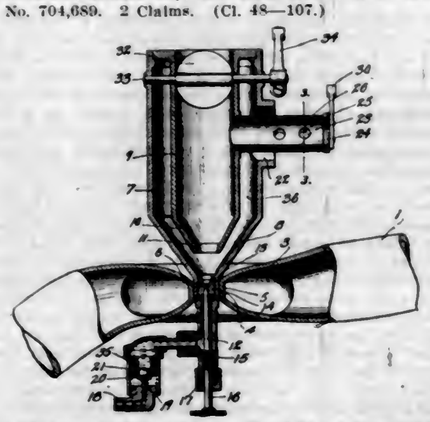
1. A piezo electric crystal upon the surface of which is incorporated a silicate binder and a powdered metal forming the electrode for the crystal.

---

1,692,075. HIGH-DUTY PETROLEUM STOVE. ARNALDO CARPINETI, Buenos Aires, Argentina. Filed Jan. 2, 1926, Serial No. 79,059, and in Argentina June, 1925. 1 Claim. (Cl. 126—44.)

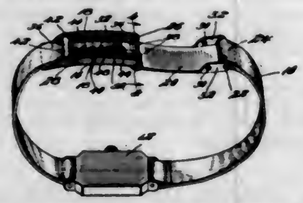
A high duty petroleum cooker comprising a base plate, said cooker being provided with combustion chambers below said base plate, oil burners arranged to direct a flame inwardly toward the middle of said cooker, within said combustion chambers, a water heater associated with each combustion chamber superposed with respect to a flue communicating with said combustion chamber, branch flues of approximately equal length communicating with said combustion chamber and symmetrically arranged with respect to said water heater, a well associated with each branch flue comprising an annular cylindrical jacket having a spiral baffle between the walls thereof and being in communication with said branch flues, said wells being each adapted to receive a cooking kettle, a jacketed oven symmetrically arranged with respect to said combustion chambers, a hot plate above the oven, an auxiliary combustion chamber directly beneath said hot plate, an oil burner for delivering heated combustion products to said chamber, the latter communicating with the space within said oven jacket, a fuel tank in conductive relation to the heat generated within said auxiliary combustion chamber and the heat of said cooker conserved by the specified disposition of the other sources of heat, and exhaust flues located directly beneath said oven for carrying away the spent combustion products.

1,692,076. CLOTHESPIN. JAMES O. CARROLL, Pittsfield, Ill., assignor of fifty-one per cent to Charles P. Carroll, Kansas City, Mo. Filed Feb. 7, 1928. Serial No. 252,611. 4 Claims. (Cl. 24—137.)



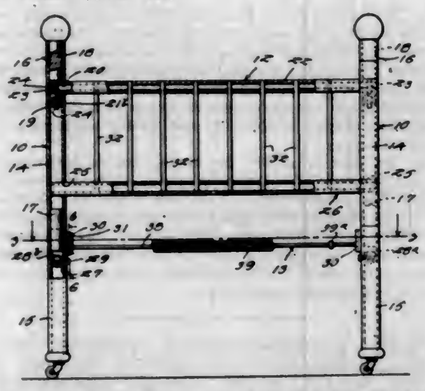
4. A clothes pin comprising a body having a solid head and depending arms spaced from each other transversely of the head, prongs spaced from the upper portions of said arms and together with the arms adapted to grip a clothes line and suspend the clothes pin from the clothes line, and a tongue pivotally mounted between the arms and when disposed longitudinally between the arms adapted to clamp clothes between the arms and tongue.

1,692,077. RADIAL STAY TONGS. ARTHUR A. COCHRAN, Chanute, Kans. Filed Jan. 23, 1926. Serial No. 83,295. 2 Claims. (Cl. 294—37.)



1. A tool of the character described, comprising a pair of elongated substantially parallel shank members, means connecting said members, one of said members being mounted for rotation on its axis, obliquely extending jaws on one end of said shank members, one of said jaws extending at a slightly different angle to the axis of its shank member than said other jaw, whereby said jaws are adapted to be moved into overlapping relation upon rotation of one of said shank members, and means for moving said shank members relative to each other.

1,692,078. CARBURETING VAPORIZER. ARTHUR COLEMAN, Kansas City, Mo. Filed Apr. 7, 1924. Serial No. 704,689. 2 Claims. (Cl. 48—107.)



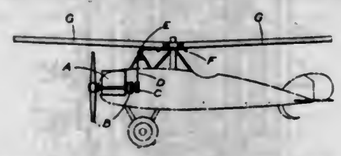
1. A carbureting vaporizer comprising a tubular casing having a conical lower end terminating in a valve seat receiving collar, a pipe for supplying hydrocarbon fluid to the casing provided with a valve seat receivable in the collar and having a port opening connecting the pipe with the casing, means for supplying heat to the collar and through it to the valve seat to cause hydrocarbon fluid to become vaporized in its passage through the valve seat, a needle valve for controlling the effective port area of said port opening, a tubular mixing chamber having a wall parallel with the wall of the casing and closing off the upper end of the casing, the mixing chamber having a constricted lower end with a central opening in a line with the opening surrounded by the valve seat, the casing having an air inlet port between its top and bottom, and the mixing chamber having an air inlet port between its top and bottom and a sleeved valve on the inlet port of the mixing chamber for controlling the effective port area thereof in combination with an exhaust manifold having a ring-shaped seat to receive the collar of the casing whereby heat from the exhaust manifold will be communicated to the valve seat.

1,692,079. AUTOMATIC STRAP TIGHTENER. JOHN D'ALO, Providence, R. I., assignor to Arthur F. Bernard, Providence, R. I. Filed Jan. 19, 1927. Serial No. 162,179. 7 Claims. (Cl. 24—71.)

7. A strap tightener adapted to be interposed in a strap for expanding and contracting the length of the strap comprising, a back connector section having a base and a front connector section having their inner ends hinged together, a connection for one end of said strap on the front connector section, and a flexible connection for the other strap end mounted over and expansible longitudinally of the base of the back connector section to automatically adjust the length of the strap, and means on the outer ends of said connector sections to detachably secure them together whereby the length of the strap may be increased when said front connector section is pivoted on said back connector section to open position.

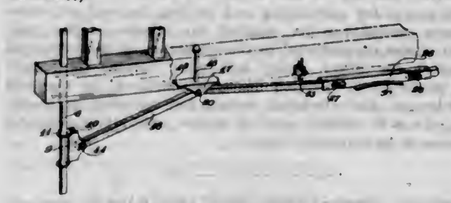
1,692,080. FOLDING BED. GILBERT OTIS DE HASS, Vandalia, Mo. Filed Nov. 27, 1926. Serial No. 151,148. 1 Claim. (Cl. 5—99.)

In a bed, corner posts, collapsible side and end structures connecting said corner posts and maintaining the corner post in properly spaced relation, the corner posts



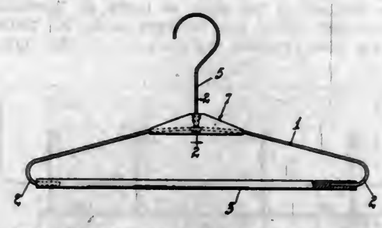
of each end pair being provided upon opposed faces with U-shaped brackets, shafts fitting between the arms of the brackets, opposing inner faces of the arms of the brackets being grooved, the shafts having heads extending into the grooves and a spring structure connecting said shafts, one of said shafts having means for connecting a lever thereto whereby the shaft may be rotated, one of the heads of said shaft and said bracket having aligning openings for the reception of a lock pin whereby the shaft may be held in rotatably adjusted positions, said collapsible end structures comprising detachable connecting means by which the upper ends of the posts are held in spaced relation and the shaft heads when positioned in the grooved brackets serving to hold the lower ends of the legs in spaced relation.

1,692,081. AIRCRAFT WITH ROTATIVE WINGS. JUAN DE LA CIERVA, Madrid, Spain. Filed Nov. 10, 1926, Serial No. 147,569, and in Great Britain Nov. 24, 1925. 7 Claims. (Cl. 244—19.)



1. In aircraft in which the supporting surfaces are constituted by freely rotative wings driven by the relative air flow in flight and hinge-jointed to the axis of rotation, a wing formation in which the chord is relatively small in the part nearest the root, increases to a maximum in the outer half of the wing's length, and thence again decreases towards the tip.

1,692,082. AIRCRAFT WITH ROTATIVE WINGS. JUAN DE LA CIERVA, Madrid, Spain. Filed Nov. 10, 1926, Serial No. 147,571, and in Great Britain Nov. 24, 1925. 8 Claims. (Cl. 244—19.)

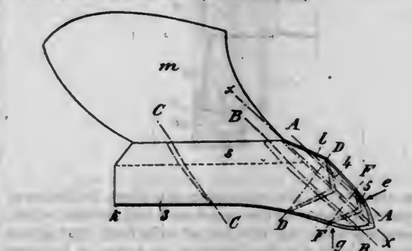


1. In aircraft, the combination with a plurality of freely rotative supporting wings hinge-jointed to the axis of rotation, of a power transmission device temporarily connecting the wings to the prime mover of the air craft to set said wings initially rotating, said device thereupon becoming automatically inoperative.

1,692,083. CRIB. ABRAHAM G. FELDMAN, Chicago, Ill. Filed Dec. 24, 1925. Serial No. 77,569. 3 Claims. (Cl. 5—100.)

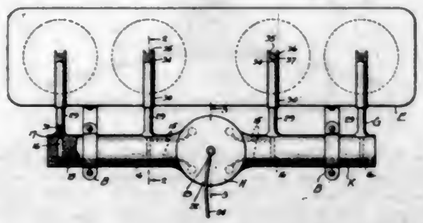
1. The combination with a crib having vertical rods and a side adapted to be raised and lowered along said rods, of arched levers rockably suspended from said side, brake shoes connected to the outer portions of said levers and adapted for braking engagement with said rods, a connecting member receiving the inner portions of said levers, and straps straddling said brake shoes and perforated to receive said rods to guide and retain said brake shoes in working relation to said rods.

1,692,084. CLOTHES HANGER. CHARLES S. GERARD, Long Beach, Calif. Filed Nov. 7, 1927. Serial No. 231,512. 1 Claim. (Cl. 223—62.)



A clothes hanger comprising a wire frame, a loop formed in said wire frame, a hook extending through the loop, a head on the bottom of said hook adapted to bear against the loop, and a metal plate bent around the wire frame fitted closely about the hook.

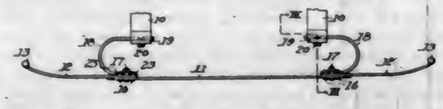
1,692,085. COLLAPSIBLE LUGGAGE CARRYING ATTACHMENT FOR USE WITH MOTOR AND OTHER VEHICLES. DARRELL WALLACE ISAACS, Redfern, New South Wales, Australia. Filed Dec. 28, 1923, Serial No. 683,248, and in Australia May 22, 1923. 4 Claims. (Cl. 224—29.)



1. A collapsible luggage carrying device particularly adapted for use on the running boards of motor cars, comprising a plurality of brackets rigidly secured to the under surface of the running board and projecting laterally therefrom and each terminating in a connecting portion, a plurality of vertical members having the lower ends pivoted to the connecting portions of the brackets, a pair of horizontal members arranged on opposite sides of the vertical members, one of the horizontal members being pivoted directly to each of the vertical members and the other of the horizontal members being pivoted in spaced relation to the other sides of the vertical members so as to permit the horizontal and vertical members being collapsed to lie on the brackets between the connecting portions thereof and edge of the running board and flush with the upper surface of the running board, and means for locking the device in its fully extended position.

1,692,086. SELF-SHARPENING PLOWSHARE. JENS PETER HENRIK JAKOBSEN, Odense, Denmark. Filed Nov. 19, 1926, Serial No. 149,476, and in Denmark Oct. 30, 1926. 2 Claims. (Cl. 97—125.)

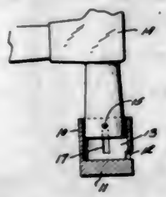
1. A self-sharpening plow share having a landside edge formed of one-layer material, the plow share in the direction of plowing, increasing in thickness in the rear direction, the horizontal section of the landside edge decreasing in thickness in the direction of plowing.



1,692,087. CURRENT-CONDUCTING APPARATUS. FRANCIS H. MATTHEW, MARTIN A. BROADBERR, and FREDERICK C. B. VOSGERAU, Venice, Calif.; said Vosgeran assignor of his right to Lloyd H. Barfknecht, Venice, Calif. Filed July 16, 1924, Serial No. 726,365. Renewed Mar. 12, 1928. 10 Claims. (Cl. 123—143.)

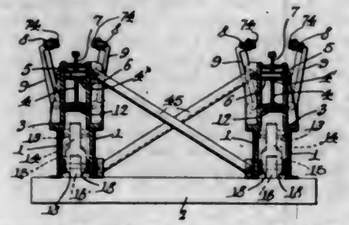
1. A current conducting apparatus for the ignition systems of engines comprising a solid conduit of insulating material, a housing of insulating material formed integral with the conduit and adapted for receiving a spark coil and a distributor, conductors connected to the distributor and embedded in the conduit, and connectors detachably associated with the conduit and adapted for detachable connection to spark plugs for conducting current from the conductors to the spark plugs.

---



1,692,088. AUTOMOBILE BUMPER. WILLIAM R. MCGOWEN, McKees Rocks, Pa., assignor to United States Chain & Forging Company, Pittsburgh, Pa., a Corporation of Delaware. Filed May 24, 1928. Serial No. 280,186. 11 Claims. (Cl. 293—55.)

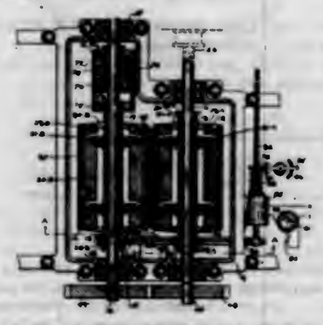
1. Bumper structure comprising an intermediate impact section having recesses in one face thereof, end sections abutting the other face of the intermediate section, and bolts extending through the ends of the intermediate section and the inner ends of the end sections for securing them together, the said bolts having heads fitting within the said recesses, the recesses and the said heads being of non-circular contour to prevent turning of the bolts.



---

1,692,089. CAP SHOOTER. MALCOLM E. MCPHAIL, Cohoes, N. Y. Filed Apr. 14, 1927. Serial No. 183,779. 1 Claim. (Cl. 46—46.)

A cap shooter of the character described including a cup-shaped body open at its upper end and having a slot communicating with the interior of said body just above the bottom thereof for the insertion of a cap, a hammer having a handle and a head at right angles to the handle at all times disposed within said cup-shaped body, and a transverse member extending through the hammer head, the cup-shaped body having its side walls vertically slotted and the ends of said member extending into said slots.



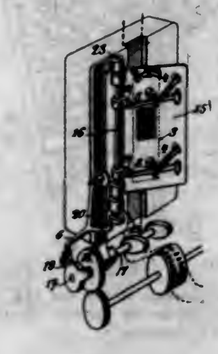
1,692,090. TRACK BRAKE. WALTER MINER, Seattle, Wash. Filed Apr. 16, 1927. Serial No. 184,392. 8 Claims. (Cl. 188—62.)

1. The combination with a track rail and a downwardly movable support therefor, of a track brake including elongated shoes at opposite sides of the rail, means operated by a car approaching the brake for shifting the shoes toward each other and for operatively connecting the shoes to the rail support, said support when depressed under the weight of a car thereon, being adapted to press the shoes toward each other when operatively connected to the rail support.

---

1,692,091. AUTOMATIC SPEED-CHANGING POWER TRANSMISSION DEVICE. HOWARD J. MURRAY, Brooklyn, N. Y. Refiled for abandoned application Serial No. 440,039, filed Jan. 26, 1921. This application filed Feb. 15, 1927. Serial No. 168,384. 14 Claims. (Cl. 64—8.)

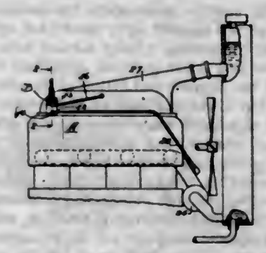
1. In a device of the class described, the combination of a pair of power transmitting pulleys mounted for rotary movement and connected to a source of power, frictional means for transmitting power from one to the other, means for increasing or decreasing the operating diameters of the said pulleys, said pulleys including a plurality of segmental parts, an actuating means for collectively moving the said segmental parts, a resilient control means for positioning and moving the said actuating means, mechanism for varying the tension of the resilient means proportional to the resistance of the connected load on the driven pulley, means for varying the supply of power to the driving pulley proportional to the said resistance, and electrical means for opposing or assisting the said resilient control means, said electric control means to be manually varied.



---

1,692,092. CINEMATOGRAPHIC APPARATUS. ETIENNE OEHMICHEN, Valentigney, France. Filed Dec. 31, 1926, Serial No. 158,297, and in France Nov. 25, 1926. 2 Claims. (Cl. 88—17.)

1. In a cinematographic apparatus utilizing a flexible film, the combination of a guideway adapted to guide the said film, a pushing element adapted to maintain the said film in the said guideway and controlling means for periodically pressing and raising the said pushing element, the period of pressure of the said element corresponding

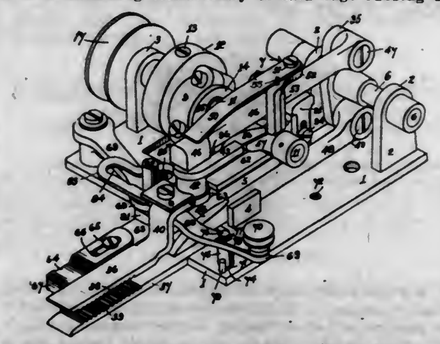


to the stopping of the said film and the period of raising corresponding to the displacement of the said film, the said controlling means being connected with the mechanism of the apparatus, a second pushing element adapted

to exert a constant and slight pressure on the said film, a movable door adapted to close the said guideway and to support the first and the second pushing element and also the said controlling means.

---

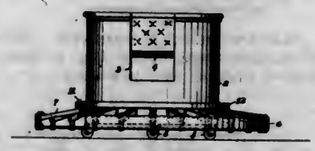
1,692,093. VALVE FITTING FOR COMMUNICATING ENGINE-CYLINDER PRESSURES. EDWARD A. ROCKWELL, Long Island City, N. Y., assignor to Stewart-Warner Speedometer Corporation, a Corporation of Virginia. Filed Feb. 25, 1926, Serial No. 90,596. Renewed Apr. 14, 1928. 4 Claims. (Cl. 123—198.)



1. A valve fitting and fluid connection for regulating communication of engine cylinder pressures, having a substantial portion of its body formed with a plurality of heat-radiating fins and the like, forming intervening channels for water circulation, and a sleeve and of the like encompassing said fin-bearing portions of the fitting for exteriorly closing the otherwise open sides of the channels, said sleeve having inlet and outlet connections for coupling to a water circulating system.

---

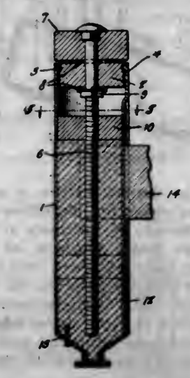
1,692,094. ATTACHMENT FOR SEWING MACHINES. ANDREW SAWERS, Leeds, England. Filed Dec. 24, 1925, Serial No. 77,571, and in Great Britain Mar. 24, 1925. 7 Claims. (Cl. 112—2.)



7. In an attachment for sewing machines of the character described, the combination of a pair of superposed edge rubbing bars, having oppositely opposed serrated surfaces, means for reciprocating said bars adapted to be operated by a moving part of the sewing machine, one of said bars comprising two pivotally connected sections, and a lever extending transversely of said edge rubbing bars

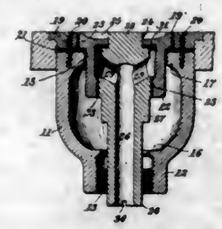
and adapted to adjust the serrated portion of the upper bar to a position substantially at right angles to the length of said bar.

---



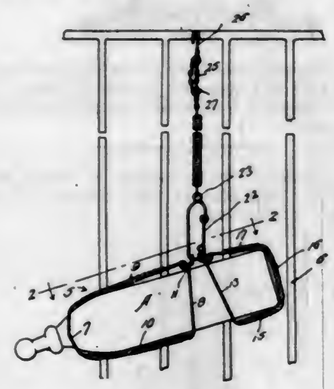
1,692,095. BUFFER OR BUMPER FOR AMUSEMENT VEHICLES OR CARS. DUDLEY HUMPHREY SCOTT, Cleveland, Ohio, assignor to The Humphrey Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 14, 1928. Serial No. 246,661. 5 Claims. (Cl. 293—57.)

2. An amusement vehicle or car of the type described, having a buffer ring supported in spaced relation to the car body by means of a series of radially extending bands made of rubber.



---

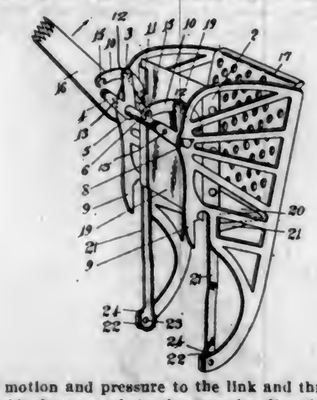
1,692,096. PASTE TUBE. FLOYD A. SCOTT, Somers Point, N. J. Filed Mar. 11, 1927. Serial No. 174,591. 2 Claims. (Cl. 221—79.)



1. A tube of the class described having a closure in its rear end, a screw shaft having an unthreaded portion rotatably mounted in the closure with a threaded portion located in the tube, a follower in the tube having a threaded hole therein engaged by the shaft, means for preventing rotary movement of the follower, a handle member on the outer end of the shaft and a pin in the front end of the tube and adapted to be projected by the follower when the follower nears the end of the tube, for indicating that the tube is empty.

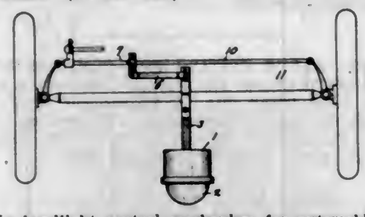
1,692,097. FLOOR OUTLET. EUGENE A. STAPLES, Brooklyn, N. Y. Filed Dec. 6, 1920. Serial No. 428,809. 6 Claims. (Cl. 247—15.)

1. A device of the character described comprising a casing having an opening in the top thereof and having a conductor wire passage, a hollow tubular conduit-member having a longitudinal passage therein for electrical conductors, a closed end portion, and outlets in the sides thereof adjacent to said closed end portion, and means for securing said conduit-member within said opening in a plurality of axial positions; the closed end portion of said conduit-member, when said conduit-member is adjusted to one of its positions, serving to seal the opening in the top of said casing, and in another of said positions to bring the passage in said conduit-member into communication with the interior of said casing, substantially as specified.



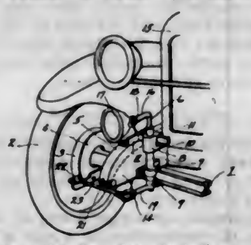
1,692,098. NURSING-BOTTLE HOLDER. MAURICE S. SULLIVAN, Meriden, Conn. Filed Aug. 4, 1926. Serial No. 127,054. 2 Claims. (Cl. 248—65.)

1. In a holder for nursing bottles, a pair of separate frame members constructed for disposition upon the bottle at opposite ends thereof, eye members at the inner ends of said independent frame members, an elongated link independent of the frame members, and slidable through the aforementioned eyes for drawing the frame members together toward each other upon the bottle when the link is swung to a position at right angles with respect to its initial position, and means associated with one end of the link for facilitating the suspension of the bottle from a support.



1,692,099. MOP WRINGER. HUGH BOGART TARBOX, Toronto, Ontario, Canada. Filed Dec. 9, 1927. Serial No. 238,789. 3 Claims. (Cl. 15—261.)

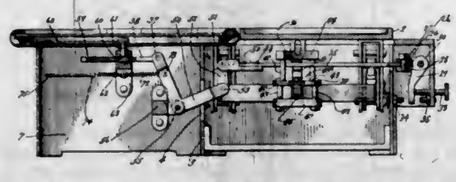
1. A mop wringer comprising a stationary frame, a movable frame, and a lever mechanism composed of a plurality of arms unitedly rotatable in clockwise or counter-clockwise direction, a link interposed between the arms and the movable frame alternately engaged and released by each of the arms in succession as they rotate, and means for actuating the arms and imparting in one direction



forward motion and pressure to the link and through it to the movable frame, and, in the opposite direction, reverse motion and release of pressure.

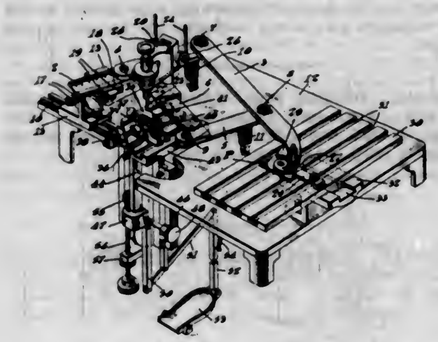
1,692,100. AUTOMOBILE HEADLIGHT-OPERATING MECHANISM. SETH L. TUCKER and FLOYD C. TUCKER, Hornell, N. Y. Filed Apr. 2, 1927. Serial No. 180,544. 3 Claims. (Cl. 240—62.)

1. In headlight control mechanism for automobiles, an attaching member for support by a fixed part of an automobile, a bracket comprising a body formed with a socket and having upper and lower portions extending therefrom, a bolt carried by the support and fitting at its ends through the said upper and lower portions of the bracket whereby to support the bracket for angular movement with respect to the attaching member, one of said portions being extended, means connected therewith for connection with a part of the steering mechanism of the automobile, a headlight supporting member comprising a shank, a head at one end of the shank removably fitted in said socket, the wall of the socket being slotted to accommodate the said shank, and means upon the shank for the support of a headlight.



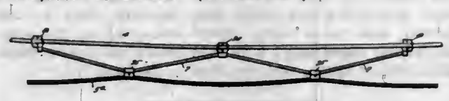
1,692,101. DIRIGIBLE-SPOTLIGHT MOUNTING. WILLIAM V. VAN ETTEN, Everett, Wash. Filed Nov. 3, 1925. Serial No. 66,484. 1 Claim. (Cl. 240—62.)

In a vehicle of the class described, the combination with the frame parts of a vehicle and a cover plate for a brake drum of one of the steering wheels of the vehicle, of a pair of vertically alined bearings secured to the frame parts; the upper of said bearings being horizontally adjustable on its support, a sleeve vertically adjustable in said bearings, means for retaining the sleeve at different positions of adjustment, a spotlight mounting shaft rotatable in said sleeve, a spotlight mounted on the upper end of the shaft, a forwardly directed arm fixed to the lower end of the shaft, a bar fixed to the drum cover plate and a connecting link having toggle connections at its ends with the bar and with the arm to cause the spotlight to be directed in accordance with the direction of movement of the vehicle.



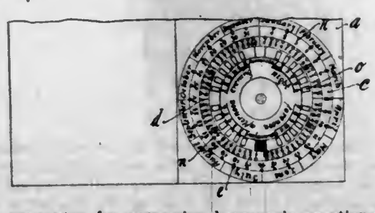
1,692,102. WEIGHING SCALE, LEAF-SPRING TYPE. MATHIAS J. WEBER, Chicago, Ill., assignor to Healthometer Company, Chicago, Ill., a Corporation of Illinois. Filed June 5, 1926. Serial No. 113,835. 11 Claims. (Cl. 265—68.)

1. In a device of the class described the combination of a substantially shallow enclosing casing, a platform closing the top thereof, a registering dial lying substantially in the plane of the platform, a plurality of horizontally disposed levers pivotally mounted within the casing, a horizontally disposed lever-spring mounted within the casing, means interconnecting the inner ends of the horizontally disposed levers with the lever-spring, registering mechanism for the dial mounted in the casing, and means connecting the registering mechanism with the lever-spring.

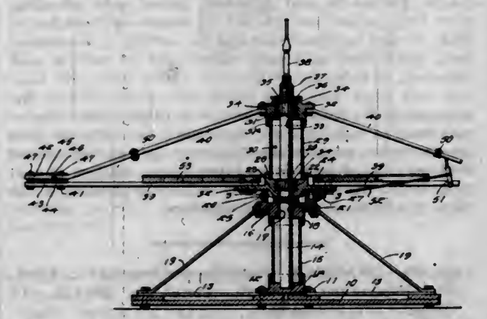


1,692,103. ENGRAVING MACHINE. CHARLES F. WILLIAMS, Stoneham, Mass. Filed May 7, 1924. Serial No. 711,594. 6 Claims. (Cl. 90—13.1.)

1. In an engraving machine, the combination of a pantograph mechanism comprising a series of arms pivoted together and all located in substantially the same plane, a holder in which one of said arms is mounted for longitudinal adjustment, means supporting said holder for pivotal movement about a fixed axis, a tool head adjustably mounted on another of said arms, a tracer supported by a third arm of said pantograph, castors carried by certain of said arms, a table on which said castors run, said tool head including means for holding and driving a rotary cutter, and a work support operatively associated with said table, said adjustable arm and said tool head supporting arm being correspondingly graduated.



1,692,104. CABLE SUPPORT. HENRY B. P. WRENN, Cleveland, Ohio; O. P. Moon, administrator of Henry B. P. Wrenn, deceased, assignor to Arthur M. Hahn, Aurora Hills, Va. Filed Nov. 28, 1924. Serial No. 752,608. 15 Claims. (Cl. 191—41.)

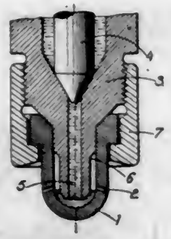


1. The combination with an overhead catenary system, of a contact wire adapted to be supported from said system, and a continuous lacing connecting said wire to said system, said lacing being composed of a plurality of sections.

1,692,105. HOROSCOPIC INTERPRETATION APPARATUS FOR HOURS AND DAYS. ALFRED ABROMEIT, Rheinhausen, Germany. Filed Jan. 22, 1927, Serial No. 162,892, and in Germany Apr. 6, 1926. 1 Claim. (Cl. 35—12.)

An apparatus for answering horoscopic questions, comprising in combination a base plate on both surfaces of which the names of the months are printed near the edge, said base plate having an inner circle comprising arc-shaped cut-out portions, a disc rotatably mounted on one side of said base plate and having value signs printed on the inner side registering with said inner circle of said base plate, thirty one marks on the edge of the outer side of said disc, each mark indicating one day, a disc rotatably fixed on the other side of said base plate and having arc-shaped cut-out portions in a circle registering with said inner circle of said base plate, thirty one marks near the edge of said disc to indicate the date of the actual day, and a disc rotatably mounted on said day disc and having radial slots in a circle which registers with said inner circle of said base plate and designed to indicate the actual hour, and marks on the edge of said outer disc and designed to indicate the birth year.

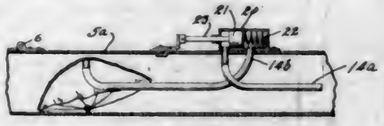
1,692,106. MERRY-GO-ROUND. JOHNNY G. C. AKERS, Wallace, Nebr. Filed Dec. 11, 1926. Serial No. 154,194. 5 Claims. (Cl. 272—33.)



1. In a merry-go-round, a base structure, a shaft arising therefrom, a rotor structure engaged with the shaft and including upper and lower castings, a tube surrounding

the shaft and maintaining the upper and lower castings in spaced relation and against relative rotation, arms extending outwardly from the lower castings, braces extending outwardly and downwardly from the upper casting and secured to said arms at the outer ends thereof and seats connecting the outer ends of said arms to one another, said seats being rigidly connected to the arms and having engagement with said braces preventing oscillation of the braces with relation to the arm.

---



1,692,107. DIRECT-INJECTION FUEL ATOMIZER FOR INTERNAL-COMBUSTION ENGINES. VADIME ARCHAOULOFF, Boulogne-sur-Seine, France. Filed Aug. 24, 1925, Serial No. 52,236, and in France Sept. 17, 1924. 2 Claims. (Cl. 123—32.)

1. In direct injection atomizers for internal combustion engines, the combination, a valve controlled injector and a cup-like atomizer connected thereto and having spraying orifices positioned below the outlet of the injector so as to form a seal joint and an air pocket between the atomizer and the injector when the injector is shut off, substantially as and for the purposes set forth.

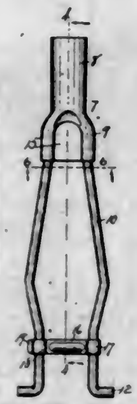
---

1,692,108. AEROPLANE SAFETY DEVICE. HERMANN BERGMANN, Detroit, Mich. Filed Aug. 22, 1927. Serial No. 214,503. 1 Claim. (Cl. 244—21.)

In an aeroplane safety device, the combination of an aeroplane having a body and wings, said body and wings having openings in their upper sides, covers on said openings, means for tending to open said covers, catches for holding said covers in closed position, parachutes in and secured to said body and wings under said openings, cylinders on said aeroplane one adjacent to each of said covers, pistons in said cylinders, piston rods extending from said pistons and adapted to release said catches, a tank on said aeroplane adapted to contain a compressed fluid, pipes from said tank to one end of each of said cylinders, a valve to control the outlet from said tank into said pipes, and other pipes from said cylinders terminating under said parachutes, said other pipes being so connected to said cylinder that when said pistons have been moved a predetermined distance by the compressed fluid the ends of these other pipes become exposed to said fluid so that the latter exhausts under said parachutes and ejects the latter through said openings.

---

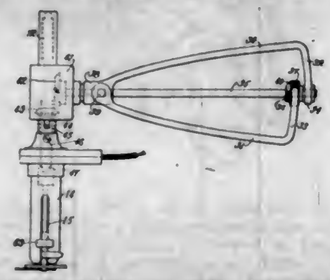
1,692,109. DRAWBAR. JOHN ROBERT BLACKHALL, Joliet, Ill. Filed June 13, 1927. Serial No. 198,410. 10 Claims. (Cl. 213—188.)



1. The drawbar construction for vehicles comprising guide means located on a vehicle, a drawbar telescoping said guide means, resilient means located rearwardly on said guide means adapted to be engaged by the rear end of said drawbar, a movable pin located forwardly on said guide means and means for automatically engaging said pin

with forward and rearward holes in the drawbar when said holes are suitably positioned beneath the pin.

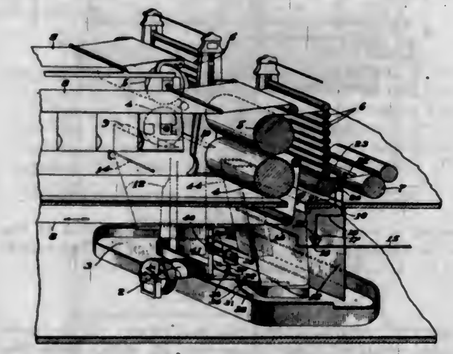
---



1,692,110. HANDLE CONNECTER FOR IMPLEMENTS. HENRY CAVE, Hartford, and HORACE H. FITZGERALD, Berlin, Conn., assignors to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed Feb. 2, 1925. Serial No. 6,237. 5 Claims. (Cl. 306—25.)

1. A handle attachment including a socket piece formed of a single piece of material with a socket at one end for the reception of a handle, said socket being closed at the bottom thereof except for spaced openings extending from the socket lengthwise of the socket piece and out at the end thereof, and a connecter comprising arms located within said openings and a bow engaging the bottom of said socket.

---



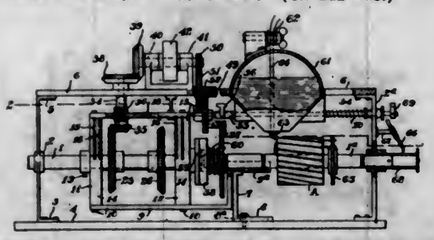
1,692,111. DEVICE FOR WAVING AND CURLING HAIR. ALEXANDER CRAIG, London, England. Filed Dec. 3, 1927, Serial No. 237,553, and in Great Britain May 6, 1927. 14 Claims. (Cl. 132—36.)

1. Devices for waving and curling hair comprising a rod on which the hair is adapted to be coiled, means on the rod against which one end of the coil of hair on the rod is adapted to take, other means on the rod adapted to take against the other end of the said coil of hair, and means for causing the two last mentioned means to subject the coil of hair on the rod to pressure in a direction parallel to the axis of the rod, for the purposes set forth.

1,692,112. METHOD AND APPARATUS FOR HANDLING BROKE. HERVEY G. CRAM, Millinocket, Me., assignor to Great Northern Paper Company, Millinocket, Me., a Corporation of Maine. Filed Feb. 18, 1927. Serial No. 169,360. 11 Claims. (Cl. 92—38.)

1. The combination of a paper machine, a beater, means for conducting broke from said machine to the beater, means for wetting the broke on its way to the beater, and mechanism for automatically controlling the operation of said wetting means in accordance with the delivery of broke to the beater.

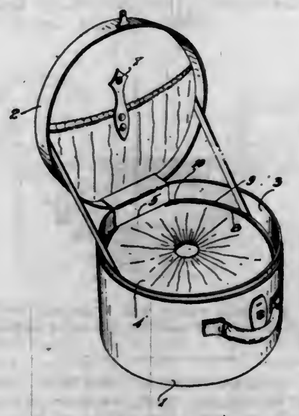
---



1,692,113. DRAFT EQUALIZER. GEORGE WESLEY CULP, Magrath, Alberta, Canada. Filed Aug. 26, 1926. Serial No. 131,754. 1 Claim. (Cl. 278—3.)

A draft equalizer comprising in combination, a rigid bracket, and an equalizer bar extending transversely through said bracket and bolted therein, a pulley rotatably mounted in said bracket behind the bar, a floating bracket member, a pulley rotatably mounted on each end thereof, the sides of the rigid bracket being tapered outwardly and bolted together at their extremity, a chain anchored to the bolt securing the sides of the rigid bracket together, said chain travelling over and under one of the pulleys in the floating bracket and under and over the rear pulley in the rigid bracket behind the equalizer bar, an auxiliary pulley rotatably associated with the outward extremity of the rigid bracket.

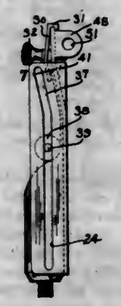
---



1,692,114. ELECTRIC MOTOR-WINDING MACHINE. JAMES K. DARBY, Dayton, Ohio, assignor of one-third o Lawrence C. Stoltz, Dayton, Ohio. Filed Dec. 15, 1926. Serial No. 155,038. 17 Claims. (Cl. 242—13.)

1. An apparatus of the character described including in combination, a container for liquid insulating material, means for moving part of an electric motor, axially and rotatably relative to said container, means for directing the wire of the motor through said liquid, and means for effecting winding of said part with said wire incident to said movements thereof.

---

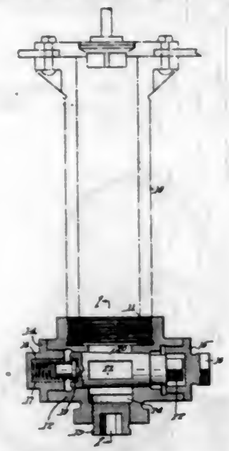


1,692,115. TRAVELING CASE. ABRAHAM GOLDSTEIN, New York, N. Y. Filed Apr. 30, 1927. Serial No. 187,742. 3 Claims. (Cl. 206—8.)

1. A traveling case having a peripheral wall, a normally flexible tray, and releasable means adjacent said peripheral wall for holding said tray stretched tight and supported by said wall.

---

1,692,116. COLLAPSIBLE-TUBE HOLDER. HUBERT M. GREIST, New Haven, Conn. Filed June 16, 1924. Serial No. 720,270. 11 Claims. (Cl. 221—60.)

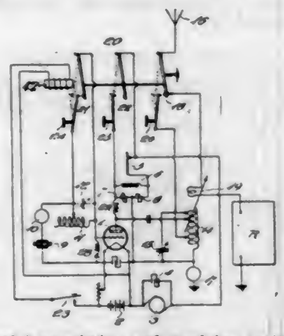


1. A tube holder or the like comprising a back-plate provided with side flanges, said plate being inclined forwardly adjacent its upper end to conform to the shape of the tube, and a clamping member securable to the plate adjacent the upper end thereof, and means to urge said clamping member toward said plate to clamp a tube therebetween.

---

1,692,117. SAFETY OUTLET VALVE FOR TANK CARS. FREDERIC A. GURNEY, Worcester, Mass. Filed Aug. 22, 1927. Serial No. 214,567. 5 Claims. (Cl. 137—21.)

1. The combination with an outlet valve casing for a tank car, of a cap secured to the bottom of said casing and having an outlet plug, said cap having a transverse conical passage therethrough closely adjacent said plug,

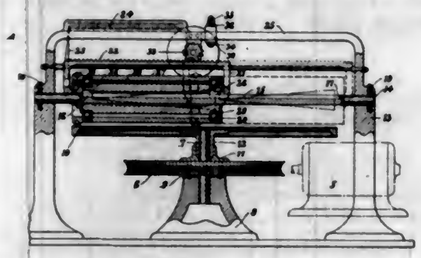


a conical valve located in said passage, a plug screwing into the side of the cap and having a recess, and a spring

projecting into said recess and engaging the large end of the conical valve for holding the valve against its seat.

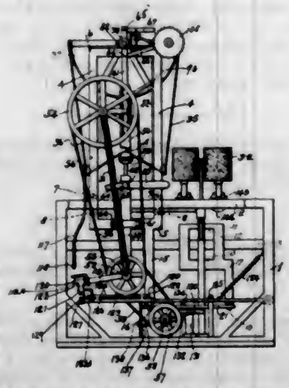
---

1,692,118. COMMUNICATION SYSTEM. MALCOLM P. HANSON, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed May 10, 1927. Serial No. 190,223. 5 Claims. (Cl. 250—13.)



1. A signal transmission and receiving system comprising an antenna ground circuit, radio receiving apparatus, radio transmission apparatus including an electron tube oscillator and a piezo electric crystal control circuit connected with said electron tube oscillator, a switching system comprising a plurality of sections, keying means for controlling the operation of said switching system, one section of said switching system being arranged to detune said piezo electric crystal control circuit, another section of said switching system being arranged to modify the amplitude of oscillations sustained by said oscillator, and another section of said switching system being arranged to control the connections between said antenna ground circuit, said radio receiving apparatus and said radio transmission apparatus.

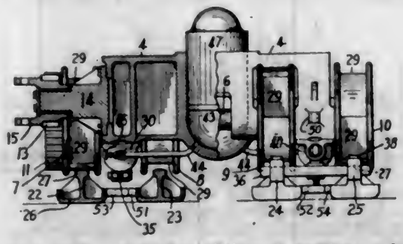
---



1,692,119. METHOD FOR MEASURING DISTANCE. HARVEY C. HAYES, Washington, D. C. Original application filed Jan. 31, 1922, Serial No. 533,092. Divided and this application filed Aug. 12, 1924. Serial No. 731,578. 3 Claims. (Cl. 177—386.)

1. The method of taking soundings which consists of imparting a succession of sound signals to the water to produce echoes from the sea bottom, directly activating one receiver at an instant simultaneous in time with the transmitted signal, activating a second receiver with the echoes of said signals, and adjusting the periodicity of said succession of signals while maintaining the duration of signal at constant length, to value such that the two receivers are activated simultaneously.

---

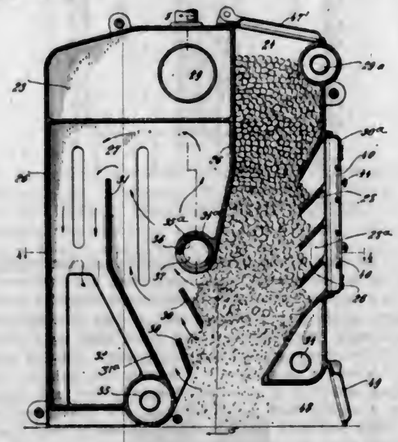


1,692,120. SHOE-POLISHING MACHINE. JACOB HOFFMAN, Memphis, Tenn. Filed Mar. 25, 1926. Serial No. 97,205. 22 Claims. (Cl. 15—30.)

2. In a shoe-polishing machine, the combination with means for polishing with a belt and independent means for polishing with brushes, of dual foot-rests, means for aligning said belt-means with one of said rests, and said brush-means with the other thereof, and means for shifting said aligning-means, to reverse the belt-means and brush-means with reference to said rests.

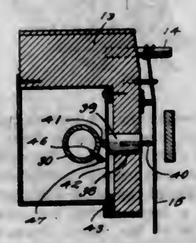
---

1,692,121. TRUCK. GRANT HOLMES, Danville, Ill., assignor to The Marion Steam Shovel Company, Marion, Ohio, a Corporation of Ohio. Filed Aug. 6, 1923. Serial No. 655,880. 19 Claims. (Cl. 180—8.)



6. In a truck, a pair of parallel track members, a frame arranged above said members, wheels carried by said frame and adapted to travel on said track members, means for rotating said wheels, said wheels having means for alternately relieving said track members from the load, a lever pivotally connected at its ends with the respective track members, a cylinder, a piston mounted in said cylinder, a piston rod connecting said piston with said lever at a point between said track members, and means for supplying fluid under pressure to said cylinder.

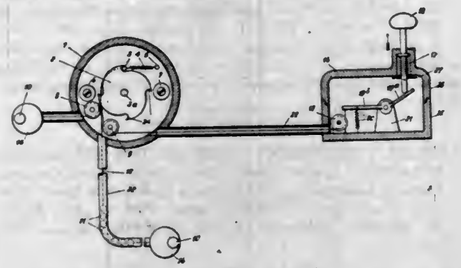
---



1,692,122. BOILER. FRANK B. HOWELL, Buffalo, N. Y., assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Original application filed Oct. 23, 1914, Serial No. 450,672. Renewed Mar. 8, 1921, Serial No. 450,672. Divided and this application filed Sept. 10, 1921. Serial No. 499,664. 6 Claims. (Cl. 122—223.)

1. A boiler of the character described comprising a fuel receptacle including a transverse wall member having a secondary air passage therein at the lower extremity thereof, and flues to the rear of said wall member communicating with said fuel receptacle below said transverse wall member and said secondary air passage; said wall member including a series of separated water-backed portions arranged in spaced relation to each other along said secondary air passage and extending below the same, and a series of air outlets intermediate said water-backed portions below said secondary air passage communicating with said secondary air passage for directing the secondary air downwardly between said water-backed portions adjacent the rear of the fuel mass in a series of jets transversely of the boiler, substantially as specified.

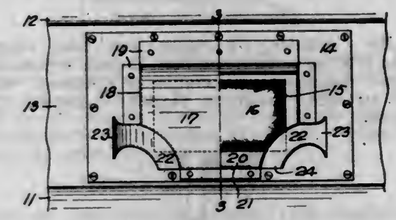
---



1,692,123. HARP. VADE HULL, Great Falls, Mont. Filed May 18, 1927. Serial No. 192,416. 8 Claims. (Cl. 84—264.)

6. In a harp, the combination with the tuning-pin carrying member and the strings connected therewith, of a block carried by said member adjacent each of said strings, yieldable means for normally maintaining the blocks out of contact with the strings, a rotatable shaft, and projections on the shaft arranged in groups at different circular angles around the shaft for contact with the yieldable means to move the blocks selectively in groups into contact with the strings.

---



1,692,124. SWITCH ARRANGEMENT FOR ELECTRIC-LIGHT INSTALLATIONS AND THE LIKE. RUDOLF HÜRLIMANN, St. Gallen, Switzerland. Filed Aug. 20, 1926, Serial No. 130,541, and in Switzerland Oct. 30, 1925. 2 Claims. (Cl. 200—156.)

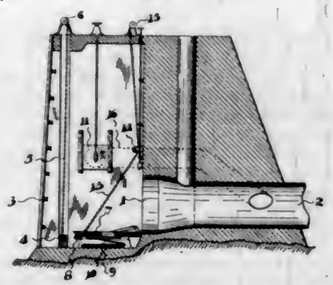
2. An electric rotatable switch, comprising in combination a central switch axle, a drum on said axle said drum having four pairs of teeth, a transverse pin bearing against one of said pairs of teeth, a pull string attached at the one end to said transverse pin and at the other end to a stationary point for holding said transverse pin in the inoperative position, a number of pull strings attached to said transverse pin, rollers guiding said pull strings, currentless wall boxes one for each pull string, a spring-controlled push button in each wall box, an elbow lever pivotally mounted on each wall box said push button adapted to act upon one arm of said elbow lever, one end of the corresponding pull string, attached to the other arm of said elbow lever, a spring for pulling said first mentioned arm of said elbow lever against said push button, and a sheath for each pull string.

---

1,692,125. CAR VENTILATOR. THOMAS M. HYMAN, Montreal, Quebec, Canada. Filed Jan. 14, 1925. Serial No. 2,429. 1 Claim. (Cl. 98—20.)

In a ventilator, a base plate having a screened opening forming an inlet, a hood mounted thereon and presenting: a roofing wall sloping outwardly and downwardly from the base plate from above the top of the inlet to a level below the bottom thereof, a bottom wall projecting outwardly from the base plate from below the bottom of the inlet with its outer end joined to the lower end of the said roofing wall, said bottom wall having a screened opening forming an outlet, end walls extending at right angles to the base plate between the latter and the upper part of the roofing wall with their respective lower longitudinal edges spaced from the said bottom wall, and tubular casings disposed within the spaces between the bottom wall and the said end walls to provide air ducts for directing a current of air transversely of the opening in the said bottom wall

and having flared mouths disposed in advance of the end walls and having their respective discharge ends located in the same plane as the outlet of the hood, said casings inclining downwardly from their mouths towards the transverse central plane of the hood to restrict the passage of the latter towards its outlet; said hood being attached to the base plate by flanges on the walls thereof.



---

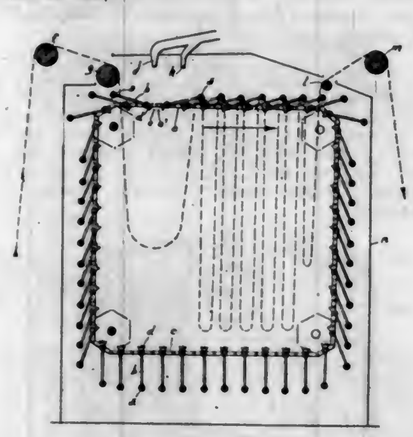
1,692,126. CATALYTIC OXIDATION OF NAPHTHALENE. ALPHONS O. JAEGER, Crafton, Pa., assignor to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Original application filed Nov. 24, 1926, Serial No. 150,623. Divided and this application filed Dec. 12, 1927. Serial No. 239,617. 20 Claims. (Cl. 260—123.)

1. A method of oxidizing naphthalene, which comprises causing vapors of naphthalene admixed with an oxidizing gas to react in the presence of a catalyst containing a zeolite.

---

1,692,127. EMERGENCY CLOSURE FOR HYDRAULIC INTAKES. JAMES JOSEPH KEON, Owen Sound, Ontario, Canada, assignor to The William Kennedy & Sons, Limited, Owen Sound, Canada. Filed Feb. 4, 1927, Serial No. 165,905. Renewed July 28, 1928. 11 Claims. (Cl. 61—17.)

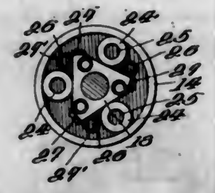
1. In an emergency closure for hydraulic intakes, the combination of a movable closure member for said intake adapted to be moved to closed position by an abnormal rush of water through the intake; and a check member connected with said closure member and positioned to be initially unaffected by the water flow and adapted to be drawn into the path of the water as the closure member moves to closed position.



---

1,692,128. METHOD OF PRODUCING TIRE FLAPS. KARL B. KILBORN, Fairlawn, Ohio, assignor to Seiberling Rubber Company, a Corporation of Delaware. Filed Oct. 19, 1926. Serial No. 142,568. 6 Claims. (Cl. 18—56.)

1. The method of producing a tire flap, which consists in providing a partially vulcanized endless band of rubber having the desired cross sectional configuration, expanding said band to fit it upon the periphery of a similarly shaped metal ring of larger diameter, and completing the vulcanization of the flap while on said metal ring.



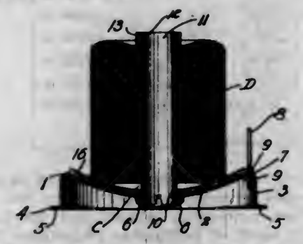
1,692,129. MACHINE FOR DRYING FABRICS AND PAPERS IN AN ENDLESS WEB. AUBIN LAMBRETTE, Membac-Dolhain, Belgium. Filed Dec. 5, 1925, Serial No. 73,513, and in France Dec. 19, 1924. 4 Claims. (Cl. 34—12.)

1. A machine of the catching type for drying fabric or paper in a continuous web, comprising in combination with two endless conveying chains, levers hingedly mounted each on the outer side of one of two corresponding links of said chain so that they turn when said chains move, a transverse stick fixed on the outer ends of every pair of levers, a feed roller for feeding the web of fabric or paper arranged at a certain height above said endless chains, a second feed roller between said first mentioned feed roller and said endless chains closer to said chains than said first mentioned feed roller, and two nozzles in front of said second mentioned feed roller arranged the one behind the other adapted to direct jets of air under pressure upon the web of fabric or paper to arrange the same about the stick which is just turning and to widely stretch and spread transversely the web in the fold formed between the preceding stick and the stick which is just turning.

---

1,692,130. FEEDING MECHANISM FOR STOCKING-SEAMING MACHINES. WILLIAM B. LONG, Chicago, and LOUIS SLIWA, Cicero, Ill., assignors to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 30, 1925. Serial No. 59,743. 8 Claims. (Cl. 74—53.)

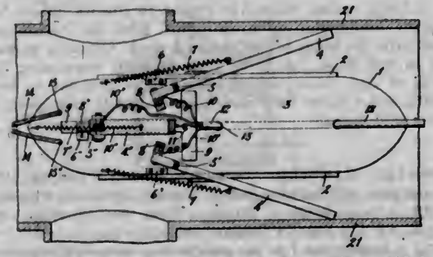
4. A feeding mechanism for sewing machines comprising a rotatable feed wheel, a clutch drum connected thereto, an oscillating clutch plate, a flat-sided block carried by said clutch plate and located within said drum, a roller between the flat side of the plate and the inner surface of the clutch drum, a lever spring for pressing said roller toward the surface of the clutch drum and holding the same continuously in contact therewith whereby when said clutch plate is moved to release the roller from gripping the clutch drum, said roller will roll on said drum and thereby change the wear on the roller.



1,692,131. WELL-FLOWING DEVICE. WILBERT L. MARTIN, Tulsa, Okla. Filed Sept. 8, 1927. Serial No. 218,206. 8 Claims. (Cl. 103—232.)

1. In combination with well tubing having an apertured portion, valve mechanism controlling flow through said apertured portion, including a housing forming a chamber about the apertured portion and having a valve seat, and a float co-operative with said seat for controlling flow to the tubing through said chamber.

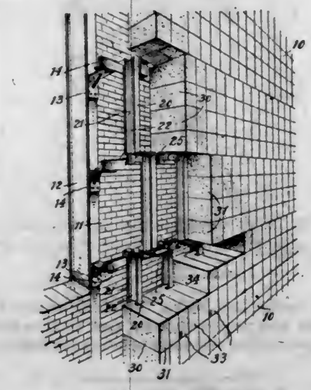
---



1,692,132. THREAD-SUPPORTING DEVICE. MORRIS L. MARTZ, New York, N. Y. Filed July 2, 1924. Serial No. 723,721. 8 Claims. (Cl. 242—141.)

1. A device of the character described comprising a base provided with a central cavity, a vertical mandrel disposed on the base within the cavity and arranged to support a spool of thread with the thread in engagement with the base and a compressing means arranged to co-operate with the mandrel to engage the core of the spool of thread and maintain a pressure of thread on the base.

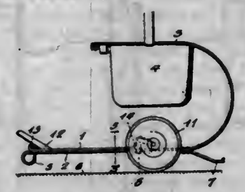
---



1,692,133. SEWER BOAT. STEPHEN WOOD MCCLAVE, JR., ROSCOE PARK MCCLAVE, and BERNARD DUNCAN MCCLAVE, Cliffside, N. J. Filed Feb. 9, 1925. Serial No. 7,761. 4 Claims. (Cl. 177—311.)

1. An indicator comprising a body portion, said body portion consisting of a deck and side runners, arms pivotally mounted on said deck, one of said arms adapted to swing from rear to front along the axis of the body portion and the other arms adapted to swing from rear to front and laterally of said body portion, means to indicate when any of said arms have swung beyond a predetermined point in its arc of rotation.

---



1,692,134. FURNACE WALL. PETER MCKENZIE, Chicago, Ill. Filed Mar. 28, 1927. Serial No. 179,088. 9 Claims. (Cl. 72—101.)

1. In a furnace wall, a plurality of vertical beams, a plurality of horizontal rails mounted on said beams, a plurality of brackets each gravity supported on an upper rail and restrained to side to side movement by a lower rail, and means on each bracket for supporting a plurality of tiles.

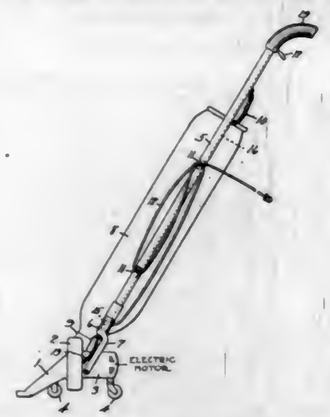
---

1,692,135. BABY CART. JAMES R. MILLEN, Flint, Mich. Filed Jan. 14, 1926, Serial No. 81,206. Renewed Sept. 22, 1928. 6 Claims. (Cl. 280—43.)

3. A baby cart embodying a platform, wheels, means supported above the platform and comprising vertical portions forming bearings for an axle and lateral portions, and an axle adjacent its ends revolubly supported in said vertical portions and having offset ends engageable beneath the offset portions of said means.

---

1,692,136. FRICTION ELEMENT AND PROCESS OF PRODUCING SAME. IZADOR J. NOVAK, Bridgeport, Conn., assignor to Raybestos Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Feb. 26, 1923, Serial No. 621,487. Renewed Dec. 22, 1927. 7 Claims. (Cl. 91—70.)

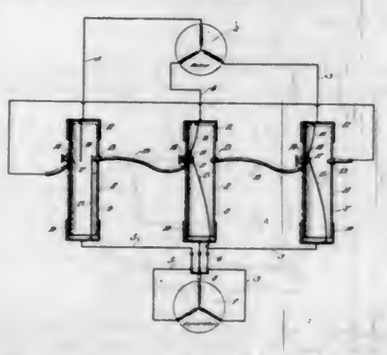


1. A friction element having an asbestos base containing a binder the solid residue of waste sulphite liquor produced by drying of the liquor.

---

1,692,137. SUCTION CLEANING DEVICE. WILLIAM V. OAS, Cleveland, Ohio. Filed Feb. 10, 1921. Serial No. 443,820. 5 Claims. (Cl. 15—257.)

1. In a device of the character described, in combination, a casing adapted to be moved along a surface and having electrical devices therein, a fork pivoted to said

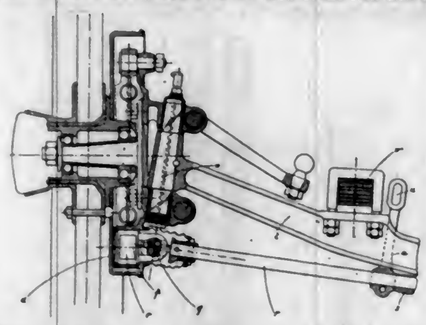


casing and having an open ended socket whose wall is slotted, an electric switch located in the end of said socket nearest the casing, a flexible electric cord extending be-

tween said switch and casing, a second electric cord extending from said switch through said slot, and a handle detachably secured in the outer end of said socket.

---

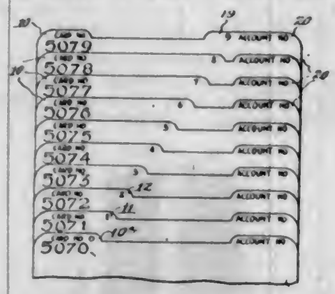
1,692,138. MULTIPHASE EQUIPMENT PROTECTION. ANGUS N. ORR and SOLOMON H. GOLDBERG, Chicago, Ill. Filed Mar. 17, 1922, Serial No. 544,485. Renewed June 2, 1928. 3 Claims. (Cl. 175—294.)



1. Electric fuses for multiphase equipment, consisting in fuses with line connections adapted to be interposed in the separate phase lines, spring means in each fuse and a fusible substance uniting the connections and said spring means and holding a spring tension upon the latter, contacting means in each fuse and connections with the fuses in the other lines, whereby with the blowing of one fuse the connected lines are short circuited and the fuses blown.

---

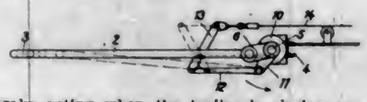
1,692,139. BRAKING MECHANISM FOR FRONT WHEELS ON MOTOR CARS. EDOUARD POULET, Courbevoie, France. Filed July 19, 1923, Serial No. 652,645, and in France Jan. 8, 1923. 1 Claim. (Cl. 188—194.)



A device for operating brakes on the front wheel of motor-cars, comprising in combination a shaft perpendicular to the pivot of the wheel, a support rigid with the wheel-axle and carrying one of the ends of said shaft, a lever keyed on said shaft and having an eye situated at the height of the suspension-spring of the axle, a braking cam, the axis of which is perpendicular to the plane of the brake band, a ball-joint arranged in the extension of the pivot-axle and interposed between said brake-cam and said

driving shaft, and means for connecting said ball-joint on the one hand to said driving shaft and on the other hand to said brake-cam.

---



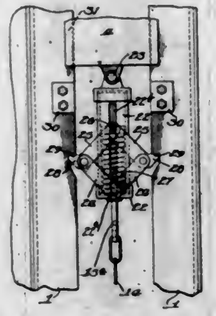
1,692,140. CARD INDEX. JAMES L. ROWLEY, Muskegon, Mich., assignor to Shaw-Walker Company, Muskegon, Mich., a Corporation of Michigan. Filed May 14, 1927. Serial No. 191,290. 4 Claims. (Cl. 129—16.5.)

1. In a card index, a series of cards each having relatively wide tabs of uniform height at the two opposite corners of one upstanding margin, and indicia visibly carried on a series of continuous projections extending inwardly at varying lengths and uniform height from one of said corner tabs.

---

1,692,141. AUTOMATIC BRAKE FOR TRAILERS. JOHANN SCHLAGENHAUF, Oerlikon, Switzerland. Filed Oct. 19, 1926, Serial No. 142,633, and in Germany Jan. 8, 1926. 1 Claim. (Cl. 188—142.)

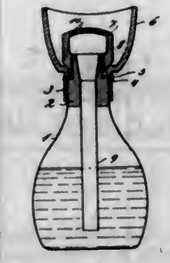
A brake acting when the trailer is closing up on the tractor, comprising in combination with the radius bar and with the bogie, of the trailer a shaft rotatably mounted on said bogie two lever arms hingedly connecting the ends of said radius bar to said shaft, a dashpot on said shaft, and a brake lever system connected to and operated from said dashpot.



---

1,692,142. BARRIER. JOSEPH B. STRAUSS, Chicago, Ill., assignor to Highway Safety Barrier Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 28, 1921. Serial No. 518,133. 4 Claims. (Cl. 39—1.)

1. A barrier for vehicles comprising separated supports, an impact receiving device comprising a plurality of flexible parts extending across the space between said supports,



spacers adapted to slide along said supports and with which said impact receiving device is movably connected, power transmitting devices connected with said spacers and extending along the supports, means for applying power to the power transmitting devices to raise and lower

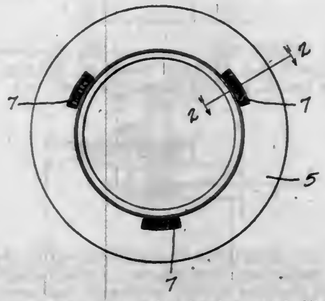
said spacers and said impact receiving device, automatically actuated devices connected with said power transmitting devices for connecting the power transmitting devices and said spacers with said supports when the impact receiving device is struck so as to relieve the strain on said power transmitting devices.

---

1,692,143. APPARATUS FOR WASHING THE EYES. WILHELM STRUNZ, Allersberg, near Nuremberg, Germany. Filed July 12, 1926, Serial No. 121,903, and in Germany Sept. 7, 1925. 2 Claims. (Cl. 128—249.)

1. An apparatus for bathing eyes, comprising in combination a rubber ball to be compressed by hand containing the washing liquid, and a flat cap having in its top plate a great number of narrow holes arranged so that they are directed towards the whole surface of the globe of the eye.

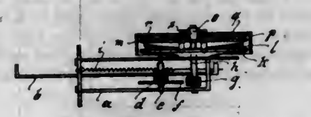
---



1,692,144. AUTOMATIC EGG BOILER. KARL THIELICKE, Wettin, Germany. Filed July 18, 1927, Serial No. 206,758, and in Germany Sept. 16, 1926. 1 Claim. (Cl. 53—1.)

An automatic egg-boiler comprising in combination with a pot partly filled with water, a cylinder open at the bottom and closed at the top located in said pot, a steam dome forming part of the top-plate of said cylinder and around which the eggs are placed, and an air-valve on the top of said cylinder.

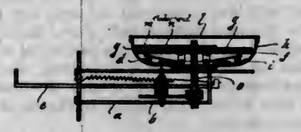
---



1,692,145. MEANS FOR BALANCING PNEUMATIC TIRES. HARRY T. WOOLSON, Detroit, Mich., assignor to Chrysler Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 21, 1926. Serial No. 82,861. 6 Claims. (Cl. 152—13.)

5. A pneumatic tire casing having patch like members secured to the outer surface thereof balancing it radially.

---

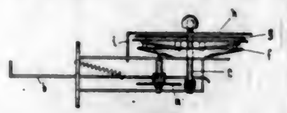


1,692,146. SPARK TOY. CARL ARNOLD, Nuremberg, Germany. Filed May 16, 1927, Serial No. 191,788, and in Great Britain Oct. 18, 1926. 2 Claims. (Cl. 46—14.)

1. A toy comprising in combination, a casing having slots in its end walls and slots in the bottom-plate and top-wall, a rack mounted in the slots of the end-walls and projecting from said casing, a pull-spring attached at the one end to said casing and at the other end to the inner end of said rack, a gear-wheel transmission operated by the inward movement of said rack and shiftably mounted in said slots of the bottom and top plates, a spark-producing mechanism rapidly rotated by said gear-wheel transmission, a vertical shaft, a head at the top end of said shaft, a disk having apertures covered with differently coloured transparent elements and loosely mounted on said head so that it is slowly rotated by friction said sparks becoming visible at certain intervals and in different colours through said transparent elements, and a disk covering said spark-producing mechanism and having apertures through which the sparks pass which are produced.

---

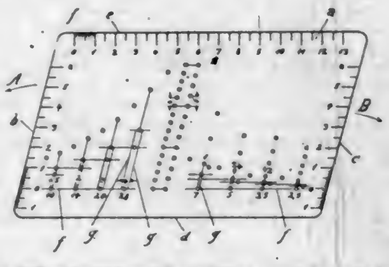
1,692,147. SPARK-PRODUCING TOY WITH RACK-OPERATED DRIVING MECHANISM AND CHANGING COLORS. CARL ARNOLD, Nuremberg, Germany. Filed Aug. 1, 1927, Serial No. 209,882, and in Germany July 8, 1927. 1 Claim. (Cl. 46—32.)



A spark-producing toy, comprising in combination with a rack-operated driving mechanism a casing in which said mechanism is located a vertical shaft, rotatably mounted in said casing and projecting through the top plate of said casing, a casing open at the top end, fixed on the top plate of the casing of said driving mechanism, an emery-band on the inner surface of said open casing, cerium-stones connected to said vertical shaft so that they rest on said emery-band, a disk having apertures

fixed on said shaft at a certain distance below the top end of the same and having a smooth upper surface, several flat rings of differently colored transparent material placed over the top end of said vertical shaft and resting loosely on said disk, and a lid having windows removably placed on said open casing.

---

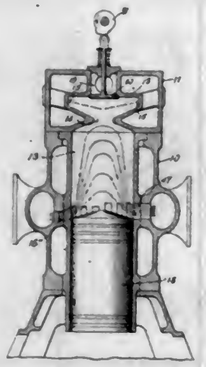


1,692,148. SPARK TOY. CARL ARNOLD, Nuremberg, Germany. Filed Mar. 15, 1928, Serial No. 261,932, and in Germany Dec. 6, 1927. 1 Claim. (Cl. 46—14.)

A spark toy, comprising in combination with the spark producing mechanism mounted on a vertical shaft driven from a rack-operated driving mechanism and with a disk rotatably mounted on said vertical shaft above said spark producing mechanism and having apertures with coloured transparents, a second disk above said disk with transparents loosely mounted on said shaft by means of a slot said loose disk having for instance a face painted on its upper surface and several apertures in the same, and means for securing said loose disk against rotation but permitting shifting movements of the same so that, when said vertical shaft is rotating, said upper disk is moved to and fro and shaken so that it looks as if the face painted on its upper surface was animated the coloured sparks becoming visible through the apertures in said loose disk.

---

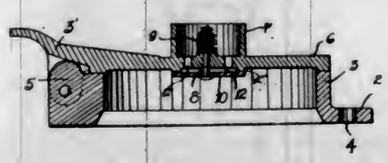
1,692,149. RULING APPARATUS FOR CHARACTERS. KARL CASTAN, Pforzheim, Germany. Filed Mar. 11, 1927, Serial No. 174,557, and in Germany July 22, 1926. 5 Claims. (Cl. 33—104.)



1. A ruling instrument for writing consisting of a plate of transparent material and having hole systems one for each height of the writing, each hole system comprising essentially division holes arranged the one above the others and designating respectively the vertical limits of small characters, capital characters and the line space, all the hole systems beginning on one and the same foot line which is parallel to the long sides of said plate, there being two parallel straight lines inclined to the horizontal at the angle of inclination of the characters indicating the height of capital characters in each hole system, the distance between said lines being equal to the thickness of the lines forming the characters.

---

1,692,150. OIL ENGINE. OTTO A. BANNER, Milwaukee, Wis. Filed Oct. 4, 1924, Serial No. 741,639, and in Germany Oct. 5, 1923. 2 Claims. (Cl. 123—65.)



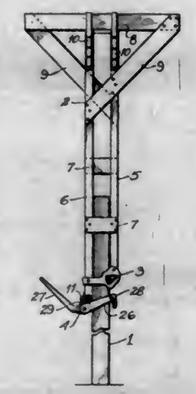
1. In a two cycle oil engine the combination of a cylinder having a piston space, a piston therein, a combustion chamber, a restricted throat between said chamber and space, oppositely disposed intake and exhaust passages in the walls of said space controlled by said piston, an air inlet valve in said chamber, and means for opening said

valve slightly while said exhaust passages are open and for opening said valve fully after said passages are closed.

---

1,692,151. AUTOMATIC SAFETY INTAKE AND OUTLET VALVE FOR TANKS. HENRY BENHAM, Breckenridge, Tex. Filed June 26, 1923, Serial No. 647,825. Renewed Oct. 3, 1927. 1 Claim. (Cl. 220—44.)

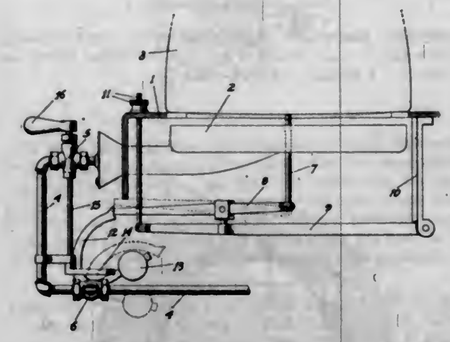
In structure of the class described, the combination with a base forming a portion of a container and provided with an upstanding annular flange, of valve mechanism, comprising a pin slidable in said base, said base being provided with port apertures therethrough adjacent said pin, a spiral spring surrounding the outer end of said pin and engaging the upper surface of said base, a valve member secured to the inner end of said pin and resiliently urged by said spring into contact with the under surface of said base to normally close said port apertures, but movable away from said port apertures against the pressure of said spring by the pressure of the external air to thereby admit air into said container upon the pressure of the air in said container being less than that of the external air, said annular flange surrounding and extending above the upper ends of said pin and spring, and also surrounding the upper ends of said port apertures, to protect said pin and spring from injury, and at the same time to protect said port apertures from the entrance therethrough of dust and other foreign matter into said container.



---

1,692,152. TIMBER CLAMP. GEORGE B. BOSCO, Chicago, Ill. Filed Feb. 12, 1927. Serial No. 167,697. 5 Claims. (Cl. 248—2.)

1. A clamp for securing together two timbers comprising a fitting adapted for support on one of the timbers, means for securing said fitting against angular movement relative to the timbers, said fitting having a keyway of

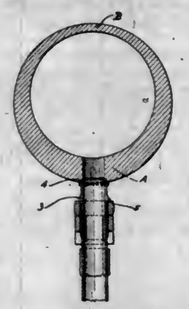


substantially triangular shape, and a wedge seated in said keyway and fulcrumed in one corner thereof, the edge of

said wedge opposite the fulcrum being adapted for engagement with the other timber.

---

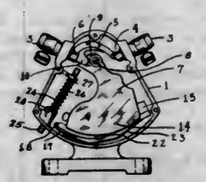
1,692,153. HEAT CONTROL FOR COOKING UTENSILS. RAYMOND A. BOTTS, Stockton, Calif. Filed Mar. 16, 1928. Serial No. 262,213. 13 Claims. (Cl. 126—42.)



1. A heat control device for a stove comprising, with a utensil having a bottom adapted to flex vertically when a certain degree of heat is attained, and a heating device over which the utensil is adapted to be positioned, a vertically movable member to engage the bottom of the utensil, means causing the member to move with the bottom of the tensil as said bottom flexes, and means governed by such vertical movement of the member for causing the operation of the heating device to be discontinued.

---

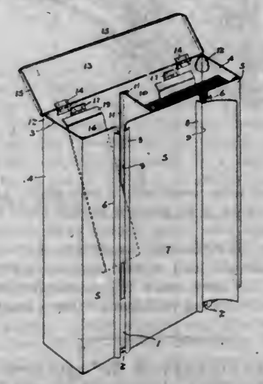
1,692,154. SUPERHEATER HEADER. BENJAMIN BROIDO, New York, N. Y., and RALPH M. SWARTZ, Bogota, N. J., assignors to The Superheater Company, New York, N. Y. Filed Nov. 13, 1926. Serial No. 148,139. 1 Claim. (Cl. 285—25.)



In apparatus for conveying fluid under pressure, in combination, an externally cylindrical header with an eccentric cylindrical bore therein and a series of alined holes in the thickest part thereof; tubular elements having ends engaging said holes; clamping means for holding said element ends in engagement with said holes; and holding studs engaging the clamping means and screwed into the

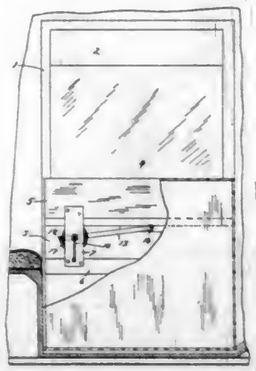
thickest part of said header, the thickness of said part being at least equal to the effective stud diameter.

---



1,692,155. CIRCUIT-CONTROLLING MEANS FOR IGNITION CIRCUITS OF MOTOR VEHICLES. FRANK A. BROWNELL, Rochester, N. Y. Filed July 17, 1924. Serial No. 726,522. 11 Claims. (Cl. 200—52.)

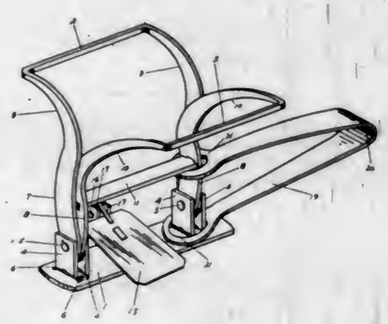
1. A circuit controlling means comprising a movable switch part, locking means, an operating member for the movable switch part held by the locking means in a normal position to and from which it moves under the action of gravity, and a separate gravity-operating member movable into engagement with said locking means to move the latter from locking position.



---

1,692,156. CABINET FOR DISPENSING FOLDED-PAPER SHEETS. GEORGE CARRUTHERS, Toronto, Ontario, Canada. Filed Mar. 13, 1926. Serial No. 94,585. 4 Claims. (Cl. 312—61.)

1. A cabinet having an open end and a pair of slots extending completely across the front wall and being open at the open end of the cabinet, and a partition dividing the interior of the cabinet and supporting the portion of the front wall arranged between the slots.

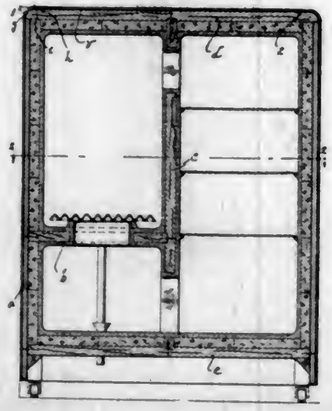


1,692,157. WINDOW-CONTROL MECHANISM. EVERETT J. COOK, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed July 23, 1923. Serial No. 653,266. 3 Claims. (Cl. 268—126.)

1. In a window control mechanism, the combination with a support, of a control arm mounted upon said support, and a spiral counter-balancing spring connected to said support and arm, said spring having its convolutions tensioned to bear against one of said members.

---

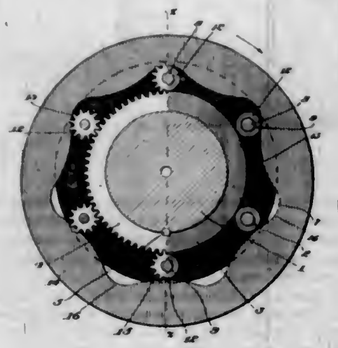
1,692,158. ANIMAL TRAP. WILLIAM COOPER, Apalachin, N. Y., assignor to Cooper Humane Trap Co., Inc., Binghamton, N. Y. Filed Apr. 12, 1927. Serial No. 183,114. 5 Claims. (Cl. 43—90.)



5. An animal trap comprising a base plate, a pair of substantially U-shaped jaws pivoted to said plate at their free ends, one of said jaws being smaller than the other to permit its passage therethrough for setting, a cross piece connecting the side portions of said smaller jaw, means normally closing said jaws, and a trigger cooperating with said cross piece for retaining said jaws in open position.

---

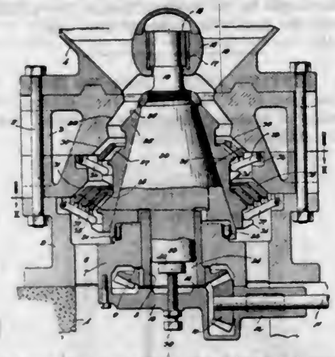
1,692,159. REFRIGERATOR OR CABINET. LLOYD G. COPEMAN, Flint, Mich., assignor to Copeman Laboratories Company, Flint, Mich., a Corporation of Michigan. Filed Nov. 16, 1925. Serial No. 69,305. 5 Claims. (Cl. 217—17.)



1. A cabinet or refrigerator comprising a wooden shell having jointed corners in which one of the wooden panels is curved and projects outwardly beyond the other and a ply metal sheathing encasing a portion of the wooden shell and being stripped down near said joint so as to underlie

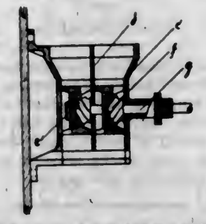
said projecting portion and stretched over the corner joints and over the rounded portion and having a turned-in portion embedded in the wooden shell.

---



1,692,160. MECHANICAL MOVEMENT. JOHN ALOYSIUS DORMER, Detroit, Mich. Filed June 9, 1925. Serial No. 35,919. 8 Claims. (Cl. 74—14.)

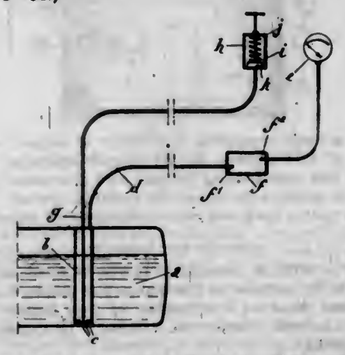
1. A multiple eccentric motion mechanism comprising inner and other rings, one of which is adapted to be driven, one of said rings being provided with a series of cam-surfaces, and cam engaging members interposed between said rings and engaging said cam surfaces, one of said rings being mounted to maintain a fixed axis and the other to turn eccentrically to said axis, whereby a multiplicity of eccentric motions are producing during one revolution of the driven ring.



1,692,161. CRUSHER. JOHN A. DORMER and JAMES GUNNELL MALONE, Detroit, Mich. Filed June 25, 1926. Serial No. 118,421. 6 Claims. (Cl. 83—10.)

1. In a crushing chamber, a crushing head movable relative to walls of said chamber, and a crushing member adjustably supported in said crushing chamber and surrounding said crushing head and adapted to be actuated thereby.

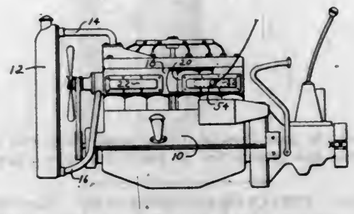
---



1,692,162. WALL COFFEE MILL FOR TWO DIFFERENT GRINDING MATERIALS. OTTO EXSTERNBRINK, Westhofen, Germany. Filed Sept. 27, 1926, Serial No. 138,050, and in Germany Sept. 25, 1925. 1 Claim. (Cl. 83—13.)

A wall-coffee-mill for two different grinding materials, comprising in combination a separate shell for each grinding material, an axle, two grinding cones one for each grinding material mounted on said axle both in the same direction, and having oppositely directed grinding edges, and a crank handle on said axle for rotating the same in the one or other direction to grind the one or other material.

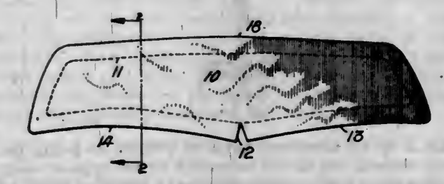
---



1,692,163. LIQUID-LEVEL INDICATOR. HENRI FARMAN, Billancourt, France. Filed Dec. 15, 1924, Serial No. 756,060, and in France Dec. 29, 1923. 1 Claim. (Cl. 73—54.)

An apparatus designed to indicate at a distance the position of the level of a liquid comprising in combination with a reservoir containing the liquid, an air pump, a pressure responsive gage, a tube, closed at each end, extending downwardly in said reservoir to adacent the bottom thereof and provided with openings in its side walls near the lower end thereof for communication with the liquid in said reservoir at the minimum level to be gaged, a tubular conduit of capillary bore, connected at one end to said pump and extending downwardly in said tube and terminating a short distance above the bottom thereof, and a second conduit having a capillary bore and connecting the top end of said closed tube with said pressure responsive gage.

---



1,692,164. HEATER. HARRY E. FROMM, Detroit, Mich. Filed Dec. 20, 1926. Serial No. 156,049. 4 Claims. (Cl. 219—38.)

1. In the combination of an internal combustion engine having a water jacket, a detachable plate forming a portion of the outer wall of said water jacket, an electrical heating element secured to the inner side of said plate, and an electrical connection projecting through the wall of said plate adapted to receive electrical terminals.

---

1,692,165. COUNTER FOR SHOES. HERBERT R. GARSIDE, Long Island City, N. Y. Filed Mar. 11, 1927. Serial No. 174,462. 2 Claims. (Cl. 36—68.)

1. A one-piece counter blank for shoes comprising a single piece of heavy material forming the body of the counter, all the edges of which are cut down or skived to be relatively thin, and decreasing in thickness toward the edge of the blank, and the top edge of the counter being relatively straight while the bottom edge is formed with joined curved portions, one of which is of greater degree of curvature than the other.

---

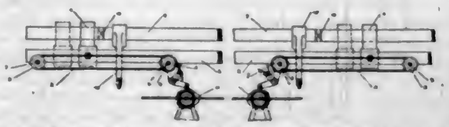
1,692,166. STRUCTURAL-FORM TIE. LEE ORVILLE GATES, Denver, Colo. Filed Jan. 28, 1928. Serial No. 250,285. 8 Claims. (Cl. 25—131.)

3. As a new article of manufacture, a tie for plastic forms formed of a single strand of wire and of a length to bridge the space between and extend outwardly beyond opposed walls of such form, said tie comprising an intermediate length, the extremities of said intermediate length being continued by returned lengths, each of the returned lengths terminating inwardly of the opposite end of the intermediate length, each end portion of the intermediate length and the connected portion of the adacent returned length being separated to provide a loop, the portions of the three

lengths between the loop being wrapped one around the other two, the extremities of each of the returned lengths

being bent to pass through the adjacent loop and form a cross piece the extremities of which are curved inwardly.

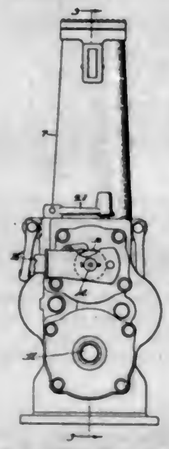
---



1,692,167. STRUCTURAL-FORM TIE. LEE ORVILLE GATES, Denver, Colo. Filed Feb. 23, 1928. Serial No. 256,320. 12 Claims. (Cl. 25—131.)

10. A tie for structural forms of a length to bridge the space between and extend outwardly beyond opposed walls of such form, said tie composed of two U-shaped pieces of wire twisted together to form a cable, each end thereof having a loop formed of an extension of material from said cable, and a cross piece formed of an extension of material from said cable extending substantially square therewith and adapted to contact with the opposed walls of such form and prevent their inward movement.

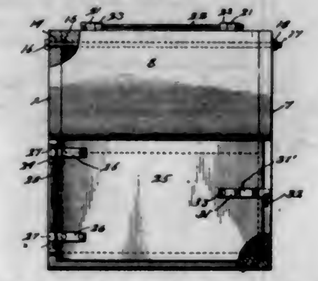
---



1,692,168. MECHANISM FOR DIRECT MECHANICAL ADJUSTING OF THE ABUTMENT FOR THE THREAD GUIDES ON FLAT HOSIERY FRAMES. EMIL GLÖCK, Chemnitz, Germany. Filed Feb. 4, 1926, Serial No. 85,938, and in Germany Apr. 20, 1925. 1 Claim. (Cl. 66—129.)

An adjusting mechanism for the thread guide stops on flat hosiery frames, comprising in combination with the design thread guides, stops for said design thread guides, endless chains for each stop, sprocket wheels for moving said chains, ratchet pawls, and ratchet wheels for rotating said sprocket wheels in accordance with the pattern so that the stops in the hosiery frames are adjusted accordingly in the inward or outward direction.

---



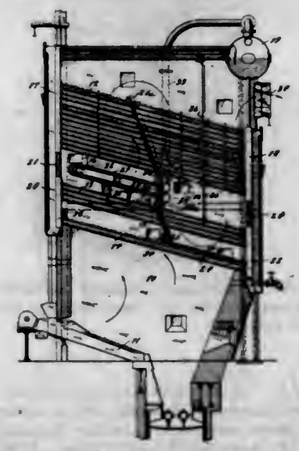
1,692,169. LIFTING JACK. JOHN W. HOBBS, Boston, Mass., assignor to A. O. Norton, Inc., Boston, Mass., a Corporation of Maine. Filed May 10, 1926. Serial No. 107,846. 4 Claims. (Cl. 254—103.)

1. A lifting jack comprising a standard, a screw revolubly mounted in said standard, a lifting member slidably mounted in said standard and adapted to be translated by said screw, selective high speed and low speed gearing for operating said screw, a power shaft revolubly mounted in said standard, and means slidably mounted on said power shaft for operating said gearing.

---

1,692,170. SECTIONAL GARBAGE AND REFUSE RECEPTACLE. WILLIAM GRANT IVES and MARTIN A. IVES, Chicago, Ill. Filed Apr. 20, 1922. Serial No. 557,486. 1 Claim. (Cl. 220—4.)

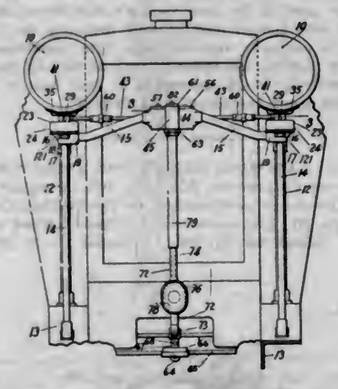
In a garbage receptacle, a plurality of molded sections, certain of said sections having aligned apertures molded therein, and rods passing through said apertures to maintain said sections in assembled position, certain of said sections resting upon said rods to be supported thereby.



---

1,692,171. STEAM BOILER. DAVID S. JACOBUS, Jersey City, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed June 14, 1924. Serial No. 719,952. 15 Claims. (Cl. 122—299.)

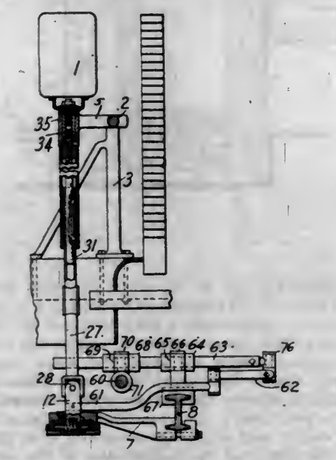
1. A boiler having horizontally extending water tubes connected at their ends to uptake and downtake water



chambers, said tubes being divided to form a lower, a middle and an upper bank with a space between each pair of successive banks, a roof baffle extending from the downtake water chamber along the tubes of the lower bank, a first cross baffle extending upwardly from the inner end of said roof baffle across tubes of the middle and upper banks,

a second cross baffle extending downwardly across the upper bank and entering the space between the upper and middle banks and a superheater located in the first pass between the uptake water chamber and said first cross baffle and in the space between the upper and the middle banks and with substantially all of its tube heating surface located in the first pass.

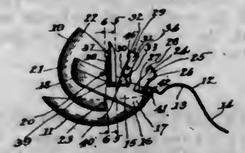
---



1,692,172. DIRIGIBLE HEADLIGHT FOR AUTOMOBILES AND THE LIKE. GEORGE S. KECK, Pasadena, Calif., assignor to The International Controlled Lamp Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 8, 1926. Serial No. 93,122. 9 Claims. (Cl. 240—62.)

1. In a dirigible headlight mechanism, supporting members having means for mounting the same near the respective sides of an automobile frame, a housing rigidly mounted between said supporting members, having a vertical bearing at one side thereof and having a horizontal slot in one wall thereof, a trunnion journaled in said bearing, means for operatively connecting said trunnion with the steering mechanism of an automobile, an actuating member connected with said trunnion and arranged within said housing, a headlight mounted for movement about a vertical axis, and means extending through slot in said housing for operatively connecting said actuating member with said headlight.

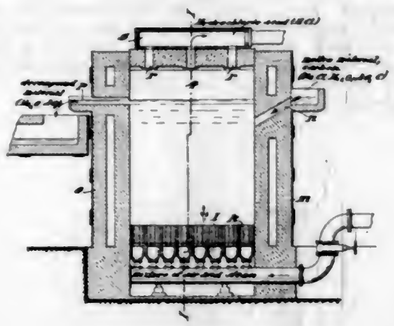
---



1,692,173. DIRIGIBLE HEADLIGHT. GEORGE S. KECK, Pasadena, Calif., assignor to The International Controlled Lamp Company, Wilmington, Del., a Corporation of Delaware. Original application filed Feb. 5, 1926, Serial No. 86,117. Divided and this application filed Apr. 23, 1927. Serial No. 186,014. 5 Claims. (Cl. 240—62.)

1. In a dirigible headlight mechanism, a headlight, means for supporting said headlight on the frame of an automobile for movement about a vertical axis, a bracket having means for supporting the same on the axle of said automobile, an actuating device mounted on said bracket for movement about a vertical axis, an operative connection between said actuating device and said headlight, a lever pivotally supported on said axle independently of said actuating device, means for connecting one end of said lever with a part of the steering mechanism of said automobile, and means for connecting the other end of said lever with the actuating device for said headlight.

---

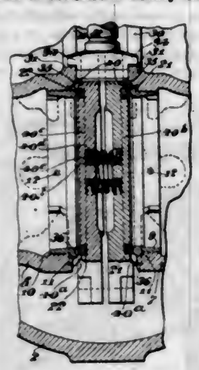


1,692,174. VOICE PLACER. EVA KELLER, Pasadena, Calif. Filed Apr. 27, 1927. Serial No. 186,917. 15 Claims. (Cl. 84—466.)

4. A voice placer comprising in combination a main reflector somewhat spherical in contour, a resonance chamber structure secured in front thereof, having a lower portion semi-cylindrical in transverse section and with the upper portion partly spherical, a dome shaped hood pivotally connected to the resonance chamber structure fitting over the top thereof, and means to receive and deflect sound waves positioned in front of the resonance chamber structure.

6. A voice placer, as claimed in claim 4, means to deflect the sound waves comprising adjustable jaws having an opening at the front and the back, and a deflecting plate.

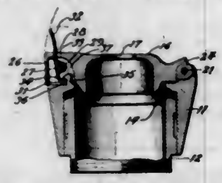
1,692,175. FURNACE FOR THE DECOMPOSITION OF ALKALI-METAL CHLORIDES. JULIUS KERSTEN, Bensheim, Germany. Filed Sept. 19, 1924, Serial No. 738,654, and in Germany Oct. 6, 1923. 1 Claim. (Cl. 23—277.)



A furnace for the decomposition of alkali metal chlorides by steam in the presence of silicates in a molten mass, comprising in combination a shaft enclosed by masonry, a grate like bottom plate in said shaft and having slits which form injecting nozzles, air boxes and steam boxes under said grate like bottom plate, means for connecting said boxes with said grate like bottom plate to supply air and steam to said slits, a collector for the escaping gases at the top end of said shaft, a permanently open inlet channel for the supply of the molten mass at the one side of said shaft at about the middle height of said shaft, and a permanently open outflow channel at the other side of said shaft at the height of the liquid level in said shaft and designed for discharging the products from decomposition, a top plate on said shaft and having outlet ports, and a collector above said top plate designed to collect the hydrochloric acid which is generated so that the initial materials with addition of carbon are continuously charged into the furnace and the products from decomposition are continuously discharged from the same.

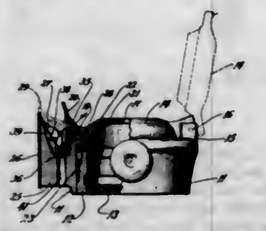
1,692,176. MOTOR FUEL AND PROCESS OF MAKING SAME. LESTER KIRSCHBRAUN, Chicago, Ill. Filed Nov. 19, 1919, Serial No. 339,161. Renewed May 12, 1928. 2 Claims. (Cl. 44—9.)

1. A fuel for internal combustion engines consisting of a homogenized emulsified mixture of a volatile hydrocarbon oil having substantially the characteristics of gasoline, water and an organic acid ammonia mixture as an emulsified agent, the water being in the dispersed phase and the oil in the continuous phase.



1,692,177. GATE VALVE. PAUL W. KNAUF, Cynwyd, Pa., assignor to Schutte and Koerting Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 22, 1924. Serial No. 738,973. 8 Claims. (Cl. 251—59.)

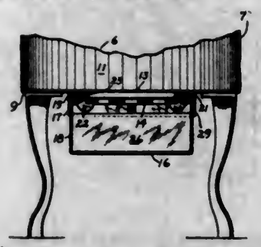
1. In a valve structure, the combination of a valve casing having an opening extending therethrough and being provided with a valve seat and being also provided with guides in oppositely disposed relation to each other, intermediate and lower end portions of said guides being wider than the remaining portions thereof, a valve having projections which extend from the periphery thereof, which projections are adapted to engage the said guides and to slide in contact therewith, the areas of the contacting surfaces of the said projections and guides increasing as the valve approaches closed position, and the said guides and projections guiding the said valve in spaced relation to the said seat until it reaches a nearly closed position, and



the said guides having means whereby thereafter the said valve may move laterally into closed position into contact with the said valve seat.

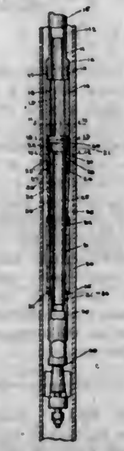
1,692,178. RADIATOR-CAP-LATCHING DEVICE. ALOYSIUS C. LIPPERT, Kenosha, Wis., assignor, by direct and mesne assignments, to The Norlipp Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 13, 1925. Serial No. 8,943. 4 Claims. (Cl. 292—128.)

1. A latching device for use with a radiator cap, having a body, means for attaching said body to the threaded filling opening of a radiator, and a cover hinged to said body, said device comprising a hooked member pivotally mounted in the front end of the cover, a hook portion on the upper part of the body and a spring mounted on the pivot of said hooked member and engaging the latter in manner to normally urge the same into engagement with said hook portion, the opposite ends of said spring engaging respectively in the apertures in said hooked member above and below the pivot point thereof.



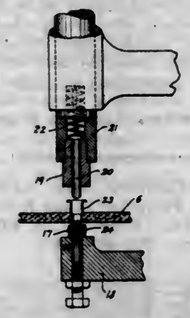
1,692,179. LATCHING DEVICE FOR RADIATOR CAPS. ALOYSIUS C. LIPPERT, Kenosha, Wis., assignor, by direct and mesne assignments, to The Norlipp Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 11, 1924. Serial No. 731,288. 6 Claims. (Cl. 220—24.)

1. In a radiator cap comprising a body attachable to the filler neck of a radiator and a cover hinged to said body and adapted to permit access to the radiator without removal of the cap body from the filler neck, means for releasably fastening said cover in closed position, said means comprising a latch member pivotally connected to the cap body and at the front thereof, said member having a part adapted to engage the top of the cover to hold the latter in closed position, said part being formed as a thumb-piece and extending vertically upward from its pivot, the engageable part of said thumb-piece being above the cover and a spring associated with said latch member and adapted to urge the latter toward latching position.



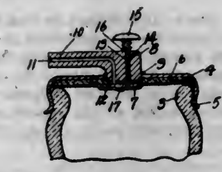
1,692,180. AIR-TIGHT HEATER. SAMUEL LOAFEA, Oakland, Calif. Filed June 30, 1925. Serial No. 40,530. 3 Claims. (Cl. 126—65.)

1. In a heater, a bottom having an opening therethrough, a grate removably positioned across said opening entirely externally of the plane of said bottom, an ash-tray removably positioned below said grate, and cooperating track members fixed to said botom adjacent said opening provided with guideways in which both said grate and ash-tray are arranged to slidably and independently engage.

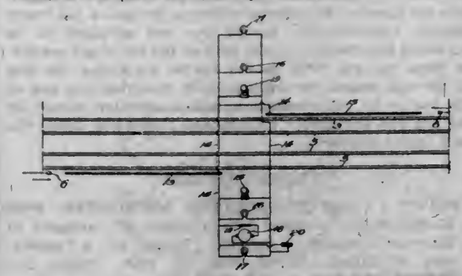


1,692,181. OIL-WELL PACKER. ALFRED P. MACHRIS, Los Angeles, Calif. Filed June 20, 1927. Serial No. 200,026. 5 Claims. (Cl. 166—12.)

2. A well packer comprising in combination a supporting structure having means to engage a well casing, a packing sleeve supported thereon, a mandrel secured at its lower end to the said structure and extending upwardly through the packing sleeve, a main sleeve having a plurality of sets of key-ways, the mandrel having lugs to engage said key-ways, means in the main sleeve for shifting the lugs from one set of key-ways to another, a tapered setting sleeve secured to the main sleeve and slidable on the mandrel, said taper sleeve engaging internally of the packing sleeve and expanding same, and means connected to the main sleeve to raise and lower same.



1,692,182. METHOD OF INSERTING TUBULAR RIVETS. FRANK MAYER, Milwaukee, Wis., assignor to Milwaukee Saddlery Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 27, 1927. Serial No. 194,718. 1 Claim. (Cl. 218—29.)

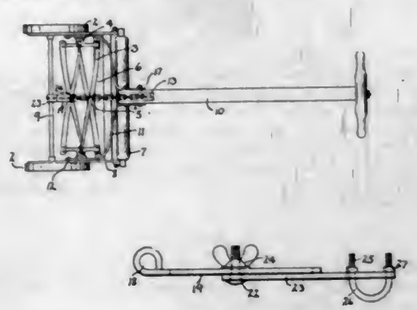


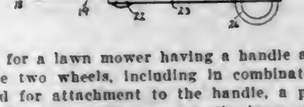
The method of reinforcing buckle holes in harness straps which consists in punching a hole in the strap, taking a tubular rivet having an outside barrel dimension of larger diameter than the hole and causing said rivet to chisel out the hole to a diameter to snugly engage the outer surface of the rivet barrel throughout its entire length and upsetting the chiselling end of the barrel against the lower side of the strap.

1,692,183. BOTTLE CAP. JOHN C. MILES, Bonners Ferry, Idaho. Filed June 27, 1927. Serial No. 201,586. 1 Claim. (Cl. 215—78.)

The combination with a bottle cap having a rigid head and discharge nozzle, of a cork layer within the cap, a valve closing said discharge nozzle and a spring pressed operating stem for the valve, a projecting lug on said valve, and a sealing layer of tin foil covering said valve and cork layer.

1,692,184. RAILWAY-CROSSING GUARD. FRANK P. MILLER, Chicago, Ill. Filed Oct. 29, 1926. Serial No. 144,049. 7 Claims. (Cl. 246—129.)



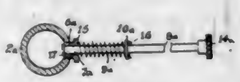


1. A crossing guard comprising in combination, a movable gate, means for automatically actuating said gate comprising an auxiliary rail and an electric motor, electric current connections between said rail and motor, electric current connections between said rail and a source of current moving toward said gate, a control switch for said

motor, clutch mechanism, electric current connections between said rail and said clutch mechanism, an electromagnet, a connection between the magnet and clutch mechanism, means operable by actuation of the clutch mechanism to automatically break the switch contact to the motor whereby further downward movement of said gate is automatically arrested after the gate has reached a predetermined lowered position, said clutch being held in engagement with said motor by said electromagnet and released from such engagement only when said magnet is deenergized by the breaking of contact between said rail and said moving source of current to permit the gates to rise.

---

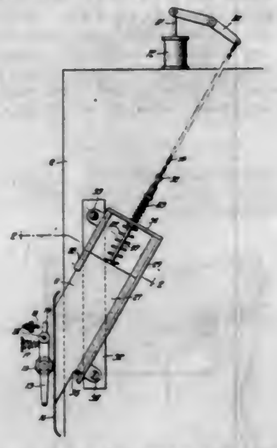
1,692,185. ATTACHMENT FOR LAWN MOWERS. JAMES BENEDICT PAINE and JAMES WILLOUGHBY SPRADLEY, Sherman, Tex. Filed Dec. 9, 1926. Serial No. 153,706. 1 Claim. (Cl. 56—249.)



An attachment for a lawn mower having a handle and a rod bracing the two wheels, including in combination a bracket adapted for attachment to the handle, a plurality of plates adapted for attachment to the brace rod, a non-resilient connecting member between said bracket and said plates, a clevis for attaching said plates to said rod and a bolt retaining said plates in any desired adjustable position.

---

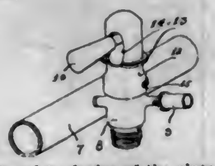
1,692,186. GAS BURNER. GEORGE FOSTER REZNOR, Mercer, Pa. Filed Apr. 15, 1927. Serial No. 183,953. 2 Claims. (Cl. 158—118.)



1. In a burner, an injection tube, an inlet for projecting gas into the tube, an air inlet through which air is drawn into the tube by the injector action of the gas, a rod freely slidable longitudinally having one end arranged to be projected into the tube in the path of the jet of gas projected from the gas inlet, means for so projecting the end of the rod, means for automatically restoring the end of the rod to its initial position, and a shoulder carried by the rod and engageable with a fixed element to define the said initial position.

---

1,692,187. DOOR-CONTROLLING MECHANISM FOR ELEVATORS. JOSEPH RICE, Chicago, Ill., assignor to Elevator Company of America, Chicago, Ill., a Corporation of Illinois. Filed July 14, 1926. Serial No. 122,368. 10 Claims. (Cl. 187—61.)



5. In a door control apparatus for elevators the combination with an elevator car having a movable abutment structure, of door control mechanism having an element adapted when said abutment structure is in its actuating position to be moved by said structure into its door-release position, said abutment structure including a slide mounted so as to fall when released, by the action of gravity into its actuating position, guides for said slide, electro-

magnetic means adapted to retract said slide, and double acting buffers to deaden the noise due to the moving parts of said abutment structure.

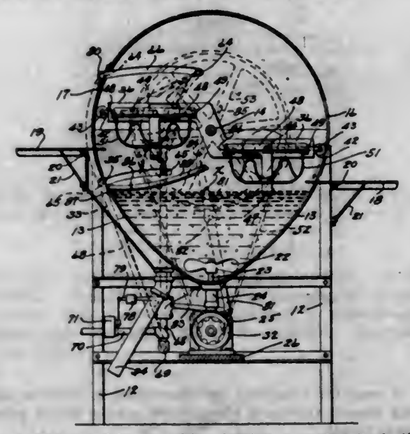
---

1,692,188. GAS-COCK SAFETY DEVICE. CYRIEL ROOSE, St. Clair Shores, and JAMES BENZIE, Detroit, Mich. Filed June 20, 1927. Serial No. 200,060. 2 Claims. (Cl. 251—166.)

1. A gas cock safety device of the class described adapted for use with a gas cock having a shell provided with a recess in its upper edge, a plug rotatably mounted in said shell, and a handle projecting laterally from said plug, comprising: a cup shaped member adapted for seating over said plug and the upper end of said shell and provided with an enlarged opening for accommodating said handle; means carried by said cup shaped member adapted upon axial movement of said cup shaped member relatively to said shell in one direction for engaging in said recess, and upon axial movement in the opposite direction for disengaging from said recess, said plug being non-rotatable relatively to said shell upon engagement of said means in said recess; and means for adjusting the circumferential position of said engagement means relatively to said cup shaped member.

---

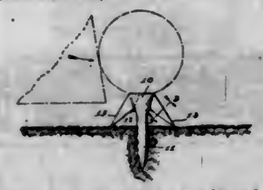
1,692,189. HERMETIC SEAL. EDGAR SCOFIELD, New York, N. Y., assignor to Anchor Cap and Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed May 7, 1926. Serial No. 107,403. 7 Claims. (Cl. 215—56.)



1. As an article of manufacture, a closure cap adapted to be sealed on a container having a cover portion and a skirt portion, and means comprising indentations formed

in said cover portion to support said cap and provide passageways beneath said cap when the cover portion thereof is resting upon the mouth of a suitable container for the exhaustion of air before the cap is hermetically sealed.

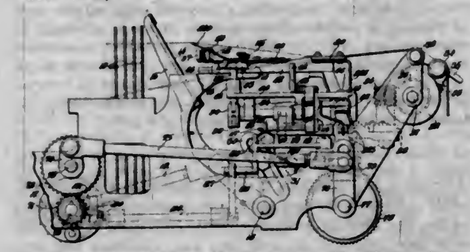
---



1,692,190. DISHWASHING MACHINE. CHARLES L. TEMPLETON, Minneapolis, Minn. Filed Jan. 6, 1927. Serial No. 159,303. 14 Claims. (Cl. 141—9.)

1. A dish washing machine having a water tank that, in vertical cross-section, is substantially in the form of an ovoid with its apex at the bottom of the tank, and a basket mounted in the tank to swing about a given axis, move radially in respect to said axis and follow the ovoid contour of the tank.

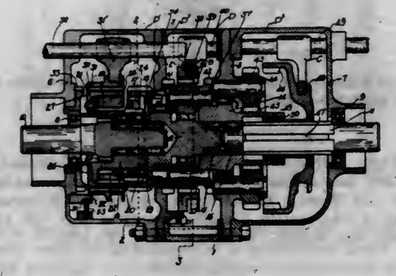
---



1,692,191. GOLF TEE. PAUL G. TOWSLEY, Indianapolis, Ind. Filed Sept. 6, 1927. Serial No. 217,618. 5 Claims. (Cl. 273—33.)

4. A golf tee, comprising a head adapted to support a ball, a shank rigid with said head and adapted to enter the ground, and an arm extending obliquely downward from said head.

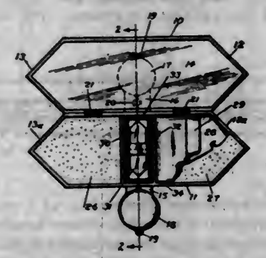
---



1,692,192. NARROW FABRIC LOOM. JOHN C. WARD, Boston, Mass., assignor to Milton Weaving Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 19, 1926. Serial No. 149,482. 5 Claims. (Cl. 139—135.)

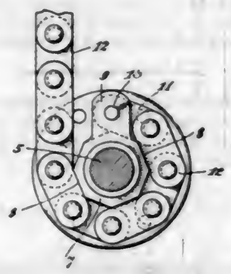
1. A narrow web loom, having in combination, a lay, a clutch controlling the operation of the loom, a shuttle race, a shuttle movable therein, means for positively reciprocating the shuttle, a feeler member pivoted upon the shuttle and arranged to be moved into an operative position when the tension upon the filling falls below a predetermined value, a member adapted to be engaged by the feeler member upon movement of the shuttle when the feeler member is in an operative position, a cam adapted to be positioned in the path of the lay by movement of the said member to be engaged by said lay, and connections between the cam and clutch for stopping the loom.

---



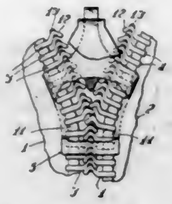
1,692,193. FOUR-SPEED TRANSMISSION. WALTER W. WELLS, Lansing, Mich., assignor to Reo Motor Car Company, Lansing, Mich., a Corporation of Michigan. Filed Feb. 24, 1925. Serial No. 11,271. 5 Claims. (Cl. 74—34.)

1. A transmission comprising a casing having a pair of end bearings and a pair of intermediate bearings, all of said bearings being co-axial, a driving shaft journaled in one end bearing, a driven shaft journaled in the other end bearing, an intermediate revoluble member journaled in one intermediate bearing, a sleeve surrounding said intermediate revoluble member and said driven member and journaled in the other intermediate bearing, antifriction bearings between said driving shaft and intermediate member, antifriction bearings between said driven shaft and said sleeve, antifriction bearings between said sleeve and said intermediate member, gearing between said driving shaft and said intermediate member, gearing between said intermediate member and said sleeve and gearing between said sleeve and said driven shaft.



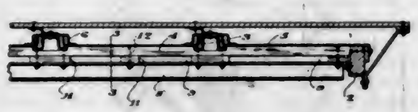
---

1,692,194. COMBINATION VANITY CASE. KATHRYN L. ALLISON, Los Angeles, Calif. Filed Aug. 16, 1926. Serial No. 129,360. 5 Claims. (Cl. 132—83.)



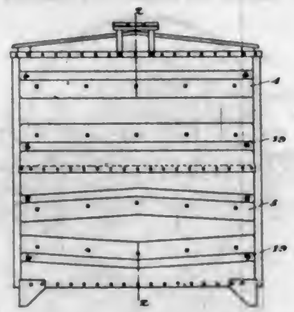
1. A compact formed with a V-shaped terminal.

1,692,195. BUCKET. HERBERT S. ATKINSON, East Orange, N. J., assignor to The Hayward Company, New York, N. Y., a Corporation of New York. Filed Apr. 29, 1925. Serial No. 26,565. 4 Claims. (Cl. 37—184.)



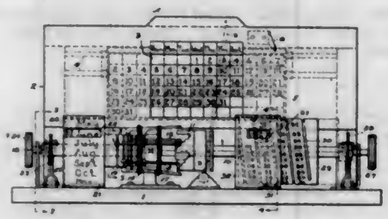
1. In a bucket, a power wheel provided with a hub having a plurality of flat chain bearing surfaces.

1,692,196. SLIDER-OPERATED FASTENER. GEORGE W. BLAIR, Mishawaka, Ind., assignor to Mishawaka Rubber and Woolen Manufacturing Company, Mishawaka, Ind., a Corporation of Indiana. Filed Mar. 25, 1926. Serial No. 97,250. 4 Claims. (Cl. 24—205.)



1. In a fastening device of the class described, the combination of opposed series fo fastener elements and a slider operable therealong for interlocking and releasing same, each element having an arched offset extending transversely thereof from one lateral edge to the other lateral edge of the element and terminating at each lateral edge in an added offset forming an added recess in the reverse side of the plate adjacent and opening through the corresponding lateral edge of the element.

1,692,197. LOAD-LIFTING ARRANGEMENT. CHARLES DAVID BONSALL, New Kensington, Pa. Filed Nov. 12, 1926. Serial No. 147,989. 2 Claims. (Cl. 105—355.)

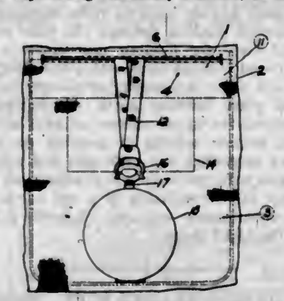


1. In a railway car, the combination of a plurality of carlines, a longitudinally extending frame member, a load lifting beam positioned below said member and spaced apart therefrom, fillers between the member and beam between the carlines secured to the member and the beam, and other fillers between the member and beam below the carlines secured to the member and the beam.

1,692,198. CAR-WALL CONSTRUCTION. CHARLES DAVID BONSALL, Parnassus, Pa., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 22, 1927. Serial No. 214,715. 11 Claims. (Cl. 105—410.)

1. A wall for a railway car comprising a metallic plate having formed therein a plurality of panels within panels of equal length.

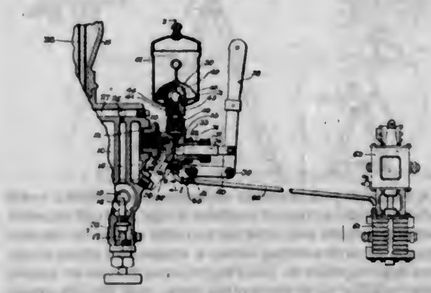
1,692,199. CALENDAR. HERBERT S. BOWMAN, Chicago, Ill. Filed Sept. 9, 1927. Serial No. 218,380. 8 Claims. (Cl. 40—107.)



1. A calendar consisting of a movable member carrying thereon columns of numerals representing the days of the month, a fixed member in front of the movable member and having the names of the days of the week in a horizontal row, the fixed member having an aperture therein adapted to expose any seven of said columns of numerals below the said names of the day of the week, and means operatively connected to the movable member for adjusting the said member to indicate a selected month of a selected year and comprising a movable stop carrier having thereon a predetermined number of stops arranged in predetermined order to represent a period of successive years, means to selectively position any one of said stops, a series of stop engaging members, and means to actuate the engaging members selectively, said means being arranged in accordance with the months of a year.

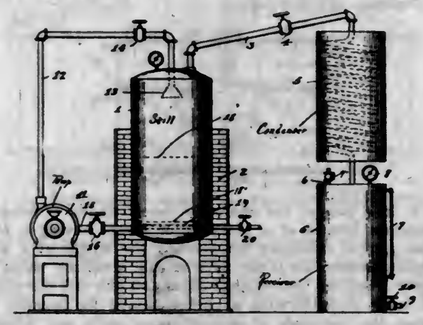
1,692,200. WATCH-LOCK ATTACHMENT FOR POCKETS. CRESCENZO CAPUANO, Los Angeles, Calif. Filed Dec. 15, 1927. Serial No. 240,146. 2 Claims. (Cl. 2—249.)

1. A watch lock for pockets, comprising a strip of tape, having its ends permanently secured to the pocket and forming a loop greater in length than the height of a watch, said tape being relatively narrow, so that the loop



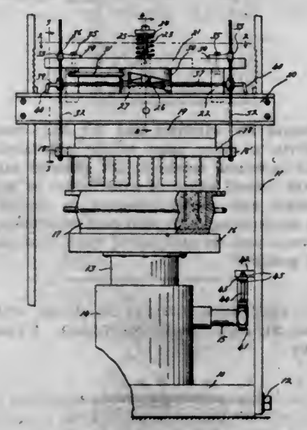
can be conveniently thrust through the ring or ball of a watch and looped about the body of the watch.

1,692,201. HAND GRIP FOR GOLF CLUBS OR THE LIKE. IRA O. DENMAN and CLEMENT W. WATSON, Toledo, Ohio; said Watson assignor to said Denman. Filed Apr. 9, 1928. Serial No. 268,632. 10 Claims. (Cl. 273—81.)



1. A hand grip for a golf club or the like, comprising a member attachable to a player's hand and having a portion engageable with the palm of the hand, and a portion spaced from the palm and engageable with the handle to retain the same against the fingers of the hand.

1,692,202. STEAM-ENGINE LUBRICATOR. PARMER DORSEY, Wichita, Kans., assignor to The Imperial Brass Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 3, 1925. Serial No. 34,585. 3 Claims. (Cl. 184—53.)

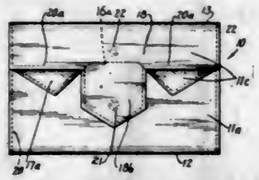


1. In a lubricator, the combination with a reservoir normally containing oil in its upper part and water in its lower part, of means for supplying normal oil-feeding pressure to the reservoir, sight-feed apparatus to carry the oil drop by drop to the part to be lubricated, a supply tank, a force pump connected to draw its supply from the tank, connections from the discharge of the pump to the reservoir, a three-way valve casing having one end screwed into the reservoir and the directly opposite end internally threaded, a hollow bolt closed at its outer end screwed into said opposite end, a valve seat located in the passage between said ends, an outlet between the valve seat and the bolt, a sliding valve adapted to co-operate with said seat and having its outer end in the hollow bolt, and a helically-coiled expanding spring in the bolt beneath the valve, substantially as and for the purpose described.

1,692,203. PROCESS OF TREATING HYDROCARBONS. GUSTAV EGLOFF, Chicago, Ill. Filed July 19, 1918, Serial No. 245,592. Renewed Apr. 21, 1928. 3 Claims. (Cl. 196—54.)

1. A process of treating hydrocarbon oil comprising heating said oil maintained in a substantial liquid body in the presence of aluminum chloride, maintaining a temperature within said body above the melting point of the aluminum chloride and sufficient to vaporize portions of the oil, withdrawing the unvaporized oil and aluminum chloride from the lower part of the liquid body and reintroducing same to the upper part of the liquid body, and continuing such circulation during the treatment, the oil and chloride being returned to the liquid body in an atomized condition.

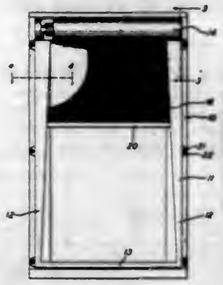
1,692,204. CLAMP FOR MOLDING MACHINES. WILLIAM J. FIEGEL, Detroit, Mich., assignor to Bohn Aluminum & Brass Corporation, Detroit, Mich., a Corporation of Michigan. Filed Oct. 11, 1926. Serial No. 140,948. 9 Claims. (Cl. 22—47.)



1. The combination with a molding machine and mold part, of a clamping mechanism for said mold part including an adjustable cross head, a pair of clamping elements swingingly mounted on said cross head, means normally urging said clamping elements into operative position,

means automatically operable in one direction of movement of the cross head for moving said clamping elements to inoperative position, and means for adjusting said cross head to permit said clamping elements to engage said mold part to support the same.

---



1,692,205. LADY'S HAND AND UNDERARM BAG CONSTRUCTION. LOUIS GOLDSMITH, Brooklyn, N. Y., assignor of one-half to Samuel R. Goldsmith, New York, N. Y. Filed Jan. 24, 1928. Serial No. 248,993. 5 Claims. (Cl. 150—36.)

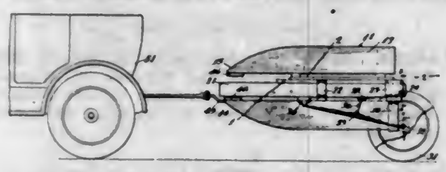
1. In a bag of the character described, an enveloping structure formed of a plurality of layers having a foldable portion extending transversely the length at a mid-section thereof, an inner layer of said structure being secured along the longitudinal edges and one end thereof to an outer layer forming a pocket having an opening between the free ends of said layers opposite said secured end, an edge portion the free end of said inner layer extending beyond the edge portion of said overlying outer layer to camouflage the visible pocket opening on the exterior side of said structure.

---

1,692,206. WINDOW SCREEN. WILLIAM E. GRIFFITHS, Flushing, N. Y. Filed July 12, 1927. Serial No. 205,066. 5 Claims. (Cl. 156—39.)

1. A closure for windows and the like, comprising a flexible fabric, a roller upon which said fabric may be wound and unwound, means at the sides of said window to guide the lateral edges of said fabric as it is wound and unwound, and means attached to the said lateral edges and cooperating with said first-mentioned means to exert a lateral pull on said fabric when it is unwound to the closed position.

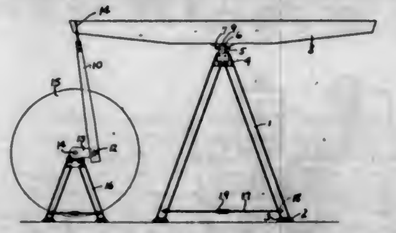
---



1,692,207. UKULELE. HARRY E. HALL, Chicago, Ill. Filed Dec. 21, 1925. Serial No. 76,589. 3 Claims. (Cl. 84—314.)

1. A stringed musical instrument comprising a wooden sound box and a wooden neck having a flat top, a sheet metal finger plate overlying said neck, the body of said plate being spaced from said neck, the edges of said plate being turned down into abutment with the top of said neck, said plate having integral frets stamped therein, a fastening element passing through the body of said plate between said frets for holding said plate in place, the upper end of said element terminating flush with the upper surface of said plate, a plurality of pockets on the center line of said plate between frets, the bottoms of said pockets abutting the upper surface of said neck, and fillings in said pockets serving as position marks, one end of said plate extending out over said box and being cut off at an angle with the long side remote from the player, and the other end terminating in a nut in the form of a transverse downwardly opening channel with notches stamped in the bight thereof.

---

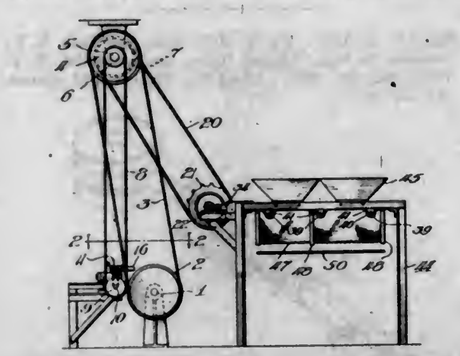


1,692,208. FOLDING TRAILER BOAT. WILLIAM I. HALLOCK, Los Angeles, Calif. Filed Jan. 5, 1928. Serial No. 244,640. 9 Claims. (Cl. 9—2.)

1. In a trailer boat, a folding cockpit comprising forward and aft sections hingedly united, a pontoon comprising a water-tight compartment secured to the bottom of each cockpit section, a spring mounted on each side of one of the cockpit sections and extending aft thereof, an axle carried by said springs, wheels removably journaled upon said axle, and a link pivoted to each spring intermediate the axle and the point of attachment to the cockpit, said links being adapted to optionally be engaged by the bottom of said cockpit to lower the axle or to be released by the cockpit to permit withdrawing the axle above said pontoon.

---

1,692,209. SUPPORT. REX G. HAMAKER, Houston, Tex., assignor of one-half to A. M. Bowman, Houston, Tex. Filed June 1, 1925. Serial No. 34,075. 2 Claims. (Cl. 308—25.)

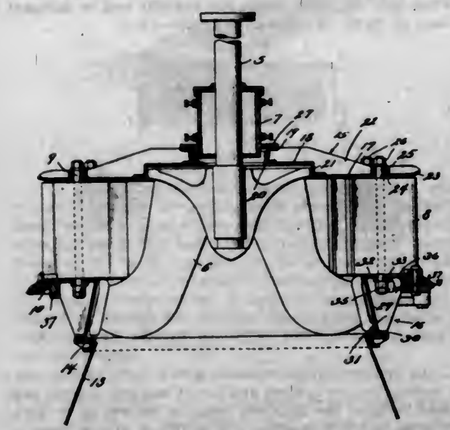


1. A Samson post adapted to support a walking beam comprising a pair of legs of uniform width inclined together at their upper ends and adapted to resist strain in the vertical plane of said walking beam, a supporting plate securing said legs together at their upper ends, means to anchor said legs rigidly to a supporting base, and an adjustable tension member connecting said legs together adjacent the lower ends thereof.

---

1,692,210. APPARATUS FOR PRODUCING ROOFING ELEMENTS AND PRODUCT THEREOF. WILLIAM T. HOFMANN, La Grange, Ill., assignor to Beckman-Dawson Roofing Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 6, 1926. Serial No. 86,464. 1 Claim. (Cl. 91—18.)

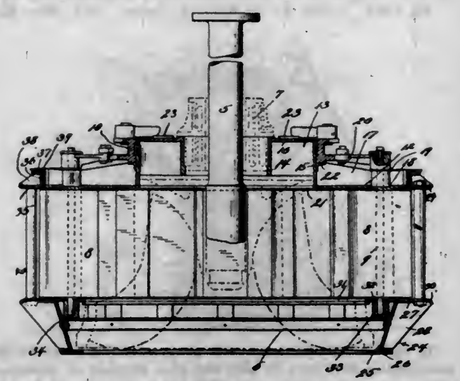
An apparatus of the character described, comprising in combination means for feeding a roofing sheet, means for distributing granular material on spaced areas of said sheet, comprising stationary and movable apertured plates superposed relative each other, a container for granular material mounted above the plates, means for actuating



the movable plate to bring the apertures of both plates into and out of registration to cause the granular material to pass through said apertures, and means for continuously changing the speed of movement of said movable plate.

---

1,692,211. PLATE-SHEET-STEEL TURBINE FRAME. GEORGE A. JESSOP, York, Pa., assignor to S. Morgan Smith Company, York, Pa., a Corporation of Pennsylvania. Filed Oct. 29, 1925. Serial No. 65,709. 8 Claims. (Cl. 253—122.)



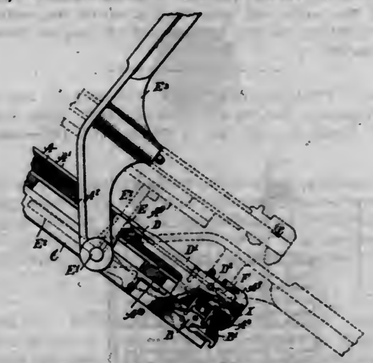
1. In a turbine frame or casing structure, the combination with gates, a runner, a shaft and bearing support for the shaft, of a top covering composed of plate sheet steel comprising outer and inner covering members connected by an interposed angular member, the inner covering member being secured to a part of the bearing support, and a lower supporting organization composed of plate sheet steel, the outer top covering member and lower supporting organization having the gate stems extending therethrough.

---

1,692,212. PLATE-SHEET-STEEL TURBINE FRAME. GEORGE A. JESSOP, York, Pa., assignor to S. Morgan Smith Company, York, Pa., a Corporation of Pennsylvania. Filed Oct. 29, 1925. Serial No. 65,710. 9 Claims. (Cl. 253—122.)

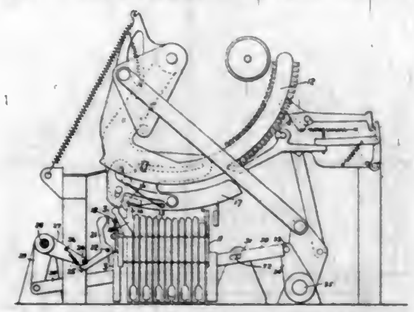
1. In a frame or casing structure for turbines, the combination with a runner, a shaft for the runner, a support for the bearing for the shaft and a plurality of gates around the runner having projecting stems, of an annular plate sheet steel top covering extending over the gates and a portion of the runner, a central chamber around the bearing support and formed by plate sheet steel members secured to the bearing and top covering, and a lower plate sheet steel annular support below the gates, the gate stems projecting through the top covering and the top portion of the lower support.

---



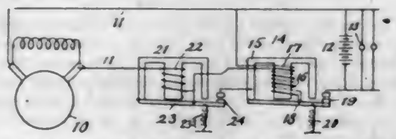
1,692,213. COILING KEY FOR COLLAPSIBLE TUBES. HENRY KIELBERG, Martins Ferry, Ohio. Filed Oct. 3, 1927. Serial No. 223,601. 2 Claims. (Cl. 221—60.)

1. A key-like device of the character described comprising a tubular sheet metal body having at one end thereof a finger-piece whereby said body may be rotated, the confronting edges of said body being correspondingly serrated and spaced apart to form a sinuous longitudinally extending slot adapted for the reception of the flattened end of a collapsible tube.



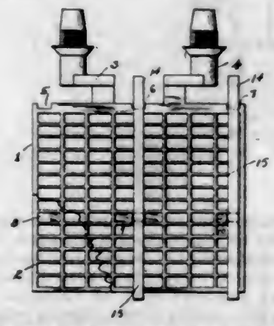
---

1,692,214. TYPOGRAPHICAL MACHINE. GEORGE P. KINGSBURY, Hollis, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Apr. 21, 1928. Serial No. 271,734. 9 Claims. (Cl. 199—46.)



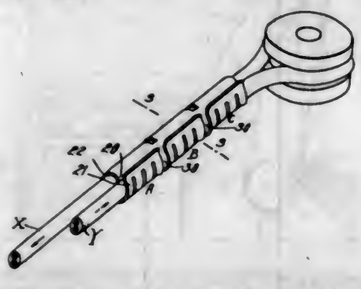
1. In a linotype machine, the combination with a matrix magazine and a bank of escapements therefor, one of said parts being movable out of operative relation to the other, of a locking device to prevent such relative movement, and a rotatable bar associated with the magazine for locking and unlocking the matrices therein, said bar being arranged to engage the locking device and capable of endwise movement to actuate the same.

1,692,215. ZERO-SHUTTER CONTROL FOR PRINTING TABULATORS. WILLIAM W. LASKER, Brooklyn, N. Y., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 29, 1925. Serial No. 26,687. 9 Claims. (Cl. 101—93.)



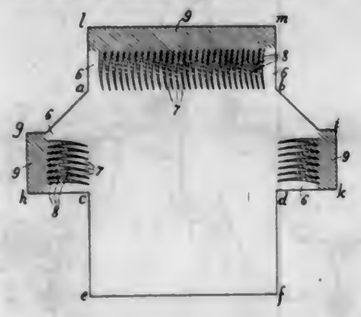
1. In combination, a movable part, selecting members for positioning said part in any one of a number of predetermined positions, a shutter device for holding said part in initial position, means for shifting said device out of the path of said movable part when one of said selecting members functions, and means holding said device in shifted position until said part returns to initial position.

1,692,216. REVERSE-CURRENT CUT-OUT FOR VEHICLE LIGHTING AND BATTERY-CHARGING SYSTEMS. BENNETT M. LEECE, Cleveland, Ohio, assignor to The Leece-Neville Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 10, 1925. Serial No. 74,457 5 Claims. (Cl. 175—294.)



1. In a system such as described, a generator, a battery adapted to be connected thereto, a reverse current cut-out between the generator and battery and comprising a movable switch member and series and voltage coils, and means for preventing the switch member being held in closed position by the passage of heavy battery current through the series coil comprising a switch responsive to a flow of battery current for reducing the ampere turns of the series coil.

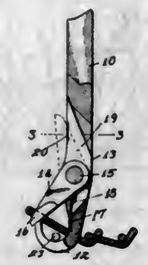
1,692,217. STORAGE BATTERY. THOMAS E. MCCARTY and HAROLD E. SALISBURY, Oakland, Calif. Filed Aug. 7, 1926. Serial No. 127,744. 1 Claim. (Cl. 136—143.)



A storage battery with positive and negative plates having notches on the top of the plates and holes therethrough, insulating combs adapted to fit in said notches with teeth extending below the holes in the plates, and lugs in register with the holes to lock said combs and to hold the plates together.

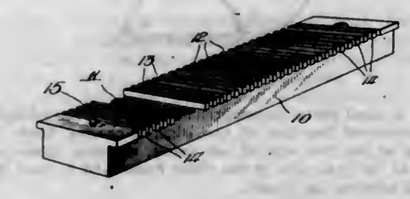
1,692,218. CLAMP. ROY E. MCINTOSH, New York, N. Y., assignor to John Edward Ogden, Mountainville, N. Y. Filed Aug. 28, 1926. Serial No. 132,124. 16 Claims. (Cl. 23—123.)

1. A clamp, S-shaped in section and comprising a central web and bendable side portions and means for firmly gripping the strands in the side portions when said portions are forced toward the central web, said means including perforations in the central web and inwardly extending projections in the side portions.



1,692,219. ENVELOPE AND OTHER ARTICLE OF PAPER. LADISLAW MEDVECZKY, Rakoshegy, Hungary. Filed Nov. 17, 1926, Serial No. 148,960, and in Hungary Nov. 21, 1925. 5 Claims. (Cl. 229—81.)

1. An article of paper consisting of a body portion having sealing incised borders and intact margins outside said incised borders, the incisions being so formed as to separate from said body portion a plurality of strips temporarily connected with one another by said margins but becoming independent of one another when said margins are cut off.



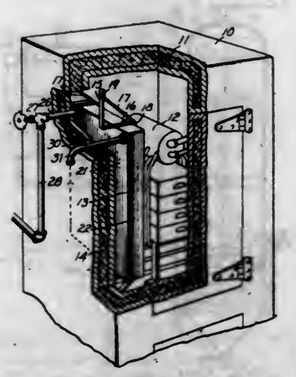
1,692,220. NEEDLE FOR REPAIRING RUNS IN KNITTED GOODS. CARL E. B. OSBERG, Des Moines, Iowa, assignor to Rollins Hosiery Mills, Des Moines, Iowa, a Corporation of Iowa. Filed May 10, 1927. Serial No. 190,244. 2 Claims. (Cl. 66—117.)

1. A knitting needle comprising a body portion having one end terminating in a hook, said body portion being provided with a central slot between its back and front edges and adjacent to the inner edge of said hook, a latch having one end pivoted in said slot and its free end designed to overlap the free end of said hook, yieldable means mounted entirely within the inner end of said slot between the latch and said hook to be engaged by the inner edge of said latch when it is moved to a nearly closed position for automatically throwing said latch to an open position, the forward edges of the upper end of the side members of said slot being bent slightly inwardly and the body portion

of said latch being adapted to frictionally engage the inwardly bent portions of said side members when moved to its open position.

1,692,221. ELECTRIC BURNER. CLARK M. OSTERHELD, Stoughton, Wis., assignor to McGraw Electric Company, Omaha, Nebr., a Corporation of Delaware. Filed Nov. 22, 1924. Serial No. 751,466. 15 Claims. (Cl. 219—37.)

1. A burner for electric devices comprising, in combination, two pairs of heating units placed side by side but insulated from each other; said heating units comprising each an insulating body and a resistance wire mounted thereon; the inner pair of units being connected in parallel and the outer pair of units likewise connected in parallel; and a single switch connected, constructed and arranged to control the current through all the units and independently to open and close the circuit including the two outer units.



1,692,222. METHOD OF DECORATING FISH LURES. JOHN B. PAGIN, South Bend, Ind., assignor to The South Bend Bait Company, a Corporation of Indiana. Filed Aug. 8, 1927. Serial No. 211,288. 3 Claims. (Cl. 41—38.)

1. The process of decorating fish baits, which comprises forming impressions representing scales on the surface of the bait body, applying a coating of paint over said surface, filling the depressed scale-like portions with a protective layer of non-coherent material, applying a coating of a distinctively colored paint over the bait surface and removing the protective layer with whatever paint may be adhering thereto.

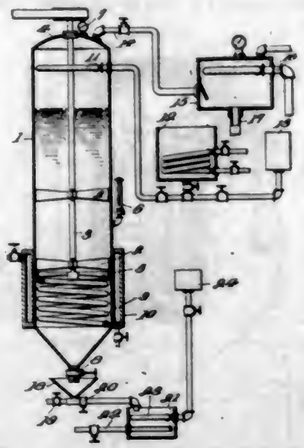
1,692,223. FOUNTAIN TANK. HOWARD K. PINKERTON and FREEMAN L. RHYNDRESS, Kansas City, Mo. Filed Oct. 14, 1926. Serial No. 141,505. 5 Claims. (Cl. 62—141.)

1. In a device of the character described, an insulated receptacle, refrigerating means therein, a tank mounted in said receptacle, an outlet connection therefor and a valved water inlet leading into said tank, said outlet connection being continuously open.

1,692,224. AMINO AROMATIC ESTERS FOR USE AS ANÆSTHETICS AND METHOD OF MAKING SAME. EDUARD RITSERT, Frankfort-on-the-Main, Germany. Filed Apr. 27, 1926, Serial No. 105,015, and in Germany May 14, 1925. 6 Claims. (Cl. 260—105.)

1. The method of producing an antiseptic and anæsthetic comprising combining an aromatic amino carboxylic acid ester with a compound containing a halogenated non-aliphatic sulfo acid radical.

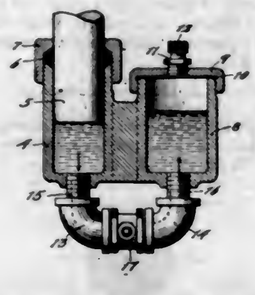
1,692,225. TOE END. GLADYS M. ROBERTS, St. Paul, Minn. Filed July 23, 1927. Serial No. 208,386. 12 Claims. (Cl. 36—1.)



1. In combination with the convex toe of a dancing shoe, a pad secured thereto, said pad consisting of spirally arranged rows of material interconnected at suitable intervals to allow the same to flex so as to cause the pad to adjust itself to the convex form of said shoe toe.

1,692,226. PROCESS OF TREATING OILS. ALEXANDER SCHWARCMAN, Buffalo, N. Y., assignor to Spencer Kellogg and Sons, Inc., Buffalo, N. Y., a Corporation of New York. Filed June 3, 1925. Serial No. 34,633. 5 Claims. (Cl. 87—12.)

1. The process of purifying vegetable oils which comprises agitating a body of such an oil with an aqueous caustic alkali solution in about the amount corresponding to the free fatty acids present, allowing the mixture to stand quiescent for a definite time less than that required to effect settling but sufficient to permit agglomeration of

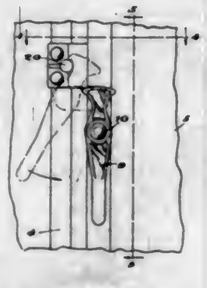


the solid soaps formed by the agitating action, raising the temperature of the oil to a point near but below 212° F.,

passing hot water therethrough in finely divided form until the oil is neutral, and removing the water solution.

---

1,692,227. SHOCK ABSORBER AND THE LIKE. JOHN C. SEGELER, Chicago, Ill. Filed Mar. 7, 1927. Serial No. 173,385. 1 Claim. (Cl. 267—64.)



A shock absorber for the purpose specified comprising, in combination, a cylinder, a piston working therein, a closed chamber, a single passage connecting the lower portion of the cylinder with the lower portion of said chamber, oil occupying the space within the cylinder beneath the piston and also the single passage aforesaid and the lower portion of the chamber, there being an air pocket in the upper portion of the chamber, and a control valve in the single passage aforesaid between the cylinder and chamber, substantially as and for the purpose described.

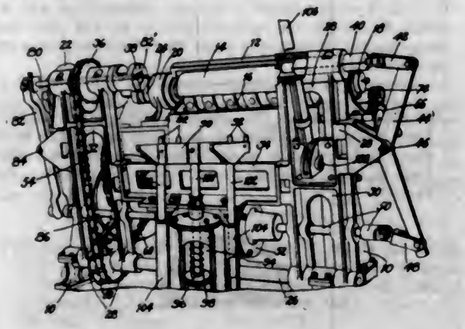
---

1,692,228. SIDING-DOOR OPENER AND CLOSER. ARTHUR E. SMALL, Chicago, Ill., assignor, by mesne assignments, to Railway Metal Products Company, a Corporation of Delaware. Filed Oct. 22, 1923. Serial No. 670,008. 9 Claims. (Cl. 268—44.)

1. In a railway car having a wall with a door opening therein, a door arranged to move horizontally to open or close said opening, a projection on the car wall, and a lever flexibly fulcrumed by a link to said door, the parts arranged so that said lever may be contacted with either side of said projection to initially open or close said door,

said lever being free to fall out of contact with said projection when released.

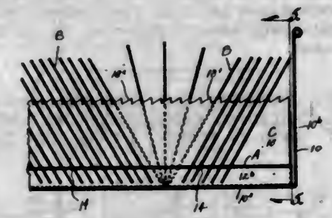
---



1,692,229. PLANT PROTECTOR. SAMUEL K. SMITH, New Brighton, Pa. Filed Mar. 30, 1928. Serial No. 265,865. 4 Claims. (Cl. 47—28.)

1. A plant protector comprising a pair of frames hingedly connected together at one edge, anchoring hooks located at the free edge of one frame, securing hooks carried at the free edge of the other frame and a sheet disposed between the frames.

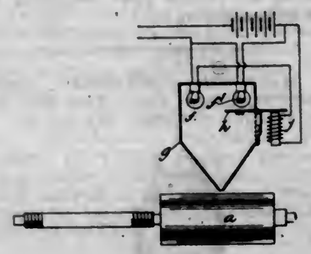
---



1,692,230. WOODWORKING MACHINERY. WALLACE W. STODDARD, Bingham, Me., assignor to United Shank & Findings Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 4, 1923. Serial No. 610,588. 8 Claims. (Cl. 142—40.)

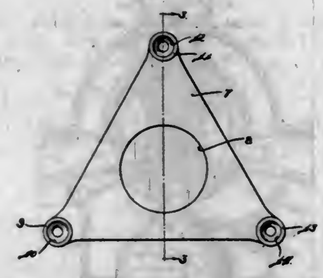
1. A wood working machine comprising, in combination, a cutter, a frame movable toward and from the cutter, relatively movable head and tail stocks carried by the frame and arranged to grasp by its ends a bolt of wood, a drill constructed and arranged to operate axially of the bolt of wood, means for advancing the tail stock and the drill, a spring for returning the tail stock, and a stronger spring for returning the drill.

1,692,231. RECORD FILE. HARVEY P. THOMPSON, Des Moines, Iowa. Filed Dec. 19, 1927. Serial No. 241,011. 8 Claims. (Cl. 129—10.)



1. In a record file, a case having a bottom, a plurality of divider members, means for pivotally supporting the divider members above the bottom of the case, said divider members having downward extensions and being pivoted at such distances from each other that the swinging of one divider member causes its extension to engage the extension of the next divider member for moving such next divider member.

7. In a structure of the class described, a case, a false bottom therefor having a plurality of slots, divider plates having downward extensions received in said slots, each plate having at its lower edge a notch, and an upright rail extending into said notch.



---

1,692,232. PICTURE-TRANSMISSION SYSTEM. THOMAS THORNE BAKER, London, England, assignor of one-third to Charles Henry Watson and one-third to Frederick William Watson Baker, London, England. Filed Dec. 10, 1925, Serial No. 74,591, and in Great Britain Dec. 11, 1924. 1 Claim. (Cl. 178—7.)

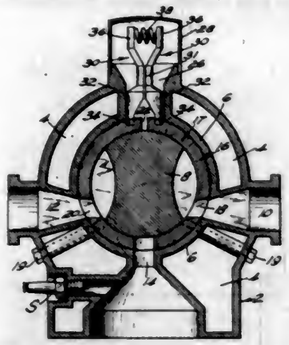
In a receiving set for use in the telegraphic transmission of pictures, diagrams and other impressions in which signals from the transmitting station are produced by a spot of light progressively traced over the picture to be transmitted the rays from said spot being caused to act upon a light-sensitive cell which is included in a circuit adapted for the emission of signals, and the said signals are received by the said receiving set and utilized therein for varying the intensity of the light from an electric lamp, a second lamp, a movable mask normally operative for obscuring the light from said second lamp, electro-magnetic release means under control of the circuit of the first lamp and adapted for bringing about the removal of the mask from the second lamp when the first lamp fails, and light-directive means adapted for concentrating the light from either of the lamps on to a spot on a sensitive layer progressively advanced in relation to such spot simultaneously and synchronously with the advancement of the picture at the receiving station.

1,692,233. GOLFING TEE. PAUL F. VAN PATTEN, Detroit, Mich., assignor to Sterling H. Campbell, St. Louis, Mo. Filed May 7, 1928. Serial No. 275,887. 5 Claims. (Cl. 273—33.)

1. A golfing tee of the class described, comprising: a triangular shaped plate; and a plurality of tees projecting outwardly from one face thereof, each at one corner of said plate.

---

1,692,234. ADJUSTABLE STREET SIGN. WALTER K. VOORHEES, Cedar Falls, Iowa, assignor to Standard Manufacturing Company, Cedar Falls, Iowa. Filed Aug. 9, 1926. Serial No. 128,100. 1 Claim. (Cl. 40—145.)

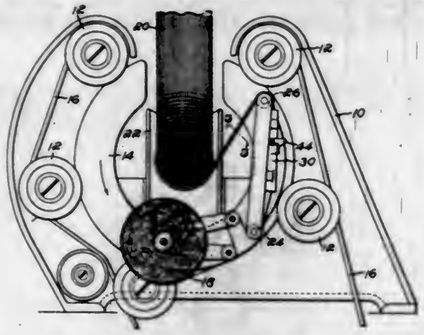


In combination, street signs superposed and separately connected for desired angular relations, the upper sign having an imperforate integral depending socket projection having interiorly threaded holes at a radial angle from each other, the lower sign having an upwardly directed boss inserted in and to fit the said socket projection and having an annular groove alined with said threaded holes, set-screws mounted in said holes to terminally engage said groove, and the lower sign having a flat top annular part around the base of said upward projection upon whose top the lower rim of said socket projection is sealingly seated, whereby the upper sign may be rotated upon said annular part and secured at a desired angle upon said lower sign with its joint connection to the lower sign sealed against entrance of moisture or other elements.

---

1,692,235. VALVE CONSTRUCTION. RUDOLPH WEHR, Los Angeles, Calif., assignor to Wehr Motor Company, a Corporation of California. Filed May 9, 1927. Serial No. 189,974. 11 Claims. (Cl. 123—190.)

1. In a valve construction, in combination, a valve casing, an integral liner in said casing, a valve adapted to be rotated in said liner, and a peripherally movable



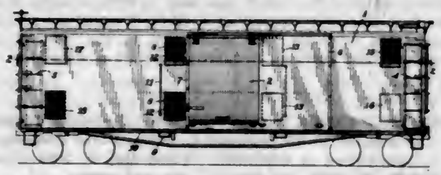
compensating device integral with said liner, and embracing substantially the entire periphery of said valve,

for compensating for the effect of the temperature changes and wear to which said valve construction is subjected.

---

1,692,236. MEANS AND METHOD FOR REENFORCING THE EDGES OF STRIP MATERIAL. WILLIAM M. WHEILDON, Framingham, Mass., assignor to Edward H. Angier, Framingham, Mass. Filed Aug. 20, 1926. Serial No. 130,478. 12 Claims. (Cl. 270—93.)

1. A device of the class described comprising a guide for the paper including a series of scrolls, each making at least a complete turn, disposed in spaced relation along a line oblique to the path of travel of the paper.

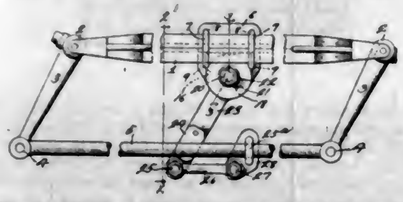


---

1,692,237. ORGANIC COMPOUND OF MERCURY AND PROCESS OF PRODUCING SAME. EDWIN C. WHITE, Baltimore, Md. Filed Jan. 27, 1927. Serial No. 164,135. 14 Claims. (Cl. 260—13.)

1. Mercury derivatives of sulfon-fluorescein.

---



1,692,238. VENTILATED FREIGHT CAR. WILLIAM E. WINE, Toledo, Ohio. Filed Nov. 9, 1925. Serial No. 67,821. 1 Claim. (Cl. 96—6.)

A freight car of the closed box car type, provided with the usual doors and usual diagonally disposed ladders, ventilators arranged in the sides of the car adjacent the door openings, said ventilators arranged in diagonal relation to each other, further ventilators in each of the sides of the car and disposed in the upper corners of the car and near their respective adjacent ladders and a further ventilator on each side of the car and near the lower corner thereof and these last mentioned ventilators being substantially diametrically across the car from the nearby ladder.

---

1,692,239. ANTIRATTLING DEVICE. RUDOLPH A. WOERPEL and HENRY KNOPP, Sawyer, Wis. Filed Feb. 9, 1927. Serial No. 166,870. 1 Claim. (Cl. 280—89.)

The combination with an axle, a connecting rod disposed adjacent one side of said axle, of an antirattling and wobbling device, said device comprising a bracket carried by the axle, an arm pivotally connected to the bracket, means for frictionally holding said arm at its pivotal point, said arm slidably and frictionally engaging one side of the connecting rod, a bracket carried by the connecting rod spaced from the arm and a link connection between said last named bracket and the arm.

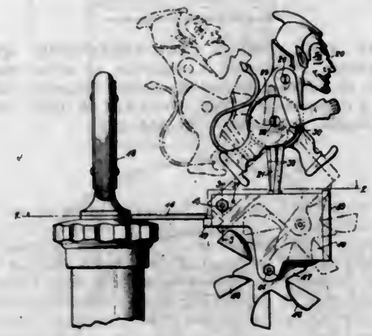
---

1,692,240. CADMIUM-PLATING BATH. ARTHUR WHITE YOUNG and MAURICE EMERSON LOUTH, Kokomo, Ind., assignors to Udylite Process Company, Kokomo, Ind., a Corporation of Indiana. Filed Mar. 31, 1926. Serial No. 98,914. 5 Claims. (Cl. 204—1.)

1. In the art of cadmium plating, the process which comprises electroplating cadmium from a cyanid bath in the presence of an addition agent comprising a cereal extract and caramelized sugar.

---

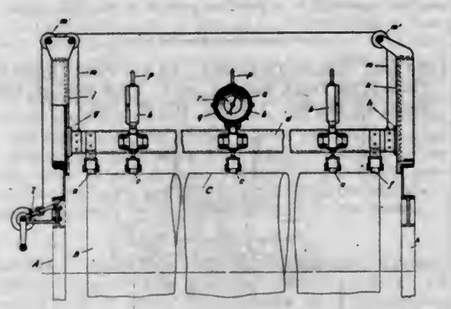
1,692,241. DIAGNOSTIC INSTRUMENT. CHARLES E. H. ARMBRUSTER, Denver, Colo. Filed May 14, 1923. Serial No. 638,847. 17 Claims. (Cl. 88—20.)



6. In a diagnostic instrument, a source of light, an enclosing element having a reflective surface to direct the light rays from the source to one focal point, and having an aperture co-incident with said point, and a light-transmitting element in said aperture adapted to condense the light rays within itself and become a secondary source of light.

9. In a diagnostic instrument, a reflector having a peep-hole, a member having in alinement with said peep-hole an opening to which the eye of the operator is applied, and a light-obstructing open-ended funnel extending forwardly from said opening and terminating in close proximity to the peep-hole of the reflector.

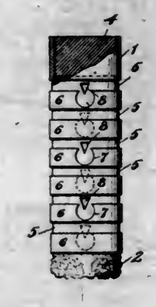
---



1,692,242. MOTOR-ACTUATED TOY. LOUIS V. ARONSON, Newark, N. J. Filed Aug. 14, 1926. Serial No. 129,255. 6 Claims. (Cl. 46—40.)

1. A motor toy comprising, in combination, a body, limbs pivoted on said body, a motor housing, a support for the body mounted on said housing, a motor wheel, a train of gears actuated by said motor wheel, a pitman wrist pin carried by one of said gears, a link pivoted near the top of the housing, a pitman connecting said link and pin, pins on certain of said limb members, rods connecting said pins on the limbs and said link, other pins on the limbs having the connecting rod pins, slide-ways on the other limbs engaging said other pins, whereby when the motor wheel is rotated an oscillating motion is imparted to said limbs.

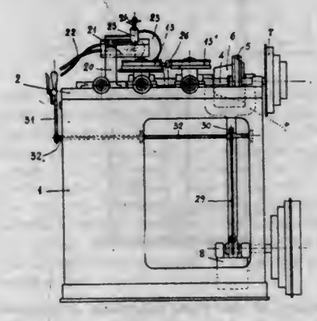
---



1,692,243. MEASURING APPARATUS FOR THE THICKNESS OF WEBS. WILHELM BECKMANN, Duisburg, and ALFRED SCHOPPER, Leipzig, Germany; said Beckmann assignor to said Schopper. Filed May 16, 1927. Serial No. 191,791, and in Germany Feb. 19, 1925. 1 Claim. (Cl. 33—172.)

Web-making machine comprising a frame, a web supporting cylinder in said frame, a carrier, anti-friction means for supporting said carrier on said cylinder by gravity, guides in said frame in which said carrier is adapted to reciprocate, means for lifting said carrier, a measuring instrument on the carrier, and a feeler on said measuring instrument supported on said cylinder.

---

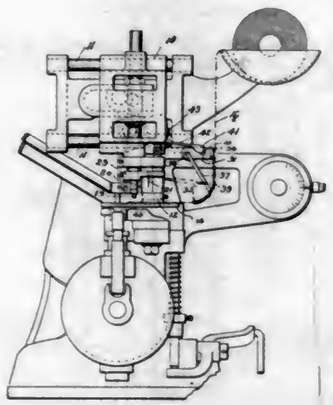


1,692,244. SCOURING DEVICE. JULES J. BAELL, New York, N. Y. Filed Jan. 15, 1927. Serial No. 161,277. 5 Claims. (Cl. 15—210.)

1. An article of the class described comprising a holder for a metallic wool abrasive, said holder being composed of a tubular casing provided with spiral exterior ribs, said casing being provided with a plurality of struck out tabs produced by the severance of some of said ribs.

---

1,692,245. ELECTRIC MACHINE FOR WELDING METALLIC TUBES OR PIPES. FRANCESCO BRERO, Turin, Italy. Filed Oct. 25, 1926, Serial No. 144,089, and in Italy June 22, 1926. 11 Claims. (Cl. 219—6.)

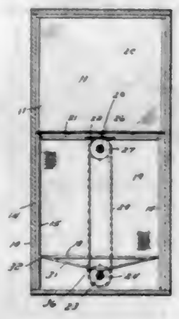


1. In a machine for electrically welding metallic tubes, the combination with feed rollers, roller electrodes, and a device for adjusting the direction of the line of the weld, of a hammering device acting upon the welded seam directly after the electrodes and between the feed rolls and actuated in tune with the tube feed.

---

1,692,246. LACING-STUD-SETTING MACHINE. GEORGE W. BROWN, Quincy, Mass., assignor to Tubular Rivet & Stud Co., Boston, Mass., a Corporation of Massachusetts. Filed Nov. 22, 1923. Serial No. 676,278. 18 Claims. (Cl. 218—17.11.)

6. In a machine for setting lacing studs in shoe uppers, reciprocating means for feeding a shoe upper, means connected to said feeding means for feeding a strip of rein-

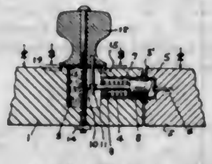


forcing tape, auxiliary means cooperating with said strip feedling means to assist in advancing the strip a distance

greater than the feeding movement of the upper, and means for setting studs into the upper and strip.

---

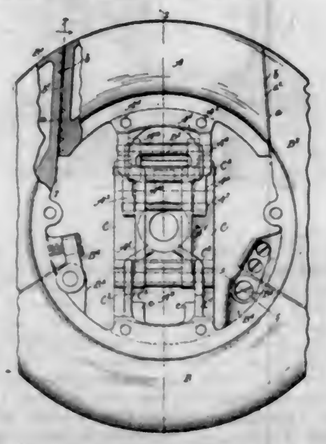
1,692,247. COMBINED WINDOW AND SCREEN OPERATING MECHANISM. RAGNA CLEVELAND, Kelly, Iowa. Filed July 19, 1926. Serial No. 123,507. 4 Claims. (Cl. 268—128.)



1. In a device of the c'ass described, a window frame having guide members, a screen frame slidably mounted between said guide members, said screen frame including a pair of oppositely disposed channel members, a window pane slidably mounted in said channel members, an endless flexible member having parallel runs supported adjacent to one side of said window and screen frame, means for operating said endless flexible member, and means carried by said endless member for independently or simultaneously operating said window and said screen frame.

---

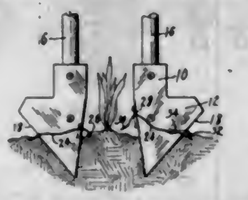
1,692,248. CABINET LATCH. ALEX C. D'ALFONSO, Santa Barbara, Calif. Filed Jan. 21, 1927. Serial No. 162,474. 7 Claims. (Cl. 292—169.)



1. A cabinet latch comprising an operating handle, a rod passing freely through the handle and adapted for passing through a panel for securing thereto, a spacing plate on said rod adapted to be clamped against the face of the panel while retaining freedom of the handle on the rod thereabove, a latch bolt member slidably arranged in the panel at right angles to the rod, and a pin extending from

said handle into a space within the panel engaging an extension of said latch bolt member for slidably moving the same upon twisting the handle.

---

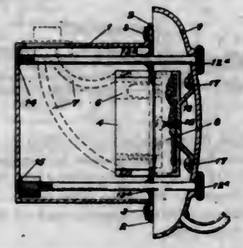


1,692,249. COLLAPSIBLE CORE STRUCTURE. PETER DE MATTIA, Passaic, N. J., assignor, by mesne assignments, to National Rubber Machinery Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 12, 1927. Serial No. 183,036. 12 Claims. (Cl. 154—9.)

1. A collapsible core comprising a key section and a plurality of secondary sections adapted to be sustained in a position of operative continuity, said key section being movable inwardly and also to a position outside of the plane of the core, a rotatable support for said core, and an actuating member pivotally sustained by the rotatable support and pivotally connected to the key section, the latter being free when drawn inwardly by the movement of the actuating member to swing about its pivotal connection therewith to a position outside of the core plane.

---

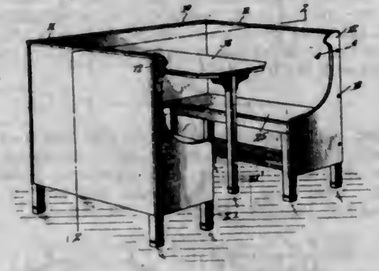
1,692,250. SELF-CLEANING CULTIVATOR SHOVEL. JACOB J. DE VRIES, Sanborn, Iowa. Filed Sept. 30, 1926. Serial No. 138,654. 1 Claim. (Cl. 97—203.)



In a device of the class described, a blade having one slanting edge and one substantially vertical thickened edge, said slanting edge being sharpened whereby weeds may be cut therewith when the blade is used as a cultivator shovel,

said substantially vertical thickened edge being rounded whereby roots catching on the blade will slip upwardly along the substantially vertical edge for causing one end of the root to be pulled from the ground after which the root will be pulled across the face of said blade and will not catch thereon, said root in being so pulled, serving to keep said blade clean.

---

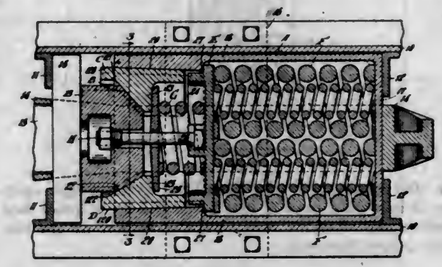


1,692,251. ELECTRICAL WALL-BRACKET SUPPORT. HENRY D'OLIER, Jr., Bridgeport, Conn. Filed Feb. 16, 1927. Serial No. 168,690. 3 Claims. (Cl. 173—338.)

1. An electrical apparatus comprising a current outlet box, a bridge piece carried by the box, a connector receptacle member supported by the bridge piece, a connector plug member adapted to be received by the receptacle member, a lamp supporting bracket plate covering the plug member and secured solely and directly to the bridge piece by means passing through the bracket plate, which may be manipulated outside said plate to secure the latter in a predetermined relation to the outlet box.

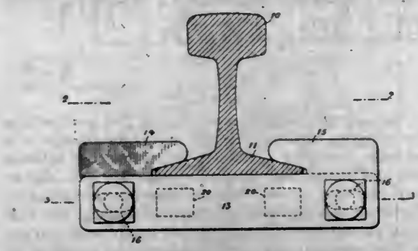
---

1,692,252. KNOCKDOWN REFRESHMENT BOOTH. ARTHUR W. EICHMAN, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Mar. 7, 1927. Serial No. 173,476. 5 Claims. (Cl. 45—31.)



1. A knock-down booth having in combination a rear frame, side frames and spaced front frames, said side frame having members extending from the ends thereof and adapted to fit in complementary formed openings in said front and rear frames, detachable means secured to said members and substantially flush with the exposed surfaces of said front and rear frames, a seat extending parallel to each of the side frames, plate members secured to the inner walls of said frames, and means detachably connected to said plate members and extending through openings in said seats for securing the latter to the frames.

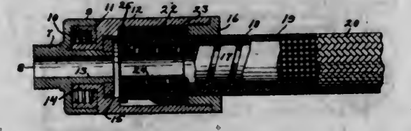
---



1,692,253. FRICTION SHOCK-ABSORBING MECHANISM. FREDERICK F. ERICKSON, Kenmore, N. Y., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Dec. 18, 1926. Serial No. 155,576. 6 Claims. (Cl. 213—32.)

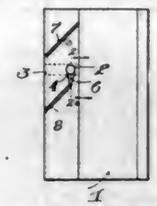
1. In a friction shock absorbing mechanism, the combination with a column element; of friction shoes; said shoes and column having co-operating sets of friction surfaces, said shoes being slidable lengthwise of said column, said column also having additional surfaces; a wedge pressure transmitting block, said block and element being relatively movable longitudinally of the mechanism, said block and shoes having co-operating sets of wedge faces, said sets of co-operating friction surfaces and sets of co-operating wedge faces being of guide and groove formation confining said wedge block, shoes and column element to relative longitudinal movement only whereby said additional surfaces are maintained inactive; and spring resistance means yieldingly opposing relative longitudinal movement of the column element and shoes.

---



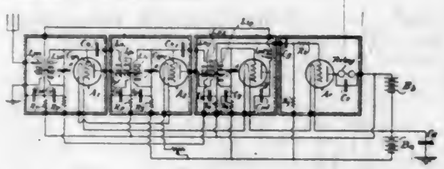
1,692,254. RAIL JOINT. CHARLES K. FREER, Fond du Lac, Wis. Filed Oct. 11, 1927. Serial No. 225,560. 7 Claims. (Cl. 238—249.)

1. A rail joint including a pair of members for disposition under and transversely of rails to be joined, the tops of said members providing a seat for the bottoms of the rail flanges, rail-flange engaging hooks at opposite ends of the respective members, said members at their ends having transverse bolt holes therein through which bolts of smaller size than the openings are adapted to be passed to secure the members together, and means whereby the hooks are forced into clamping engagement with the rail flanges as the bolts are tightened to draw the two members toward each other.



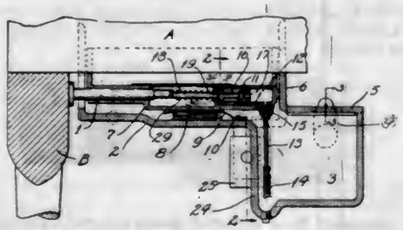
---

1,692,255. UNIVERSAL GREASE GUN. WILLIAM H. FULTON, Irvington, N. J., assignor, by mesne assignments, to Titeflex Metal Hose Co., a Corporation of New Jersey. Filed Dec. 12, 1921. Serial No. 521,606. 6 Claims. (Cl. 281—97.4.)



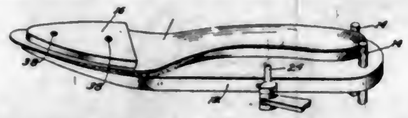
1. An outlet for a universal grease gun having a grease reservoir and means for forcing the grease from said reservoir, said outlet having a flexible grease resistant conduit and a covering fluid tight and flexible but less resistant to grease than said conduit.

1,692,256. SLIT BLOCK. RICHARD HALPENNY, Washington, D. C., assignor to De Forest Phonofilm Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 14, 1927. Serial No. 175,067. 11 Claims. (Cl. 179—100.1.)



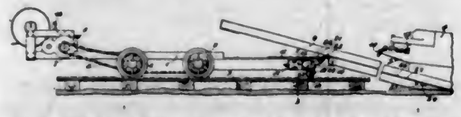
4. The combination with a slit block having a light aperture of grooves formed in said block above and below said aperture for removing dirt from the surface of the film which passes thereover.

1,692,257. WAVE SIGNALING SYSTEM. LOUIS A HAZELTINE, Hoboken, N. J., assignor to Hazeltine Corporation, a Corporation of Delaware. Original application filed Feb. 27, 1925, Serial No. 12,000, Patent No. 1,648,808, and in Canada May 4, 1925. Divided and this application filed Oct. 31, 1927. Serial No. 229,912. 4 Claims. (Cl. 179—171.)



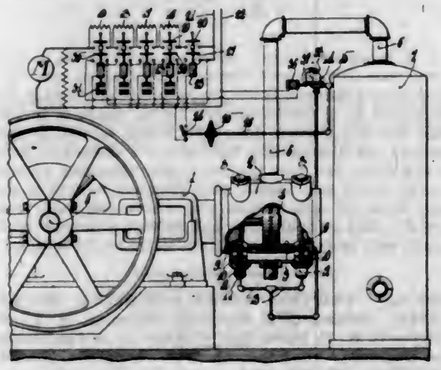
1. In an electric circuit arrangement for neutralizing capacity coupling between the grid and plate circuits of a vacuum tube, including a primary coil connected between the plate and the filament system, a secondary coil, and an auxiliary coil and a neutralizing capacity connected in series between the grid and the filament system, the auxiliary and primary coils being utilized under such circumstances that substantially unity coefficient of coupling between their circuits is not present, the method of securing substantially complete neutralization, which comprises arranging said coils so that the ratio of the mutual inductance between the secondary coil and the auxiliary coil to the mutual inductance between the secondary coil and the primary coil is equal to the ratio of the mutual inductance between the auxiliary coil and the primary coil to the self-inductance of the primary coil and so that said ratios are also equal to the ratio of the coupling capacity to the neutralizing capacity.

1,692,258. LUBRICATOR. JAMES J. HENNESSY, New York, N. Y. Filed Sept. 10, 1925. Serial No. 55,603. 20 Claims. (Cl. 308—84.)



1. In a journal lubricator, a lubricant distributing chamber adapted to underlie the journal to be lubricated, a lubricant reservoir extending substantially below the level of the bottom of said chamber, a pump positioned in said chamber and including an intake member extending downwardly into said reservoir, and a removable wall on the upper portion of said reservoir whereby said pump may be removed from the lubricator while the same is applied to a journal.

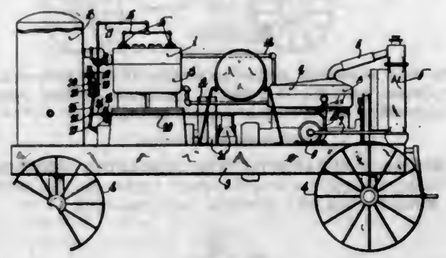
1,692,259. MACHINE FOR OPERATING ON FILLER PIECES FOR SHOES. GEORGE H. HEYS, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 17, 1923. Serial No. 657,935. 25 Claims. (Cl. 12—25.)



2. In a machine for operating upon filler pieces for shoes, a stock trimming device, and means for supporting a filler piece and relatively moving and guiding the filler piece and said device to cause the latter to trim the toe and forepart of the filler piece without trimming any of the remaining portion of the filler piece.

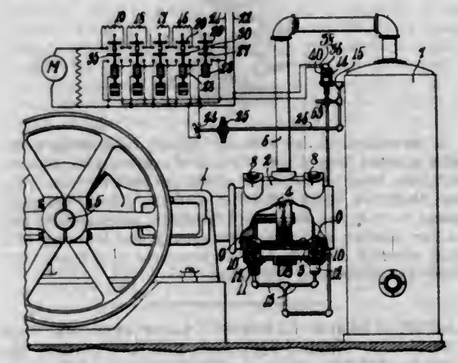
1,692,260. MINING APPARATUS. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 18, 1919, Serial No. 305,149. Renewed Oct. 4, 1923. 57 Claims. (Cl. 105—161.)

1. In a mining apparatus, a wheeled truck adapted to carry a load reciprocably thereon and to move along track rails, and supplemental track rail engaging supporting means for the front end thereof and including supporting means extending transversely of the apparatus into the path of the truck wheels in front of the latter and engageable with the track rails.



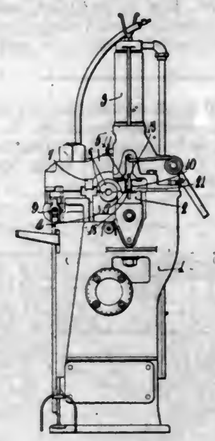
1,692,261. COMPRESSOR-CONTROLLING MECHANISM. FRED D. HOLDSWORTH, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Jan. 30, 1922, Serial No. 532,681. Renewed July 19, 1928. 13 Claims. (Cl. 230—4.)

1. In a compressor controlling system, a compressor, electric driving means therefor, pneumatic unloading means for said compressor, controller means for said driving means, and means controlled by said controller means for controlling said unloading means and comprising means constantly biased toward one of its positions by compressor discharge pressure.

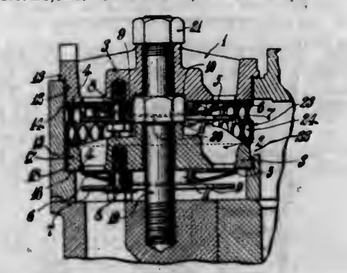


1,692,262. COMPRESSOR-UNLOADING MECHANISM. CHARLES F. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 31, 1923. Serial No. 683,615. 17 Claims. (Cl. 230—3.)

1. The combination comprising a compressor having gaseous fluid actuated unloading means, an engine for driving said compressor, means for normally circulating a cooling liquid for said engine the pressure of which increases with the speed of said engine, and means whereby said liquid controls actuation of said unloading means.



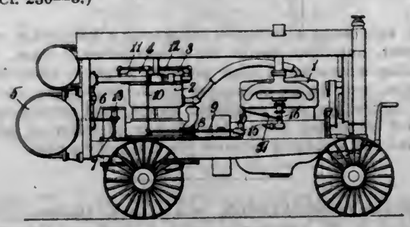
1,692,263. COMPRESSOR-CONTROLLING MECHANISM. FRED D. HOLDSWORTH, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Jan. 25, 1924, Serial No. 688,632. Renewed June 6, 1928. 10 Claims. (Cl. 230—4.)



1. In a compressor controlling system, a compressor, electric driving means therefor, pneumatic unloading means for said compressor, comptroller means for said driving means, and means including a spring controlled by said controller means for controlling said unloading means, and comprising means constantly biased toward one of its positions by compressor discharge pressure.

1,692,264. PIN EXTRACTOR FOR FORGING MACHINES. FRANK A. HALLECK, Michigan City, Ind., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Original application filed July 30, 1920, Serial No. 400,121. Divided and this application filed Sept. 9, 1924. Serial No. 736,796. 12 Claims. (Cl. 29—86.1.)

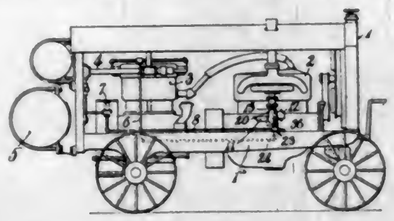
1. Mechanism for removing a pin from a hollow drill steel comprising a movable member, a gripping means pivotally supported and actuated thereby for engaging one of the elements to be separated, and means for guiding the said movable member to move in a direction transversely of the longitudinal axis of the member being gripped.



1,692,265. VALVE SHIELD. HJALMAR T. BLOM, Michigan City, Ind., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Apr. 28, 1925. Serial No. 26,513. 7 Claims. (Cl. 230—231.)

1. In combination, a plurality of coaxially disposed valve mechanisms each including seat, valve and guard members, and broken valve part guard means disposed between the adjacent sides of said mechanisms and held in position by said mechanisms jointly.

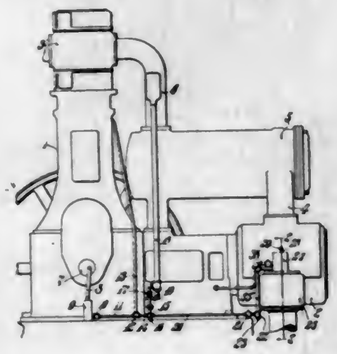
1,692,266. CONTROLLING MECHANISM. FRED D. HOLDSWORTH, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Sept. 15, 1925. Serial No. 56,538. 15 Claims. (Cl. 230—3.)



1. A controlling mechanism comprising a controlled element, a cylinder, a fluid responsive piston therein adapted to have operative connection with said element, a conduit for leading pressure fluid to said cylinder, a second conduit leading from said cylinder, the said piston being movable

in said cylinder so that in one position the flow of fluid to said second conduit is obstructed by said piston and in another position the flow is permitted, and means for maintaining fluid pressure in said second conduit during release of the actuating fluid pressure for said piston.

---

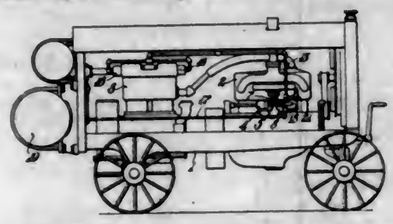


1,692,267. COMPRESSOR-CONTROLLING MECHANISM. FRED D. HOLDSWORTH, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Jan. 21, 1926. Serial No. 80,589. 4 Claims. (Cl. 230—3.)

1. The combination with a compressor and an internal combustion driving engine therefor, of controlling means for said compressor and for said engine comprising a cylinder adjustable in length, a piston therein, a plunger movable with said piston, a throttle for said engine having a controlling element engageable by said plunger, and means coaxially arranged with said piston and actuated thereby for controlling the condition of said compressor.

---

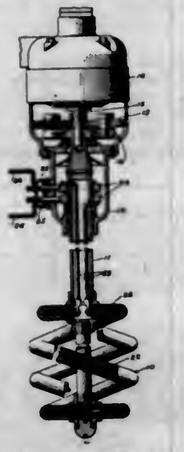
1,692,268. COMPRESSOR. HALBERT B. HALVORSEN, Michigan City, Ind., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Apr. 26, 1926. Serial No. 104,745. 7 Claims. (Cl. 230—2.)



1. In a compressor system comprising a multi-stage compressor, unloading means for a low pressure stage, unloading means for a high pressure stage, a lubricating system, and means connected to the lubricating system for controlling said unloading means, said second mentioned unloading means including a plurality of relief means and a unitary actuator for said relief means.

---

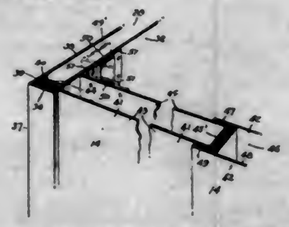
1,692,269. COMPRESSOR. CHARLES F. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Apr. 9, 1927. Serial No. 182,449. 12 Claims. (Cl. 230—4.)



1. In a compressor controlling mechanism, a driving engine having a throttle, a governor for said throttle controlled by the speed of said engine, a fluid compressor driven by said engine, an unloading device for said compressor, a control for said unloading device operated by said engine throttle governor, and a second control

for said unloading device responsive to the compressor discharge pressure, said second mentioned control being independent of the engine throttle governor.

---

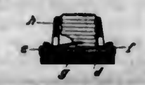


1,692,270. APPARATUS FOR TREATING LIQUIDS. AAGE JENSEN, Los Angeles, Calif. Filed Jan. 10, 1927. Serial No. 160,135. 5 Claims. (Cl. 219—41.)

4. An apparatus for treating liquids, comprising a tubular member formed into a series of convolutions, electric resistance elements arranged within the coils for imparting heat thereto, a shaft connected with the tubular member, means for rotating said shaft to impart movement to the tubular member, and means for raising and lowering said shaft whereby the coils may be immersed in a liquid container and withdrawn therefrom.

---

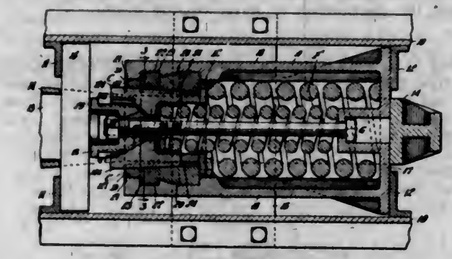
1,692,271. DRIER CABINET. LOUIS JUDELSON, New York, N. Y. Original application filed May 28, 1924, Serial No. 716,340. Divided and this application filed Nov. 28, 1924, Serial No. 752,582. Renewed Aug. 30, 1927. 3 Claims. (Cl. 312—141.)



1. In a cabinet having interengaging hollow sheet metal sections, a section comprising an inner sheet each end of which is bent back on itself to form one side of a channel,

bent at an angle to form the bottom of said channel, and bent to form a flange parallel to the sheet, and an outer sheet each end of which is bent back on itself to embrace said flange and to form the other side of said channel.

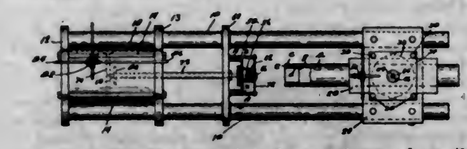
---



1,692,272. SUPPLEMENTAL RESISTANCE FOR SERIALLY-MOUNTED LAMPS. ALFRED LAMPL, Berlin-Halensee, Germany. Filed Nov. 9, 1925, Serial No. 68,042, and in Germany May 9, 1925. 2 Claims. (Cl. 200—118.)

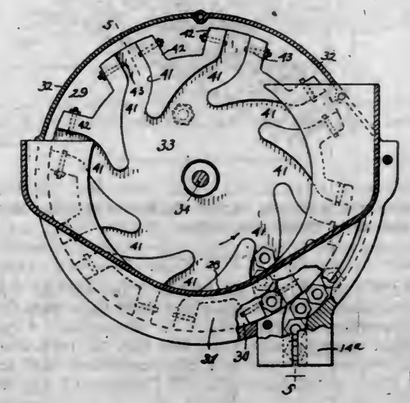
1. In an electric system, electric contacting terminals and a shunt on said terminals, comprising a supply of loosely aggregated substantially granular iron chips.

---



1,692,273. FRICTION SHOCK-ABSORBING MECHANISM. HARVEY J. LOUNSBURY, Glen Ellyn, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Dec. 18, 1926. Serial No. 155,573. 5 Claims. (Cl. 213—32.)

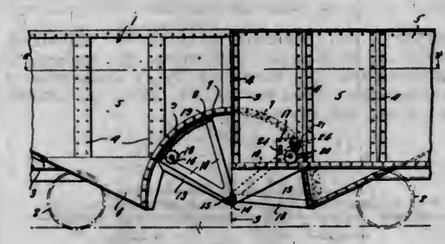
1. In a friction shock absorbing mechanism, the combination with a spring cage having a plurality of side walls, two of said side walls being opposed; of a spring resistance within the cage; a pair of detachable liners; means for preventing relative longitudinal movement of said liners and cage, said liners and side walls of the cage having interengaging faces thereon for holding the liners centered on the said walls; a pair of friction shoes cooperating with the liners; a wedge block engaging the shoes, said wedge block, shoes and liners being provided with interengaging means for holding all of said parts centered on said side walls and uniformly spaced from the remaining walls respectively.



---

1,692,274. DEVICE FOR REMOVING CAPS FROM PAPER CORES. MICHAEL J. MALLOY and EVERETT A. BUCK, Millinocket, Me., assignors to Great Northern Paper Company, Millinocket, Me., a Corporation of Maine. Filed Dec. 1, 1927. Serial No. 237,104. 22 Claims. (Cl. 29—88.2.)

1. A machine for removing the metal caps from the ends of tubular paper cores, including a core clamp having a movable clamping block, fluid-operated means to hold said block against the core and also to move it away from the core, a cap extractor, a carrier therefor, fluid operated means to move said carrier and the extractor toward and away from the cap on the end of the core in said clamp, and means operated by said fluid-operated means to force said extractor into pressure-applying relation with the cap.

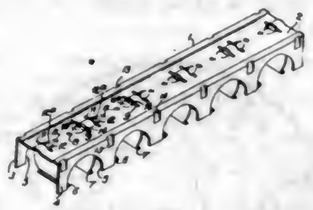


1,692,275. HOPPER FEED FOR METAL-WORKING MACHINES. BENJAMIN H. MORTUS, Cleveland, Ohio, assignor to The National Screw and Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 1, 1924. Serial No. 747,304. 18 Claims. (Cl. 10—162.)

8. In a metal working machine having a tool adapted to operate on blanks, a feed hopper, a delivery member extending from said hopper, and a rotatably mounted feed disc for delivering blanks from the hopper to the delivery member, said disc having on the inner face thereof spaced slots, each extending inwardly from the periphery and of a length to receive a plurality of blanks and each being disposed angularly with respect to a radial line, each slot terminating short of the center of the disc and having unobstructed inner ends to permit blanks to pass freely into and out of the slots during rotation of the disc, each slot having means for permitting the passage of properly positioned blanks and preventing discharge of improperly positioned blanks from the peripheral end thereof.

---

1,692,276. DUMP CAR. ROBERT W. MOTISHER, Sewell, N. J. Filed Aug. 6, 1927. Serial No. 211,186. 12 Claims. (Cl. 105—249.)



1. A hopper car comprising side members and an upwardly convex bottom portion, an arcuate door plate juxtaposed to the bottom portion.

---

1,692,277. CARTRIDGE-FEEDING DEVICE FOR AUTOMATIC FIREARMS. CHRISTIAN PFEIFFER, Hartford, Conn., assignor to Colt's Patent Fire Arms Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Aug. 29, 1927. Serial No. 216,166. 11 Claims. (Cl. 89—33.)

1. A cartridge holder for automatic firearms comprising in combination a normally horizontal plate, means on the

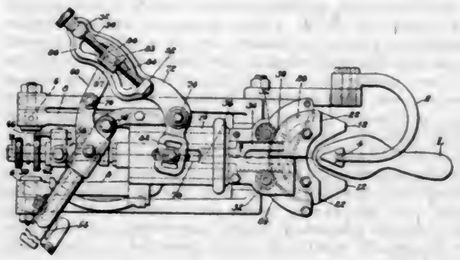


plate for holding a plurality of cartridges, and oppositely facing shoulders on the plate for engagement by the feed

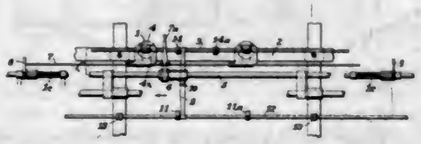
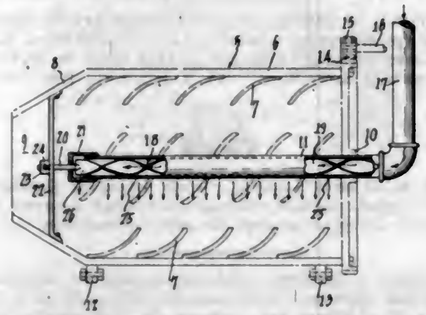
mechanism of a firearm to feed the holder in either direction relatively thereto as desired.

---



1,692,278. LASTING MACHINE. ARTHUR F. PYM, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Mar. 10, 1924, Serial No. 698,099. Divided and this application filed Jan. 23, 1926. Serial No. 83,372. 23 Claims. (Cl. 12—14.)

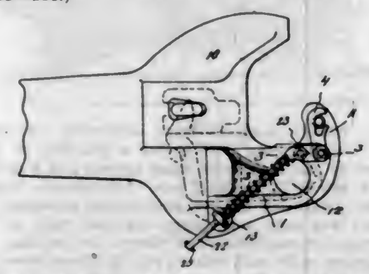
1. In a lasting machine, the combination with shoe-positioning means, of end-embracing wipers, a hand lever, and separate connections between said lever and the wipers for advancing and closing the wipers respectively.



---

1,692,279. FULL-FASHIONED-HOSIERY MACHINE. WOLFGANG D. RICHTER, Philadelphia, Pa., assignor to Wildman Mfg. Co., Norristown, Pa., a Corporation of Pennsylvania. Filed Feb. 3, 1927. Serial No. 165,689. 5 Claims. (Cl. 66—130.)

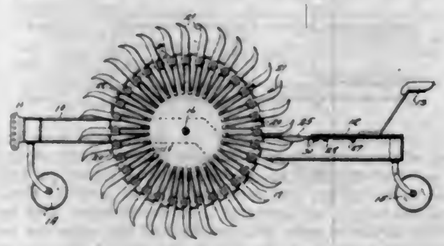
1. In combination in full fashioning hosiery machines, a member for reciprocating the thread carrier, a reciprocating driving rod for said member with which said member has a friction connection to permit the member to be retarded and arrested before the stroke of the said rod is completed, and means retarding the speed of said member comprising a lever pivotally mounted on said member, a relatively stationary stop with which one end of said lever contacts, a reciprocating slur cock and a stop reciprocating with the slur cock and contacted by the other end of said lever, substantially as described.



1,692,280. CONCRETE MIXER. GERALD ROUTLEDGE, Oakland, and AXEL O. NORLING, Alameda, Calif., assignors to Hutchinson Co., Oakland, Calif., a Corporation. Filed May 14, 1928. Serial No. 277,775. 5 Claims. (Cl. 83—73.)

1. A concrete mixer having a revoluble drum and a water supply pipe and a screw conveyer carried by said drum and extending into said pipe and adapted to facilitate the distribution of water to said drum.

---

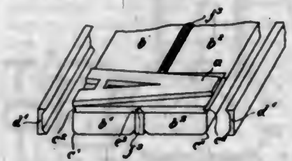


1,692,281. RAILROAD COUPLER ATTACHMENT. HARRY P. SPEER, Council Bluffs, Iowa, assignor of one-half to John M. Wheeler, Council Bluffs, Iowa. Filed Nov. 9, 1927. Serial No. 232,057. 2 Claims. (Cl. 213—116.)

1. An attachment for a coupler comprising a plate, means for attaching the plate to a coupler body, a rod for engagement with the knuckle of the coupler body to project laterally from one side thereof, an eye member on the plate, a rod slidable through the eye member, a crank pivotally engaged with the rod, a shaft journaled in the plate and rotatable by the crank, an arm extending from the shaft and having a notch to receive the rod in the knuckle.

---

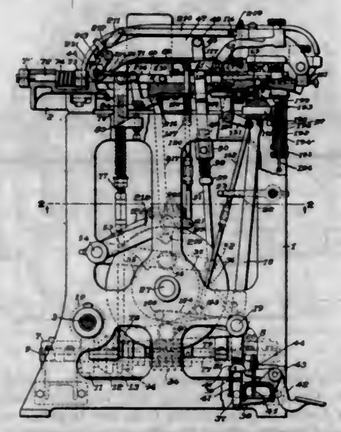
1,692,282. ROTARY PLOW. JAMES WILSON, Great Falls, Mont. Filed Sept. 3, 1927. Serial No. 217,403. 3 Claims. (Cl. 97—222.)



1. A mechanism of the character described including a frame, a rotatable structure mounted on the frame and having a plurality of circularly extending rows of teeth,

the teeth being angular in cross section, the vertices of the teeth being in advance, and cleaners mounted upon the frame and coacting with the teeth and resiliently urged in a direction toward the vertices of the teeth and shifted across the inclined face of the tooth by the wedging action of the tooth as a tooth passes a cleaner.

---

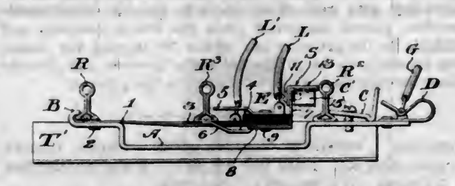


1,692,283. MEANS FOR PRODUCING PRINTING PLATES SPECIALLY FOR POSTER PRINTING. CARL ANDREAS ADAM, Hamburg, Germany. Filed Dec. 15, 1926, Serial No. 155,066, and in Germany Jan. 6, 1926. 2 Claims. (Cl. 101—384.)

1. In combination, a printing impression member formed on its rear surface with a narrow row of teeth extending transverse the member, and a block made up of a series of independent sections, each formed with a row of teeth corresponding to that on the impression member, the row of teeth on each of the several sections aligning when the sections are assembled in block form.

---

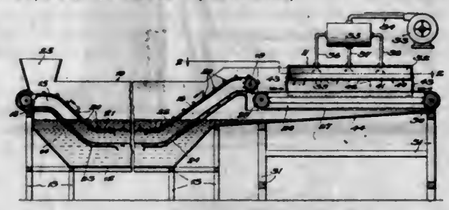
1,692,284. MACHINE FOR USE IN THE MANUFACTURE OF SHOES. WILLIAM C. BAXTER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 25, 1921. Serial No. 487,394. 150 Claims. (Cl. 12—97.)



1. In a machine for shaping parts of shoes, the combination with means for applying pressure to a shoe part to give it substantially the shape which it is to have in the finished shoe, of positioning means comprising a member for engaging the shoe part in a jig hole formed in said part outside of the area where the shaping pressure is applied to position the part for the operation of the pressure applying means.

---

1,692,285. AUTOMATIC SIGNALING MEANS FOR TOY TRACKS. HARRY S. BECKER, River Forest, Ill., assignor to American Flyer Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 3, 1927. Serial No. 237,434. 11 Claims. (Cl. 246—31.)

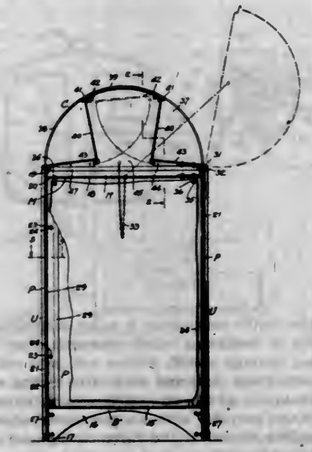


1. In a toy railway, a device adapted to be attached to a track section having a pair of wheel bearing rails and an insulated electrically charged rail, said device including a ground terminal electrically connected with a wheel

bearing rail, and a contact finger adapted to engage with said charged rail and insulated from said wheel bearing rails.

---

1,692,286. PROCESS AND APPARATUS FOR FORMING A PROTECTIVE AND PRESERVING COATING UPON FRUIT AND THE LIKE. ERNEST M. BROGDEN, Santa Monica, Calif., assignor to Brogdex Company, Winter Haven, Fla., a Corporation of Florida. Filed Apr. 27, 1923, Serial No. 635,206. Renewed May 18, 1926. 22 Claims. (Cl. 91—68.)

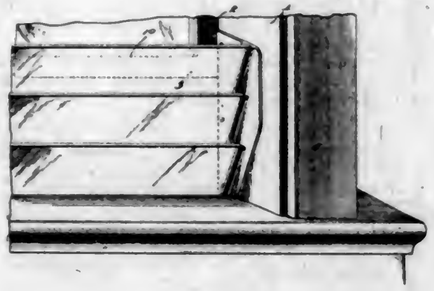


4. Apparatus for treating fruit and the like comprising in combination, means for applying a fluent coating material to the fruit, conveyor means adapted to receive fruit with fluent coating material applied thereto and to deliver said fruit to a point of discharge while freely gravity-supporting said fruit, and fluid-pressure means acting upon said fruit on said conveyor to uniformly distribute said fluent coating material thereover.

16. The process of treating fruit and the like which comprises applying coating material in a fluent condition to the fruit and then blowing air against the fruit to spread the applied material thereover.

---

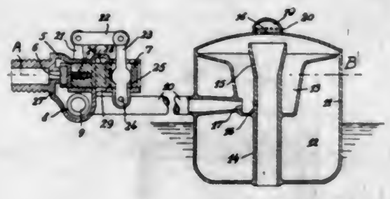
1,692,287. REFUSE RECEPTACLE. SAMUEL D. BUNDY, Pomona, Calif. Filed Apr. 29, 1925. Serial No. 26,773. 6 Claims. (Cl. 220—32.)



1. A receptacle of the character described comprising a base, upstanding posts secured to the base and having

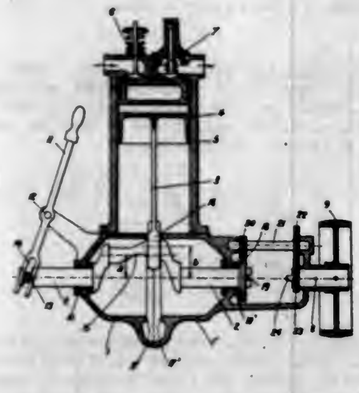
offset longitudinal edges, a frame member secured to the upper ends of the posts, clamping members having lips co-operating with said off-set edges to provide constrictable grooves, panels suspended from the frame members and slidable in the grooves, and means for moving the clamping members so as to constrict the grooves and thereby clamp the panels against movement in the grooves.

---



1,692,288. WINDOW VENTILATOR. FRANK CLARKE, Louisville, Ky. Filed Dec. 10, 1927. Serial No. 239,085. 7 Claims. (Cl. 98—99.)

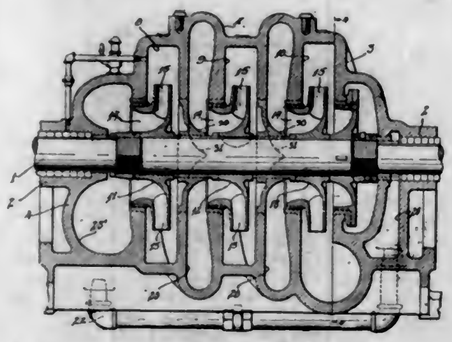
1. A panel holder for window ventilators comprising a bracket adapted to be secured to a suitable support, a layer of elastically yieldable material secured to the inner face of said bracket, and a panel receiving groove formed in said material.



---

1,692,289. FLOAT VALVE. NIELS PETER DAMGAARD, Copenhagen, Denmark. Filed Dec. 28, 1925, Serial No. 78,024, and in Germany Apr. 4, 1925. 12 Claims. (Cl. 137—104.)

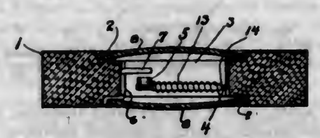
10. A float valve comprising a valve casing and a float loaded with a weighting tank communicating with the valve casing through a stiff, hollow rod, said rod entering both said weighting tank and said valve casing with tight joints, the said rod, at its end entering the valve casing bent to an angle and provided with a screw thread screwing into a corresponding thread in the valve casing and swivelling therein, the said weighting tank provided with several discharge openings in its wall arranged at different levels.



1,692,290. PUMP AND LIKE ENGINE. MANUEL GÓMEZ DE RUEDA, Paris, France. Filed July 13, 1927. Serial No. 205,304. 6 Claims. (Cl. 103—12.)

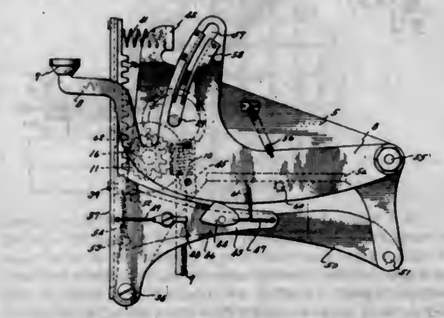
1. In a crank driven engine the combination of a crank with means for simultaneously varying both the speed and the effective radius of said crank.

---



1,692,291. MULTISTAGE PUMP. WILLIAM CHARLES DOWD, Quincy, Ill. Filed Aug. 15, 1924. Serial No. 732,282. 1 Claim. (Cl. 103—108.)

A centrifugal pump comprising a casing, a plurality of impellers, means for actuating said impellers, said casing having a double volute leading from one impeller to the eye of the next impeller, said double volute consisting of two passageways, one passageway starting at a point diametrically opposite to the other making a complete circle and terminating adjacent the eye of the next impeller, the terminating point being disposed diametrically opposite the terminating point of the other passageway, said passageways increasing in area as they approach the eye of the next impeller, whereby a decreasing of velocity and increasing of pressure of the water is effected, means for preventing whirling of the water as the two streams of water from the two volutes merge into one stream, said means comprising a bushing disposed adjacent each of said impellers, and deflecting vanes integral with said bushings and having concave surfaces merging into each other at their adjacent extremities for directing the flow of the two volumes of water in one direction, whereby the two volumes of water will merge into one volume and be conducted into the eye of the adjacent impeller.



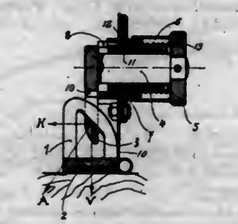
1,692,292. ELECTRIC FLASHER DEVICE. WILLIAM DUBILIER, New Rochelle, N. Y., assignor to Radio Patents Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 25, 1926. Serial No. 144,011. 5 Claims. (Cl. 200—122.)

1. In a disk-shaped flasher for an electrical circuit a thermally responsive element, a co-operating member, a heater member, an insulating support for said element and said co-operating member, the support having slots therein to be engaged by said thermally responsive element and the co-operating member.

---

1,692,293. ZERO-RESETTING DEVICE. LYNDEN N. DAVY, Cheyenne, Wyo. Filed June 1, 1925. Serial No. 33,946. 17 Claims. (Cl. 235—144.)

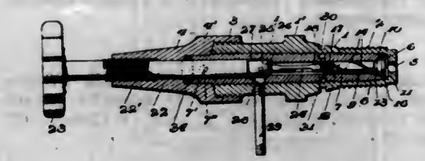
1. In trip indicators for vehicles having a plurality of numeral wheels arranged to be turned from a moving part of the vehicle, and means for resetting all the numeral wheels to zero position including means for detaching the numeral wheels from the moving part of the vehicle, means including normally disengaged racks for simultaneously rotating the numeral wheels in the reverse direction, and means for successively stopping the numeral wheels when they have reached zero position.



---

1,692,294. RACK FOR DRYING OVENS. JOHN D. ELDER, Rockville Center, N. Y., assignor, by mesne assignments, to Crown Cork & Seal Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 27, 1926. Serial No. 104,954. 6 Claims. (Cl. 198—134.)

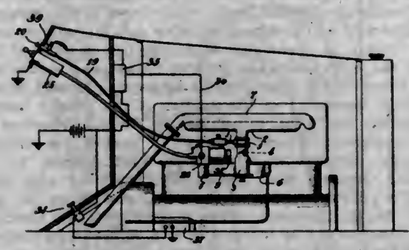
1. A rack for drying ovens embodying therein parallel sprocket chains having laterally extending pivot pins, blocks having openings therethrough adapted to receive said pivot pins whereby said blocks may be pivotally mounted upon said pins, means holding said blocks against displacement with relation to said pins, said blocks having openings therein intermediate the portions thereof engaging said pivot pins, a carrier having legs entering said openings, and means passing through the walls of said blocks respectively and said legs for securing said legs in relation to said blocks.



1,692,295. AUTOMATIC FASTENING DEVICE. AUGUSTE LÉON JEAN GÉRARD, Paris, France. Filed Nov. 30, 1926. Serial No. 151,788. 4 Claims. (Cl. 292—242.)

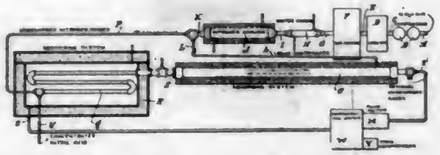
1. A device of the character described comprising in combination with the hood and frame of an automobile, a sleeve fixed to portions of said hood, a handle rotatably mounted within and extending through said sleeve, a curved hook secured to one end of the handle and having a wedging engaging surface, a keeper fixed to the frame and having an inclined surface cooperating with the wedging surface of the hook, and a coil spring engaging the fixed sleeve and the rotatable handle to continuously urge the hook into further wedging engagement with the keeper preventing the hood to move relatively to the frame.

---



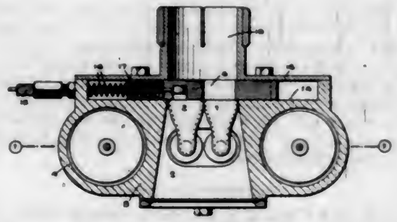
1,692,296. SAFETY VALVE. FRENCH E. GODSEY, Bluefield, W. Va. Filed Sept. 28, 1927. Serial No. 222,667. 7 Claims. (Cl. 277—27.)

1. In a valve of the character described, the combination of the casing open at its inner end, a tubular bushing secured in the casing, a valve and valve-seat located in the inner end of the bushing, a bonnet secured to the outer end of the casing, a valve-operating stem screw-threaded into the bonnet and passing into the bushing and into operative relation with the valve in the inner end of the bushing, and a valve on said valve stem and seating on a valve-seat within said bushing.



---

1,692,297. ENGINE-HEATING APPARATUS. JOHN GOOD, Garden City, N. Y., assignor to Good Inventions Co., New York, N. Y., a Corporation of New York. Filed May 21, 1923, Serial No. 640,018. Renewed Nov. 21, 1927. 28 Claims. (Cl. 123—122.)

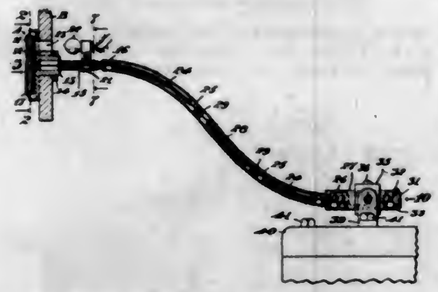


1. The combination, in an internal combustion engine, of a carburetor, an auxiliary, carburetor and a liquid fuel combustion device associated with the latter, comprising a pressure means for spraying the fuel therein and an igniter, and adapted to cause said auxiliary carburetor to deliver a hot mixture of fuel and air.

1,692,298. PRODUCTION OF NITRIC ACID FROM AMMONIA. LUCIEN H. GREATHOUSE, Clarendon, Va., assignor to Atmospheric Nitrogen Corporation, Syrscuse, N. Y., a Corporation of New York. Filed Sept. 6, 1923. Serial No. 661,151. 10 Claims. (Cl. 23—160.)

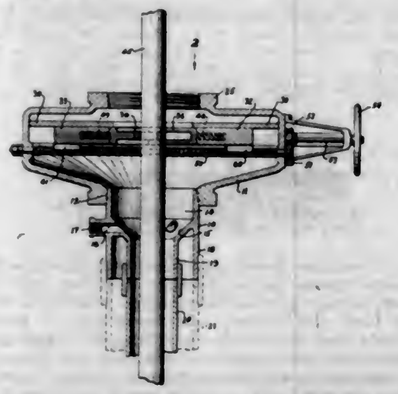
1. The process which consists in compressing a gaseous mixture containing ammonia and oxygen and subjecting the compressed gaseous mixture to catalytic oxidation cooling the resulting product so as to cause a portion thereof to become condensed to liquid form, causing such liquid condensate and the uncondensed gases to travel in contact with each other in the same direction while further cooling them, then separating the liquid condensate from the uncondensed gases, then bringing such liquid condensate and uncondensed gases into renewed contact with each other and causing them to travel in contact with each other in opposite directions while further cooling them, and finally discharging separately, the liquid nitric acid thus obtained and the remaining uncondensed gases, the entire process being conducted at a pressure above atmospheric pressure.

1,692,299. CARBURETOR. HOWARD JOSEPH HARDING, Paris, France. Filed Jan. 6, 1927, Serial No. 159,406, and in Great Britain Jan. 7, 1926. 3 Claims. (Cl. 261—18.)



1. In a carburetor, the combination of a mixing chamber having an outlet adapted for connection with the intake of an engine a plurality of independent feed systems for supplying different fuels, an air inlet, a slide disposed transversely of the mixing chamber and the said air inlet and having an opening allowing the free passage of fuel from the feed systems and air from the air inlet to said mixing chamber, the proportion of air passing to said mixing chamber depending on the position of the slide, a control operating the slide to enable the mixing chamber to be throttled, and a plurality of nozzles for delivering the different fuels from the feed systems to the mixing chamber, said nozzles being disposed with their outlets adjacent a face of the slide, whereby as the passage through the mixing chamber is progressively throttled the outlet of one of the nozzles is progressively restricted in order to decrease the proportion of fuel supplied to an engine from the said nozzle, and, as the opening in the slide is moved to register with the mixing chamber, a projection on the slide extending into the said opening serves to restrict the outlet of a second nozzle progressively, whereby the proportion of fuel supplied to the engine from the said second nozzle is decreased.

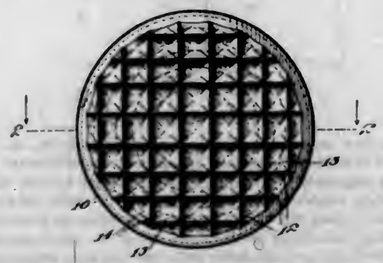
1,692,300. VANITY CASE. HARRY HEITEL and JOSEPH HEITEL, New York, N. Y., assignors of one-half to Harry Jacobson, New York, N. Y. Filed Oct. 16, 1922. Serial No. 594,721. 17 Claims. (Cl. 132—83.)



1. In a vanity case, a member fitted thereinto, a mirror, and a hinge directly joining peripheral points on the mirror and said member together.

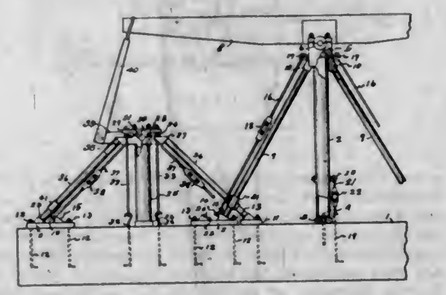
1,692,301. THERMAL INDICATOR. WILLIAM R. HESLEWOOD, Los Angeles, Calif., assignor of one-half to Fred A. Datta, Los Angeles, Calif. Filed June 8, 1927. Serial No. 197,413. 5 Claims. (Cl. 116—114.)

1. In a thermal indicator, a thermostatic element, means for supporting said element on a heat conductive surface, a flexible shaft connected to said thermostat element; said thermostat element being operable on expansion and contraction thereof to effect rotation of said shaft, a dial fixed on said shaft having differently colored fields, a casing having a sight opening exposing a portion of said dial, means connected to said thermostat element whereby said element may be manually turned to effect adjustment of said dial relatively to the sight opening, and means for holding said last named means against rotation.



1,692,302. WELL-CAPPING DEVICE AND CONTROLLING HEAD. ALBERT ORVALL HESSEMER, Fullerton, Calif. Filed May 2, 1925. Serial No. 27,612. 2 Claims. (Cl. 166—15.)

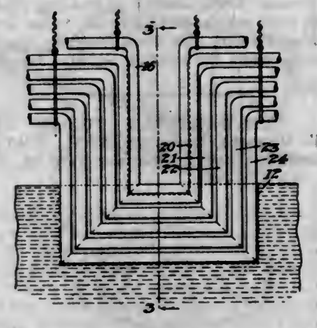
1. The combination with a casing head including a lower body part and an upper head portion, of a series of distributing outlets in said body portion, said head portion including two parts detachably secured together, one of said parts having an apertured plate therein, ribs in said head spaced from said plate, a pair of valve members movable on said ribs, one of said valve members having a spring pressed block movable therein, the other valve member also having a spring pressed block movable therein, one of said movable members comprising two spaced portions and the other member having a portion thereon adapted to fit between said spaced portions, said movable blocks having drill stem engaging slots therein, a threaded shaft extending through said head, one portion of said threaded shaft having right-hand threads and the other part of said shaft having left-hand threads, said valve members having threaded portions thereon engaging said threads and means for rotating said threaded shaft to simultaneously move the two valve members.



1,692,303. LENS. PAUL P. HORNI, Newark, N. J. Filed Mar. 21, 1927. Serial No. 177,126. 1 Claim. (Cl. 240—106.)

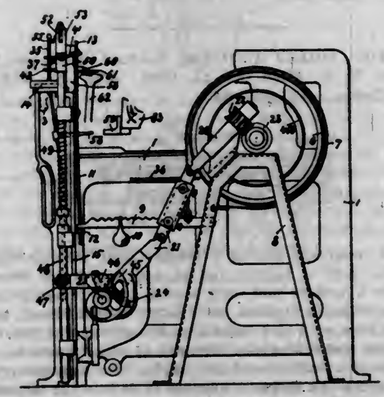
A concavo-convex lens, the concave side having a central bull's-eye, and concentric prismatic ribs cooperating with the bull's-eye to concentrate a beam of light passing through the lens, and the convex side having its whole face covered with lenticular subdivisions whereby the beam formed by the concave side is subdivided into a number of small intersecting beams dispersed both vertically and horizontally.

1,692,304. PUMPING MECHANISM. CLAUDE W. HUGHES, Odessa, Tex. Original application filed July 3, 1926, Serial No. 120,352. Divided and this application filed May 7, 1927. Serial No. 189,497. 5 Claims. (Cl. 74—5.)



1. A device of the character described including a post, a bearing member thereon formed with a bearing, a bracket fixed in position and spaced from the post and formed with an inclined bearing face, a brace rod interposed between said bearing member and bearing face.

1,692,305. INFLATABLE GAME BALL. GEORGE R JACOBUS, Hawthorne, N. J. Filed Feb. 14, 1927. Serial No. 167,960. 1 Claim. (Cl. 273—65.)



An inflatable game ball comprising a casing having a slit, a bladder entrable through the slit into the casing to be inflated therewithin, tabs fixed on the inner surface of said casing at opposite sides of the slit, interlocking fastener devices on the adjacent edges of said tabs, a flexible flap disposable under said tabs and fasteners, a slider movable over said fastener devices, and a pocket in said casing to receive and conceal said slider.

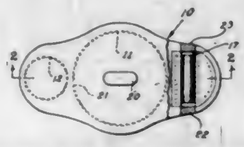
1,692,306. APPARATUS FOR CONTROLLING MOLTEN-GLASS FLOW. CHARLES B. KINGSLEY, Clairton, Pa. Filed Apr. 8, 1926. Serial No. 100,507. 5 Claims. (Cl. 49—55.)

5. In combination with a flow spout of a glass tank, a gate comprising nested conduit members adapted to extend across the pouring passage and to be submerged in the molten metal.

1,692,307. POWER LOOM. REINHARD KNOBEL and EUGEN KNOBEL, St. Gall, Switzerland, assignors to Charles Walter, Cernay, Haut Rhin, France. Filed Mar. 14, 1924, Serial No. 699,180, and in Switzerland Mar. 20, 1923. 9 Claims. (Cl. 139—227.)

1. In a power loom, a drive shaft, fast and loose pulleys driven by said shaft, loom mechanism actuated by the fast

pulley, a brake device for stopping the loom mechanism, a cam shaft, gearing adapted to be actuated by the loose pulley for actuating said cam shaft, a clutch device for throwing said gearing into and out of action, a shifter including a starting and stopping lever for shifting the power from the fast pulley to the loose pulley and vice versa, a control device governing the starting and stopping lever for throwing said lever into action to shift the power from the fast pulley to the loose pulley, a normally inactive control lever controlling said brake device, a normally inactive control lever controlling said clutch device, coacting contact members on said starting and stopping and control levers for shifting said control levers into action when the starting and stopping lever acts on its fast to loose power shifting movement and for returning said controlling levers to normal inactive position upon the return of the starting and stopping lever to normal position, and means operative by the cam shaft for returning said starting and stopping lever to normal position.

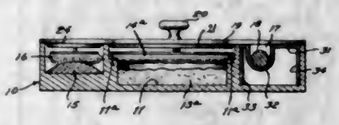


---

1,692,308. PROCESS FOR THE PURIFICATION OF NITRANILINE. HAMILTON MERRILL, South Orange, N. J., assignor to Tower Manufacturing Co., Inc., a Corporation of New York. Filed July 1, 1925. Serial No. 40,978. 4 Claims. (Cl. 260—130.5.)

1. The process which consists in treating para-nitraniline formed from para-nitrochlor-benzol, in an aqueous solution of a solid alkali, then filtering off the solution from the nitraniline while the solution contains said alkali.

---



1,692,309. DRESSING-TABLE TOILET ARTICLE. LAURA L. MILLRING, New York, N. Y. Filed Apr. 10, 1925, Serial No. 22,071. Renewed July 19, 1927. 10 Claims. (Cl. 132—83.)

1. A receptacle having a compartment for receiving a cosmetic such as powder and an applying device therefor such as a powder puff, and having another compartment for receiving a lipstick, said latter compartment being in the form of a slot extending transversely of the receptacle and open-ended laterally of said receptacle, and a cover for said receptacle having a depending member adapted to fit about said receptacle and over the respective ends of said slot for closing said last-mentioned compartment.

---

1,692,310. TOILET ARTICLE. LAURA L. MILLRING, New York, N. Y. Filed Dec. 11, 1926. Serial No. 154,159. 10 Claims. (Cl. 132—83.)

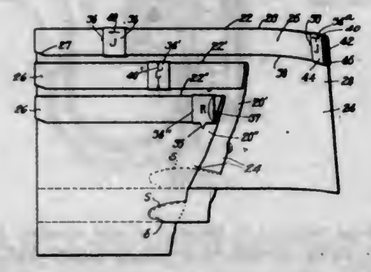
1. A receptacle having a compartment for receiving a cosmetic such as powder and an applying device therefor such as a powder puff, and having another compartment for receiving a lipstick, said latter compartment being in the form of a slot extending transversely of the compartment and open-ended laterally of said receptacle, and a cover for said receptacle having two oppositely disposed depending members adapted to fit into the respective ends of said slot for closing said last-mentioned compartment.

1,692,311. DISPLAY STAND. ROBERT J. RADER, New Rochelle, N. Y., assignor to J. C. Penney Company, New York, N. Y., a Corporation of Delaware. Filed May 3, 1927. Serial No. 188,422. 1 Claim. (Cl. 211—163.)

A display stand comprising a vertical support, an extension rotatably mounted thereupon, downwardly extending angularly and radially disposed bars having their inner ends connected to said extension, a series of rings positioned upon the bars and arranged exteriorly thereto, said rings increasing in diameter from the uppermost to the lowermost proportionate with the angular disposition of the bars, a second series of rings arranged inwardly of and secured to the bars, the rings of said second series being spaced with respect to the rings of the first series to form pairs of rings by means of which articles may be suspended for display, the space between the rings of each pair being governed by the dimension of the bars, and the angular disposition of the bars being of such degree as to eliminate the overlapping of the space between the rings of one pair with the space between the rings of any other pair.

---

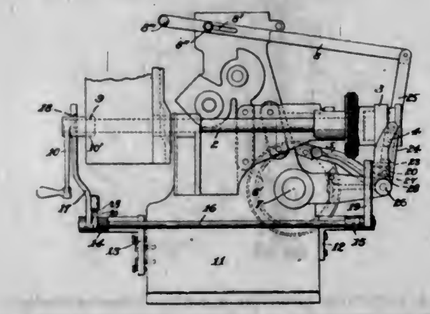
1,692,312. TROUSERS. JACOB REICHEL, New York, N. Y. Filed Mar. 31, 1925. Serial No. 19,591. 4 Claims. (Cl. 2—237.)



2. A garment of the character described having a waistband comprising an outer member and an inner lining, a plurality of belts secured to extend between said member and lining, the end portion of each belt being relatively narrow in width, said member being perforated at spaced distances along the waist band to permit the narrow free end portions of the belts to extend to the exterior side of the garment and being also provided with openings on each side of the perforated portions for inserting the narrow free end of the belt, and a buckle for engaging with said narrow ends of the belt for adjusting the waist band for various sizes.

---

1,692,313. SLIDING SIGNAL. JOHN CHADBOURN ROBISON, New York, N. Y. Filed Dec. 4, 1923. Serial No. 678,405. 20 Claims. (Cl. 129—16.7.)

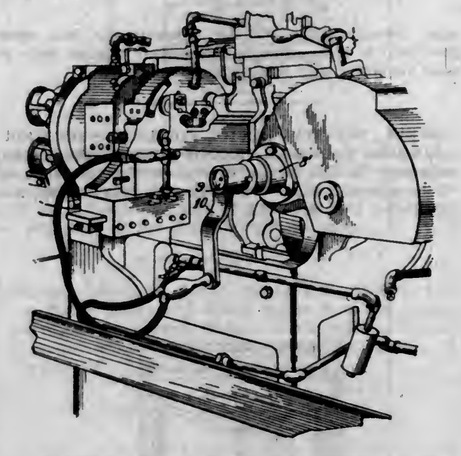


1. An indicating device of the character described comprising a card having an upper marginal flap and a sliding signal interlocked with said flap so as to hold said signal against movement transverse to its path of travel.

18. An index card having a series of sections adapted to be folded over at successive time intervals to form different guide-ways for a sliding signal.

---

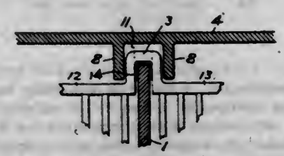
1,692,314. SAFETY DEVICE FOR AUTOMATIC SCREW MACHINES. OLIVER A. RUSSELL, Windsor, Vt., assignor to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 30, 1926. Serial No. 125,862. 21 Claims. (Cl. 29—64.)



1. In a machine having a manually operative and power driven shaft and clutch, mechanism for transmitting power to the shaft, positively acting means shiftable into position to cooperate with said shaft for preventing the attachment of manually operating means to the shaft when the clutch is engaged and having connection with the clutch mechanism for preventing the operation thereof when the manual means is attached, and independent means for operating said clutch mechanism.

10. In a machine having a manually operative and power driven shaft, a clutch for transmitting power to the shaft and clutch shifting means, means for preventing the engagement of the clutch when manually operating means is attached to the shaft and comprising means shiftable to cooperate with the power shaft and having connection with the clutch mechanism, independent means for operating said clutch shifting means, and means for locking the clutch in its inoperative position.

---



1,692,315. CRANK-HANDLE SAFETY DEVICE FOR MULTIPLE-SPINDLE SCREW MACHINES. CHARLES W. SIMPSON, Windsor, Vt., assignor to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 26, 1927. Serial No. 222,160. 17 Claims. (Cl. 29—64.)

1. In a machine having an automatically operated clutch comprising a fixed and a shiftable member and means for operating it, the combination of a feed shaft, a sliding crank handle shaft, said shafts having an interlocking connection, a sliding push rod connected with the shiftable member of the clutch and in position to engage the crank shaft thereby to slide the crank shaft out of engagement with the feed shaft when the clutch is thrown into operation.

---

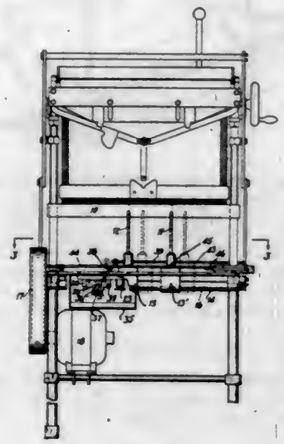
1,692,316. STORAGE BATTERY. EDWARD W. SMITH, Philadelphia, Pa. Filed Dec. 31, 1927. Serial No. 243,887. 2 Claims. (Cl. 136—170.)

1. A storage battery container having vertical intercell partition walls and intercell connectors provided with yokes mounted at the top portions of said walls, and an externally flanged concave cover common to several cells and adapted to fit into said container, the concave face of said cover being provided with spaced ribs adapted to receive between them the yoke of a connector and the top part of said cell wall, and said ribs on opposite sides of the yoke provided with confronting ledges.

---

1,692,317. ACOUSTIC WAVE FILTER. GEORGE WALTER STEWART, Iowa City, Iowa, assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 25, 1922, Serial No. 577,409. Renewed Sept. 18, 1928. 26 Claims. (Cl. 181—0.5.)

17. An acoustic wave filter, comprising two co-axially disposed tubular bodies, a plurality of axially spaced par-

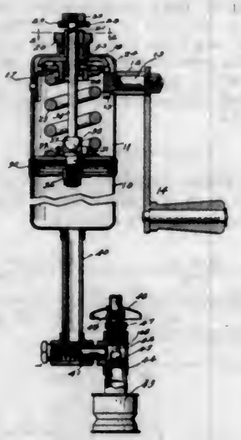


tition walls dividing the interspace into separate compartments, openings between the inner tubular body and the separate compartments and tubes extending through the

outer tubular body into the compartments into close proximity to the openings in the inner tubular body in axial alignment with said openings.

---

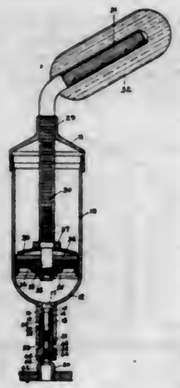
1,692,318. SHIFTING DEVICE FOR DRILLS ON BOOK-BINDING MACHINES. NELSON S. WELK, Athens, Ohio, assignor to The McBee Binder Co., Athens, Ohio, a Corporation of Ohio. Filed May 25, 1927. Serial No. 193,958. 4 Claims. (Cl. 77—6.)



1. The combination, with a book-binding machine, of a plurality of electrically driven drills suitably connected to a source of electric power, carriages on which said drills are mounted, a guide upon which said carriages are laterally slidable, an electrical switch in the line, means connected to said switch and said carriages whereby the lateral movement of the carriages in one direction operates to close said electrical switch and in the other direction to open it and move the said drills out of the path of the drilled holes.

---

1,692,319. GREASE GUN. OSCAR ZERK, now, by judicial change of name, Oscar Ulysses Zerk, Cleveland, Ohio, assignor, by mesne assignments, to Alemite Manufacturing Corporation, a Corporation of Delaware. Filed May 25, 1921. Serial No. 472,482. 3 Claims. (Cl. 221—47.4.)



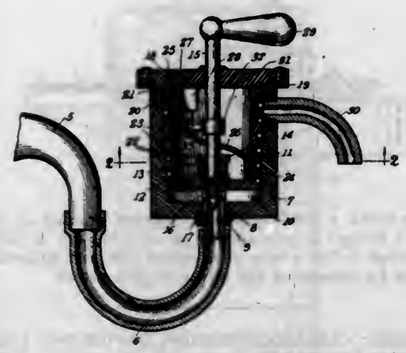
3. A lubricant coupling comprising a valve chamber having a valve seat defining an outlet for said chamber, means for making a quick detachable connection with a lubricant receiving element, said means communicating with said chamber through said outlet, a valve for closing said outlet, a valve stem extending outside said valve chamber and in axial alignment with said connecting means, said valve

stem being threaded in the wall of said chamber, and a torsion spring tending to rotate said stem and close said valve.

---

1,692,320. LUBRICATING APPARATUS. OSCAR ZERK, now, by judicial change of name, Oscar Ulysses Zerk, Cleveland, Ohio, assignor, by mesne assignments, to Alemite Manufacturing Corporation, a Corporation of Delaware. Filed Nov. 21, 1922. Serial No. 602,465. 6 Claims. (Cl. 221—47.4.)

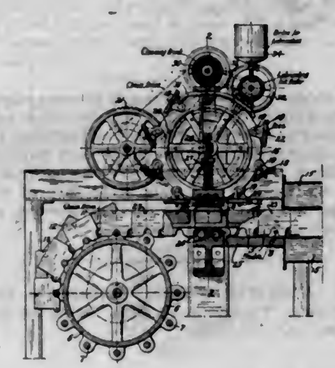
1. A lubricating pistol for a contact pressure-lubricating system comprising a lubricant receptacle having an exit, a valve within said exit, a piston reciprocable within said receptacle, manually operable means for moving said piston to create pressure upon the lubricant within said receptacle, means for independently further moving said piston in the same direction to eject lubricant therefrom when said valve is open, and means for opening said valve by pressing said exit against the part to be lubricated.



---

1,692,321. INSTANTANEOUS ELECTRIC WATER HEATER. GEORGE J. ZISCH, Newark, N. J. Filed Jan. 27, 1927. Serial No. 163,874. 3 Claims. (Cl. 219—39.)

1. An electric water heater comprising a cylindrical body having means to connect with a water supply source,

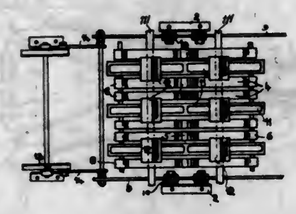


said body having a conical chamber and an opening leading thereto, a cover on the open end of said body, a hollow tapered plug having a raised helix on its periphery fitting the chamber, a high resistance wire coil disposed in the grooves of said helix, a snap switch controlling current

to said coil, a valve controlling the passage of water through the helical grooves, said valve having a stem extending through said cover, a handle thereon, an outlet on said body in communication with the groove most remote from the water inlet and means actuated by said valve handle to operate said switch.

---

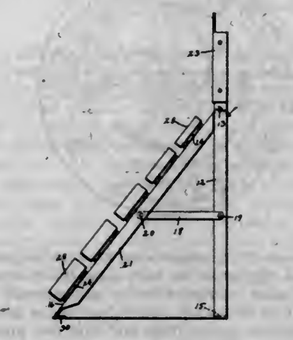
1,692,322. SOAP-MARKING MACHINE. CHARLES W. AIKEN, New York, N. Y. Filed Apr. 14, 1921. Serial No. 461,398. 8 Claims. (Cl. 25—7.)



1. In a soap marking machine, an endless chain of mold boxes for carrying cakes to be marked, a plurality of marking dies rotatably mounted to move adjacent said boxes and mark the cakes therein, means for causing the lineal speed of said boxes and marking dies to be substantially equal, means for cleaning each die, and means for lubricating each die after the latter has been cleaned.

---

1,692,323. FIRE GRATE. ABEILARD SANTA ROSA ARAUJO, Rio de Janeiro, Brazil. Filed Nov. 2, 1926, Serial No. 145,740, and in Brazil Nov. 25, 1925. 3 Claims. (Cl. 126—157.)

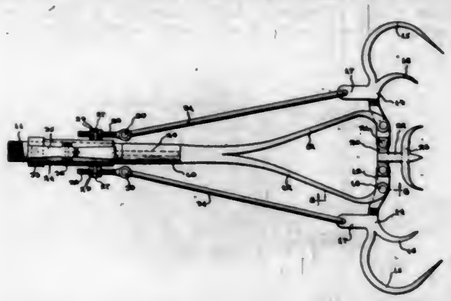


3. A grate structure of the character described comprising a set of stationary bars comprising single side bars and a plurality of pairs of bars arranged therebetween and spaced therefrom and from each other, each of said bars having upon its top a central hump and an end half hump, a set of shiftable bars comprising a single bar arranged between each of said pairs of stationary bars

and between each side bar and the adjacent pair of stationary bars, the bars of one set having laterally extending scraping projections partially overhanging the upper surfaces of the adjacent bars of the other set, and means for reciprocating the shiftable bars in unison.

---

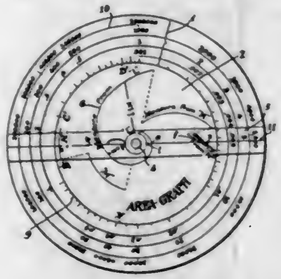
1,692,324. DISPLAY RACK. WILLIAM H. AVERILL, Boston, Mass., assignor to Joseph Pollak Tool and Stamping Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 26, 1927. Serial No. 228,788. 4 Claims. (Cl. 211—160.)



1. A display-rack structure comprising a substantially U-shaped bow composed of spaced apart parallel arms and a neck connecting the arms; a transverse coupling rod connecting the arms and spaced from the neck; a display board having merchandise-confining means, flanges adapted to overlap the outer sides of said arms, and a coupling hook adapted to separately engage the coupling rod; and parallel links pivoted to said arms and flanges, and adapted to extend either parallel with the arms, or at an angle therewith, the arrangement being such that the structure may be converted into an easel-shaped rack, adapted to bear on a horizontal support, by engaging the coupling hook with the coupling rod, and arranging the links substantially at right angles with the arms, and into a flat rack adapted to be hung on a vertical support, by disconnecting the hook from the rod, and arranging the links parallel with said arms, and extending toward the neck.

---

1,692,325. GAFF HOOK. GORDON L. BELLILE and FRED REISSMANN, Rhinelander, Wis. Filed Nov. 7, 1927. Serial No. 231,558. 5 Claims. (Cl. 43—5.)

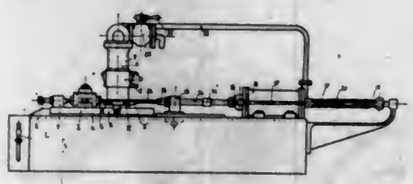


1. A gaff hook comprising a staff having terminal divergent spring arms, hook members having pivotal mountings

in the terminals of said arms and tail extensions beyond said pivotal mountings, a trip spur having terminal pivotal connections with said tail extensions, a sleeve slidably mounted on the staff, and link connections between said sleeve and said hook members.

---

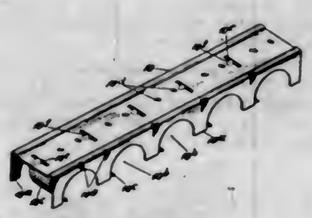
1,692,326. DRAWING DEVICE. SAMUEL WHITTEMORE BOGGS, Chevy Chase, Md. Filed Oct. 11, 1926. Serial No. 140,941. 19 Claims. (Cl. 33—75.)



1. A drawing device comprising in combination a member having an edge provided with logarithmic graduations, a second member carried thereby and movable relative thereto and provided with a base line and a plurality of logarithmic curves spaced from said base line proportional to measurements of lines, areas, volumes, and angles, respectively, and cooperating with said graduations on said first member, and an indicator member which is movable over both said two first-mentioned members by means of which to take off at any relative setting of said two first-mentioned members a series of coordinates of the curves on said second member corresponding to the numerical values of said graduations on said first member.

17. An article of manufacture comprising an element having a polar curve formed thereon within a circle of limited radius, the curve being developed initially outwardly from a circular base-line of small radius to a point near the periphery of said circle, and being continued from a point on the same radial line with the last mentioned point in such manner that the distances measured radially from said small circular base-line to points on said curve are less than the corresponding radial co-ordinates of the respective points by a constant value.

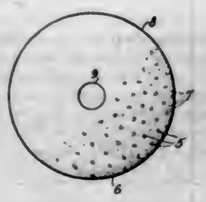
---



1,692,327. ELECTRIC UPSETTING OR JOLTING MACHINE. FRANCESCO BARRO, Turin, Italy. Filed Oct. 25, 1926, Serial No. 144,090, and in Italy Nov. 6, 1925. 1 Claim. (Cl. 219—3.)

An upsetting or jolting machine comprising a bed, two insulated plates mounted on said bed and connected to the terminals of a source of electricity, a ram mounted on one of said plates and the piston whereof actuates a half-bush cooperating with another half-bush for gripping the work piece, an adjustable anvil arranged on the other plate, a guide and stop support situated on the bed, a plunger axially slidable in said support, a piston connected to the piston of a second ram and adjustable means for regulating the stroke of said piston.

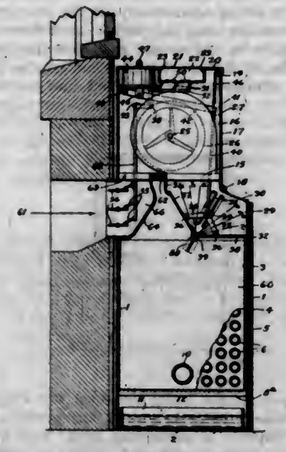
---



1,692,328. CARTRIDGE-FEEDING DEVICE FOR AUTOMATIC FIREARMS. JOHN M. BROWNING, Ogden, Utah; John Browning administrator of said John M. Browning, deceased. Filed Jan. 2, 1925, Serial No. 141. Renewed Aug. 18, 1928. 24 Claims. (Cl. 89—33.)

2. A cartridge holder for automatic firearms comprising a normally horizontal top plate, and cartridge engaging means depending from the top plate and including a flange extending longitudinally of the holder and having seats for receiving a plurality of cartridges, the portions of the flange at the edges of the seats being adapted to enter annular grooves in the cartridges to prevent relative endwise movements of the cartridges.

---



1,692,329. ABRASIVE WHEEL. GILDEROY O. BURLEW, Newark, N. J. Filed Sept. 10, 1927. Serial No. 218,695. 3 Claims. (Cl. 51—279.)

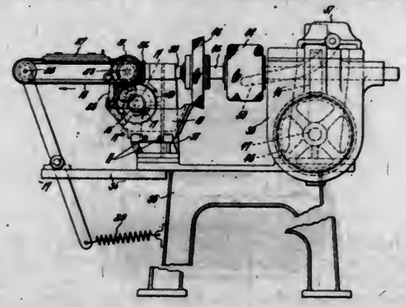
2. A grinding wheel comprising an abrasive substance in powdered form, chopped sponge incorporated therewith, and a binder of rubber vulcanized with the abrasive and sponge.

1,692,330. HEATING AND VENTILATING UNIT. MICHAEL J. CALLAHAN, New York, N. Y. Filed Jan. 19, 1924. Serial No. 687,199. 16 Claims. (Cl. 257—3.)

13. A heating and ventilating unit comprising a casing divided into a plurality of chambers, one of the chambers being at the top of the casing and adapted to contain blowers and a motor for operating the latter; another of the chambers being at the bottom of the casing and adapted to contain a heating element; another and smaller chamber being located between the heating and blower chambers and having a damper operating therein adapted to shut off the heating chamber from the blower chamber; and still another chamber located between the heating and blower chambers and in rear of the smaller chamber and communicating with the blower chamber to admit fresh air thereto.

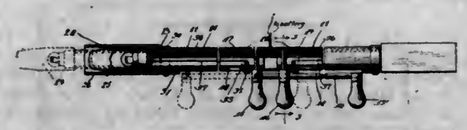
---

1,692,331. VARIABLE INDUCTANCE. NEWSOME HENRY CLOUGH, Chelmsford, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Jan. 3, 1925, Serial No. 401, and in Great Britain Jan. 14, 1924. 7 Claims. (Cl. 171—242.)



1. A variable inductance comprising a plurality of coils wound upon a spherical former and a spherical cap mounted to turn about a diameter of the former to cover varying portions of any of the coils.

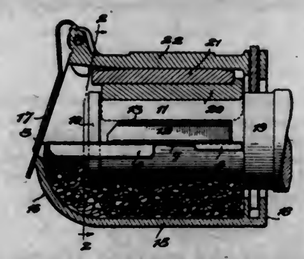
---



1,692,332. SOLE-WAXING MACHINE. WILLIAM A. COPELAND, Boston, Mass., assignor to International Shoe Company, St. Louis, Mo., a Corporation of Delaware. Filed Dec. 9, 1925. Serial No. 74,378. 7 Claims. (Cl. 12—79.5.)

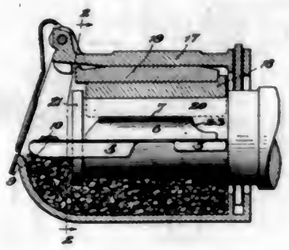
1. In a device of the class described, a liquid container, means for heating the container, means for feeding liquid from the container, means for transferring the liquid from the feeding means and applying it to work held thereagainst, said transferring and applying means comprising a plurality of chains positioned side by side for contact with said feeding means; means adjacent a portion of said chains for heating said chains, and means for maintaining a yielding tension on said chains.

---



1,692,333. SIGNALING DEVICE. BENJAMIN A. CRENSHAW, Chicago, Ill. Filed May 16, 1927. Serial No. 191,631. 10 Claims. (Cl. 177—329.))

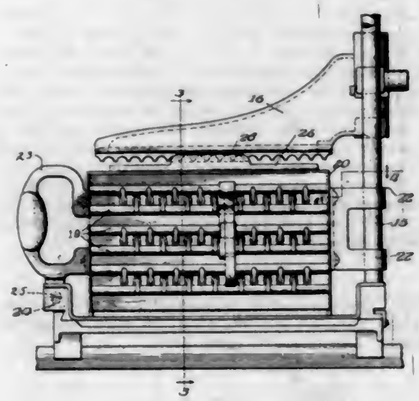
8. In a direction signal for motor vehicles, a body member arranged to be attached transversely to a motor vehicle adjacent to the instrument board, laterally extensible signal arms slidably mounted on said body member a signal at the outer end of each of said arms, and means interconnecting the arms, so that on the projection of one the other will be automatically retracted, each said signal comprising a member formed to represent a hand with the index finger extended, the central portion of said member being cut away to provide a similar hand shaped open space, an incandescent light bulb within said space, lenses of colored translucent material overlying said space on opposite sides of said bulb, an electric circuit for said light bulb and means for closing said circuit incident to extending its signal arm.



---

1,692,334. JOURNAL-BOX-WASTE RETAINER. REAMEY H. DYER, Roanoke, Va. Filed July 28, 1926. Serial No. 125,363. 4 Claims. (Cl. 308—80.)

2. A waste retainer for car axle journal boxes, comprising a front member, side members extending rearwardly therefrom, said members having downwardly projecting flanges at their outer edges, and cheeks extending upwardly from the inner edges of said side members and having horizontal bearing faces at their tops, as and for the purpose described.

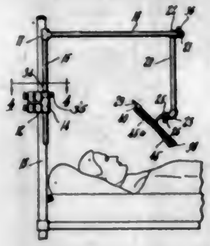


1,692,335. WASTE RETAINER. REAMEY H. DYER, Roanoke, Va. Filed Sept. 29, 1927. Serial No. 222,773. 5 Claims. (Cl. 308—89.)

1. A waste retainer for car axle journal boxes, comprising right and left hand sections, each composed of an end member and a side member, the latter having an upstanding flange on its inner edge to engage the journal brass, said members also having downward extending flanges on their outer edges, and a swinging latch to lock said end members together.

---

1,692,336. GRIPPING DEVICE FOR SLICING MACHINES. JOSEPH FOLK, La Porte, Ind., assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed Apr. 23, 1927. Serial No. 185,948. 8 Claims. (Cl. 146—217.)



1. A work holder for slicing machines comprising a work support, an upright mounted on said work support at one side thereof, a top grip slidably mounted on said upright, an end grip attached to said upright, and means on the top of said end grip for engaging said top grip to hold said end grip in place on said work support.

---

1,692,337. ADJUSTABLE HOLDER. DOROTHY FORBES, Boston, Mass. Filed Apr. 22, 1927. Serial No. 185,762. 1 Claim. (Cl. 45—82.)

For use with a bedstead and a bed thereon, an adjustable holder comprising, in combination, a clamp adapted to engage opposite sides of one of the upright corner posts of the bedstead, above the bed, and provided with a socket offset from the clamp and post; a crane including an upright member journaled in the socket and vertically adjustable therein, and provided with means whereby it may be supported by the socket and permitted to turn therein when in any position to which it is vertically adjustable, the crane including also a horizontal member fixed to and projecting from the upper end of the upright member, and adapted to swing horizontally on the axis provided by the upright member and the socket to different angular positions relative to the corner post and the bed; a terminal arm hinged to the swinging end of the horizontal member and adjustable to a vertical and to various in-

clined positions, means being provided for securing said arm to the crane to hold the arm in any position to which it may be adjusted; a supporting rack; and a ball and socket joint connecting said rack with the lower end of the terminal arm, said joint being provided with means whereby it may be locked to confine the rack in different angular positions relative to the terminal arm, the arrangement being such that the rack may be supported in various positions over the bed, and may be displaced with the terminal arm and the crane to leave the bed unobstructed.

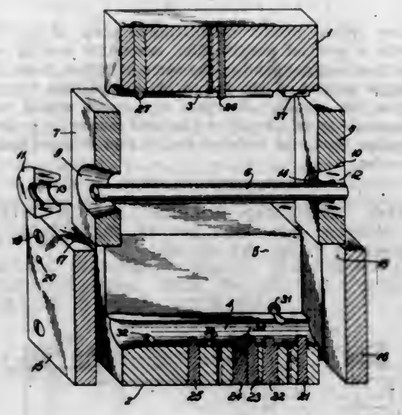
---

1,692,338. CLAMPING DEVICE FOR SLICING MACHINES. EUGENE R. FOX, Southport, England, assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed May 6, 1927. Serial No. 189,297. 8 Claims. (Cl. 146—217.)

1. A clamp for slicing machines having means for gripping material to be sliced, a guard for said gripping means, springs for holding said guard in position to shield said gripping means for permitting said guard to move into a position to expose said gripping means, guides for directing the movement of said guard, and stops for limiting the movement of said guard towards its shielding position.

---

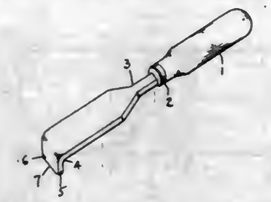
1,692,339. INTERNAL-COMBUSTION ENGINE. WILLIAM H. HILL, Canton, Ohio. Filed Apr. 20, 1927. Serial No. 185,170. 9 Claims. (Cl. 123—191.)



1. An internal combustion engine including a cylinder, a piston reciprocating in the cylinder, a substantially flat

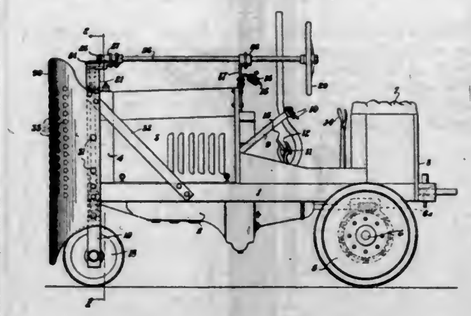
initial combustion chamber consisting of an extension of one end of the cylinder bore, spark ignition means in the initial chamber, a secondary combustion chamber of greater capacity and height than the initial chamber and of a height substantially equal to its width, located entirely at one side of the end of the cylinder, and communicating tangentially with one side of the initial chamber whereby upon the compression stroke of the piston the mixture will be rapidly displaced from the initial chamber and discharged tangentially into the secondary chamber and caused to rotate in the secondary chamber, the rotation being accelerated by expansion of burning gases from the initial chamber, the flame velocity being added to the velocity of the gases rotating in the secondary chamber, causing the same to be enveloped by the flame before the combustion reaches the center of the mass.

---



1,692,340. MOLD FOR MUSICAL-INSTRUMENT BODIES OR SIMILAR ARTICLES. ROBERT B. LATTIN, West Hartford, Conn., assignor to Colt's Patent Fire Arms Manufacturing Co., Hartford, Conn., a Corporation of Connecticut. Filed Jan. 27, 1927. Serial No. 163,924. 12 Claims. (Cl. 18—42.)

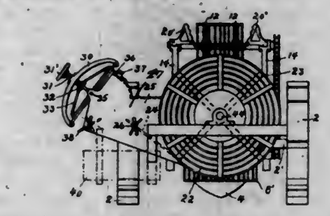
1. A mold for a hollow article of the type described, comprising in combination separable body members having registering recesses therein which together constitute a mold opening conforming in shape to the exterior contour of the article to be molded, one of the said body members being provided with a hole communicating with the recess therein and having its axis at an angle to the direction of separation of the said members, a removable core normally extending longitudinally through the said mold opening and conforming in shape to the interior contour of the article to be molded, a plug adapted to extend through the said hole in the last said body member and serving to form a correspondingly located hole in the article to be molded, and means operable prior to molding to move the plug inward relatively to the last said body member substantially into position for engagement with the core, the said means serving to hold the plug in fixed relation to the said body member while relative movement between the body members is effected to close the mold and also serving to move the plug outward relatively to the said body member after molding so as to withdraw it from the molded article and thereby permit the said article to be separated from the said body member.



1,692,341. EYELASH CURLER. CLARA H. LOCKE, Plainfield, N. J. Filed Mar. 23, 1928. Serial No. 264,175. 2 Claims. (Cl. 132—31.)

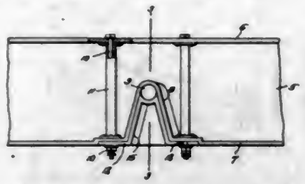
1. An eyelash curler comprising a device of substantially flat ribbon shaped material, mounted on a suitable handle, the end of said device being bent at right angles thereof, having its depending end curved at the corner portions and its edges rounded.

---



1,692,342. TRACTOR. MORRELL E. MILLER, Warren, Ohio. Filed Sept. 16, 1925. Serial No. 56,729. 1 Claim. (Cl. 180—25.)

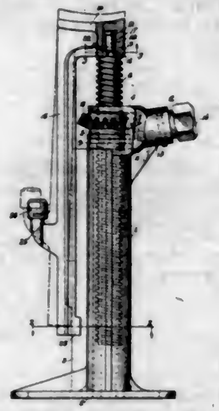
A tractor, having an internal combustion engine mounted on the frame of the tractor at its forward end, a radiator in front of said engine, a substantially rectangular frame mounted vertically in front of the radiator at the forward end of the tractor frame, a vertical shaft carried by the rectangular frame, a taction steering wheel carried by said shaft, and a curved bumper plate connected to said rectangular frame and extending in front of the radiator and wheel and provided with a series of perforations in front of the radiator.



---

1,692,343. POTATO DIGGER AND SEPARATOR. CARL FREDRIK MÖLLER, Oslo, Norway. Filed Mar. 11, 1925, Serial No. 14,714, and in Great Britain Mar. 25, 1924. 3 Claims. (Cl. 209—119.)

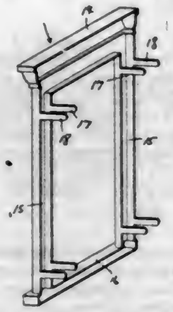
1. A machine for use in separating and sorting potatoes, stones and other matter in which the sorting mechanism comprises a resilient surface, means for adjustably stretching the resilient surface, and positive means for throwing the potatoes and stones upward against the resilient surface.



1,692,344. WHEEL FELLY. DANIEL E. MORAN, Sr., Monrovia, Calif. Filed June 27, 1927. Serial No. 201,884. 3 Claims. (Cl. 301—5.)

1. In a felly having a flange, a portion of the flange being directed inwardly to form a valve stem receiving opening, and a filler member, means for pivotally mounting the filler member.

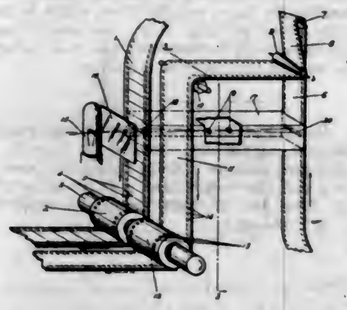
---



1,692,345. LIFTING JACK. JOHN A. MORRISON, Mansfield, Ohio. Filed Dec. 21, 1925. Serial No. 76,612. 4 Claims. (Cl. 254—133.)

1. A lifting jack including a standard having a plurality of vertical ribs thereon, a lifting member carried by the standard, a reduced shank upon the upper end of the lifting member and provided with a squared portion, and a lifting arm having a socket provided with a squared portion to receive the squared portion of said shank, and having means arranged to selectively slidably engage any one of said vertical ribs.

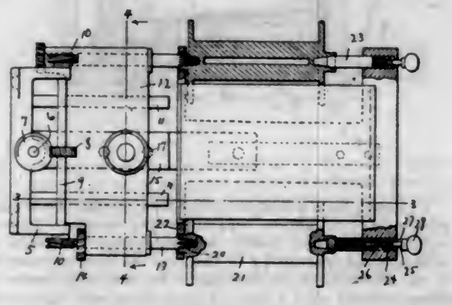
---



1,692,346. DOLL-HOUSE CONSTRUCTION. REINHARDT NITSCHKE and HENRY SALOIS, Lawrence, Mass. Filed Mar. 23, 1927. Serial No. 177,661. 3 Claims. (Cl. 46—37.)

1. A window frame member comprising a unitary sheet member formed to provide a rectangular frame of U-shaped cross section, the free edges of said frame being formed with a plurality of pairs of projecting tongues in a predetermined relation extending from the rear free edge portions thereof in parallel relation.

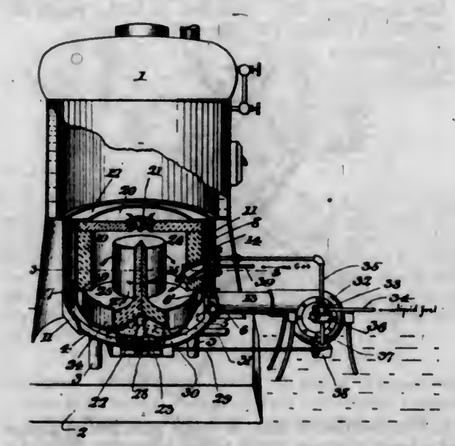
---



1,692,347. OPTICAL PRINTER. FREEMAN H. OWENS, New York, N. Y. Filed Nov. 12, 1926. Serial No. 147,978. 6 Claims. (Cl. 88—24.)

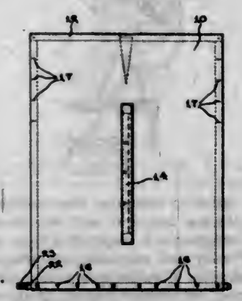
1. An optical printer comprising a strip of negative film and a strip of positive film, means for moving said strips synchronously and in the same direction, means for causing a portion of the length of said positive strip to move in the opposite direction at a point spaced from and opposite to said negative film, and means for projecting images from said negative film to said positive film at such point.

---



1,692,348. STRIP-MAP HOLDER. FRED A. PULLEN, La Fontaine, Ind. Filed Oct. 18, 1927. Serial No. 226,943. 1 Claim. (Cl. 40—42.)

In a strip map holder, a stationary frame, a gear mounted thereon adapted for operative connection with a speedometer drive shaft, a counter-shaft journaled on said frame, means operatively connecting the same with said gear, gears mounted on each end of said counter-shaft, a carriage slidably arranged on said frame, a pair of shafts journaled for rotation in said carriage, means operatively connecting said shafts for opposite rotation with said counter-shaft gears, manually operated means for selectively moving said carriage shafts into and out of operative position, a map spool frame, means detachably connecting said frame with said carriage, a pair of spools mounted in said map frame and arranged for rotation by said carriage shafts and means for manually operating said spools when the carriage shafts are disconnected from said speedometer drive shaft.

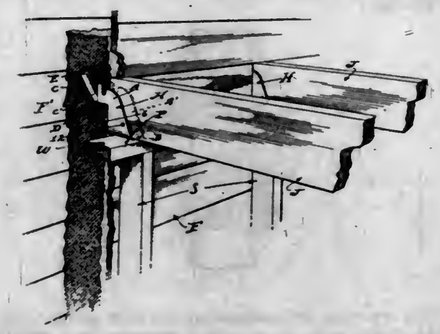


1,692,349. LIQUID-FUEL BURNER. FRANCISCO ANGEL QUIROZ and ERNEST HENRY PEABODY, New York, N. Y., assignors to Peabody Engineering Corporation, a Corporation of New York. Filed Apr. 9, 1926. Serial No. 100,838. 7 Claims. (Cl. 158—28.)

1. In a liquid fuel burner, a combustion chamber, a rotary table at the bottom of the chamber upon which the fuel is fed, said table carrying a central abutment for reflecting the heat, means at one side of the chamber for feeding fuel with an admixture of air to the table, said chamber having a discharge opening so placed with respect to the abutment that the burning gases are constrained to move above the abutment toward the discharge opening.

---

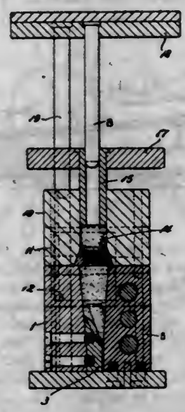
1,692,350. NETHER GARMENT. ANNIE E. ROBERTSON, Coffeyville, Kans. Filed Oct. 18, 1927. Serial No. 226,889. 3 Claims. (Cl. 2—224.)



1. A nether garment comprising a rectangular piece of which one end edge defines the waist-band, the side edges adjacent said waist-band and the lower edge being provided with complemental fasteners which when attached cause the connected sections to define leg portions.

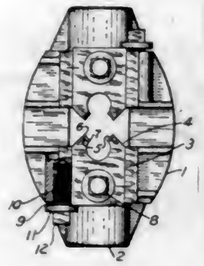
---

1,692,351. JOIST HANGER. FRANKLIN N. ROPP, Los Angeles, Calif. Filed Sept. 12, 1927. Serial No. 218,980. 4 Claims. (Cl. 72—108.)



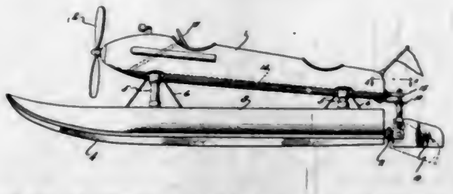
3. A hanger comprising a U-shaped stirrup for receiving a joist, an anchor having an outer horizontal supporting portion permanently secured to the upper portion of said stirrup, and a central portion inclined inwardly and

upwardly from the stirrup and bent forwardly at its inner end to form an anchor when the same is embedded in a wall.



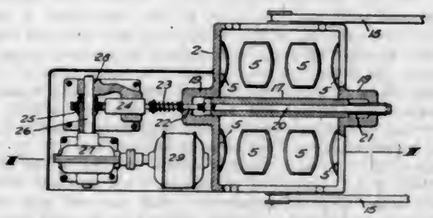
---

1,692,352. MOLD FOR MUSICAL-INSTRUMENT MOUTHPIECES. WILLIAM F. SCHMALZ, Rockville, and ROBERT E. DODD, Hartford, Conn., assignors, by mesne assignments, to Colt's Patent Fire Arms Manufacturing Co., Hartford, Conn., a Corporation of Connecticut. Filed Sept. 11, 1926. Serial No. 134,855. 10 Claims. (Cl. 18—34.)



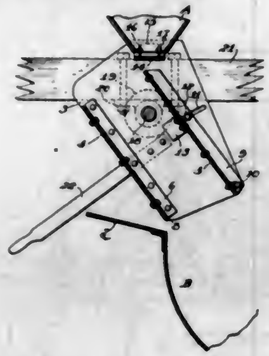
1. A mold for the mouth piece of a musical instrument or for a similar article, comprising in combination a body member having a vertical recess therein conforming to the exterior contour of the major portion of the article to be molded and having at one side a vertical slot therein communicating with the recess at one side thereof, a vertical plate adapted to fit and close the said slot and relatively movable laterally with respect to the body member during assembly and disassembly, the inner edge of the plate when in assembled relation with the body member forming an exterior flat surface on the said article, a core lug carried by the plate and projecting laterally into the recess when the body member and plate are in assembled relation so as to form a lateral opening in the said article, and a depending central core rod movable vertically into or out of engagement with the said core lug, the said rod forming a central opening in the said article communicating with the lateral opening formed by the lug.

1,692,353. DIESTOCK. LEO V. STOELTZLEN, Erie, Pa., assignor to Reed Manufacturing Company, Erie, Pa. Filed Jan. 6, 1927. Serial No. 159,304. 1 Claim. (Cl. 10—121.)



In a die stock, the combination of a body having a two-sided chaser guide groove and a screw-threaded opening along one wall of the groove; a chaser slidingly mounted and freely movable in the groove and supported at its side edges directly and only by the walls of the guide groove; and a screw in the screw opening having a head overlapping the end of the chaser, said screw forming the only backing support of the chaser and supporting said chaser only at one edge whereby the lateral yielding of the chaser in the groove under the torque of cutting pressure tends to close the die and the backing off movement tends to open the die.

1,692,354. ICE BOAT. PETER STONE, Detroit, Mich. Filed Jan. 24, 1927. Serial No. 162,973. 4 Claims. (Cl. 114—43.)



1. In a combined ice- and water-boat, the combination of a boat body, means adapted to support the boat on ice and in water, a guiding rudder mounted at the rear of said means, means for pivoting said rudder laterally, said rudder being pivotal vertically independently of the means for effecting lateral pivoting whereby the same may assume correct position for guiding the boat on ice and in water and means acting on the rudder to cause it to forcibly engage ice and submerge in water.

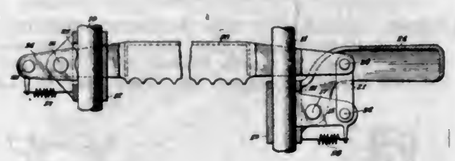
1,692,355. BLOCK-MOLDING MACHINE. FRANCIS J. STRAUB, New Kensington, Pa. Filed Nov. 16, 1926. Serial No. 148,674. 4 Claims. (Cl. 25—41.)

1. A block molding machine provided with a vertically arranged molding casing, a vertically movable bottom plate, a presser plate, a reciprocable side plate forming one confining wall of the casing and provided with a spring retracted stem, and an actuating eccentric therefor.

1,692,356. MEASURING BOX. FRANCIS J. STRAUB, New Kensington, Pa. Filed Feb. 1, 1927. Serial No. 165,238. 5 Claims. (Cl. 221—107.)

1. The combination with an upper open bottom hopper and a lower receiving casing having a laterally extending material supporting shelf, of an interposed pivotally mounted measuring box having an adjustable side wall, a cut off gate for the hopper and a continuously open bottom, and means for shifting the measuring box on its pivotal mounting to move contained material from direct supporting engagement with the shelf to the casing.

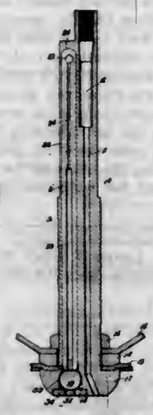
1,692,357. MACHINE FOR SPINNING COTTON AND OTHER TEXTILE MATERIALS. AMBROGIO TURATI, Turin, Italy. Filed Oct. 10, 1927, Serial No. 225,245, and in Italy Dec. 18, 1926. 3 Claims. (Cl. 19—130.)



1. In a ring spinning machine, the combination with a rear pressure cylinder, and rear and intermediate grooved cylinders, of a bridge piece suspended from the pivots of the pressure cylinder and extending between the rear and intermediate cylinders substantially tangential to said cylinders and adapted to support and guide the roving in its passage between the pair of rear cylinders and the pair of intermediate cylinders.

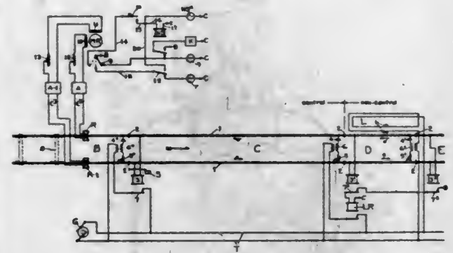
1,692,358. CLEANING GELATINOUS SURFACES AND THE LIKE. BERTHA SUGDEN, Boston, Mass., assignor, by mesne assignments, to Technicolor Motion Picture Corporation, Boston, Mass., a Corporation of Maine. Filed Jan. 20, 1926. Serial No. 82,622. 2 Claims. (Cl. 87—5.)

1. A method for cleaning gelatinous surfaces, comprising immersing the same in a dilute, volatile solution of approximately 2% of ammonia and ethyl alcohol inert with respect to the gelatinous material, followed by drying.



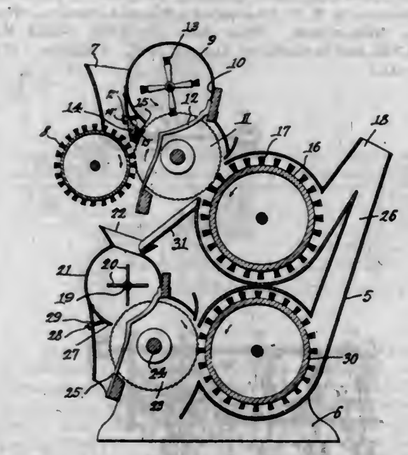
1,692,359. CLAMP FOR SLICING MACHINES. WILLEM PETRUS VAN LAMMEREN, Rotterdam, Netherlands, assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed Aug. 16, 1926, Serial No. 129,414, and in Germany June 11, 1925. 9 Claims. (Cl. 146—217.)

1. A clamp for holding material to be sliced comprising a clamping member, a support for said clamping member, a lock for automatically holding said clamp against reverse movement when placed into contact with the material to be clamped thereby, and means connecting said clamp with said lock for shifting said lock to its holding position by the upward force exerted on said clamp by the material held thereby.



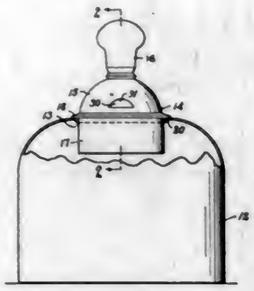
1,692,360. PRESSURE GAUGE. IRVING L. WOLCOTT and WILLIS H. GRANT, Cleveland, Ohio; said Grant assignor to said Wolcott. Filed May 7, 1923. Serial No. 637,140. 1 Claim. (Cl. 73—110.)

A pressure gauge including a stem, a transparent tube closed at one end and located in a longitudinal bore of the stem, a collapsible bulb secured to the other end of the tube, the bore of the tube being of substantially uniform diameter near the bulb and of a substantially uniform and materially reduced diameter near the closed end portion thereof, said bulb containing liquid extending upward a short distance into the bore of the tube to form a column in the tube when external pressure is applied to the bulb, the stem being provided with an enlarged recess for receiving the bulb, a ring nut forming a closure for the recess and being provided with a central aperture for exposing the bulb to pressure external to the bulb.



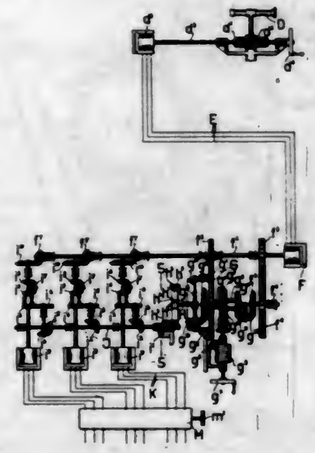
1,692,361. TRAIN CONTROL. WALTER W. WENHOLZ, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed Apr. 7, 1924. Serial No. 704,749. 26 Claims. (Cl. 246—63.)

1. A train control system of the continuous inductive control type for railroads provided with blocks comprising, means associated with each block for impressing across the track rails at the exit end thereof an alternating current voltage only if the block next in advance is unoccupied, receiving coils on a vehicle in front of the first pair



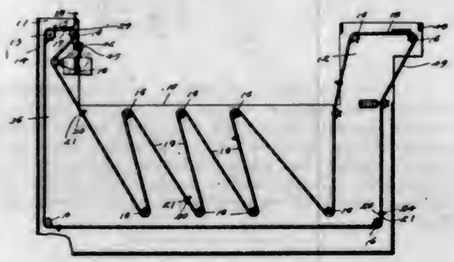
of wheels and axles thereof and disposed over the track rails in inductive relation thereto, a two-element relay of the induction type on the vehicle having its field windings connected separately to said receiving coils, and means for causing relative phase displacement of the currents of said field windings with respect to the induced voltage in the receiving coils.

1,692,362. COTTON GIN. JOHN WOOLDRIDGE, Childress, Tex., assignor of one-half to Lucille Wooldridge Farr, Childress, Tex. Filed June 22, 1926. Serial No. 117,760. 1 Claim. (Cl. 19—57.)



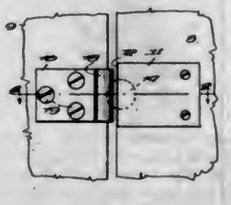
A cotton gin embodying a housing, a hopper at one end of the housing through which material is fed to the housing, a gin saw supported within the housing adjacent to the discharge end of the hopper, a rotary brush operating within the housing and contacting with the gin saw to remove material therefrom, a brush housing having an open lower extremity and into which a portion of the gin saw extends, a rotary brush within the brush housing and disposed above the gin saw and contacting with the gin saw to remove material therefrom, a depending brush hingedly connected with the brush housing and contacting with the gin saw at a point between the first mentioned brushes, means for adjusting the depending brush with respect to the gin saw and another rotary brush for contacting with the gin saw adjacent to the lower edge thereof.

1,692,363. SIGNAL MEANS FOR BOILING LIQUIDS. KLAAS ZWART, Sheboygan Falls, Wis. Filed Apr. 19, 1928. Serial No. 271,191. 3 Claims. (Cl. 116—70.)



1. A signal means incorporated in a cover for a utensil comprising a dome, an annular flange depending therefrom, a plate interposed between said dome and said flange, dividing said cover into an upper section and a lower section, an opening adjacent to the wall of said dome in said plate for forming a passage between said sections, an opening in said dome having an upper edge in axial line with said passage, whereby steam in said lower section will pass through said passage and contact said upper edge of said opening in said dome.

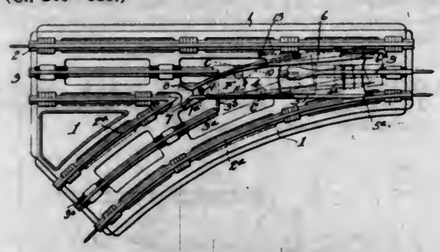
1,692,364. TRAINING MECHANISM FOR GUNS. WALTHER AKEMANN, Essen, Germany, assignor, by mesne assignments, to N. V. Hazemeyer's Signal-Apparaten, Hengelo, Netherlands. Filed Nov. 16, 1920, Serial No. 424,522, and in Germany Apr. 12, 1917. 3 Claims. (Cl. 89—41.)



1. Apparatus for imparting the lateral direction to a plurality of guns from a distant observation point, comprising a telescope at said point, an electric transmitter mechanically connected to said telescope to rotate therewith, an electric receiver electrically connected to said transmitter, an auxiliary electric transmitter for each gun operatively connected to a corresponding receiver at each gun, which controls the directing thereof, and a transmission gearing between said first named receiver and said auxiliary transmitters including a rotatable element positively connected to said first named receiver and adjustable in accordance with the distance of the target from the observation point and an element positively connected to said auxiliary transmitters and movable in a straight line, said elements constituting a slide crank device forming part of said transmission gearing.

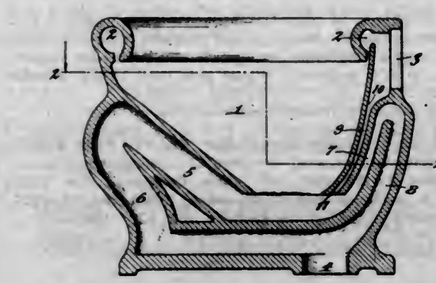
1,692,365. APPARATUS FOR SCALDING POULTRY. WILLIAM C. BARRIER, Fremont, Nebr., assignor of one-third to Howard W. Loomis, Fremont, Nebr. Filed Feb. 16, 1928. Serial No. 254,801. 15 Claims. (Cl. 17—11.)

1. In poultry scalding apparatus, a tank, carrier bars, means for causing the bars to travel longitudinally of the tank in opposite directions, slides at opposite ends of the tank, poultry supports slidable thereon and when engaged with one of the slides moving toward the tank and when engaged with the other thereof moving away from the tank, the end of the first named slide being disposed over the carrier bars at the beginning of their longitudinal travel in one direction and having a latch preventing the passage of the poultry supports thereover, means operated by the passage of a bar releasing said latch, means upon the poultry support engaging the bar releasing the latch when the poultry support falls from the slide, and means upon said standards and engaging the other of the slides at the opposite end of the travel for withdrawing the poultry supports from the bars.



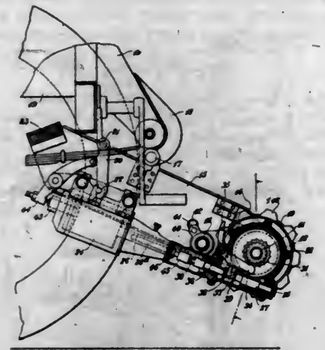
1,692,366. LATCH. JAMES H. BEAN, Sisson, Calif. Filed Apr. 28, 1924. Serial No. 709,573. 1 Claim. (Cl. 292—73.)

The combination with a frame member and a closure member having adjacent edges, of a substantially U-shaped keeper embracing the said edge of one member and having an opening through its central portion, a rotatable latch member behind the keeper and of greater area than the opening, said latch member projecting through the opening, a spring bearing against the rear side of the latch member to yieldingly hold it in projecting position through the opening, and a second keeper member secured to one side of the other member and having a free yielding portion extending across the edge of the said member to which it is secured and between the two members in line with the first keeper member, said yielding portion having an opening therethrough of less area than the opening in the first keeper member and snugly receiving the projecting end of the rotatable latch member, said spring being capable of movement toward and from the first keeper member to insure said snug reception.

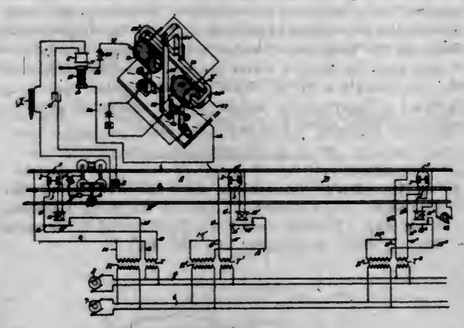


1,692,367. AUTOMATIC SWITCH. HARRY S. BECKER, River Forest, Ill., assignor to American Flyer Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 3, 1926. Serial No. 133,462. 3 Claims. (Cl. 246—388.)

1. A switch for toy electric railways including a base, a straight and curved track section including turn-out and stock rails mounted on the base, a frog including straight and curved lead rails pivoted to the base adjacent its narrow end, a spring mounted at the underside of the base and consisting of spring arms, means for anchoring the spring to the base at the junction of the arms, one of said arms engaging with the frog and the other of said arms engaging with the base.



1,692,368. WATER-CLOSET. JOHN J. BOYNE, Buffalo, N. Y. Filed Feb. 17, 1926. Serial No. 88,732. 1 Claim. (Cl. 4—73.)

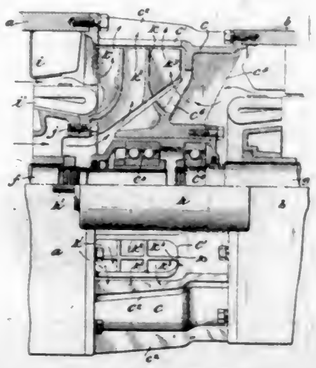


A water closet comprising a bowl; a water distributing rim arranged above the bowl and having a water inlet, an outlet at the bottom of the bowl; a main siphon having an ascending passage communicating at its lower end with the lower part of the bowl and a descending passage with said outlet; an auxiliary unobstructed overflow having no communication at its top with said water inlet and having a narrow ascending passage communicating with the lower part of the bowl opposite the lower end of said ascending siphon passage and a wide descending passage connecting the upper end of said ascending overflow passage with said outlet; and a descending unobstructed jet passage having no communication at its top with said overflow and extending directly from said water inlet along the ascending overflow passage and terminating at its lower end adjacent to the bottom of the bowl opposite the lower end of the ascending siphon passage and adapted to have its lower end submerged in the same water in the bowl which seals the lower ends of the ascending passages of the main siphon and auxiliary overflow.

1,692,369. LIFE GUARD OR OBSTRUCTION REMOVER FOR MOTOR, ROAD, AND OTHER VEHICLES. VERNON JOHN PHILIP CLIFFORD, London, England. Filed Oct. 3, 1927, Serial No. 223,810, and in Great Britain Oct. 12, 1926. 8 Claims. (Cl. 293—17.)

1. A life guard or obstruction remover comprising a frame pivotally supported between its ends, a guard member pivotally mounted at the forward end of the frame, a latch at the rear end of the frame normally holding the forward end of the frame raised, and means for releasing the latch when the guard member strikes an obstruction and is swung downwardly.

1,692,370. AUTOMATIC TRAIN-CONTROL SYSTEM. CHARLES F. ESTWICK, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed Mar. 7, 1917, Serial No. 152,972. Renewed Dec. 7, 1926. 5 Claims. (Cl. 246—37.)



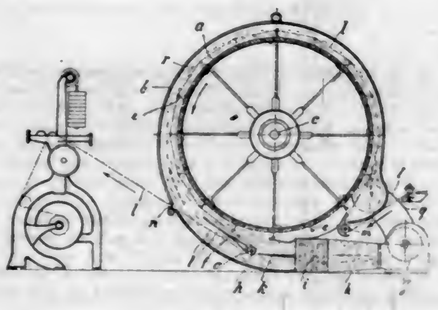
1. In an automatic train control or cab signaling system, in combination: a railway vehicle; a stationary conductor extending along the path of movement of the vehicle; traffic controlled means for supplying a periodic signaling current to said conductor; a coil on the vehicle directly coupled in inductive relation with said conductor; a circuit on the vehicle including said coil and tuned sharply to resonance for the single particular frequency of said signaling current; an electrical amplifying device included directly in said circuit; a relay affected only by current of the frequency of said signaling current and controlled by the current supplied from said amplifying device; and train control apparatus on the vehicle controlled by said relay.

1,692,371. COMBINATION ELECTRIC DRIVE. CHARLES FROESCH, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 9, 1927. Serial No. 166,860. 5 Claims. (Cl. 172—239.)

1. A combination drive unit comprising motor and generator housings, a motor and generator therein having in-

dependently mounted armatures, a housing connecting the two, means therein for supporting the motor and generator armatures independently, vents in the ends of the unit and

in the connecting housing, and means carried with the generator armature for ventilating the motor and generator separately.

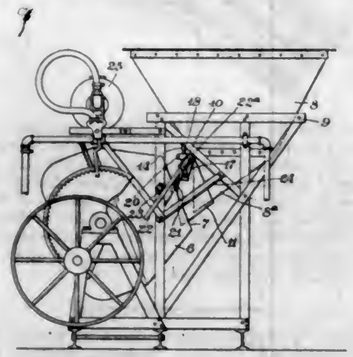


---

1,692,372. TREATING ARTIFICIAL SILK. HENRY A. GARDNER, Washington, D. C. Filed May 13, 1927. Serial No. 191,276. 5 Claims. (Cl. 8—13.)

1. Process of delusterizing artificial silk fibers which comprises impregnating the same with a dilute aqueous solution of a titanium salt which is thermally decomposable in the presence of water, and heating the impregnated fibers in the presence of water whereby there is deposited in and upon the fibers a water-insoluble titanium compound, the concentration of the titanium salt solution used being such as to increase the weight of the so-treated artificial silk fibers from about 4% to about 0.5%.

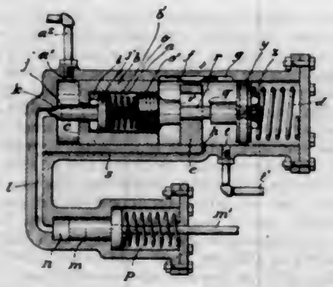
---



1,692,373. DRYING MEANS FOR YARN-SIZING MACHINES. PAUL GREVE, Lindau-on-the-Harz, Germany. Filed Apr. 22, 1925, Serial No. 25,172, and in Germany May 2, 1924. 4 Claims. (Cl. 34—48.)

1. In a device of the kind described in combination, a slowly rotatable, comparatively large, closed drying drum, an outer casing, eccentrically and spacedly surrounding said drum, and forming a channel of gradually decreasing diameter between the casing and the drum, hot-air-admitting means at the broad end of the channel, and air-discharging means at the narrow end of said channel, guiding means, spacedly and peripherally mounted on the drum in the interior of the channel, a supply of thread-like material in contact with said guiding means and passing from the broad end of the channel to the narrower end thereof, and substantially plate shaped subdividing means substantially in the direction of the thread-like material and extending from the air-admitting means to said material.

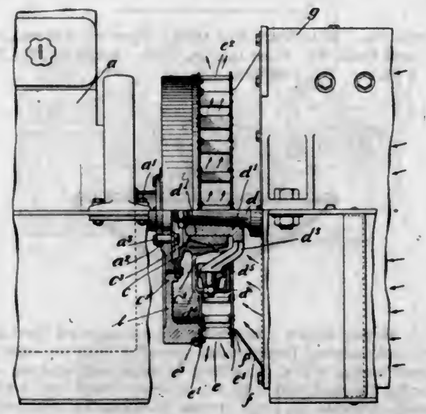
---



1,692,374. HOPPER CONCRETE MIXER. GERHARD JAEGER, Columbus, Ohio. Filed Feb. 10, 1926. Serial No. 87,405. 6 Claims. (Cl. 83—73.)

1. A hopper to receive components of a mixture, said hopper having its discharge end provided with a movable spout and a discharge closing gate and means for imparting a greater movement to the gate than to the movable spout.

---



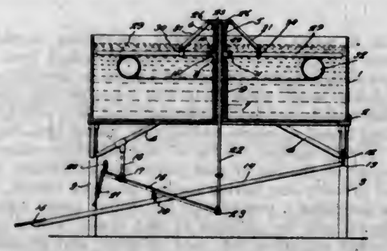
1,692,375. PRESSURE-RELIEF VALVE FOR FLUID PUMPS. LYMAN C. JOSEPHS, Jr., Allentown, Pa., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 19, 1927. Serial No. 214,061. 3 Claims. (Cl. 137—153.)

1. In a pressure relief valve for fluid pumps having means to control the actuation of a pressure forming means, a cylinder for connection with the pressure side of the pump, means in the cylinder operable upon an increase of pressure to initiate actuation of controlling means to reduce the presure, means associated with the actuating means, and unresponsive to gradual increases in pressure to prevent actuation of the controlling means, and means to cause actuation of the controlling means after a predetermined interval, said mechanism responding to a sudden surge in pressure to cause substantially instantaneous actuation of the controlling means.

1,692,376. GENERATOR FAN CONSTRUCTION. WILLIAM B. JUPP, Brooklyn, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 19, 1927. Serial No. 214,124. 2 Claims. (Cl. 230—135.)

1. In combination, two units, connecting means therebetween, a flywheel formed with a web and an inertia portion offset with respect thereto and projecting toward one of the units, a fan secured to the face of the inertia portion of the flywheel adjacent said last named unit, and means to secure the connecting means within the inertia portion and the fan.

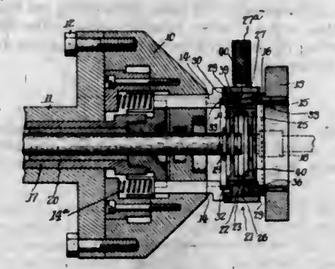
---



1,692,377. CAR-BODY CONSTRUCTION. WILLIAM B. JUPP, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 26, 1927. Serial No. 235,917. 3 Claims. (Cl. 105—35.)

1. A car construction of the character described comprising a body, a plurality of power plants carried therein, a central aisle section through the car, center doors at either end of the car whereby access may be had to the car through the ends thereof, and means to mount the power plants to preserve the continuity of the aisle through the car and doors from end to end thereof.

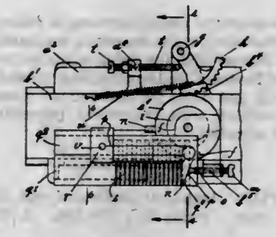
---



1,692,378. DEVICE FOR TESTING AUTOMOBILE TIRE INNER TUBES. JAMES A. KEENA and JESSE L. SHARKEY, Hutchinson, Kans. Filed Aug. 1, 1927. Serial No. 209,693. 10 Claims. (Cl. 73—56.)

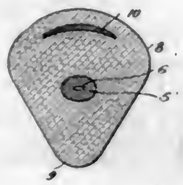
1. A tire tube tester comprising a tank, a vertically reciprocating member within the tank, arms pivoted to said member and arranged in a vertical position when said member is in its uppermost position and shiftable on the downward movement of said member to a horizontal position, means for raising and lowering said member including a rod extending downwardly through and below the tank, and actuating means coupled to said rod.

---



1,692,379. WORKHOLDER. HERBERT E. KEMPTON, Chicago, Ill., and KEITH F. GALLIMORE and RAYMOND M. WOYTYCH, Fond du Lac, Wis., assignors, by mesne assignments, to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 25, 1924, Serial No. 728,063. Renewed Sept. 21, 1928. 7 Claims. (Cl. 279—1.)

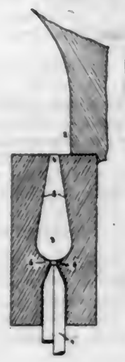
7. In apparatus of the class described, in combination, a body constructed to support a work blank, a plurality of clamping members slidably mounted in said body, an actuator ring rotatably mounted in said body, and means independently connecting said ring with each clamping member, said means having a sliding wedge connection with the latter.



---

1,692,380. NEEDLE-FEEDING MECHANISM. HERMANN NACKEN, Wurselen, Germany, assignor to Aachener Maschinenbau-Gesellschaft m. b. H., Aachen, Germany. Filed Mar. 13, 1925, Serial No. 15,332, and in Germany Mar. 31, 1924. 5 Claims. (Cl. 90—11.)

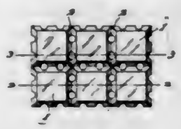
1. A needle feeding mechanism, comprising a slide movable to and fro, a stack holder carried by the slide, this stack holder forming a guide for a row of needles and having a delivery channel from which the needles are emitted one at a time, a rotary carrying head mounted on the slide, means for rotating the head in one direction during the forward stroke and in the opposite direction during the return stroke of the slide, a radial groove in the top surface of the rotary head adapted to be positioned below the outlet of the delivery channel and to receive a needle from the same at the end of the return stroke of the slide, means for retaining the needle in the said groove during the forward stroke of the slide, and means arranged for cooperation with the rotary head and adapted to shift the needle radially into the proper working position.



1,692,381. THERMOMETER. HARRY Y. NORWOOD, Avon, N. Y., assignor to Taylor Instrument Companies, Inc., Rochester, N. Y., a Corporation of New York. Filed Jan. 5, 1925. Serial No. 476. 2 Claims. (Cl. 73—52.)

1. In a thermometer, a stem comprising an inner tubular portion and an outer tubular portion, the inner portion defining the bore and being formed by a relatively thin wall of colored glass.

---



1,692,382. GAS BURNER. MAX NUSS, Darmstadt, Germany. Filed June 15, 1926, Serial No. 116,244, and in Germany Jan. 19, 1925. 1 Claim. (Cl. 158—99.)

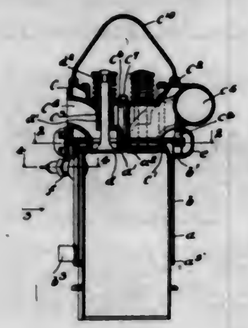
In apparatus of the class described, a structure providing a firing chamber, a gas burner, a combustion chamber between the burner and the firing chamber, said combustion chamber having a restricted orifice formed to a broad slotted opening and inlets for fuel and air formed as broad slits and provided with transverse protecting portions of refractory material.

---

1,692,383. TILE. PHILIP O'DWYER, Detroit, Mich. Filed Nov. 17, 1926. Serial No. 148,894. 1 Claim. (Cl. 72—18.)

A tile comprising a body of uniform thickness having beveled side faces extending from the upper face to the lower face of the tile, the lower edges of the side faces being adapted to contact with corresponding edges of other tiles, said side faces having vertically disposed recesses formed therein and leading from the under surface of the tile and terminating in spaced relation to its upper surfaces, the recesses being adapted to register with the recesses of adjoining tiles when set and provide openings between the tiles for the reception of cement bonds to secure the tiles to a foundation.

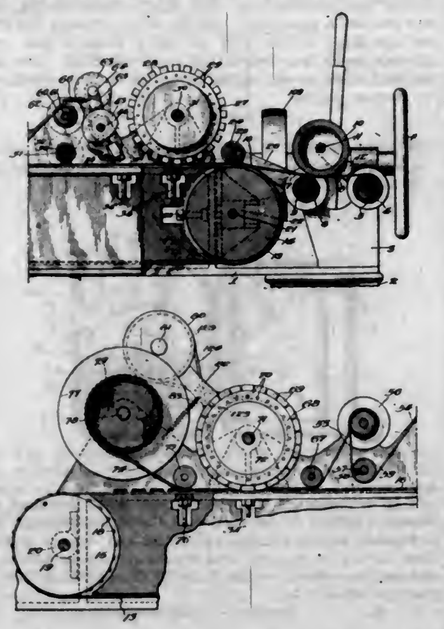
---



1,692,384. BLOTTER HOLDER. FRED C. PARTELL, Island Pond, Vt. Filed Dec. 14, 1926. Serial No. 154,779. 1 Claim. (Cl. 120—24.)

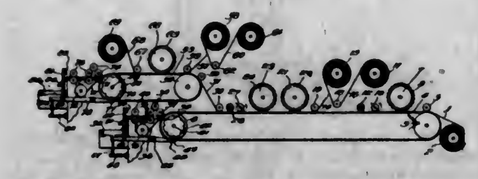
A blotter holder comprising a base member having a vertical opening therethrough provided with an enlarged lower end, a screw projecting through said opening and having its head seated in the enlarged lower end, a plate freely slidable on said screw, cooperating positioning means on the plate and body to hold the plate from revolving with respect to the body, a handle having an opening extending upwardly therein and provided with an enlarged lower end, a nut seated in said enlarged lower end and fitting said screw, and wedge pins extending into the handle at opposite sides of the nut to secure the same from rotation with respect to the handle.

---



1,692,385. COOLING DEVICE FOR THE CYLINDERS OF INTERNAL-COMBUSTION ENGINES. FREDERICK HENRY ROYCE, Elmstead, West Wittering, near Chichester, England, assignor to Rolls-Royce Limited, Derby, England. Filed July 31, 1926, Serial No. 126,283, and in Great Britain Sept. 24, 1925. 4 Claims. (Cl. 123—173.)

1. In a water cooled internal combustion engine, a cylinder, a water jacket enveloping and spaced from the top and sides of said cylinder and having its lowered ends secured with water tight fit to said sides, the top of said cylinder and jacket being provided with valve and bolt receiving bossed apertures having their bosses extending in watertight fit against the top of said jacket, a valve casing seated on the top of said jacket and detachably fixed to said cylinder and having cooling passages therein, and means providing a passageway for cooling liquid between said jacket and the passages in said casing, and a spark plug socket extending into said cylinders and secured to the water jacket and cylinder with a water passage from said jacket around said socket.



1,692,386. APPARATUS FOR MAKING PADS. OTTO G. SCHMITT, Chicago, Ill. Filed Nov. 10, 1926. Serial No. 147,604. 12 Claims. (Cl. 154—1.)

11. A machine comprising in combination, an endless conveyor, means for driving same, means for feeding thereto a continuous strip of flexible material, means adapted to act on said strip while moving forward on said conveyor to produce incisions of predetermined outline therein, means for removing as waste the severed material within the incisions, means for feeding and uniting another strip of material to said first mentioned strip, means adapted to act on said united sheet to produce incisions around the first mentioned incision, means for removing as waste the material exterior of these latter incisions to leave separated pads on the conveyor, means for feeding and uniting a base of gauze-like material to said separated pads, and means for imparting an increased speed of forward travel to the gauze relative to the conveyor to space the separated pads a greater distance apart on the gauze than on the conveyor.

---

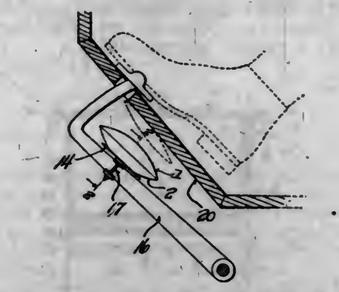
1,692,387. MACHINE FOR MAKING FLEXIBLE PADS. OTTO G. SCHMITT, Chicago, Ill. Filed Mar. 9, 1927, Serial No. 173,882. Renewed May 31, 1928. 4 Claims. (Cl. 154—1.)

1. A machine for simultaneously making pads of different sizes, comprising in combination, primary and auxiliary moving conveyors, means for feeding to the primary conveyor a strip of flexible adhesive tape, sets of rotatable means adapted to act successively on said strip to produce incisions of predetermined outline taking the form of the small size pad, means interposed therebetween adapted to feed and unite another strip of adhesive tape with the first mentioned strip, means for removing the surrounding waste material in connected strip form to leave separately formed pads of small size on the primary conveyor, means for feeding and uniting to said connected strip of waste an additional strip of adhesive tape, rotatable means acting thereon to produce incisions of predetermined outline taking the form of the large size pads, means for removing the surrounding waste, and means cooperatively associated with each conveyor for feeding and uniting strips of gauze-like material to said separated pads.

---

1,692,388. SHINGLE. WILLIAM A. SCHOLLMEYER, Yonkers, N. Y. Filed Nov. 4, 1926. Serial No. 146,244. 3 Claims. (Cl. 108—33.)

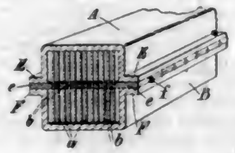
1. A shingle having a metallic plate secured thereto adjacent an edge thereof and extending beyond said edge, said plate having a tab projecting therefrom in a direction opposite said extension adapted for use when the shingle is laid in one position and having oppositely projecting tabs on the extension thereof, adapted to use when the shingle is laid substantially at right angles to said position.



---

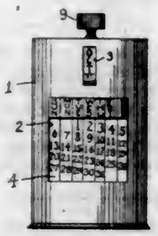
1,692,389. COLOR-BINDING PREPARATION. EDUARD SCHWARZ, Chicago, Ill. Filed Aug. 4, 1926. Serial No. 127,185. 1 Claim. (Cl. 134—46.)

A color binder consisting in a mixture of the following ingredients: casein, glue, flour, linseed oil, china wood oil, borax, ammonia, thymol, benzol, and cobalt dryer in the following proportions: 5.3 units of casein, 0.3 units of glue, 0.3 units of flour, 2.4 units of linseed oil, 3.7 units of china wood oil, 0.8 units of borax, 0.1 unit of ammonia, 0.03 units of thymol, 0.1 unit of benzol, and 0.01 unit of cobalt dryer.



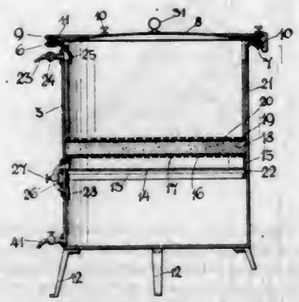
---

1,692,390. CLUTCH CONTROL. ANDREW SMITH, Milwaukee, Wis., assignor to Smith Laboratories, Inc., Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 19, 1926. Serial No. 102,969. 6 Claims. (Cl. 192—109.)



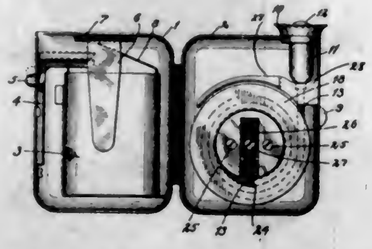
5. The combination of an automobile having a control pedal and a fluid cushioning device carried by said pedal, said device having relatively movable portions one of which is adapted to contact with a stationary portion of the automobile and one of which is attached to the said pedal, said device having means controlling the escape of fluid, whereby the motion of said pedal in one direction is automatically cushioned.

1,692,391. HEAT-TRANSFER APPARATUS. CECIL WHEATLEY STANCLIFFE, London, England. Filed Mar. 8, 1928, Serial No. 260,124, and in Great Britain Jan. 6, 1927. 2 Claims. (Cl. 257—245.)



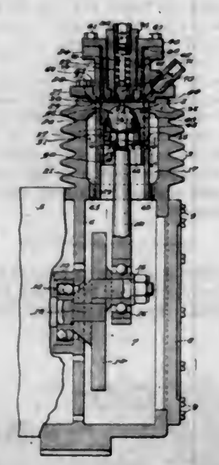
1. Heat transfer apparatus comprising an upper casing, a lower casing, a division wall comprising alternately assembled plates and spacing bars, means for clamping said upper casing, division wall, and lower casing together, and headers for inlet and outlet clamped at each end of said casing.

1,692,392. PERPETUAL CALENDAR. FAYE A. STEVENSON, Lancaster, Ohio. Filed Nov. 2, 1927. Serial No. 230,404. 10 Claims. (Cl. 40—111.)



1. A calendar comprising an outer shell having openings therein, a cylinder revolvably positioned inside said outer shell provided with numerals denoting days of the mouth arranged in numerical order and in spiral groups, said numerals extending entirely around the cylinder, said cylinder further adapted to carry legends indicating the months of the year, said month numerals and month legends being so arranged as to be exposed through the said openings in the outer shell when the cylinder is revolved and so arranged as to be turned together in one continuous direction in relation to the outer shell for exhibiting the monthly calendars in proper order throughout the year.

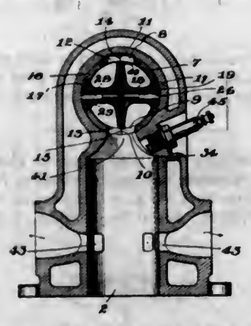
1,692,393. APPARATUS FOR FILTERING AND BOTTLING FLUIDS UNDER PRESSURE. GOTTLIEB STRIFFLER, Chicago, Ill. Filed Jan. 20, 1928. Serial No. 248,077. 2 Claims. (Cl. 210—103.)



1. In a device of the class described a container, a lid therefor, means for seating said lid tightly and firmly onto the container, a false bottom in said container arranged at a distance from the real bottom thereof, a filter arranged in said container at a distance above said false bottom, an air compressing device communicating with the top portion of the container, an inlet pipe communicating with said portion, a pipe connecting the space between the filter and the false bottom with the space beneath said false bottom, means for conducting compressed air into said last named space, and an outlet on the container adjacent the bottom thereof.

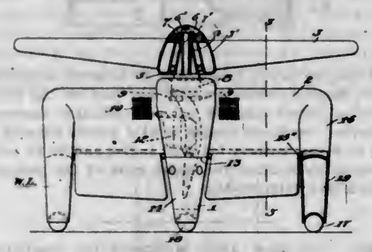
1,692,394. FLASH LIGHT. AUGUST SUNDH, Hastings upon Hudson, N. Y. Filed Oct. 29, 1925. Serial No. 65,545. 9 Claims. (Cl. 240—10.5.)

1. In a device of the class described, a sectional enclosure, a battery in one section of the enclosure and a reel in another section of said enclosure, and contact mechanism carried by the reel and arranged to cooperate with said battery when the sections of the enclosure are in closed position.

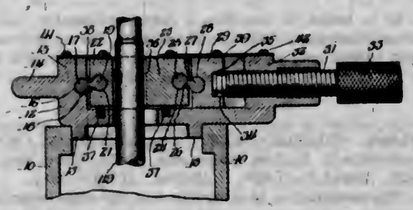


1,692,395. COMPRESSOR. JOSEPH R. THOMAS, Philadelphia, Pa., assignor, by mesne assignments, to Widmer Compressor, Inc., Philadelphia, Pa., a Corporation of Delaware. Filed June 8, 1922, Serial No. 566,767. Renewed Apr. 13, 1928. 3 Claims. (Cl. 230—27.)

1. In a compressor, the combination of an internally cored cylinder block, a cylinder sleeve having a plurality of ports communicating with the cored space within the block, and a groove in its inner wall spaced above said ports and forming an exhaust port, means for rigidly securing the sleeve within the block, a cylinder head having a portion extending into the sleeve, and a piston slidable in the sleeve and having a guide skirt adapted to enter the space between the head and the sleeve said skirt being provided with a plurality of ports positioned to register with said first mentioned ports when the piston is at the extremity of its travel in one direction and with said groove when the piston is at the end of its travel in the other direction.

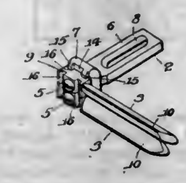


1,692,396. ROTARY VALVE. WILLIAM D. TIPTON, Towson, Md. Filed Dec. 11, 1926. Serial No. 154,219. 10 Claims. (Cl. 123—190.)



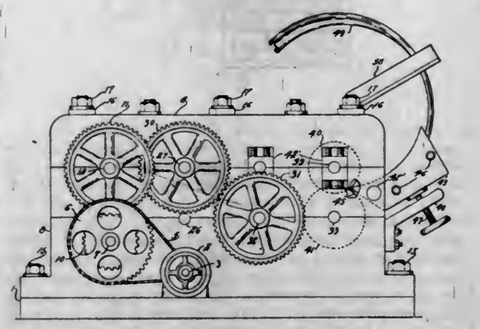
1. The combination with a cylindrical valve chamber of a cylindrical valve rotatable therein, said valve being formed of two similar halves, and means between said halves to force them into yielding contact with the wall of said chamber.

1,692,397. HELICOPTER. RUDOLF WAGNER, Hamburg, Germany. Filed Oct. 10, 1925, Serial No. 61,723, and in Germany June 10, 1922. 5 Claims. (Cl. 244—19.)



1. A helicopter comprising a main rotatable propeller and a stationary counter-propeller with curved blades mounted immediately below the main propeller for taking up and neutralizing the swirl of the fluid stream from the main propeller.

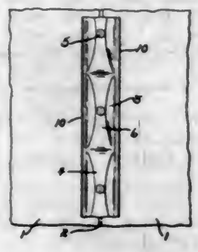
1,692,398. VISE. GAILARD E. WEAVER and WILLIAM C. KEIM, Springfield, Ill., assignors to Weaver Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Jan. 2, 1926. Serial No. 78,776. 8 Claims. (Cl. 81—33.)



1. In a vise, the combination of a substantially C-shaped support open at one side, a jaw movable at substantially right-angles to the plane of the C to engage one side of the body to be clamped by the vise, a link connecting said jaw to said support, a second jaw movable at substantially right-angles to the plane of the C to engage the opposite side of said body, a block adjustable on said support toward and from said first jaw, and a link connecting said second jaw to said block, whereby movements of the jaws with the body cause their increased clamping action on the latter due to the rocking of said links, said jaws registering with the opening at the side of said support.

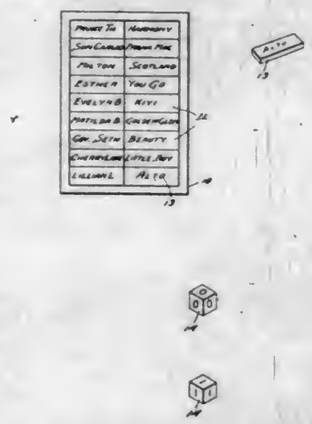
1,692,399. KNOT CATCHER AND YARN CLEANER. JACOB K. ALTEMUS, Philadelphia, Pa. Filed Sept. 22, 1926. Serial No. 136,916. 9 Claims. (Cl. 28—71.)

1. The combination of a supporting member, and two bars comprising base portions secured to the member, and parallel extensions forming a yarn passage between them, each bar being invertible, the member and the bars having opposing surfaces which engage each other and position the bars relatively to each other and prevent them from turning, and the opposing surfaces of the extensions diverging forwardly from the region of the entrance to the passage in each position of each bar.



1,692,400. METAL-REFORMING METHOD AND APPARATUS. JAMES L. AUBLE, Toledo, Ohio, assignor, by direct and mesne assignments, of one-half to Nancy M. Auble and one-half to Jeannette M. Seybold, Toledo, Ohio. Filed Feb. 11, 1924, Serial No. 691,965. Renewed Oct. 1, 1928. 7 Claims. (Cl. 153—2.)

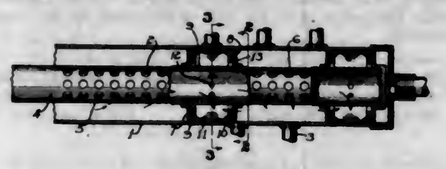
1. Re-forming strip metal stock embodying transversely re-shaping said stock by rolling in a plane, and in addition to said rolling and as a continuation therefrom increasing the degree of the transverse re-shaping by causing said rolling re-shaping to propel the stock therefrom through a stationary die out of said plane.



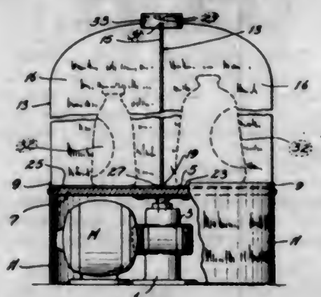
6. A metal re-working machine embodying a train of roll pairs including a terminal roll pair, therefrom a further re-shaping embracing adjustable width stationary die of arc form mounted to extend into proximity to the re-forming region of the terminal roll pair, and driving means for the roll pairs for progressing material from said terminal roll pair into and through said die, the axis of the die arc being transversely of the line of the roll pairs.

1,692,401. FASTENER FOR ROOFING SHEETS. DALE R. BARD, Bryan, Ohio. Filed Mar. 31, 1928. Serial No. 266,139. 1 Claim. (Cl. 108—33.)

A sheet metal fastener having a rectangular base, flat longitudinal and symmetrically curved nail-receiving portion, the curvature from opposite ends being such that a line tangent to the center thereof forms with a chord from such center to either end an angle of the order of 12°, said nail-receiving portion diverging uniformly in opposite directions from the central part thereof, and sides depending downwardly and outwardly from said nail-receiving portion, and upturned flanges on the side edges thereof.



1,692,402. HORSE-RACE GAME. JOHN BARTHEL, Oak Park, Ill. Filed Apr. 20, 1928. Serial No. 271,546. 2 Claims. (Cl. 273—135.)



1. A game of the character described comprising a board, said board being divided into a number of spaces, a number of blocks corresponding to the number of said spaces upon said board, said blocks being adapted to be either positioned in said spaces upon said board or taken therefrom, and means whereby the player may be apprised whether to place the block upon the board or take one from the board.

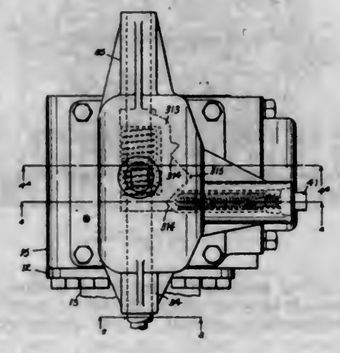
1,692,403. FLUID-TIGHT PACKING. JOHN A. BROOKS, Detroit, Mich. Filed Nov. 28, 1927. Serial No. 236,079. 2 Claims. (Cl. 251—78.)

1. In a device of the class described, a tubular stem having a fluid inlet and outlet in spaced relation, a packing unit on each side of said outlet, each unit comprising longitudinally spaced retainer members and a flexible annulus with the ends thereof engaged by said retainer members, said stem having means to supply fluid to the inside of the annuli for exerting an expanding force thereagainst.

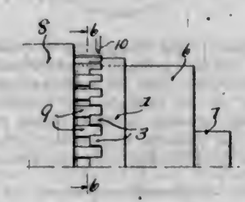
1,692,404. DISPLAY DEVICE. LEE R. CONWELL, Elmhurst, N. Y., assignor to Conwell Graphic Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 17, 1926. Serial No. 109,558. 7 Claims. (Cl. 40—33.)

1. A display device comprising a platform, a holding lip thereon, display elements adapted to rest on the platform comprising panels adapted to form dihedral angles with one another, segments hinged to said panels adapted to be folded to act as spacers for said angles and to fit said lip, and means for holding the upper ends of the panels in a predetermined relationship.

1,692,405. TICKET AND METHOD OF PRODUCING THE SAME. CHARLES A. FREEMAN, Chicago, Ill., assignor to The Simplex Ticket Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 19, 1924. Serial No. 700,360. 6 Claims. (Cl. 283—8.)

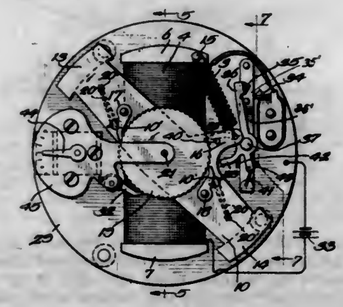


1. In a ticket or the like, a warning imprint and a warning-obscuring imprint, said imprints having different actinic values, and co-operating to form a completed design not disclosed by either of said imprints alone.

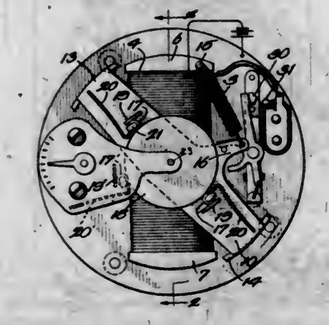


1,692,406. CHANGE-SPEED TRANSMISSION GEAR. LAWRENCE C. FULLER, Kalamazoo, Mich. Filed Feb. 9, 1925. Serial No. 7,928. 5 Claims. (Cl. 74—39.)

1. The combination in a structure of the class described comprising a shiftable member having two operative positions and an intermediate neutral position, of a reciprocating control rod, a shifter yoke for said shiftable member provided with arms slidably mounted on said rod, said rod being provided with a collar between said arms, springs arranged on said rod between said collar and the arms of said yoke, said yoke being provided with a pointed cam projection and with notches at each side thereof, and a spring pressed detent coacting with one of said notches when said shiftable member is in one of its operative positions and with the other of said notches when in the other of its operative positions, said detent coacting with said cam to cause a complete actuation of said shifter yoke after the crown of the cam has passed the detent thereby preventing the stopping of said shiftable member in its neutral position.



1,692,407. PROCESS OF FORMING AND WELDING END RINGS FOR ROTOR BARS. KLAUS L. HANSEN and WILLIAM J. OESTERLEIN, Milwaukee, Wis., assignors of one-third to Northwestern Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 26, 1925. Serial No. 65,008. 1 Claim. (Cl. 29—155.5.)

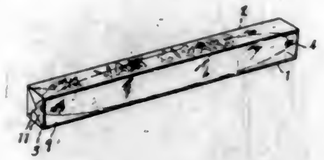


The method of making end rings for rotor bars comprising forming a strip with notches in its marginal edge, with solid portions between said notches, positioning the projecting rotor bars in said notches with the intermediate solid portions of the strip positioned between successive rotor bars, and arc welding the rotor bars to the intermediate portion whereby a localized application of intense heat is secured and whereby the main body and the intermediate portions of the strip retain their original characteristic.

1,692,408. ELECTRIC MOTOR. JOHN W. HOBBS, Moline, Ill., assignor to George W. Borg, Chicago, Ill. Filed Dec. 9, 1926. Serial No. 153,577. 5 Claims. (Cl. 172—126.)

1. An electric motor having a moving element and including a field magnet inclusive of a magnetizable core; a block of non-magnetizable material assembled with an intermediate portion of said core and formed with slots on opposite sides thereof and in communication with the winding spaces of the magnet that are spaced apart by said block, an energizing wire winding disposed about said core and passing through said slots and wound in a direction to induce magnetic flux through said core in a single direction; a shaft passing through said block and core; and motion transmitting means between the moving element of the motor and said shaft.

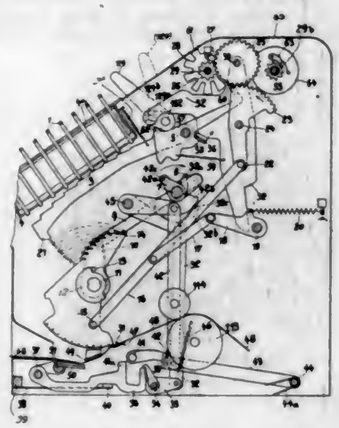
1,692,409. OSCILLATING MOTOR. JOHN W. HOBBS, Moline, Ill., assignor to George W. Borg, Chicago, Ill. Filed May 21, 1927. Serial No. 193,368. 8 Claims. (Cl. 172—126.)



1. The combination with an electro-magnet having an oscillating armature turned in one direction by the magnet; of a spring operating upon the armature to reverse the direction of movement of the armature and connected with the armature and so disposed as to have its power increased when the armature is moved by the magnet; a switch in the magnet circuit, there being means whereby the magnet opens the switch and the spring, in functioning, also closes the switch; a wheel which is to be turned by the armature when the armature is moved by the spring; a clutch member carried by the armature and having a side opposed to the rim of the wheel and sloping toward the wheel in the direction of rotation of the armature that is effected by the magnet; a roller carried by the armature and engageable at the same time with said clutch member side and the rim of the wheel; and a spring urging the roller into engagement with said clutch member side and the rim of the wheel.

1,692,410. PACKAGE FOR CIGARS, CANDY, AND THE LIKE. HAROLD H. JONES, Kalamazoo, Mich., assignor to Kalamazoo Vegetable Parchment Company, Kalamazoo, Mich. Filed Mar. 7, 1927. Serial No. 173,564. 2 Claims. (Cl. 206—46.)

2. A package comprising an open sided frame member having a fingernail opening adjacent one end thereof pro-

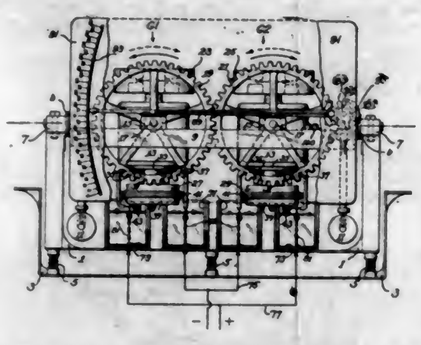


viding an engaging and a fracturing point, and an enclosing wrapper completely enclosing said frame and overlying said nail opening therein, said nail opening facilitating the fracturing of the wrapper over the opening and the

engagement of the frame through the fractured wrapper, and the fracturing thereof at a predetermined point and the tearing of the wrapper along the edges of the frame as it is pulled apart exposing the contents of the package.

---

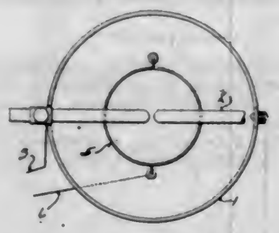
1,692,411. CHECK ISSUING AND ADDING MACHINE. ERNST KASSNER, Berlin, Germany. Filed May 26, 1923, Serial No. 641,650, and in Germany Mar. 11, 1921. 4 Claims. (Cl. 235—7.)



1. In a machine of the class described, the combination of a bank of keys arranged in a row, a setting up lever extending longitudinally of the row of keys and pivoted adjacent to one end of the row and provided adjacent the other end of the row with a catch, said setting up lever having a step-like formation presenting a series of faces arranged to be engaged by the keys for moving the setting up lever to different positions, and a pivoted member provided with a step-like formation presenting a series of faces arranged to be engaged by the catch on the setting up lever in the different positions thereof, whereby the amount of movement of the said member is controlled by and corresponds to the movement of the key actuated setting up lever.

---

1,692,412. GYROSCOPIC SPEED INDICATOR. LLOYD R. KOENIG, St. Louis, Mo. Filed May 28, 1926. Serial No. 112,245. 7 Claims. (Cl. 33—204.)



1. In a gyroscopic speed indicator, a frame rotatable about an axis of support, a gyroscope rotatably held for indicating purposes in said frame on its own axis of precession the latter axis being located at right angles to said frame axis and said gyroscope being adapted to precess its axis of spin about said axis of precession when said frame turns on its axis of support, said axis of spin being located at right angles to the axis of precession, the precessional angle being adapted to lie on both sides of a plane positioned perpendicular to the axis of support, the spin

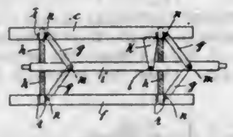
axis in normal starting position being inclined to said plane which is perpendicular to the axis of support at an angle substantially one-half of the indicating range thereof.

---

1,692,413. THERAPEUTIC LAMP. WILLIAM TURNOR LEWIS, Racine, Wis., assignor to Western Coil & Electrical Company, Racine, Wis. Filed May 21, 1927. Serial No. 193,244. 4 Claims. (Cl. 174—177.)

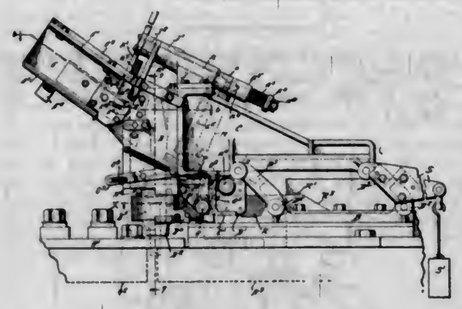
1. A therapeutic lamp comprising a reflector, an arc light mounted therein, a heater mounted within said reflector and connected to said arc light, and means for producing a blast of air through said reflector from the front to the rear, whereby particles falling from said arc light are projected from the rear of said reflector and are prevented from accumulating upon said reflector.

---



1,692,414. ELECTRIC-WIRE CONNECTER. WILLIAM P. MARR, Toronto, Ontario, Canada. Filed Oct. 13, 1926. Serial No. 141,382. 8 Claims. (Cl. 173—263.)

1. An electric wire connecter, comprising a tube of insulating material closed at one end, a tube permanently arranged within said insulating tube adapted to receive the ends of the wires to be connected a fastening member carried by said latter tube for securing the wire ends therein, an opening through the wall of said insulating tube to permit access to said fastening member, and an insulating member interposed between said tubes and adapted to be moved into a position to close the opening in the insulating tube.



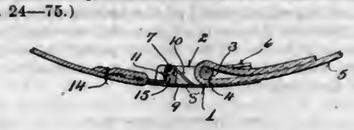
1,692,415. YARN REEL, MORE PARTICULARLY FOR THE WINDING OF FRESHLY-SPUN ARTIFICIAL SILK. KARL MEYER-GAUS, Barmen, Germany, assignor to American Bemberg Corporation, New York, N. Y. Filed Oct. 1, 1926, Serial No. 138,962, and in Germany Oct. 3, 1925. 4 Claims. (Cl. 242—111.)

1. A reel comprising spiders, cross bars fixed to said spiders, cross bars mounted in said spiders and shiftable radially only therein, a shaft axially movable in said spiders, and toggle joints intermediate said shiftable cross bars and shaft.

---

1,692,416. MECHANISM FOR FEEDING AND OPERATING UPON ARTICLES. CHARLES F. NEWPHER, Shaker Heights, Ohio, assignor to The Bourne-Fuller Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 18, 1927. Serial No. 206,502. 27 Claims. (Cl. 80—8.)

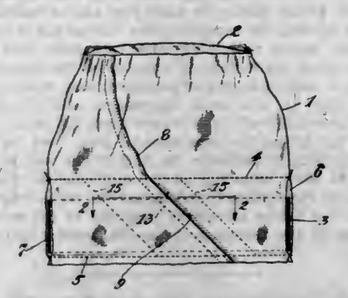
1. The combination, with a guide along which articles are moved, of mechanism for operating upon the articles delivered from the said guide, and means for delivering the articles successively to such operating mechanism, such delivering means comprising a pair of arms spaced apart in the direction of the length of the said guide, and means for projecting the said arms transversely alternately across the said guide and into and out of the path of movement of the articles therealong, whereby one of said arms serves to retain the series of articles therebeyond against movement when the other of said arms is withdrawn from the guide to permit the delivery of an article from said guide and whereby, on reverse movement of said arms, the second arm will be brought into the path of movement of said articles and the first arm will be withdrawn from such path of movement, and means movable by and with the first arm and adapted to be projected across the said guide to engage an article between the said arms thereby to facilitate the discharge of such article from the guide when the second arm is withdrawn therefrom.



---

1,692,417. MANUFACTURE OF CYANIDES OF THE PERYLENE SERIES. ALFRED PONGRATZ, Graz, Austria, assignor to Felice Bensa, Genoa, Italy. Filed June 18, 1926, Serial No. 116,943, and in Austria June 26, 1925. 3 Claims. (Cl. 260—108.)

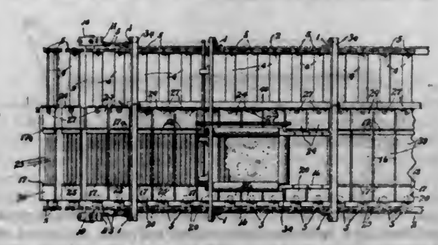
1. A process for manufacturing cyanides of the perylene series consisting in mixing halogen compounds of perylene with metal cyanides and heating the mixture to 300° centigrade.



1,692,418. BELT BUCKLE. ADAM PRIMAK, Milwaukee, Wis. Filed Sept. 26, 1925. Serial No. 58,811. 1 Claim. (Cl. 24—75.)

The combination of a belt, a buckle having a body portion provided with outwardly turned marginal flanges, a transversely extending member carried between said flanges adjacent one end of the body portion and having a lip extending towards and spaced from the body portion, said member having a slanting extension projecting towards the center of the body portion and contacting therewith, the other end of said body portion having inwardly turned lugs and having a locking transversely extending member located between and spaced from said slanting extension and said last mentioned lugs, one end of said belt being wrapped about said transversely extending locking member and having its end positioned beneath said last mentioned inturned lugs, a second member secured to the other end of said belt and having a right angular lip adapted to interlock with said first mentioned lip.

---

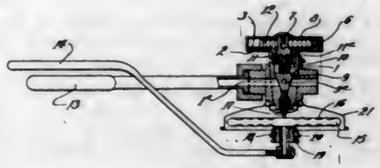


1,692,419. HAT LINING AND SIZE REDUCER. PHILIP ROSENBERG, Brooklyn, N. Y. Filed Feb. 13, 1928. Serial No. 253,829. 2 Claims. (Cl. 2—190.)

1. A lining for a hat comprising a body shaped to fit the interior of the hat, said body having a portion attached adjacent its lower edge to the body and extending circumferentially thereof, the upper edge of said portion also being secured to the body, the lining and said portion thus providing a continuous annular pocket closed at the top and bottom, said pocket having an opening and a flexible strip of filling material in the pocket and removable through said opening to adjust the size of the hat to the head of the wearer.

---

1,692,420. GYPSUM-BLOCK MACHINE. GEORGE H. A. RUBY, East Grand Rapids, Mich. Filed Oct. 31, 1927. Serial No. 229,808. 9 Claims. (Cl. 25—99.)



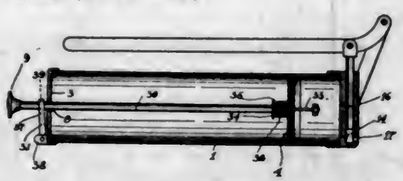
1. A consecutive series of block forms, each comprising a bottom plate, a vertical side plate pivotally connected

to the bottom plate, an end member permanently secured at one end of the bottom plate, a second end member located at the opposite end of the bottom plate and having an inturned flange, the upper side of which is flush with the upper side of the bottom plate, and means for mounting said second end member for movement toward or away from said bottom plate.

---

1,692,421. VALVE FOR REGULATING GAS FLAMES. GEORGE SCHLUSSELBURG, Chicago, Ill., assignor to Francis Edward Hale, London, England. Filed June 8, 1926, Serial No. 114,431, and in Great Britain June 8, 1925. Renewed Aug. 17, 1928. 9 Claims. (Cl. 67—116.)

1. In a device of the class described in combination with a burner and gas passage, a main plug for regulating the flow of gas through the gas passage, a supplemental plug provided with a cross bore and rotatably mounted and normally seated within the main plug and extending across the gas passage for regulating the flow of gas for lighting purposes, means associated with both main and supplemental plugs for imparting rotation to the supplmenetal plug by a limited degree of movement and rotation to the main plug by continued movement, and thermostatic means associated with the burner when the flame is maintained for lifting the supplemental plug from its seat in the main plug to maintain the flow of gas, and means operable to effect reseating of the supplemental plug when the gas is extinguished, and means for regulating the extent of the lifting movement imparted to the supplemental plug by the thermostatic means, substantially as described.

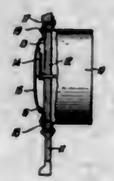


---

1,692,422. METHOD OF TREATING SULPHUR. JAMES W. SCHWAB, Gulf, Tex., assignor to Texas Gulf Sulphur Company, Bay City, Tex., a Corporation of Texas. Filed Mar. 16, 1927. Serial No. 175,935. 7 Claims. (Cl. 23—229.)

1. The method of purifying sulphur contaminated with hydrocarbons, which comprises agitating the sulphur while molten in the presence of anhydrous aluminum chloride and separating the molten sulphur from the combined impurities.

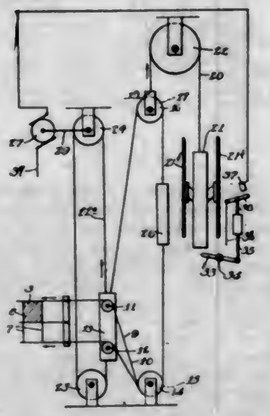
---



1,692,423. GREASE GUN. ALBERT T. SHERE, Oakland, Calif., assignor, by mesne assignments, to Gat Gun Lubricating Corporation, Oakland, Calif., a Corporation of California. Filed Apr. 25, 1922. Serial No. 556,393. 2 Claims. (Cl. 221—47.3.)

1. In combination, a cylinder adapted to contain grease and having a booster pump associated with the front end thereof, a rod extending slidably into the cylinder from the rear end thereof and having a piston slidable thereon, an abutment on said rod, a spring cushion bearing on the abutment and on the piston so as to urge the latter forwardly and a locking means for the rod associated with the rear end of the cylinder, the said locking means being arranged to allow the rod to be pushed forwardly but to resist rearward motion of the rod.

---

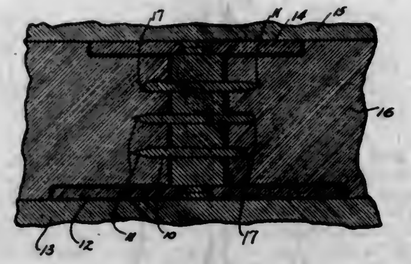


1,692,424. CLOCK CRYSTAL. LOUIS STERN, Woodmere, N. Y., assignor to The De Luxe Clock & Mfg. Co., Inc., New York, N. Y., a Corporation of New York. Filed Dec. 13, 1927. Serial No. 239,657. 3 Claims. (Cl. 58—91.)

2. In combination a clock face having a dial, a crystal having a center portion, a peripheral wall and a marginal portion, said marginal portion being substantially parallel to and spaced from said center portion by said wall, and means for securing said marginal portion directly to said clock face outside of said dial.

---

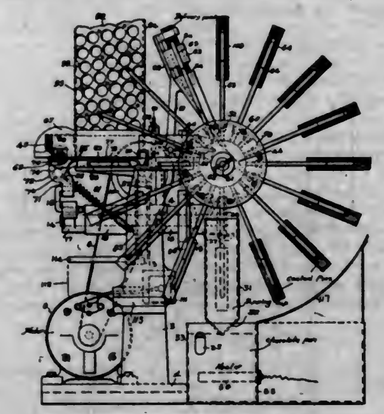
1,692,425. DEVICE FOR STOPPING HIGH-POWERED VEHICLES. JOSEPH B. STRAUSS, Chicago, Ill. Filed Nov. 9, 1925. Serial No. 67,805. 12 Claims. (Cl. 39—1.)



3. A device for stopping vehicles comprising separated posts, a barrier portion extending between said posts, flexible pay out members connected with said barrier portion, direction changing devices over which said pay out members pass, a spacer to which said direction changing devices are connected, direction changing devices connected with said posts over which the pay out members pass and located below the first-mentioned direction changing devices, direction changing devices above the spacer over which said pay out members pass, said pay out members passing downwardly from said latter direction changing devices and being connected with said spacer, resisting means with which said latter direction changing devices are connected and which resist the paying out of said flexible pay out members, and a raising and lowering mechanism for said spacer.

12. A device for stopping vehicles comprising a barrier portion extending across the space to be protected, means for raising and lowering said barrier portion, means for causing the pressure exerted on the barrier portion by a vehicle striking it, to be exerted in a downward direction and a stop for resisting said downward pressure.

---



1,692,426. MOLDER'S CHAPLET. HUGH STUART, Granite City, Ill., assignor to Commonwealth Steel Company, Granite City, Ill., a Corporation of New Jersey. Filed June 25, 1927. Serial No. 201,336. 2 Claims. (Cl. 22—184.)

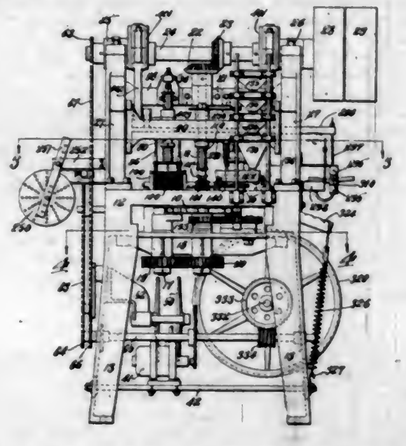
1. In a molder's chaplet, a core-supporting shank, core or mold engaging heads on said shank, and a radial fin on said shank between said heads, said shank comprising a continuous solid section of substantial thickness between said heads to firmly support the core throughout a casting operation, and said fin being of substantially larger diameter than said shank and the outer portion of said fin being much thinner than said shank or the inner portion of said fin so that said outer portion will be melted by the heat of the molten metal poured into the mold during the casting operation and unite with the casting metal to form a fluid-tight joint with the chaplet before any similar melting of said shank occurs and irrespective of shrinkage of the cast metal away from said shank upon cooling of the casting.

---

1,692,427. ICE-CREAM CUTTING AND COATING MACHINE. WILLIAM E. URSCHEL, Valparaiso, Ind., assignor to Eskimo Pie Corporation, Louisville, Ky., a Corporation of Delaware. Filed July 12, 1924. Serial No. 725,734. 10 Claims. (Cl. 91—14.)

1. For sizing of material in block form, a machine comprising means for severing a section of the material from the block, a well for holding a sizing fluid, means for separating a portion of the sizing fluid from the main body thereof, and means cooperating with said separating means to effect the enveloping application of said separated portion of sizing fluid to the severed section of block material.

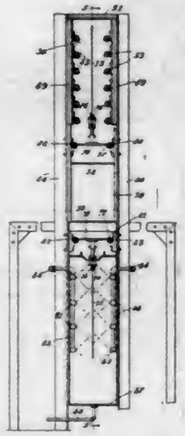
10. A machine for sizing material in block form which comprises a Ferris wheel having spokes and impaling needles secured near the outer extremity of said spokes, a knife for severing sections from said block, said knife designed to sever a section of block and force the severed sections onto a set of impaling needles in one continuous operation, a well for containing sizing liquid, a dipper for withdrawing a portion of the liquid and enveloping one of the impaled sections therewith, means for withdrawing the sized sections, and synchronizing means whereby the Ferris wheel is alternately rotated a distance equal to the distance between the sets of impaling needles and held against rotation intermediate successive movements, the severing and impaling, sizing and removing steps occurring simultaneously while said Ferris wheel is held against rotation.



---

1,692,428. LATCH FOR COVERS FOR TYPEWRITING MACHINES. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Original application filed Nov. 4, 1921, Serial No. 512,741. Divided and this application filed Aug. 13, 1925. Serial No. 49,973. 3 Claims. (Cl. 292—87.)

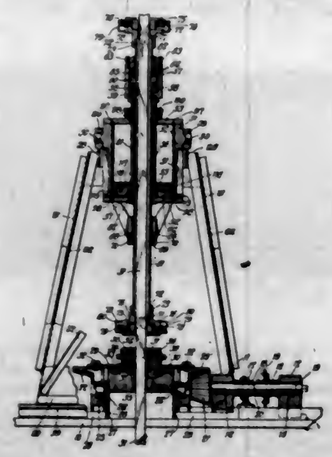
1. The combination with a casing having a cover hinged thereto, of a flexible and shiftable arm pivoted to one side of said cover and provided with a projection thereon generally parallel to said pivot, there being corresponding apertures in the side of said cover and said casing registering with each other in closed position of the cover and normally retained in registration by said arm-projection passing therethrough, said arm being conditioned to be first withdrawn by flexure thereof to withdraw said projection from said apertures, and thereafter shiftable about said pivot to shift and thereby displace said projection from said apertures to an idle position.



1,692,429. PACKAGING MACHINE. HANS H. WANDERS, Boston, Mass. Filed Feb. 14, 1922, Serial No. 536,523. Renewed Apr. 21, 1928. 13 Claims. (Cl. 93—5.)

1. In a packaging machine, means for cutting a disk of sheet material, means for crimping the edge of said disk to form a receptacle, means for filling said receptacle, means for folding said crimped edge down over the filling, and means for sealing the receptacle.

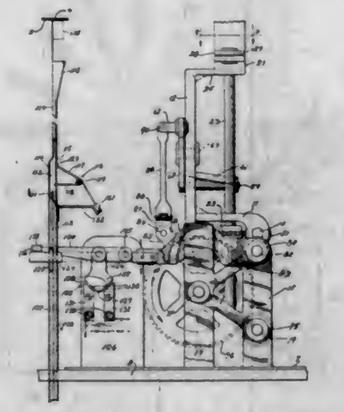
---



1,692,430. APPARATUS FOR DRYING AND SHAPING KNITTED ARTICLES. EDWARD J. ZIOCK, Rockford, Ill. Original application filed May 7, 1924, Serial No. 711,565. Divided and this application filed Sept. 20, 1924. Serial No. 738,755. 2 Claims. (Cl. 34—12.)

1. In apparatus of the character described, in combination, a drying compartment, a carrier for moving knitted articles lengthwise through said compartment, heating pipes at opposite sides of the knitted articles, a centrifugal fan the intake end of which is in communication with the compartment at the carrier entrance end thereof, an air conduit leading from the discharge end of said fan to the carrier outlet end of said compartment, and nozzles located on opposite sides of the knitted articles at the point at which they emerge from the outlet end of said compartment and arranged to discharge air from said conduit into the outlet end of said compartment past the stockings, whereby to produce an injector action for drawing fresh air into the compartment past the stockings emerging therefrom.

---

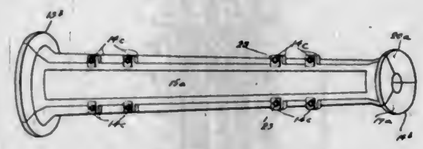


1,692,431. HYDRAULIC-FEED ROTARY DRILL. OLOF B. ANDERSON, Marquette, Mich., assignor to E. J. Longyear Manufacturing Company, a Corporation of Delaware. Filed June 7, 1924. Serial No. 718,568. 11 Claims. (Cl. 255—24.)

1. A device of the character described comprising a stem, a rotatable table for rotating said stem, said stem being slidable therethrough, and means for advancing said stem during rotation thereof comprising a cylinder, a piston in said cylinder, a member moving with said piston having means for gripping said stem and means for supplying fluid under pressure to said cylinder to move said piston therein said cylinder being swingably mounted so as to automatically align itself with said stem.

---

1,692,432. CORN-POPPING MACHINE. DANIEL WEBSTER BAKER, Oakland, Calif., assignor, by direct and mesne assignments, of one-fourth to Dominick John Collins, one-fourth to George Bettandorff, Oakland, Calif., and one-fourth to Harry C. Schroeder, Concord, Calif. Filed May 19, 1927. Serial No. 192,518. 14 Claims. (Cl. 53—4.)



1. In a machine for popping corn or other grain, a receptacle, means in operative relation to said receptacle for automatically heating the grain therein until the grain pops; and means for automatically vibrating said receptacle so as to cause a uniform roasting of the grain.

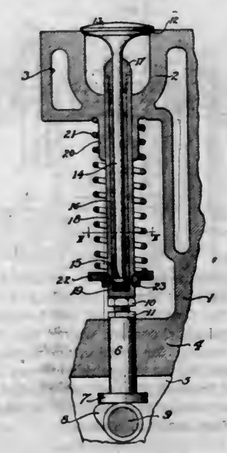
---

1,692,433. METHOD FOR MAKING HOLLOW MOLDS. HENRY BARKSCHAT, Los Angeles, Calif., assignor to Marbelite Corporation of America, Los Angeles, Calif., a Corporation of Delaware. Filed Mar. 29, 1926. Serial No. 98,177. 5 Claims. (Cl. 22—193.)

4. The method of making hollow, cast molds from a substantially cylindrical model, that includes detachably securing a pair of angularly spaced defining strips to the peripheral face of the model, said strips extending longitudinally in substantial parallelism with the axis of the model, applying plastic material to the peripheral face of the model between said strips at one side only of a given axial plane, allowing the plastic material to set at least partially, removing at least one of the strips, applying a separative film to the edge of the material where exposed by such removal, and applying a body of plastic substance to the peripheral face of the model, said body being extended angularly about the model to meet the film on said exposed edge.

---

1,692,434. HINGE FOR JEWELRY. GASTON CANDAS, Paris, France. Filed Mar. 12, 1926, Serial No. 94,207, and in France Jan. 22, 1926. 1 Claim. (Cl. 59—80.)



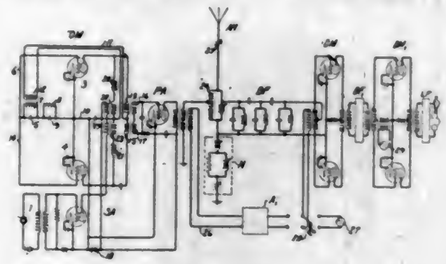
A sectional band of rigid material comprising a plurality of relatively movable substantially rectilineal abutting sections having oblique end faces, means for permitting the band to be opened into a rectilineal line or broken into a polygonal configuration, the said means comprising an apertured sector of a circle secured to one section and projecting from the end thereof an extent substantially equal to about one-half of its total length, the inner face of the portion of such section to which the sector is secured corresponding to a radius of the circle from which such sector is described and the said projecting portion of the sector having an oblique face corresponding to another radius of the same circle but projecting to an angle of the first mentioned radius, said sector being provided with a slot concentric to the circumference of such circle, and the other section having a plurality of concentric arcuate lugs, one of which is adapted to travel in the aforesaid concentric slot and the other of which is adapted to ride on the circumference of the circle of said sector and a stop member projecting from the periphery of said sector and adapted to abut the end of the latter lug when the aforesaid sections are opened so that their outer surfaces are in rectilineal alignment with each other.

---

1,692,435. TAPPET-NOISE ELIMINATOR. AXEL CLEMENSEN, Chicago, Ill. Filed Jan. 22, 1927. Serial No. 162,709. 11 Claims. (Cl. 123—90.)

1. The combination with an internal combustion engine and a tappet mechanism thereof, of a valve, a valve stem formed thereon, a disk formed on the lower end of said valve stem, an inner sleeve surrounding the valve stem and resting on said disk, an outer sleeve surrounding said inner sleeve with the lower end of said outer sleeve closed and in contact with said tappet mechanism, a plurality of superimposed friction plate springs in the lower end of said outer sleeve below said valve stem disk, a stop ring recessed into the outer periphery of said outer sleeve,

a stop plate engaged on said outer sleeve above said stop ring, and a coiled spring engaged around said outer sleeve and seated against said stop plate.



---

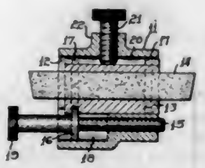
1,692,436. TURF-CUTTING DEVICE. HARRY B. DEANE, Monroe, Mich. Filed Aug. 31, 1926. Serial No. 132,721. 3 Claims. (Cl. 97—226.)

1. In a turf cutting device, a cylindrical cutter, a spider having depending ends extending into the cylindrical cutter and to which the cutter is secured, a tube extending upwardly from the spider, a union threaded onto the upper end of the said tube and having an opening therethrough in alignment with the opening of the tube, a pair of arms threaded into opposite sides of the said union and extending at a right angle to the said tube, a rod reciprocably mounted in the tube and extending through the said union, a head on the upper end of the said rod the said rod also extending from the lower end of the pipe, a plunger secured to the lower end of the rod and fitting within the cylindrical cutter, downward movement of the said plunger being limited by said head striking the said union and upward movement of the plunger being limited by striking the depending ends of the spider.

1,692,437. SIGNALING SYSTEM. JOHN F. FARRINGTON, Flushing, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 11, 1924. Serial No. 698,358. 9 Claims. (Cl. 250—9.)

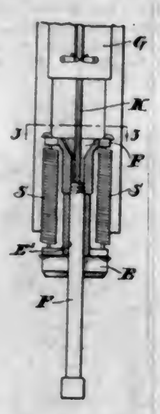
1. In a radio system comprising a station having an incoming wave receiving circuit including a broad band filter selective to the frequencies of the incoming wave, a source of high frequency carrier waves for transmitting outgoing signals, means for combining waves from said source with incoming waves whereby waves of an inaudible frequency different from that of either of said frequencies are produced, and means for deriving audible incoming signals from said last mentioned wave.

---



1,692,438. TAR-LAID BUILDING MATERIAL. SYLVESTER A. GATES, Detroit, Mich. Filed Apr. 10, 1926. Serial No. 101,049. 3 Claims. (Cl. 72—19.)

2. A building slab having tongues at certain edges and grooves at other edges thereof, said grooves containing a fusible material which is hard at ordinary temperatures.



---

1,692,439. GRINDING TOOL. ERNEST A. HALL, Toledo, Ohio, assignor to The Hall Manufacturing Co., Toledo, Ohio, a Corporation of Ohio. Filed Dec. 5, 1927. Serial No. 237,615. 8 Claims. (Cl. 51—204.)

1. In a machine of the character described, a tool holder having a longitudinal groove, a housing in which the holder is mounted, means for adjusting the tool longitudinally in the housing, means cooperating with said groove to guide the holder longitudinally but adjustable away from the groove to permit the holder to be rotated, said holder having means normally engageable with the holder adjusting means to fix the longitudinal position of the holder but releasable to permit free longitudinal movement of the holder after the latter has been partially rotated.

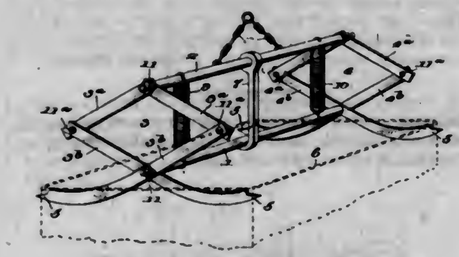
1,692,440. MUD GUARD FOR SUBMARINE DRILLS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 6, 1927. Serial No. 224,303. 3 Claims. (Cl. 255—51.)

1. A submarine drill unit, having a main frame provided with guides, a guide frame vertically movable on said guides, a drilling element, a tubular mud guard slidably supported at the lower end of said guide frame below the drilling element whereby the weight of the drilling element may rest upon the mud guard to force it down to the rock to be drilled, and an elastic connection between the guide frame and the mud guard constantly tending to force the mud guard downwardly.

---

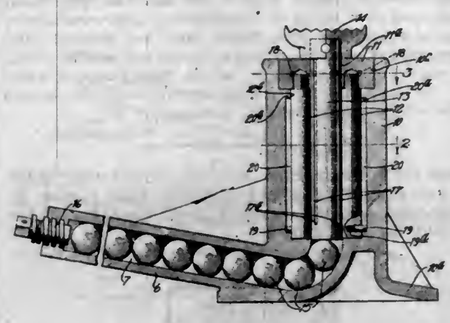
1,692,441. BOBBIN SUPPORT. LOUIS B. HASBROUCK, Elmira, N. Y., assignor to Eclipse Textile Devices, Inc., Elmira, N. Y., a Corporation of New York. Continuation of and substitute for applications Serial No. 140,430, filed Oct. 9, 1926, and Serial No. 149,050, filed Nov. 18, 1926. This application filed May 26, 1928. Serial No. 280,675. 16 Claims. (Cl. 242—130.)

1. The combination with the creel of a spinning frame and the like and a roving bobbin, of means for supporting the bobbin on the creel providing a bearing which is located well above the center of gravity of the bobbin, and with respect to which the bobbin rotates and about which it is free to tip.



1,692,442. HIGH-PRESSURE STEAM BOILER. CHARLES GILBERT HAWLEY, Chicago, Ill. Filed Mar. 15, 1924. Serial No. 699,592. 2 Claims. (Cl. 122—332.)

1. A steam boiler of tubular construction throughout and hence adapted to sustain high pressures, and, bodily suspended above a suitable furnace chamber; said boiler being characterized by a horizontally positioned group of water drums which frame the top of said chamber, in combination with horizontally spaced return tubes rising from all said drums and framing a fire chamber which extends above said furnace chamber, brick walls supported by said drums and tubes and extending to the tops of the latter, a horizontally positioned group of parallel steam-and-water drums elevated above the first group and wherewith the upper ends of respective return tubes communicate, said elevated group supporting the lower drums, tubes and brick.



---

1,692,443. BAG HOLDER. WILLIAM BRADFORD HEBBARD, Trumansburg, N. Y. Filed July 23, 1926. Serial No. 124,433. 9 Claims. (Cl. 83—26.)

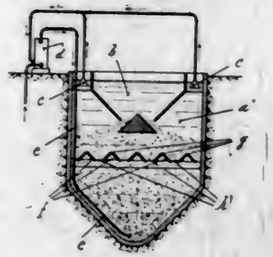
1. A loading support for receptacles comprising symmetrically arranged pairs of parallel projecting members adapted to engage and hold a receptacle, a pair of parallel connecting rods symmetrically connected at their ends to said projecting members and adapted to have relative movement with respect to each other to advance and retract said projecting members thereby, and means to hold the parts normally in operative position to engage and hold a receptacle.

1,692,444. JACK. MARCUS A. HIRSCHL, Chicago, Ill., assignor to National-Standard Company, Niles, Mich., a Corporation of Michigan. Filed Aug. 5, 1927. Serial No. 210,859. 17 Claims. (Cl. 254—98.)

1. A jack comprising, a standard having a bore; a lifting member telescoping in said bore; a ball retaining member telescoping into said standard and having ball retaining bars surrounding said bore; a collar on the ball retaining member surrounding the lifting member; a ball receiving extension having a bore communicating with the lower end of the bore in the standard; a row of balls lying in said ball receiving extension; means for forcing said balls from said extension into the bore in the standard and against the lower end of the lifting member; and means for limiting the upward movement of the lifting member through the collar on the ball retaining member.

---

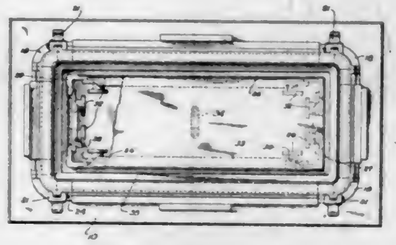
1,692,445. ELECTRIC FUSE. VERNON HOPE, Macclesfield, England. Filed Oct. 16, 1924, Serial No. 743,985, and in Great Britain Oct. 17, 1923. 6 Claims. (Cl. 200—135.)



1. In an electric fuse in combination;—a tape composed of woven weft threads and warp threads of flexible insulating material; multiple fuse wires extending longitudinally from end to end of the tape and being

secured to the tape at frequent intervals in such manner that the flexible wires are supported by the tape clear of the edges of the tape and with sufficient slackness to ensure that when the ends of the tape are pulled apart the tension to resist such pull is taken by the insulating warp threads of the tape, without subjecting the multiple fuse wires to tension, some of the said fuse wires being composed of a metal of comparatively high conductivity and comparatively high fusing point and some of them composed of a metal of comparatively low melting point; a contact plate at each end of the flexible tape attached to the said tape and making contact with the several fuse wires; substantially as described.

---

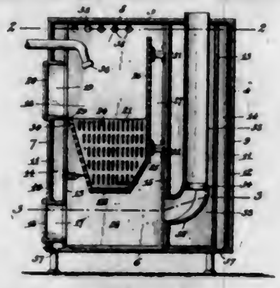


1,692,446. HEATABLE SLUDGE-DIGESTION CHAMBER FOR SEWAGE TREATMENT. KARL IMHOFF, Essen, Germany. Filed June 18, 1927. Serial No. 199,786. 2 Claims. (Cl. 210—2.)

1. The combination in a sludge digestion chamber, of means for heating the latter at its deepest point, and a partition between the top and bottom of the tank separating the heated lower part of the chamber from the upper part thereof, said partition comprising separator members placed side by side and spaced apart along their lateral edges, each of said members having openings therethrough.

---

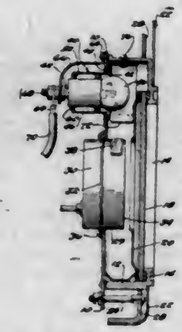
1,692,447. MOLD FOR VAULTS AND THE LIKE. JOHN L. JANISCH, Chicago, Ill. Filed June 16, 1927. Serial No. 199,278. 12 Claims. (Cl. 25—130.)



1. In a mold having removable corner, side and end walls, means detachably adjustable whereby said side and end walls may be both joined together and conveniently elevated and manipulated.

---

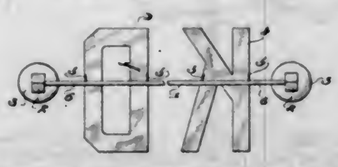
1,692,448. GARBAGE AND REFUSE INCINERATOR. FREDERICK R. JONES, Chicago, Ill. Filed Dec. 8, 1925. Serial No. 74,153. 11 Claims. (Cl. 110—8.)



1. A garbage and refuse incinerator having an incinerating chamber provided with a refuse receptacle having open-work walls to contain and support a quantity of garbage or refuse, a gas burner situated above said supporting means and directing its flame downwardly onto the garbage or refuse, and an outlet for the products of combus-

tion beneath the lowest point of said refuse receptacle to cause suction downwardly through all parts of said receptacle.

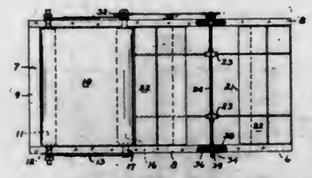
---



1,692,449. LAMP MOUNTING FOR INSTRUMENT PANELS. DON E. KEENEY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Feb. 27, 1928. Serial No. 257,257. 7 Claims. (Cl. 240—8.16.)

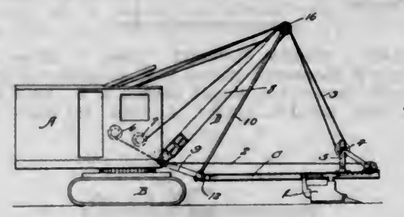
5. In an instrument assembly: a panel having openings therein; an instrument in one of the openings in said panel; a forwardly removable sleeve in another of said openings; a rearwardly removable light bulb supported by said sleeve and having a central end contact; and resilient means, pivoted to said panel and yieldably engaging end contact and thereby normally serving not only to conduct a current to said bulb but to retain said bulb against movement in either mentioned direction.

---



1,692,450. WINDOW-SIGN HOLDER. CLARENCE M. KIMBALL, Atlanta, Ga. Filed Mar. 28, 1925. Serial No. 18,982. 1 Claim. (Cl. 40—142.)

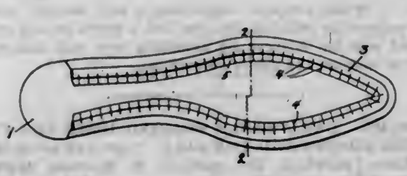
In a supporting member for window signs or notices, vacuum cups attached to the window, rearwardly extending lug portions from the cups having openings therein, a supporting bar mounted in the openings in the lug portions, a section of the supporting bar being bent inwardly in order to support the sign in close contact with the window.



1,692,451. FISH SCREEN. GEORGE C. KENNEY, Bishop, Calif. Filed June 9, 1927. Serial No. 197,562. 4 Claims. (Cl. 210—175.)

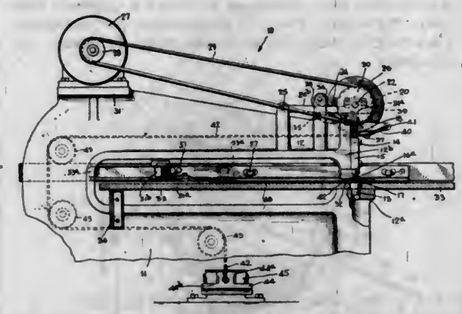
1. In a device of the character described, the combination of a flume, a fish screen of the endless belt type mounted in said flume, a water wheel supported on a rotatable shaft and disposed in the channel of said flume, bearing blocks for said shaft supported by said flume and displaceable upwardly from their normal position, and means operatively connecting said shaft to said screen.

---



1,692,452. SKIMMER-SCOOP CRANE. JOSEPH E. KIRKHAM, Topeka, Kans., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Oct. 3, 1924, Serial No. 741,345, and in Canada June 9, 1925. 27 Claims. (Cl. 214—102.)

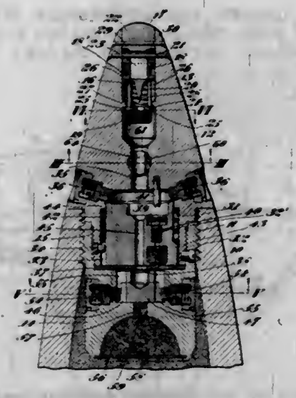
1. In a skimmer scoop crane, in combination, a traction support and a rotative car body thereon, a skimmer boom and skimmer bucket to operate on said boom, and means connecting the skimmer boom to the car body including an auxiliary boom supporting unit pivoted to said body and having an off-standing arm, and means pivotally connecting the said arm at its outer end with the skimmer boom, the skimmer boom being free at all times to swing on said pivotal connection toward and independently of the auxiliary supporting unit.



---

1,692,453. INSEAM SEWING MACHINE. EUCLID I. LA CHAPELLE, Brockton, Mass., assignor to C. C. Blake, Incorporated, Boston, Mass., a Corporation of New York. Filed July 6, 1923. Serial No. 649,853. 8 Claims. (Cl. 112—35.)

1. An awl for inseam shoe sewing machines having a point to engage the base of the channel of the sole, and a knife constructed and arranged with relation to the point to cut a lateral slit in the channel flap.

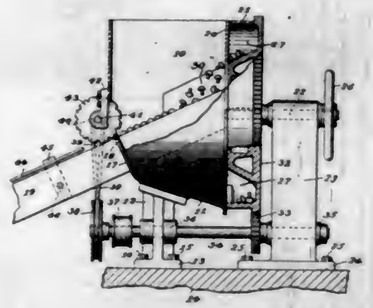


1,692,454. APPARATUS FOR PERFORATING INSCRIPTIONS, ORNAMENTATIONS, OR THE LIKE ON SHEET MATERIAL. JOSEPH LEVY, Brooklyn, N. Y. Filed Mar. 22, 1926. Serial No. 96,544. 10 Claims. (Cl. 164—47.)

1. An apparatus of the character described comprising a punch head having a lower and upper jaw, a die mounted on the lower jaw, a punch normally supported for sliding movement on the upper jaw in cooperative relation to said die, eccentric means for reciprocating said punch, said means being pivotally mounted on the punch head, and means for swinging said eccentric means to raise the punch into a non-cooperative position relative to the die while reciprocating the punch to and from the die for permitting the free movement of sheet material between the punch and the die.

---

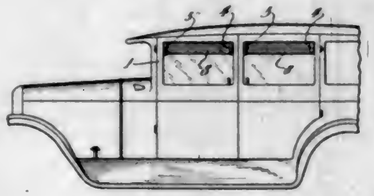
1,692,455. DETONATING FUSE. WILLIAM L. LUKENS and NEVIL GREENWELL, Bethlehem, Pa., assignors to Bethlehem Steel Company. Filed Oct. 20, 1925. Serial No. 63,594. 6 Claims. (Cl. 102—39.)



1. In a fuse, the combination of a fuse body, a detonating element, a firing mechanism mounted in the fuse body, a duct formed in said body to transmit the flame from said firing mechanism to the detonating element, a valve member rotatably mounted in said body and having an aperture therein whereby said duct is open in one position of said

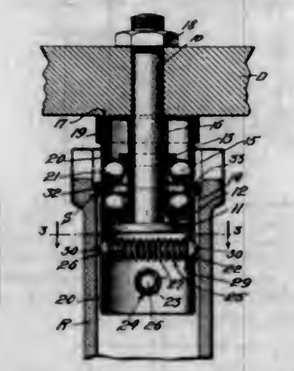
member and closed in another position of said member, and a passageway formed in said valve member for venting the flame from said firing mechanism to the atmosphere when the duct is closed.

---



1,692,456. MACHINE FOR FEEDING HEADED BLANKS. JOHN M. LYNCH, Oakville, and WILLIAM S. GILMOUR, Waterbury, Conn., assignors to Blake & Johnson Company, Waterbury, Conn., a Corporation of Connecticut. Filed Sept. 6, 1923. Serial No. 661,210. 4 Claims. (Cl. 10—165.)

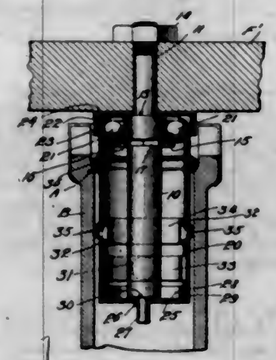
1. In a machine for feeding headed blanks, a hopper open at the rear side thereof, adapted to contain a quantity of blanks, an inclined chute extending through said hopper, a vertical blank feeding wheel at right angles to the plane of said chute closing the rear side of said hopper, said blank feeding wheel having a plurality of recesses having openings on the side only for automatically picking up blanks from said hopper and delivering them out of the plane of said wheel to said chute as said wheel is rotated, said blank feeding wheel being mounted on a shaft at the rear of said hopper, and a hand wheel on the end of said shaft for manually operating said feeding wheel.



---

1,692,457. CANOPY FOR AUTOMOBILE WINDOWS. HARRY M. MAGID, Chicago, Ill. Filed May 7, 1927. Serial No. 189,487. 14 Claims. (Cl. 296—44.)

1. A device of the character described comprising a holder adapted to extend across and be frictionally held in a window frame, said holder having grooves adapted to lie at opposite sides of the window opening and facing each other in a plane forming an angle with the plane of the window, said grooves being open at the ends that are the inner ends when the device is on a window, and a stiff canopy sheet of a length sufficient to extend between said grooves, said sheet being adapted to be slipped into the grooves through their open ends.

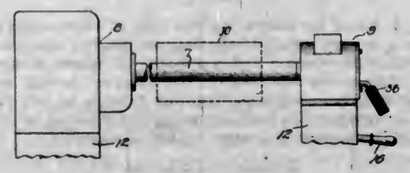


1,692,458. BOBBIN SUPPORT. JOHN V. MANN and LOUIS B. HASBROUCK, Elmira, N. Y., assignors to Eclipse Textile Devices Inc., Elmira Heights, N. Y. Filed Aug. 12, 1926. Serial No. 128,778. 19 Claims. (Cl. 242—130.)

15. A bobbin support comprising a depending rotary holder mounted on a bearing located above the center of gravity of the bobbin and resiliently engaging the bobbin to permit a tipping of its axis with respect to the axis of the bearing.

---

1,692,459. BOBBIN SUPPORT. JOHN V. MANN and LOUIS B. HASBROUCK, Elmira, N. Y., assignors to Eclipse Textile Devices, Inc., Elmira Heights, N. Y. Filed Aug. 14, 1926. Serial No. 129,117. 4 Claims. (Cl. 242—130.)



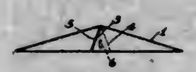
1. A bobbin support, comprising a ball bearing, means for supporting said ball bearing, and a sleeve having at its upper edge an incurved lip extending over said ball bearing to suspend the sleeve therefrom.

---

1,692,460. DETACHABLE BEARING HEAD FOR CUTTER SHAFTS AND THE LIKE. CARL LAWRENCE MATTISON, Rockford, Ill., assignor to Mattison Machine Works, Rockford, Ill., a Corporation of Illinois. Filed Mar. 27, 1924. Serial No. 702,194. 5 Claims. (Cl. 308—58.)

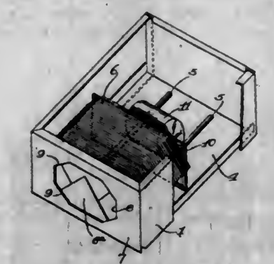
1. In a machine of the character described, the combination of a frame, a cutter shaft, a stationary bearing head for one end of the shaft adapted to support the shaft permanently on said frame for rotational and against longitudinal movement, a cutter carried on said shaft adapted to be slid off the other end thereof for removal from the machine, a bearing head for the said other end of the shaft slidable on said frame longitudinally of the shaft for disengagement from the shaft and removable from the machine to permit removal of the cutter, said head having a bearing sleeve rotatably mounted therein arranged to receive the said other end of the shaft, and means for effecting a connection between the shaft and said sleeve adapted to center the shaft in the sleeve.

---



1,692,461. UMBRELLA. FRANCIS B. MCKINNEY, Pittsburgh, Pa., assignor to The Parella Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 6, 1928. Serial No. 267,961. 3 Claims. (Cl. 135—20.)

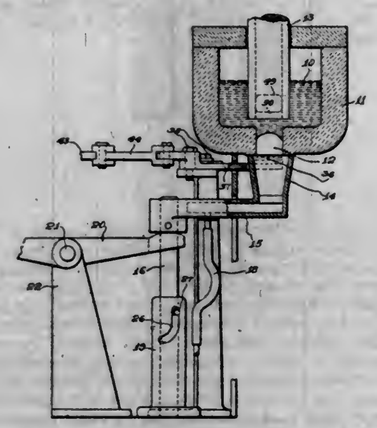
1. An emergency umbrella consisting of a sheet of self form-sustaining material provided with adjacently-disposed straight lines of weakness extending from the edge to a point materially within the sheet, the portion of the sheet between said lines of weakness being turned inwardly to form a gripping member which when engaged maintains the sheet in conical form.



---

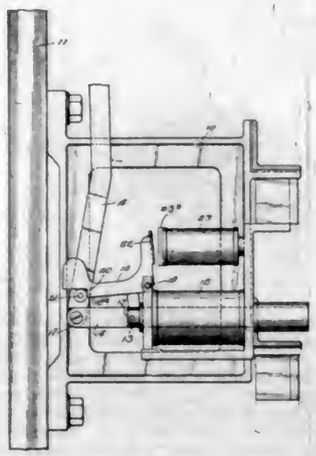
1,692,462. UMBRELLA. FRANCIS B. MCKINNEY, Pittsburgh, Pa., assignor to The Parella Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 6, 1928. Serial No. 267,962. 5 Claims. (Cl. 135—20.)

1. An emergency umbrella comprising a sheet of self form-sustaining material slit and overlapped to form a conical, umbrella-like structure having an underlying flap of substantial width, and connected together along the upper overlying edge to maintain said form and to leave said flap free for gripping engagement.



1,692,463. DISPENSER FOR PAPER NAPKINS AND THE LIKE. SAMUEL A. MERRIN, Chicago, Ill., assignor, by mesne assignments, to Marathon Paper Mills Company, Rothschild, Wis., a Corporation of Wisconsin. Filed Aug. 23, 1926. Serial No. 130,855. 4 Claims. (Cl. 312—61.)

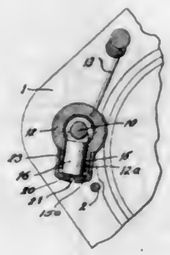
1. A dispenser for folded paper napkins, towels and the like, comprising a receptacle having an inclined bottom arranged to support the napkins on edge, a substantially vertical wall toward which said bottom inclines downwardly, said wall having a delivery window smaller than the folded form of the napkin, and a follower for the napkins movable by gravity along the inclined bottom to exert substantially uniform pressure against the napkins toward the window, said follower comprising a substantially flat plate directly engaging a quantity of napkins at the opposite side of the latter from the delivery window, and a weight resting on the inclined bottom against said plate but unconnected therewith or with the receptacle and movable by gravity toward the window as the napkins are withdrawn.



---

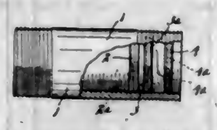
1,692,464. METHOD AND APPARATUS FOR FEEDING GLASS. KARL E. PEILER, Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Mar. 22, 1923. Serial No. 626,986. 11 Claims. (Cl. 49—55.)

4. In a glass feeder, the combination with a glass container having a submerged orifice, of a tubular throttling element having its lower open end adjacent to the upper end of the orifice, the internal diameter of the element decreasing upwardly, and means for creating a periodically fluctuating gas pressure below the orifice.



1,692,465. DAMPER CONTROL. OSCAR PETERSEN, Chicago, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 17, 1924. Serial No. 707,113. 3 Claims. (Cl. 84—218.)

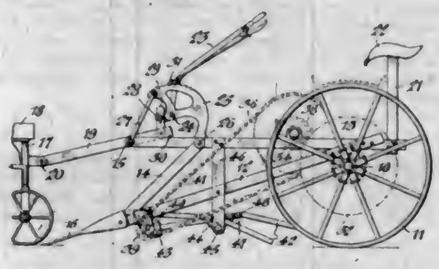
3. In means of the character set forth, a damper-actuating lever provided with a latching-shoulder, an electromagnet having a core linked to said lever and serving to secure it to the damping position, a pivoted latching-pawl operative to engage said shoulder and releasably hold said first-named lever in damping position, and a second electro-magnet adapted to retract said latching-lever.



---

1,692,466. LEVEL-WIND MECHANISM FOR FISHING REELS. CHARLES T. PFLUEGER and WALTER L. ADAMS, Akron, Ohio, assignors to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 30, 1926. Serial No. 105,711. 7 Claims. (Cl. 242—84.4.)

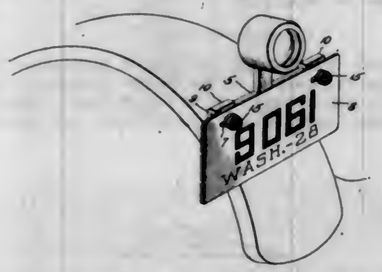
1. Level wind mechanism for fishing reels, comprising a reversely threaded shaft, a line guiding carriage mounted upon said shaft and adapted for movement back and forth therealong, said carriage being provided with an opening, a pawl removably positioned within said opening and adapted for engagement with said shaft, and means threaded to the external surface of said carriage for confining said pawl within said opening in engagement with said shaft.



1,692,467. FUEL-GAS REGULATOR. JAMES QUINLAN, Minneapolis, Minn. Filed June 18, 1926. Serial No. 116,890. 5 Claims. (Cl. 137—112.)

1. A device for controlling the flow of combustible gas from a storage supply to the burners therefor comprising a conduit for the gas and a plurality of spaced members extending across said conduit, said members having holes therethrough arranged in staggered relation in the adjacent members said holes in the respective members decreasing in size toward the supply end of the conduit.

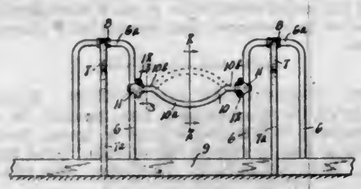
---



1,692,468. POTATO DIGGER. JOHN REUTHER, East Aurora, N. Y. Filed Feb. 26, 1927. Serial No. 171,290. 3 Claims. (Cl. 55—141.)

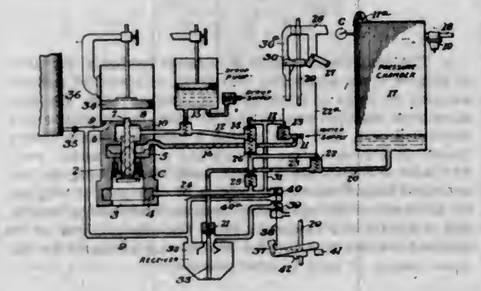
1. In a potato digger, the combination of a frame, a plow, a crank shaft mounted on said frame in rear of the plow, a supporting rod arranged parallel to and rearwardly of said crank shaft, upwardly-facing rock arms mounted on said rod and free to swing vertically thereon and a plurality of separator bars arranged side by side lengthwise of the frame and connected at their front ends to said crank shaft and at a point intermediate their ends to the free upper ends of the respective rock arms.

---



1,692,469. LICENSE-PLATE HOLDER. WALTER H. REX, Tallahassee, Fla., assignor to Crorex Holding Company, a Corporation of Florida. Filed Mar. 28, 1928. Serial No. 265,448. 3 Claims. (Cl. 40—125.)

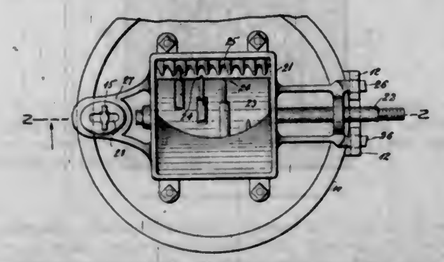
1. The combination with an automobile license holder and a license plate adapted to be supported thereon, of a bolt having its head disposed in anchored engagement with said support, the stem of said bolt extending through said license plate, a nut threaded on said bolt for clamping said plate against said support, a rotary cutter movable longitudinally over said bolt for penetrating engagement in said license plate upon advancing movement of said nut, and means on said nut for rotating said cutter upon retractive movement of said nut.



1,692,470. CATTLE-STALL BAR. LUDWIG E. SEDERBERG, St. Paul, Minn. Filed Aug. 19, 1926. Serial No. 130,224. 6 Claims. (Cl. 119—27.)

1. A stanchion having in combination, spaced front posts, a member extending therebetween and having a yoke-like portion between its ends, said member being revolubly mounted whereby said yoke-like portion may be disposed in various vertical positions.

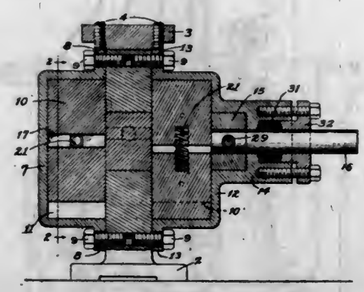
---



1,692,471. METHOD AND APPARATUS FOR BOTTLING. PATRICK W. SHIELDS and WALTER J. BLENKO, Pittsburgh, Pa., assignors to McKenna Brass and Manufacturing Company, Incorporated, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 5, 1923. Serial No. 678,588. 20 Claims. (Cl. 226—77.)

2. The method of bottling carbonated liquids which includes placing a bottle in operative relation to a source of carbonated liquid, sealing the bottle through the medium of a liquid under pressure, raising the pressure inside the bottle to above atmosphere, and thereafter directing carbonated liquid into the bottle, the sealing pressure and the pressure within the bottle being maintained substantially equal.

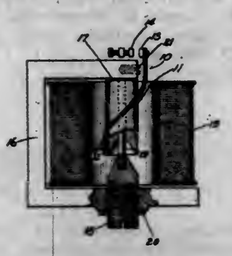
---



1,692,472. ICE CRUSHER. CHARLES M. SMITH, East Pepperell, Mass. Filed Mar. 25, 1926. Serial No. 97,239. 1 Claim. (Cl. 83—63.)

The combination with a tub, of ears secured to said tub, an ice crusher, prongs extending laterally from said ice crusher and arranged to take into said ears, respectively, an arm extending laterally from said crusher and provided with a slot, a bolt rotatably attached to said tub, a locking button on the upper end of said bolt, said button projecting through the slot in said arm, and a shaft for actuating said ice crusher.

---

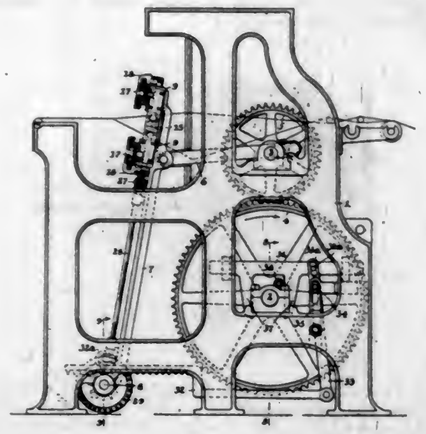


1,692,473. AIR COMPRESSOR. WILLIAM J. SMITH, Philadelphia, Pa., assignor to Vincent S. Clymer, Souderton, Pa. Filed Jan. 4, 1928. Serial No. 244,766. 5 Claims. (Cl. 230—152.)

1. In an air compressor, a standard having a bearing therein, chambers formed on opposite sides of the standard, a disk head having an integral shaft extending therefrom arranged in one of the chambers, and having its shaft located in the bearing, a corresponding disk head and shaft arranged in the opposite chamber, and means for connecting the second disk head to the shaft of the first disk head.

---

1,692,474. ELECTROTHERMAL DEVICE. OLIVER C. TRAVER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 11, 1925. Serial No. 14,829. 17 Claims. (Cl. 200—122.)

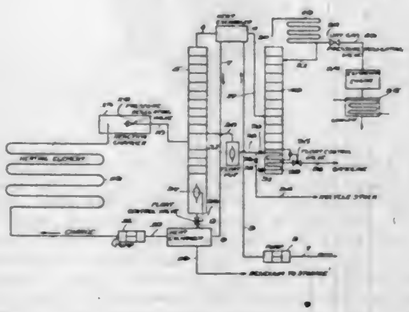


9. A thermal electric circuit controlling device comprising current conducting thermal responsive means, switch mechanism arranged to be controlled by said means responsive to variations in the temperature thereof, means for inducing a flow of current for heating said thermal responsive means comprising an energizing winding and a magnetic structure therefor having a magnetic member adjustable along the axis of said winding for varying the value of the current induced for heating said thermal responsive means upon variation in the energizing current of said winding.

---

1,692,475. LOOM-SHUTTLE MOTION. ARTHUR J. VERVAET, North Haledon, N. J. Filed June 4, 1927. Serial No. 196,499. 6 Claims. (Cl. 139—133.)

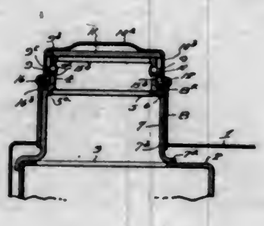
1. In combination, means affording a shuttle race, shuttle driving means extending lengthwise of and spaced from the race and including longitudinally arranged



shuttle-driving portions individually movable toward the race, and having their ranges of movement wholly at one side of the same, means to hold the warp stretched in a plane extending between the first two means, a shuttle

movable along the race and having an end-surface against which said portions are active cam-fashion, and means to successively urge said portions against said end-surface to advance the shuttle along the race.

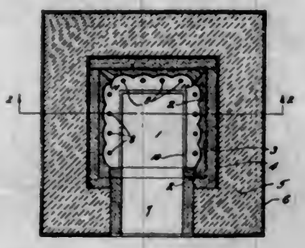
---



1,692,476. METHOD AND APPARATUS FOR CRACKING AND RECTIFYING PETROLEUM OILS AND THE LIKE. JAMES M. WADSWORTH, Sand Springs, Okla. Filed Mar. 12, 1926. Serial No. 94,288. 6 Claims. (Cl. 196—94.)

1. In a method of treating petroleum oils, cracking the oil under heat and pressure to produce a mixture of gasoline hydrocarbons, hydrocarbons lighter and heavier than gasoline hydrocarbons, and residuum, rectifying said mixture to sharply separate the gasoline hydrocarbons and lighter hydrocarbons from heavier hydrocarbons and residuum, subsequently rectifying said gasoline hydrocarbons and lighter hydrocarbons, and separately withdrawing from the second rectification step, rectified liquid gasoline and uncondensed gases, and utilizing during the rectification steps, the pressure resulting from the cracking step to effect the second rectification at super-atmospheric pressure and at temperatures from substantially atmospheric upwardly.

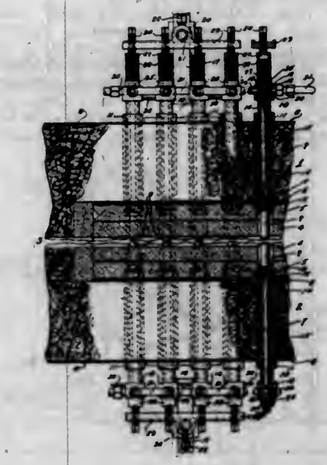
---



1,692,477. DETACHABLE CONNECTION. EUGENE C. WAMELINK, Cleveland Heights, Ohio, assignor, by mesne assignments, to The Eaton Axle & Spring Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 25, 1923. Serial No. 641,312. 14 Claims. (Cl. 220—40.)

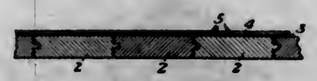
1. The combination, with a member having a plurality of pins or studs projecting therefrom, of a second member adapted to form a telescoping connection with the first mentioned member and having at such telescoping end a channeled seat, said seat having a pair of tongues struck therefrom corresponding to each pin or stud, and a resilient wire for each pin or stud, each wire having an end anchored behind one of the tongues of each pair of tongues, an inclined portion extending from such anchoring tongue, and a second end extending from the opposite end of its inclined portion and located behind and anchored by the other tongue of such pair of tongues.

---



1,692,478. ELECTRIC FURNACE. JACOB WEINTZ, Cleveland, Ohio, assignor to The Strong, Carlisle & Hammond Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 26, 1927. Serial No. 163,704. 3 Claims. (Cl. 266—1.5.)

1. In a furnace having a wall, a refractory lining therefor having parallel depressions of curved section the side portions of which meet at an angle to form ridges, and parallel heating elements spaced forwardly of the plane of said ridges and one before each of said depressions.

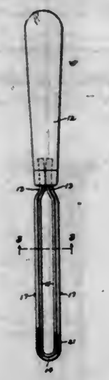


1,692,479. ELECTRIC FURNACE. JACOB WEINTZ, Cleveland, Ohio, assignor to The Strong, Carlisle & Hammond Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 3, 1927. Serial No. 223,800. 4 Claims. (Cl. 266—1.5.)

3. In an electric furnace, a bank of heating elements arranged in parallel relation, each extending between a pair of contactors, separate backing means for each set of contactors and secured upon opposite walls of the furnace, and yielding connections between one of said backing means and its set of contactors.

---

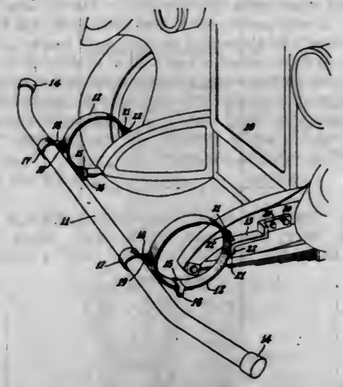
1,692,480. LAYING LINOLEUM OR THE LIKE. CALVIN N. WENRICH, Lancaster, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 15, 1927. Serial No. 161,421. 4 Claims. (Cl. 94—3.)



4. The combination of a wooden floor, a linoleum or similar hard surfaced floor covering, and a lining between the floor and said floor covering comprising felt reinforced by lines of stitching.

---

1,692,481. SHOE CREASER. GEORGE H. WILKINS, Brockton, Mass, assignor to Geo. E. Keith Company, Campello, Mass., a Corporation of Massachusetts. Filed June 8, 1928. Serial No. 283,894. 2 Claims. (Cl. 12—96.)



1. A shoe-creasing implement comprising an oblong loop of wire, secured at one end to a handle and including a longitudinal side member having flat longitudinal faces oppositely inclined, and a narrow fillet between said faces, the side faces and fillet collectively forming a longitudinal creasing ridge and being adapted to act conjointly in forming a relatively narrow crease, the bottom of which is

formed by the fillet, the implement being operable to cause the side faces to act alternately in widening the crease, without increasing the depth thereof.

---

1,692,482. BUMPER. MIRZA J. WILSON, Kenmore, Ohio. Filed Aug. 26, 1927. Serial No. 215,654. 11 Claims. (Cl. 293—55.)

1. In a bumper, the combination of a buffer-bar, and a pair of yielding, generally circular members each formed with an integral loop encircling said buffer-bar for supporting the same.

---

1,692,483. PENCIL AND ERASER THEREFOR. MAURICE ALLAND, Atlantic City, N. J. Filed Nov. 14, 1925. Serial No. 68,951. 1 Claim. (Cl. 120—38.)

An instrument of the class described comprising a hollow container body provided with exterior screw threads adjacent one end thereof, an eraser removably closing the body at said end, a ferrule surrounding said body and eraser, said ferrule having interior screw threads spaced from its ends and engaging the first mentioned screw threads so that the ferrule is adjustable longitudinally of

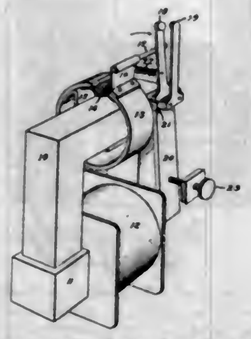
the body to compensate for wear of the eraser, said ferrule at one end having a portion longer than and covering the screw threaded portion of the body and spaced outwardly from the body, the other end portion of the body being interiorly smooth, the last mentioned portion and screw threads of the ferrule being spaced outwardly from the eraser.

---

1,692,484. VENTILATING DOOR. LEWIS S. BARR, Chicago, Ill. Filed May 5, 1928. Serial No. 275,467. 3 Claims. (Cl. 98—6.)

1. In a car of the character described having a vertical ventilating shaft with an opening to the outside at the lower end thereof, means for closing said shaft near the lower end thereof and above said opening, said means including a door hingedly attached to one wall of said shaft by means of curved supporting strips extending through holes in said wall, said door being accessible for manual control through the opening at the lower end of the shaft and adapted to be moved from horizontal position closing the shaft to vertical position opening the same.

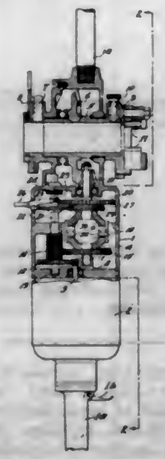
---



1,692,485. PACKER FOR WORKING BARRELS. PATRICK H. BRAY, Huntington Beach, Calif. Filed Nov. 1, 1926. Serial No. 145,579. 1 Claim. (Cl. 74—109.)

A deep well plunger pump unit including a cylindrical body member having a uniform diameter flow passage from end to end and each being threaded for attachment of coordinate members; the outer surface of the body being turned down and presenting an elongated packing recess between integral shoulders, the bottom of the recess including a straight cylindrical portion and shallow expanding conical faces at the ends of the cylindrical portion, and an elongated stack of packing rings seating on the bottom of the recess each end of the packing being expanded as it shifts in one direction on the conical faces as the load of liquid pressure is taken by the packing.

---

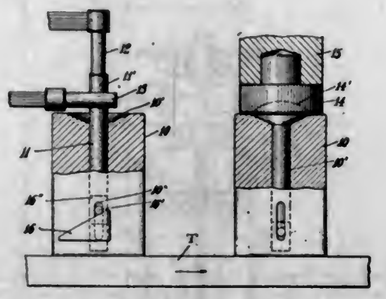


1,692,486. THERMAL AND ELECTRORESPONSIVE DEVICE. ALFRED COHN, Charlottenburg, Germany, assignor to General Electric Company, a Corporation of New York. Filed May 2, 1927, Serial No. 188,249, and in Germany May 20, 1926. 9 Claims. (Cl. 175—356.)

1. An electroresponsive device for alternating currents comprising a transformer having a closed magnetic structure provided with polar extensions for the stray flux set up upon excessive energization of the primary circuit of the transformer, a thermal responsive element arranged to be heated by the current in the secondary circuit of the transformer to effect operation thereof, and a movable magnetic member mounted to be operated by the stray flux through said polar extensions.

---

1,692,487. MOTOR-DRIVEN THREADING TOOL. EDWIN L. CONNELL, Cleveland, Ohio, assignor to The Van Dorn Electric Tool Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 10, 1925. Serial No. 49,839. 5 Claims. (Cl. 10—89.)



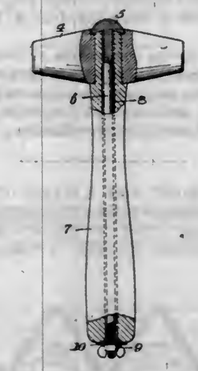
3. Thread cutting apparatus, comprising a tool rotating shaft carrying differential mechanism including two opposed gears, a driving shaft arranged in substantially parallel relation with said tool shaft, means whereby said driving shaft rotates one of said gears at fixed speed in one direction, and means whereby said driving shaft also rotates the opposed gear at two different speeds, one greater and the other less than that of the first named gear.

---

1,692,488. ELECTRICAL HEATING AND FORMING METHOD. ARTHUR G. DANNELL, New York, N. Y., assignor to Elektromatik Forging Machine Corporation, New York, N. Y., a Corporation of New York. Filed May 11, 1927. Serial No. 190,492. 20 Claims. (Cl. 219—3.)

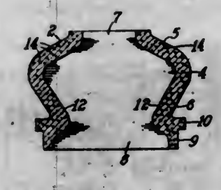
1. The method of heating a metal article held in a die cavity, which comprises supporting said article in said die cavity so that the portion desired to be heated extends beyond said die cavity in advance of its forging position in said die cavity, and heating said portion to a forging temperature while held in said die in such advanced position.

---



1,692,489. ODOMETER TRANSFER MECHANISM. CLARENCE B. DINSMORE, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Feb. 28, 1927. Serial No. 171,707. 2 Claims. (Cl. 235—139.)

1. In a registering instrument, number wheels having internal gears, an external star pinion between said number wheels in driving and driven relation thereto, a mounting for said star pinion including segmental plate means coaxial with and of the same radius as the number wheels having a radial extension, means to engage said extension and flexibly support said mounting.



1,692,490. TOOL HANDLE. JOSEPH DRAGON, McKees Rocks, Pa. Filed Mar. 17, 1927. Serial No. 176,006. 1 Claim. (Cl. 306—38.)

The combination with a hammer head having an eye, of a handle for the head, comprising a metallic sleeve, a rod slidably fitting in the sleeve but having its ends protruding therefrom, and its outer end portion extending into said eye and having connection with said head, a grip member snugly fitting the sleeve, and adjustable means carried by the inner end of the rod and abutting against the adjacent end of the grip member, for forcing said member into engagement with the hammer head, the sleeve serving to reinforce the grip member.

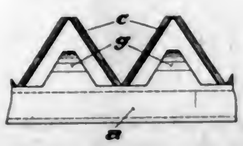
---

1,692,491. HOT TOP FOR INGOT MOLDS. MAXWELL GERSON DUMAS, Pittsburgh, Pa., assignor to Dumas Engineering Company, Youngstown, Ohio, a Corporation of Ohio. Continuation of application Serial No. 221,461, filed Sept. 23, 1927. This application filed July 27, 1928. Serial No. 295,680. 5 Claims. (Cl. 22—147.)

2. In a hot top or sink head, a hollow body having a predetermined inner dimension at its intermediate section, the body tapering inwardly in both directions from the intermediate section, and terminating in openings at the upper and lower ends thereof.

---

1,692,492. PROCESS OF DYEING CELLULOSE DERIVATIVES. HEINZ EICHWEDE, ERICH FISCHER, and CARL ERICH MÜLLER, Hochst-on-the-Main, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 23, 1925, Serial No. 77,399, and in Germany Jan. 9, 1925. 6 Claims. (Cl. 8—5.)

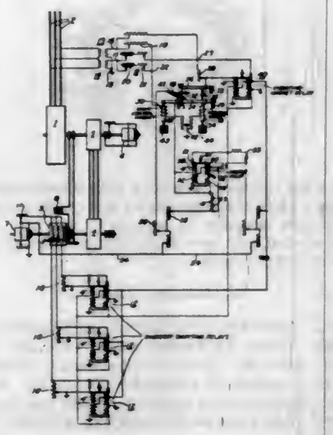


1. Process of dyeing compounds of the group including cellulose esters and cellulose ethers consisting in using for the dyeing process monoazo dyes obtainable by coupling a diazo compound containing at the most one sulfo group with an ortho-aminophenolether.

1,692,493. PROCESS OF DYEING CELLULOSE DERIVATIVES. HEINZ EICHWEDE, ERICH FISCHER, and CARL ERICH MÜLLER, Hochst-on-the-Main, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 23, 1925, Serial No. 77,400, and in Germany Jan. 9, 1925. 6 Claims. (Cl. 8—5.)

1. Process of dyeing compounds of the group including cellulose esters and cellulose ethers consisting in using for the dyeing process monoazo dyes obtainable by coupling a diazo compound containing at the most one sulfo group with a monoacyl-metaphenylenediamine.

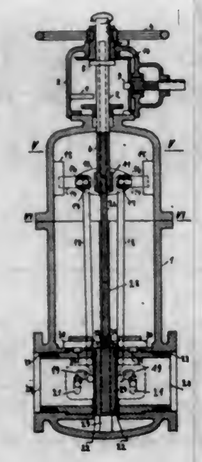
---



1,692,494. SUPPORT FOR KNIVES OF MOWING MACHINES. LEONHARD EISELE, Pfaffenhofen, Post Buttenwiesen, Germany. Filed Oct. 21, 1925, Serial No. 63,897, and in Germany Oct. 20, 1924. 1 Claim. (Cl. 56—299.)

A support for the knives of mowing machines, comprising a U-shaped supporting bar having a top plate of relatively great width and a bottom plate of relatively small width, said top plate being cut out to form a plurality of tongues, said tongues being adapted to rest upon the several blades of the mowing knife when inserted into the support.

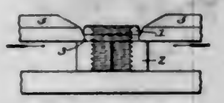
---



1,692,495. QUICK-EXCITED MACHINE AND SYSTEM OF TRANSMISSION. ROBERT D. EVANS, Pittsburgh, CHARLES F. WAGNER, Swissvale, ALEXANDER D. DOVJIKOV, Wilkinsburg, and ERROL B. SHAND, Pittsburgh, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 9, 1927. Serial No. 218,432. 21 Claims. (Cl. 171—119.)

1. The combination with a synchronous dynamo-electric machine, of a quick-response excitation system therefor, having a quickness of response sufficient to make a significant increase in exciting voltage before the air-gap flux of the machine has had time to drop more than about 3% by reason of the demagnetizing armature reaction equivalent to full-load demagnetizing current suddenly drawn from the machine terminals, and a voltage-responsive regulator operative to complete a corrective action necessary to initiate an increase in the excitation-system voltage in a time interval which is very small as compared to the first-mentioned time.

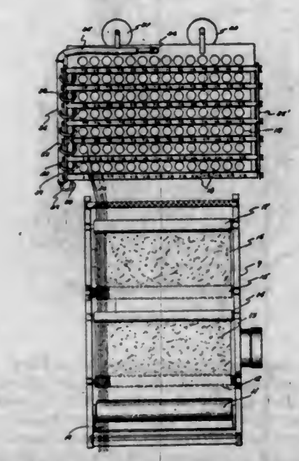
---



1,692,496. SLIDE STOP VALVE. WALTHER FRÖB, Eberswalde, near Berlin, Germany, assignor to the Firm Franz Seiffert & Co., Aktiengesellschaft, Berlin, Germany. Filed Oct. 11, 1926, Serial No. 140,952, and in Germany Oct. 16, 1925. 6 Claims. (Cl. 251—59.)

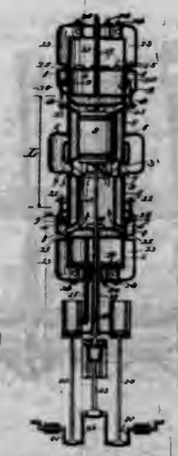
1. A slide stop-valve, comprising in combination, a casing and two oppositely located branches extending thereunto; a shiftable tubular member in each of said branches; a slide adapted to be introduced between, and withdrawn from, said tubular members; an operating mechanism for said slide and the tubular members and comprising means for lowering and lifting the slide, means for pressing the tightening faces of the tubular members against, and for withdrawing them from, the lowered slide, and means for pressing the tubular end members against one another when the slide is lifted.

---



1,692,497. METHOD OF MAKING LOCK NUTS. JOHN GUY FURLAN, New York, N. Y., assignor to Furlan Nut Machinery Corporation, New York, N. Y., a Corporation of New York. Filed May 1, 1923, Serial No. 635,880. Renewed Apr. 16, 1928. 4 Claims. (Cl. 10—86.)

3. The method of making lock nuts which comprises the steps of forming a polygonal portion at one end of the nut and a rounded portion at the other end of the nut, and then expanding the said rounded portion next to the polygonal portion, to effect an axial extension of the rounded portion from the polygonal portion.



1,692,498. DRYING APPARATUS. WALTER S. GATES, Detroit, Mich., assignor, by mesne assignments, to General Cable Corporation, a Corporation of New Jersey. Filed Dec. 7, 1925. Serial No. 73,681. 7 Claims. (Cl. 34—48.)

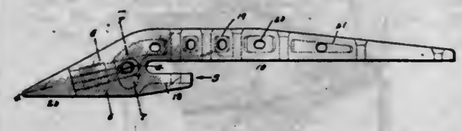
1. A device of the class described adapted for effecting the drying of a plurality of threads consisting of a header having a plurality of emitting outlets each adapted for emitting a current of air directed against one of said threads.

---

1,692,499. INTERNAL-COMBUSTION ENGINE WITH COUNTERRUNNING PISTONS. JOHN G. GRÖNVALL, Stockholm, Sweden. Filed Nov. 2, 1920, Serial No. 421,344, and in Great Britain Sept. 15, 1920. Renewed May 16, 1928. 8 Claims. (Cl. 133—62.)

1. A double acting two cycle internal combustion engine comprising a cylinder having a ring of exhaust ports arranged in the medial portion thereof, a hollow piston mounted to reciprocate in said cylinder, said hollow piston having a central ring of exhaust ports adapted to communicate with the exhaust ports of said cylinder, and a ring of inlet ports arranged adjacent each end thereof, said cylinder having air scavenging, air after charging and explosive fuel ports arranged in each end thereof adapted to communicate directly with the rings of inlet ports arranged at the opposite end of the hollow piston, and a piston reciprocating in said hollow piston forming combustion chambers therein, substantially as for the purpose specified.

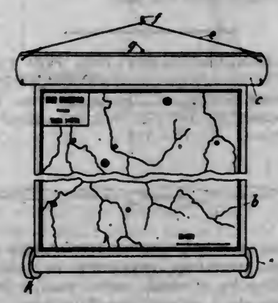
---



1,692,500. ROTARY RUST OR SCALE CLEANER. KNUT HARALD VILHELM GUSTAFSSON, Gottenborg, Sweden. Filed Apr. 18, 1927, Serial No. 184,744, and in Sweden Mar. 22, 1927. 2 Claims. (Cl. 15—104.14.)

1. A rotary rust or scale cleaner for internal cleaning of boiler and like tubes including a rotatable shaft, a chipping member eccentrically mounted at the free end of said shaft, guide means for said shaft located at a substantial distance from the chipping member whereby the axis of the journalled portion of said shaft is held in position in the centre of the tube under treatment to prevent displacement across the interior of the tube.

---

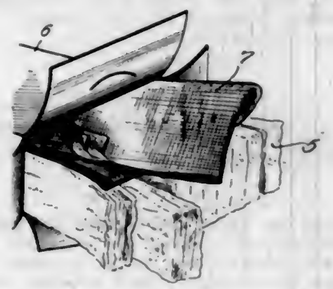


1,692,501. DIPPER TOOTH. GEORGE R. HANKS, High Bridge, N. J., assignor to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed Mar. 25, 1926. Serial No. 97,270. 3 Claims. (Cl. 37—142.)

1. A solid base having rivet openings and intervening metal reducing cavities whereof the entries are at right angles to the rivet openings, whereby provision is made for uniform heat treatment without weakening the structure of the base.

---

1,692,502. SUSPENSION DEVICE FOR WALL CHARTS. RUDOLF HARM, Berlin-Schoneberg, Germany. Filed Nov. 28, 1925, Serial No. 72,027, and in Germany Dec. 7, 1927. 7 Claims. (Cl. 40—28.)

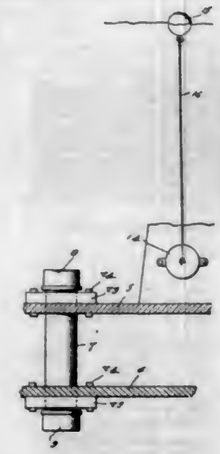


1. A suspension device for wall charts, maps and the like comprising two independent holding elements, one of said elements comprising two folding parts forming when closed a hollow cylinder.

1,692,503. MEANS FOR DISPENSING SURGICAL PLASTER. ROBERT P. HAYDEN, Highland Park, N. J., assignor to Johnson & Johnson, New Brunswick, N. J., a Corporation of New Jersey. Filed Apr. 30, 1926. Serial No. 105,749. 1 Claim. (Cl. 142—68.)

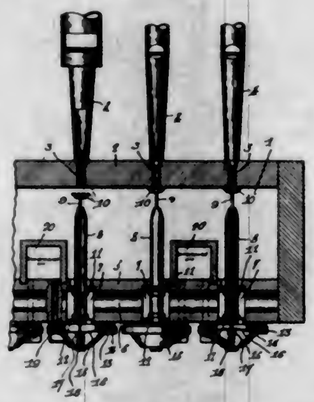
A hospital appliance, comprising a base having uprights whereof one is provided with a center point and whereof the other is formed with a downwardly opening slot, spring elements mounted therein to form downwardly opening reverse jaws, and a mandrel having one end adapted to said point and having its other end formed with a peripheral groove whereby it may be snapped into or out of place with relation to said spring jaws, said mandrel operating as a carrier for a factory filled plaster core.

1,692,504. PACKAGING SURGICAL NAPKINS. ROBERT P. HAYDEN, New Brunswick, N. J., assignor to Johnson & Johnson, New Brunswick, N. J., a Corporation of New Jersey. Filed Sept. 3, 1926. Serial No. 133,396. 2 Claims. (Cl. 206—47.)



1. As an article of manufacture, means to admit of fabrication of sanitary napkins to suit the fancy or requirements of the individual, comprising a package containing a plurality of absorbent pads in a raw or blank state whereby they are capable of facile individual or collective modification, and a supply of gauze or muslin sufficient to accommodate the pads.

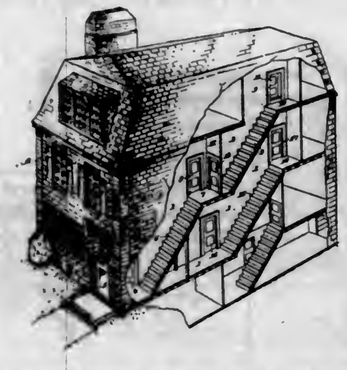
1,692,505. REENFORCEMENT BAR FOR CONCRETE STEEL AND METHOD OF MANUFACTURING THE SAME. ERNST HOFFMANN, Vienna, Austria. Filed Nov. 9, 1926, Serial No. 147,275, and in Austria Nov. 18, 1925. 4 Claims. (Cl. 72—111.)



1. A method of manufacturing reenforcement bars for concrete steel structures consisting in cold twisting together, a plurality of single rods, equal in length contacting in pairs along generatrices throughout their entire length and having substantially the same round transverse section throughout their entire length, until at least the parts of the twisted bar remote from the center of the total transverse section are stretched beyond the limit of elasticity.

1,692,506. SUBMARINE SAFETY DEVICE. RICHARD M. JOHNSON, Red Bank, N. J. Filed Mar. 29, 1928. Serial No. 265,797. 2 Claims. (Cl. 114—16.4.)

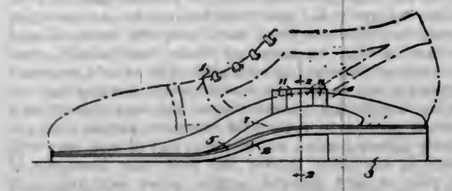
1. A submarine safety device of the class described comprising a tube for extending between the outer and inner portions of the upper deck of a submarine, means for anchoring the tube in place, a plug threaded in the inner end of the tube, a coupling on the outer end of the tube, a tubular member engaged in the coupling, a conduit leading upwardly from the tubular member, a plug threaded in the upper end of the tubular member and an elongated handle depending from the last mentioned plug and terminating immediately above the first mentioned plug.



1,692,507. PNEUMATIC ACTION FOR PIPE ORGANS. FRÉDÉRIC LAMONTAGNE, Montreal, Quebec, Canada. Filed Sept. 8, 1925. Serial No. 55,150. 5 Claims. (Cl. 84—335.)

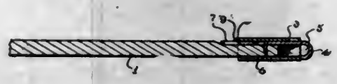
1. A pneumatic action for pipe organs comprising in combination with an air chest and an organ pipe communicating therewith, an air conduit member, an air chamber intersecting said conduit, a diaphragm having one side exposed to said chamber, said member having a duct independent of the conduit and leading to the other side of said diaphragm, a valve connected to said diaphragm and adapted to engage directly the inlet of said pipe, and a chamber containing compressed air.

1,692,508. BUILDING CONSTRUCTION. DANIEL E. MCAVOY, Long Island City, N. Y. Filed Sept. 11, 1924. Serial No. 737,189. 3 Claims. (Cl. 20—1.)



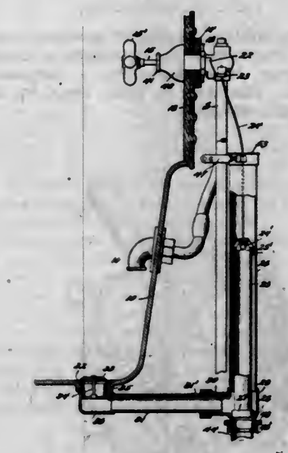
1. A building having a stair-well and straight flights of steps therein reaching from the ground floor to the uppermost floor of the building and completely bridging the space between the side walls of the well, thereby forming a continuous upwardly and rearwardly extending barrier between the front and the rear ends of the stair well; platforms or landings at the floors of successive stories; an outlet into the body of the building at each landing or platform, each such outlet provided with a closure; a main entrance at the ground floor, opening from the outside of the building into the stair-well; a doorway and door at the foot of the lowermost flight of steps, opening from the stair-well into the body of the building; a second stairway extending in rear of the first-named stairway from one story to another; and an outlet and a closure therefor, at the foot and head of such second stairway, opening into the body of the building on the floors connected by said second stairway; whereby a private passageway is afforded between the floors connected by such second stairway.

1,692,509. MANUFACTURE OF PHYSIOLOGICALLY-ACTIVE SUBSTANCES FROM ORGANS. WERNER MERKI, Basel, Switzerland, assignor to the Firm of Society of Chemical Industry in Basle, Basel, Switzerland. Filed Jan. 26, 1928, Serial No. 249,780, and in Switzerland Feb. 23, 1927. 8 Claims. (Cl. 167—7.)



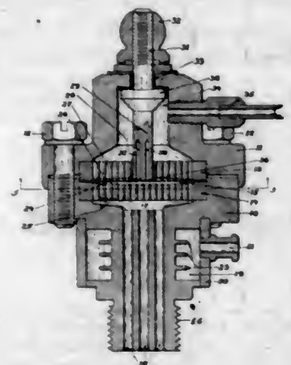
1. A process of extracting the internal secretory organs of females, wherein the fresh organs are cooled to such a low temperature that they become hard and in this condition are pulverized, whereupon the powder thus obtained is extracted with a suitable solvent.

1,692,510. SHOE AND ARCH PRESERVER. MICHAEL MINUTILLO, Holyoke, Mass. Filed May 23, 1927. Serial No. 193,086. 2 Claims. (Cl. 36—71.)



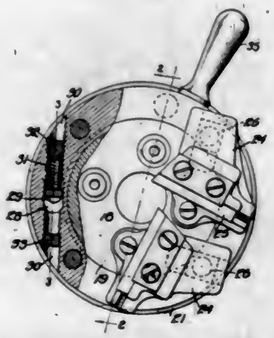
1. A shoe comprising a main sole, an inner sole having its inner side portion extended transversely from the main sole along the instep and adjacent heel and ball portions thereof and curved upwardly to form a brace for the instep portion of the shoe, an auxiliary bracing sheet of stiff material for the instep portion of the inner sole and brace forming portion thereof fitting against the under face thereof with its outer side face spaced from the adjacent side edge of the inner sole, and bracing strips extending transversely between the bracing sheet and instep portion of said inner sole with their outer end portions projecting from the bracing sheet and extending beyond the marginal edge of the brace forming portion of the innersole.

1,692,511. STRAP CONNECTION. EDWIN S. MIX, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed June 7, 1928. Serial No. 283,647. 4 Claims. (Cl. 24—265.)



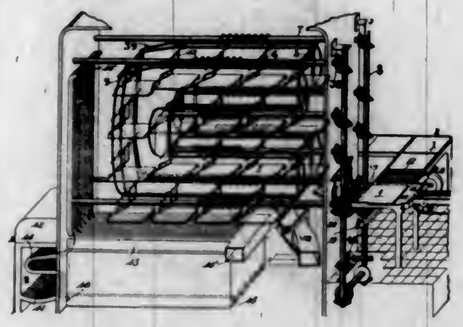
1. The combination with a strap, and an open ended box surrounding the strap, of an attaching device having a plate portion lying between an inner face of the box and the outer face of the strap and provided with a prong engaging the strap, and movable means carried by said plate portion for interlocking with the box to hold the latter against movement.

1,692,512. WASTE-CONTROL MECHANISM. PHILIP MUELLER and LUCIEN W. MUELLER, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed Dec. 22, 1926. Serial No. 156,376. 9 Claims. (Cl. 4—202.)



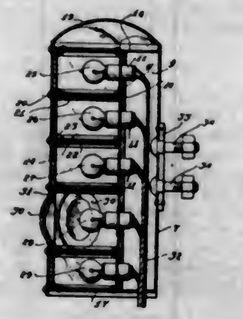
1. In a waste control, a stand pipe having a gravitative valve and a valve seat therein, a branch pipe adapted to conduct waste thereto from a tub or the like and operating means for said valve comprising a manually rotatable shaft, an arm carried by said shaft, a pin on said arm extending in substantially the direction of the shaft, and a continuous, integral wire-form element freely bendable and forming a connection between said pin and valve adapted to permit positioning of said stand pipe on various radii with respect to the axis of said shaft, said element having a loose connection directly with said pin at one end thereof and with the valve at the other end thereof.

1,692,513. INDICATOR. FLOYD B. NEWELL, Elmira, N. Y., assignor to Leopold Freedman and William H. Reynolds, Copartners, doing business as American Instrument Company, Washington, D. C. Filed May 3, 1920, Serial No. 378,694. Renewed Feb. 12, 1926. 10 Claims. (Cl. 73—110.)



1. In an indicator, a body portion, diaphragm supporting means therein, a diaphragm held by said supporting means, the supporting means being provided with closely spaced ribs upon which the diaphragm will rest when pressure on its opposite side tends to force it out of its plane, said body portion having a pressure chamber on each side of the diaphragm adjacent a support and in communication with the respective side of the diaphragm.

1,692,514. DIE HEAD. SAMUEL F. NEWMAN and JAMES G. HARPER, Waynesboro, Pa., assignors to Landis Machine Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Aug. 11, 1922. Serial No. 581,160. 13 Claims. (Cl. 10—100.)



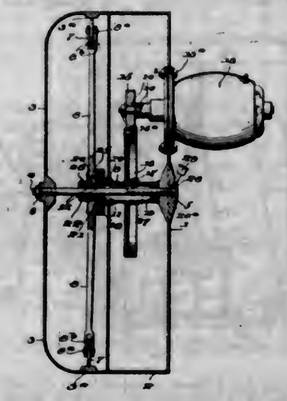
7. In a die head, a head body, rings surrounding the body, an integral circumferential flange at the end of the body for holding the rings in place, a shoulder on the said body, a thin ring surrounding said body and adapted to rest against said shoulder, a thin ring secured to said body for securing said first-named thin ring in position, and a supporting shank for the body bearing against the rearmost ring, said shank being movable axially relatively to said ring, substantially as set forth.

1,692,515. AUTOMATIC BAKING OVEN. FORTUNATO FERNANDEZ OVIEDO, Madrid, Spain. Filed Mar. 3, 1924, Serial No. 696,659, and in Spain Apr. 11, 1923. 6 Claims. (Cl. 107—57.)

1. An oven for baking loaves of bread and the like, including a heating chamber, an endless tray carrier operating within the chamber, an ovening table communicating with the chamber, automatic tray transferring mechanism between the table and carrier, automatic discharging mechanism for the trays including means for tipping the trays, means for separating the loaves from the trays, and means for separately discharging the loaves and the trays.

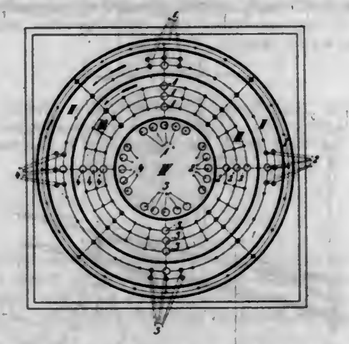
1,692,516. VEHICLE SIGNAL. JAMES H. REED, Detroit, Mich. Filed Mar. 1, 1926. Serial No. 91,366. 2 Claims. (Cl. 177—329.)

2. A vehicle signal housing of the class described having a rear portion comprising a rear wall; inclined side walls mounted on said rear wall, said side walls diverging outwardly from said rear wall; a forward portion comprising a front wall; side walls inclined to and diverging outwardly from said front wall, said side walls on said forward portion engaging at their longitudinal edges the longitudinal edges of said side walls of said rearward portion; a top formed on said forward portions and extending rearwardly thereof beyond the rear edge of said forward portion to cover said rearward portion; an angularly turned portion on the upper end of said rear wall extending forwardly thereof and projecting forwardly of the rear of said forward portion below said top; and an angularly turned portion on the lower end of said rear wall extending forwardly thereof and projecting forwardly of the rear of said forward portion to provide a bottom for said housing; and means for connecting said forward portion to said rearward portion.

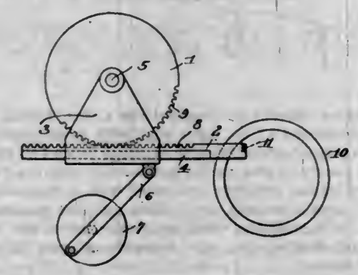


1,692,517. CORD REEL. DANIEL BENSON REPLOGLE, Berkeley, Calif., assignor to Commerce Guardian Trust and Savings Bank, trustee, Toledo, Ohio. Filed Aug. 20, 1923, Serial No. 658,349, and in Germany about June 21, 1923. 5 Claims. (Cl. 242—97.)

1. A cord reel comprising essentially a dish shaped cover and a thin spool, the said cover having a rigidly anchored central bearing member on which the spool is adapted to be revolved, said spool being provided with a central slotted disk adapted to have looped therethrough the cord to be wound, and a separate disk adapted to make a closure of the cover when the spool is in place.



1,692,518. ALARM. SAMUEL SOTAK, Jr., Lansford, Pa. Filed Nov. 18, 1925. Serial No. 69,864. 4 Claims. (Cl. 116—158.)



1. A signal device comprising a supported stud carrying an alarm member, a hollow shaft rotatably mounted concentrically with the stud and supported by it, a member cooperating with said alarm member and mounted on said stud and rotatable independently of said hollow shaft, and means connecting said co-operating rotatable member and the hollow shaft for effecting such independent rotation in but one direction.

1,692,519. SOCIETY GAME. ARTHUR SPILLING, Cassel, Germany. Filed July 7, 1927, Serial No. 204,008, and in Germany Apr. 14, 1927. 5 Claims. (Cl. 273—134.)

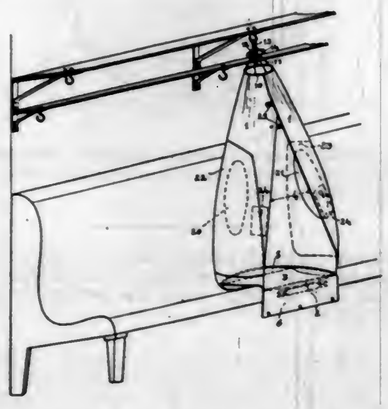
1. A society game, comprising a board showing four concentric rings, an annular line in each of the outer two rings and three annular lines in the third ring, counter- or men-fields inserted into all said lines, separate fields located in the fourth or innermost ring and radial lines connecting some of the fields in one ring with some of the fields in another ring.

1,692,520. METHOD AND APPARATUS FOR CUTTING GEARS. HAROLD E. STONEBRAKER, Rochester, N. Y. Filed Apr. 25, 1927. Serial No. 186,435. 6 Claims. (Cl. 90—9.)

1. The method of imparting endwise curvature to gear teeth, consisting in rolling a tool support bodily and without slippage on a curved guide member with which the tool support is in immediate contact, the latter being located with reference to the blank so that said rolling motion causes the tool to travel across the face of the blank in a curved non-circular cutting path.

6. A gear cutter mechanism comprising a tool support and a circular guide member on which the tool support has bodily rolling movement, the guide member being so located with reference to the gear blank that said rolling movement causes the tool to travel across the face of a blank in a curved cutting path, rack teeth on the tool support engaging teeth on the guide member, and a carrier mounted concentrically of the guide member and slidably holding the tool support, the latter being arranged between the circular guide member and the bottom surface of the carrier.

1,692,521. MANUFACTURE OF CONTAINERS FOR COMPRESSED GASES. HERMAN E. STÜRCKE, Port Orange, Fla. Filed May 8, 1924. Serial No. 711,877. 7 Claims. (Cl. 148—12.)



1. In the manufacture of containers for compressed gases, the method which consists in forming them from

comparatively soft steel substantially devoid of heat and mechanical stresses, annealing them, subjecting the containers to internally applied pressure corresponding to the ultimate test pressure, and removing the mechanical stresses set up thereby.

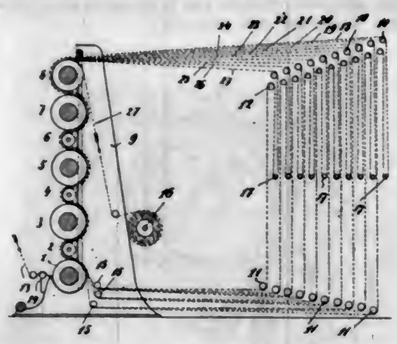
---

1,692,522. HANGING SLEEPING TENT. JOSEFINE TILL and KONRAD TILL, Neutitschein, Czechoslovakia. Filed Aug. 24, 1925, Serial No. 52,192, and in Czechoslovakia Dec. 19, 1924. 1 Claim. (Cl. 155—58.)

Hanging sleeping-tent comprising a seat bottom, a tent cloth connected at its lower edge with three edges of the seat bottom a hollow roll with openings formed on the upper end of the tent a disk having a relatively large central opening and lateral openings, connected with a suspending ring a cord drawn through the hollow roll and passing alternatively through the openings of the latter and through the holes of the disk in order to secure an equal distribution of the load.

---

1,692,523. HINGED DRYING FRAME. PAUL J. TIMBERLAKE, Jackson, Mich. Filed July 14, 1926. Serial No. 122,378. 2 Claims. (Cl. 223—19.)

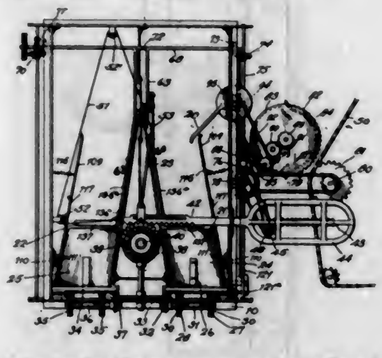


1. In a drying form, a frame to support the article to be dried, formed with a hinge portion; and a cooperating hinge member encircling the said hinge portion in which the latter may turn, the said hinge parts being formed with interengaging friction-producing means which, while permitting movement of the drying frame, operate to hold the latter in desired position.

---

1,692,524. PLASTIC RESINOUS MATERIAL AND PROCESS OF MAKING SAME. HARRY M. WEBER, Montclair, N. J., assignor to Ellis-Foster Company, a Corporation of New Jersey. Filed Jan. 12, 1924. Serial No. 685,887. 8 Claims. (Cl. 106—22.)

1. In the process of making resinous molding composition the step which comprises grinding magnesium oxide with formaldehyde.



1,692,525. CALENDER. ERNST WERNER, Oberlangenbielau, Germany. Filed Dec. 16, 1927, Serial No. 240,597, and in Germany Nov. 13, 1926. 4 Claims. (Cl. 26—39.)

1. The combination in a calendering machine of a set of calendering rollers adapted to operate on superimposed layers of a continuous web of fabric, a set of upper guiding rollers and a set of lower guiding rollers, one of each set of upper and lower guiding rollers being associated with a corresponding layer of said web and adapted to guide said layer in its course from one passage through said calendering rollers to the next, an intermediate guide roller arranged immediately underneath each of said upper guiding rollers and receiving the web coming from the apurtenant upper guiding roller in such a way that a slack is formed in the web between it and said appurtenant upper guiding roller, and means for compensating for said slack.

---

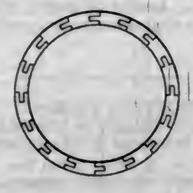
1,692,526. SHOCKER. GEORGE B. WEST, Lester Township, Black Hawk County, Iowa. Filed Jan. 2, 1926. Serial No. 78,922. 15 Claims. (Cl. 56—415.)

1. A shocker for binders comprising two valleys for receiving the bundles, alternately operated packers for moving the bundles to the rear and means under direct control of the ejecting mechanism of the binder for operating the packers.

---

1,692,527. SLEEVE HOLDER. ALBERT WIEGEL, Cassel, Germany. Filed July 7, 1927, Serial No. 204,000, and in Germany May 5, 1926. 1 Claim. (Cl. 24—15.)

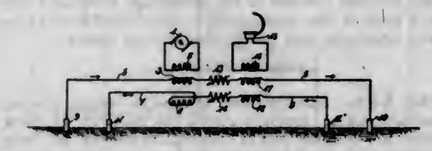
A sleeve holder consisting of a flat clasp, which is bent from thin elastic wire, the opposite halves of which are bent to a semi-circle in the middle and are connected by a ball at each end.



1,692,528. METHOD FOR THE MANUFACTURE OF BICHROMATE-GLUE PRINTING PLATES FOR HAND PRINTING OR PRESS DEEP PRINTING. MAX WIRLAND, Berlin-Tempelhof, Germany. Filed Nov. 7, 1924, Serial No. 748,487, and in Germany Nov. 13, 1923. Renewed Sept. 22, 1928. 3 Claims. (Cl. 95—5.6.)

1. In the method of producing chromic acid salt colloid printing plates the step of mixing a colloid with a hydraulic binding substance in such proportions as to preserve the ability of the colloid to swell.

---



1,692,529. MACHINE FOR MAKING HOLLOW TUBES OR CONDUCTORS. JOHANN ZAGORSKI, Frankfort-on-the-Main, Germany, assignor, by mesne assignments, to American Luigi Corporation, New York, N. Y., a Corporation of New York. Original application filed Jan. 29, 1926, Serial No. 84,796, and in Germany Feb. 3, 1925. Divided and this application filed Dec. 14, 1926. Serial No. 154,841. 11 Claims. (Cl. 29—1.)

1. A machine for forming hollow tubes or conductors from bands provided with corresponding projections and recesses consisting of pressure means for interlocking the bands, such means comprising a mandrel and a die surrounding the mandrel and having an internal diameter corresponding to the external diameter of the finished tube, means for guiding the bands into engagement with each other and means for pulling the bands through the pressure means, whereby pressure is applied to the wires or strips to force the projections and recesses into interlocking engagement.

---

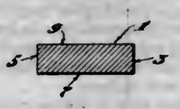
1,692,530. METHOD AND APPARATUS FOR LOCATING ORE BODIES. THEODORE ZUSCHLAG, New York, N. Y., assignor to The Taumac Corporation, New York, N. Y., a Corporation of New York. Filed May 15, 1925. Serial No. 30,478. 7 Claims. (Cl. 175—182.)

1. In the art of locating ore bodies by observing the characteristics of subterranean electric currents, the method of generating subterranean currents which consists in causing a flow of current between spaced points, causing another opposite flow of current of equal magnitude and adjacent to and parallel with the first-mentioned flow, and grounding said currents at spaced points to produce subterranean currents.

---

1,692,531. POWER-TRANSMISSION MECHANISM. ALEXANDER ABRAMSON, Prague, Czechoslovakia. Filed July 21, 1927, Serial No. 207,526, and in Russia Aug. 9, 1926. 3 Claims. (Cl. 74—7.)

1. A power transmission mechanism having a limited free movement for use as a differential gear, especially in motor cars, comprising driving half-axles, abutments secured to said half-axles, said abutments being formed with angular recesses in their adjacent surfaces, a driving casing, a common driving pin arranged in said casing for normally driving said abutments, a ball cake stationarily located in the driving casing, a locking ball arranged between the angular recesses in the abutments and displaceable in a direction parallel to the axes in said ball cage, said locking ball being adapted to lock one of the abutments to the casing when the other abutment runs freely.

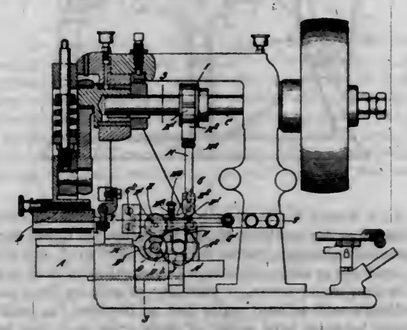


---

1,692,532. WASH OR COATING FOR INGOT MOLDS. JOHN W. ALDEN, Canton, Ohio, assignor to Central Alloy Steel Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 19, 1926. Serial No. 82,377. 6 Claims. (Cl. 22—189.)

1. The herein described coating for ingot molds comprising a mixture of commercial aluminum powder and tar.

---

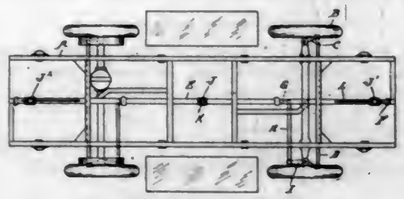


1,692,533. WELTING. EDWARD W. ARNOLD, North Abington, Mass. Filed Sept. 20, 1926. Serial No. 136,487. 10 Claims. (Cl. 36—78.)

1. A method of manufacturing welting for shoes characterized by making a longitudinal incision in the body of a leather strip near an edge thereof, and pressing outward the portion of the strip between the incision and said edge to open the incision, set the inner edge out to be oblique to the grain face, and increase the width of the strip.

---

1,692,534. MACHINE FOR MAKING CARDBOARD AND SIMILAR BOXES. NICHOLAS PENTREATH ANDREW, WILLIAM LESLIE MACFIE, and ROBERT WILLIAM ROSE, Finsbury, London, England, assignors to Nicholas Pentreath Andrew and George Ernest Suter, Copartners, trading as Andrew & Suter, Finsbury, England. Filed Dec. 22, 1926, Serial No. 156,202, and in Great Britain Mar. 15, 1926. 14 Claims. (Cl. 93—56.)

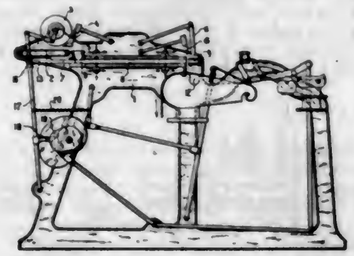


1. Feeding mechanism for advancing a strip to the cutter and anvil of a box corner staying machine as hereinbefore

referred to, comprising feed rollers for advancing the strip, gearing for actuating said rollers, a toothed rack for actuating said gearing, means for reciprocating the said toothed rack, means whereby the advancing movement is rendered intermittent, means for varying the position of the anvil in relation to a plunger that applies the strip to the box corner and means whereby the said adjustment of the anvil varies the extent of movement of the toothed rack in order to impart a feeding movement that advances a length of strip to suit the position of the anvil.

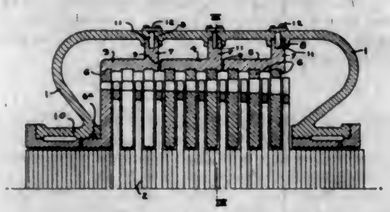
---

1,692,535. STEERING MECHANISM FOR MOTOR VEHICLES. GEORGE M. BACON, Detroit, Mich., assignor to Divco-Detroit Corporation, Detroit, Mich., a Corporation of Michigan. Filed Jan. 14, 1924. Serial No. 686,163. 7 Claims. (Cl. 280—91.)



1. The combination with a vehicle chassis and steering mechanism therefor, of a rock shaft extending longitudinally of said chassis and operatively connected to said steering mechanism, a plurality of socket bearings on said rock shaft at different points in the length thereof, certain of said sockets being keyed to said shaft but longitudinally adjustable thereon and an upwardly extending controlling lever for engaging said sockets.

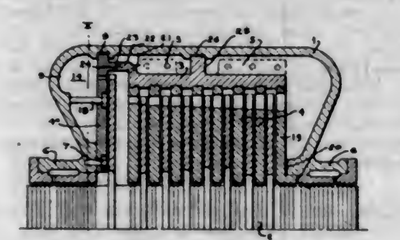
6. The combination with a vehicle chassis and steering mechanism therefor, of a rock shaft for actuating the steering mechanism, a plurality of sockets splined to said rock shaft for longitudinal adjustment thereon, and controlling arms detachably engageable in the said sockets.



---

1,692,536. FEEDING DEVICE. ADOLF BARGEBOER, Rotterdam, Netherlands. Filed Sept. 23, 1924, Serial No. 739,435, and in the Netherlands Oct. 23, 1923. 3 Claims. (Cl. 131—39.)

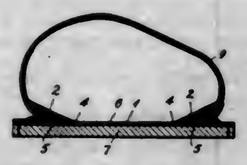
1. In a device for feeding tobacco and similar material to a machine for working on the material, an upper series of parallel conveyor bars, a lower series of conveyor bars, said lower series of bars being parallel to each other and to said upper series, a plurality of gripper bars associated with each of said series and an impeller for feeding material between said series of bars, said conveyor bars being adapted to move toward each other to grip the material and move it longitudinally.



1,692,537. ELASTIC-FLUID TURBINE. KARL BAUMANN, Urmston, England, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 17, 1924, Serial No. 720,663, and in Great Britain Aug. 2, 1923. 10 Claims. (Cl. 253—69.)

1. A turbine having an internal stator wherein the internal stator is connected with some other stationary part of the turbine by a number of guides which are capable of movement in a radial direction only relative to at least one of these parts.

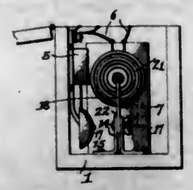
---



1,692,538. ELASTIC-FLUID TURBINE. KARL BAUMANN, Urmston, England, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 8, 1924, Serial No. 736,639, and in Great Britain Sept. 12, 1923. Renewed Aug. 9, 1928. 21 Claims. (Cl. 253—69.)

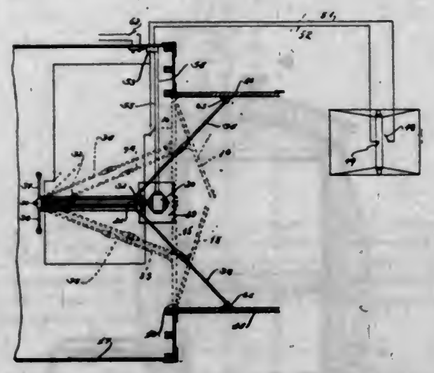
1. In a turbine, the combination of a casing, a diaphragm carrying stator disposed within the casing and means supporting at least one end of the diaphragm carrying stator from a part of the casing substantially unaffected by irregular expansion and contraction of said casing.

---



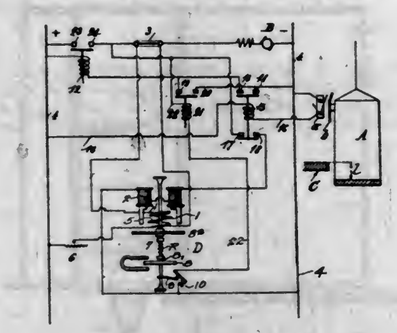
1,692,539. FOOTWEAR. JAROSLAV BENDA, Prague, Czechoslovakia. Original application filed Oct. 11, 1924, Serial No. 743,140, and in Czechoslovakia Oct. 19, 1923. Divided and this application filed May 8, 1926. Serial No. 107,820. 3 Claims. (Cl. 36—22.)

1. In boots and shoes of the character described, an insole having an inclined margin of a width representing from ⅛ to ¼ of the wides portion of the insole extending right round the latter except at the inside of the waist, said margin being inclined so as to present a concave surface to the foot.



1,692,540. THERMOSTATICALLY-OPERATED SWITCH. ERNEST L. BENSON, Pueblo, Colo. Filed Sept. 3, 1921. Serial No. 498,334. 1 Claim. (Cl. 200—136.)

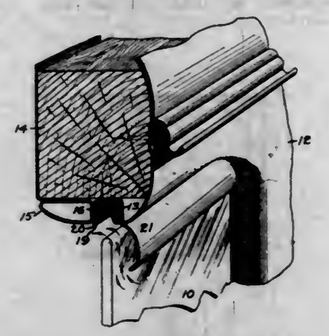
An adjustable thermostat mounting, comprising a bracket including a pair of members one of which is adapted to be mounted in upright position and is provided with a slot, the other member being arranged in overlapping end relation to the slotted member, a bolt extending through the other member and through the slot, a nut for said bolt cooperating therewith to maintain the members in adjusted position with relation to one another, lug members carried by said other member and adapted to rest upon the top edge of the slotted member, and a thermostat mounted on said other member whereby it may be adjusted in spaced relation with respect to an associate instrument, said slotted member having the slot formed therein transversely of the upper end thereof to permit horizontal adjustment of said thermostat.



---

1,692,541. DOOR OPENER AND CLOSER. HARRY HILL BLISS and KURT PORTER, Royal Oak, Mich.; Olive M. Bliss administratrix of said Harry Hill Bliss, deceased. Filed Feb. 19, 1927. Serial No. 169,442. 1 Claim. (Cl. 268—63.)

In a door opener of the class described, a rotatable member; an electrically operated motor for rotating said member; a carriage on said rotatable member movable axially thereof upon rotation thereof; a pair of supporting members in spaced relation and extending parallel to, at opposite sides of, said threaded member, said carriage extending between and above and below said supporting members; a switch mounted on the outer face of each of said supporting members, adjacent one end of one of said supporting members, and adjacent the other end of the other of said supporting members; a downwardly projecting rockable arm on each of said switches; a pair of rockable dogs mounted on said carriage below said supporting members and at the outer sides thereof; and a spring for normally retaining said dogs in upwardly extended position, said dogs engaging said arms upon movement of said carriage past said switches, the engagement of said dogs, upon movement of said carriage in one direction, effecting a rocking of said switch arms to control the circuit to said motor, said dogs being oppositely faced.

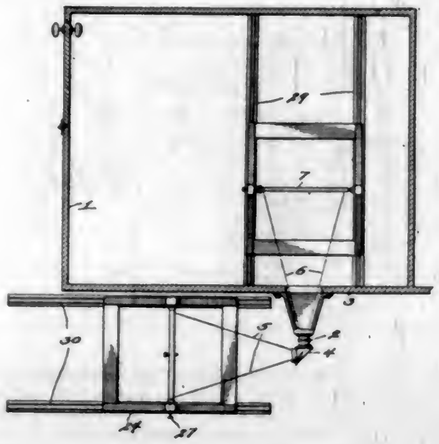


1,692,542. ELECTRICAL MEANS FOR CONTROLLING LIFTS AND THE LIKE. ANTOINE BOSSELUT, Paris, France. Filed Jan. 19, 1926, Serial No. 82,274, and in France Dec. 3, 1925. 7 Claims. (Cl. 187—29.)

5. In an electrically controlled lift the combination with a cage, an electric motor driving the cage, a limit switch associated with the cage, a wattage relay associated with said motor and with said switch, adjustable means to take into account the usual balance of the lift, a movable member displaced when said relay is energized and means for breaking the circuit of the said motor on the return of said member to its initial position.

---

1,692,543. BODY CONSTRUCTION. JOSEPH H. BOURGON, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed July 2, 1926. Serial No. 120,118. 3 Claims. (Cl. 296—44.)

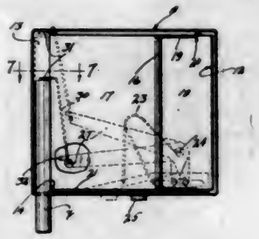


1. In combination with a window and a window frame having a longitudinally disposed recess therein, a pliable channel member for receiving the upper edge of said window, and a metallic channel member supporting said pliable member fitting within said recess and secured to said window frame, said metallic member having an imperforate deflector portion curved outwardly and then inwardly positioned in spaced relation to the plane of said window.

---

1,692,544. PHOTOGRAPHIC COPYING MACHINE. ARTHUR W. CAPE and IVAN E. LEININGER, Kansas City, Mo., assignors, by mesne assignments, to Photostat Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Jan. 19, 1924. Serial No. 687,278. 10 Claims. (Cl. 88—24.)

10. In a photographic machine for copying pages, a lens and prism, a page-holder mounted for reversal to present

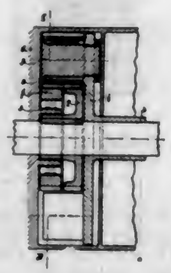


opposite sides of a page to the lens and prism, and a sensitized paper holder arranged to receive images in proper

registration from the page holder and mounted for reversal to expose in proper arrangement the opposite sides of the sensitized paper.

---

1,692,545. CIGARETTE CASE. FRANCIS W. CARPENTER, Minneapolis, Minn., assignor of one-half to Maurice H. Graham, St. Louis Park, Minn. Filed May 9, 1927. Serial No. 189,867. 6 Claims. (Cl. 206—41).



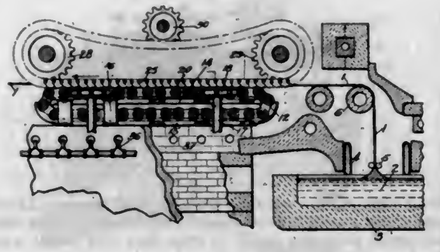
1. In a cigarette case, a body having a displaceable cover, and a partition in the body dividing the same into a supply compartment and a reserve compartment, said supply compartment having a discharge passage and being of a width less than that of the length thereof, said partition being displaceable to permit cigarettes to be moved laterally thereunder from the reserve compartment to the supply compartment.

---

1,692,546. ELECTROMECHANICAL STARTING DEVICE FOR HEAT ENGINES. GASTON DOLNE-DEHAN, Juan les Pins, France. Filed Jan. 21, 1926, Serial No. 82,829, and in Belgium Jan. 21, 1925. 2 Claims. (Cl. 74—34.)

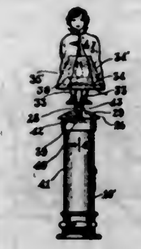
1. In a transmission mechanism for a heat engine, a toothed gear secured to the shaft of said engine, a second toothed gear disposed axially to said first-gear and rotatable with respect thereto, a sleeve freely mounted on said shaft and provided with an annular flange, and a planet gear freely mounted on said flange and engaging both of said toothed gears, said second gear and said planet gear being provided with free wheel clutches, one of said clutches locking said second gear when said sleeve is driving said engine, the other of said clutches locking said planet gear when the engine is running to drive said sleeve, whereby there is no longitudinal displacement of the members upon transmission from one position to the other.

---



1,692,547. PORTABLE ELECTRIC COOKER. MORRIS EVANS, Washington, D. C. Filed Dec. 19, 1922. Serial No. 607,850. 2 Claims. (Cl. 219—35.)

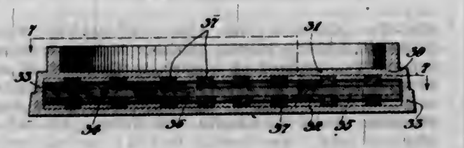
1. A portable electric cooker including outer and inner walls spaced apart around the sides and bottom and having an iner heating chamber within the inner wall, said inner wall being bent outwardly at the upper end thereof for closing the space between the outer and inner walls, insulating material interposed between the outer and inner walls, a heating unit of refractory material, having a wire of high resistance molded therein surrounding the inner wall for heating the inner chamber, a mica lining interposed between the heating unit and the insulating material, means for supporting the heating unit from the bottom of the outer wall, an electric plug connected with the side of the outer wall for supplying electric current to the resistance wire, and an insulated cover for the heating chamber.



1,692,548. METHOD AND APPARATUS FOR DRAWING AND FLATTENING SHEET GLASS. ENOCH T. FERNOREN, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 31, 1924. Serial No. 703,031. 22 Claims. (Cl. 49—17.)

1. In the art of continuously drawing sheet glass, the process of supporting the moving sheet during the flattening period along a plurality of straight parallel lines which are constantly shifting with respect to the sheet to prevent sagging of the sheet between the lines of support.

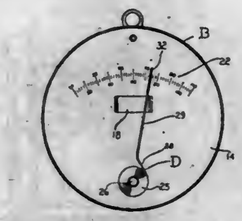
---



1,692,549. ELECTRIC POST LAMP. MIGUEL A. CARVAJAL DE CASTRO, Bogota, Colombia. Filed Oct. 24, 1927. Serial No. 228,165. 6 Claims. (Cl. 240—6.4.)

1. An electric post lamp of the class described comprising a flashlight, an attachment mounted on the casing of said flashlight, a doll supported by said attachment and a reflector mounted on said attachment disposed below the torso of said doll and beneath the skirt thereof adapted to direct rays of light downwardly.

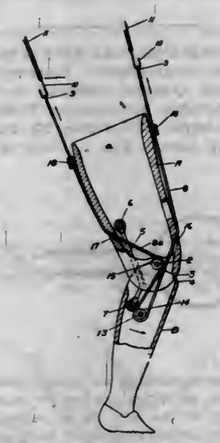
---



1,692,550. METHOD OF CONSTRUCTING VAULT OR SAFE DOORS AND THE LIKE. GUSTAVE M. GOLDSMITH, Cincinnati, and CARL BARTELS, Hamilton, Ohio, assignors to The Mosler Safe Company, Hamilton, Ohio, a Corporation of New York. Original application filed Aug. 18, 1923, Serial No. 658,004. Divided and this application filed Sept. 25, 1926. Serial No. 137,654. 2 Claims. (Cl. 22—206.)

1. The method of constructing walls for safes, which consists of placing a metallic insert having recesses between recessed walls of a chamber in a metallic body portion with the recesses in said insert and chamber walls in alignment, surrounding said insert and filling said aligned recesses and the cracks and crevices between the insert and the body portion by flowing molten material into said recesses, cracks and crevices, the molten material solidifying therein.

---

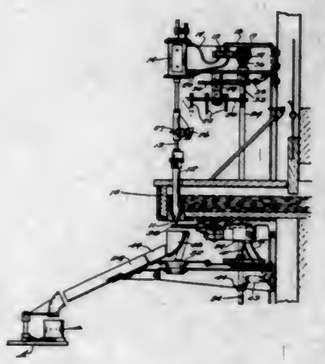


1,692,551. THERMOMETER. BLAINE H. HARRIS, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed Nov. 15, 1926. Serial No. 148,477. 3 Claims. (Cl. 73—118.)

1. A thermometer comprising front and back telescoping members of sheet metal adapted to form a casing, a thermo unit secured to said back member between said members, said back member having gauge marks thereon, an indicating finger integral with the thermo unit and cooperating with said gauge marks to indicate the temperature and said front member having an opening formed therein providing a window to disclose the relation between the indicating finger of said thermo unit and said gauge marks.

---

1,692,552. ARTIFICIAL LIMB. HARRY W. KARN, Pittsburgh, Pa. Filed Jan. 7, 1925. Serial No. 997. 4 Claims. (Cl. 3—2.)



4. The combination with a hollow thigh member having inwardly extending centrally spaced pivot bearings, and a hollow lower shin member pivoted thereto and provided with a cross bearing roller below the pivot, said pivot consisting of a cross pin extending through the inwardly disposed bearings with an intervening roller thereon, of a pair of continuous substantially parallel tension members passing down directly in front and oppositely back

of the thigh member, then inwardly at front and back above the joint, over and in front of the pivotal connection and over the bearing roller thereon between the pivot bearings of the thigh member and around the cross bearing roller of the shin member, and having separable connections at their upper outer ends at front and back with a pair of shoulder straps.

---

1,692,553. GLASS-FEEDING MECHANISM. RICHARD LA FRANCE, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 23, 1921. Serial No. 502,764. 10 Claims. (Cl. 49—55.)

5. The combination of a receptacle for molten glass having an outlet through which the glass is discharged, a device operable periodically to control said discharge, a series of stops to limit the movement of said controlling device, and automatic means to bring said stops successively into operative relation to said device, said stops being individually adjustable to selectively vary the extent of movements of said controlling device.

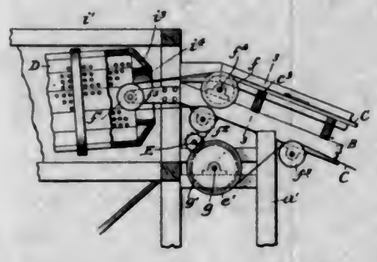
---

1,692,554. DEVICE FOR ILLUMINATING ALL KINDS OF HOLLOW MEMBERS. FRIEDRICH FERDINAND LEITER, Vienna, Austria, assignor to Josef Leiter, Fabrik Chirurgischer Instrumente, Vienna, Austria, a Company of Austria. Filed Jan. 22, 1924, Serial No. 687,880, and in Austria Feb. 1, 1923. 4 Claims. (Cl. 128—6.)

1. A cystoscope comprising an ocular tubulus, an external source of light, an optical system for transmitting light from said source to the area to be examined, a second optical system for transmitting light from said area to the front end of said tubulus and a tubular member enveloping both optical systems.

---

1,692,555. AIR PISTOL OR GUN. GEORGE S. LEWIS, Springfield, Mass. Filed Feb. 8, 1927. Serial No. 166,698. 9 Claims. (Cl. 124—10.)

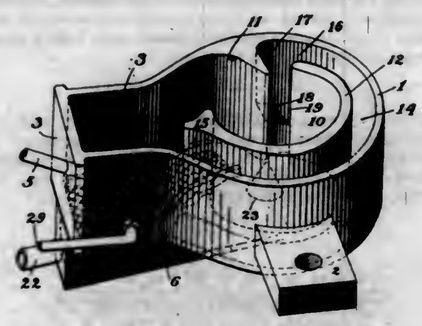


8. The combination, in an air pistol or gun, with a frame provided with a fixed barrel, of a breech block slidingly mounted on said frame behind said barrel, a perforated plug in the forward end of said block, and a pusher carried by said block and extending into the opening therein, said pusher being of less area transversely

than that of the opening through said plunger to permit of the passage of air therethrough, and adapted, when advanced with said block, to force into said barrel a bullet inserted in the breech thereof.

---

1,692,556. SCREEN-FEEDING MEANS FOR TILE-CLEANING MACHINES. HARRY D. LILLIBRIDGE, Zanesville, Ohio, assignor to American Encaustic Tiling Company, Ltd., New York, N. Y., a Corporation of New York. Original application filed July 22, 1921, Serial No. 487,854. Divided and this application filed Apr. 16, 1925. Serial No. 23,593. 2 Claims. (Cl. 209—284.)

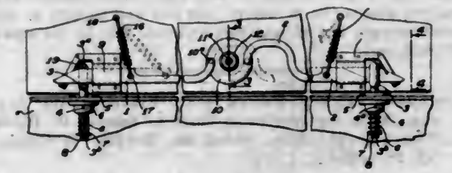


1. A tile cleaning machine embodying a rotary separating cylinder the receiving end of which is reduced in diameter, a cylindrical band concentric with the cylinder, said band extending into said cylinder inwardly from the reduced end thereof, said cylindrical band and the reduced cylinder end partially closing the receiving end of the cylinder and said band affording an inlet for material, and an endless conveyor the discharge end portion of which is projected beyond the cylindrical band, said discharge end of the conveyor being located slightly above the level of the lower portion of the band and said discharge end being enveloped by the cylindrical band and by the cylinder.

---

1,692,557. METHOD OF AND APPARATUS FOR BURNING LIQUID FUEL. HERBERT R. MARSH, Philadelphia, Pa., assignor of one-half to Daniel F. Ryan, Kirklyn, Pa., Mutual Trust Company of Philadelphia, executor of said Daniel F. Ryan, deceased. Filed Aug. 20, 1926. Serial No. 130,374. 12 Claims. (Cl. 158—28.)

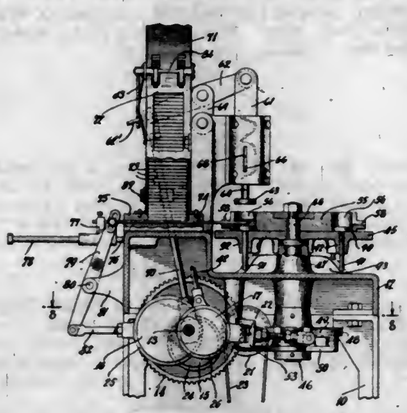
1. The method of burning liquid fuel, which consists in vaporizing the fuel, commingling the fuel with air, causing the commingled gases to travel in a path which is first eccentric and then concentric relatively to a combustion chamber, and introducing into the combustion chamber above the commingled gases in proximity to the fuel and air inlet and in the direction of flow of gases in the



combustion chamber a stratum of highly heated air and fuel through which the commingled gases pass to their discharge outlet.

---

1,692,558. AUTOMOBILE ENGINE-HOOD RETAINING AND LOCKING MEANS. ARTHUR C. MCBRIDE and FREDERICK W. RENWORTH, San Diego, Calif., assignors of one-third to Charles H. E. Remondino, San Diego, Calif. Filed Oct. 26, 1926. Serial No. 144,239. 4 Claims. (Cl. 70—74.)



1. In a means of the class described, a guide member, a bolt member longitudinally reciprocally mounted in said guide member and also laterally shiftable therein, a rotatable member pivotally connected to the inner end of said bolt member, and a spring means adapted to force said bolt member outwardly and normally against one side of said guide member and adapted also to resiliently retain said bolt member in its withdrawn position.

---

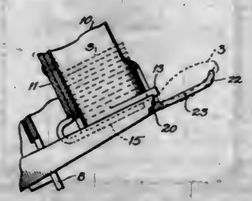
1,692,559. CANDY-MAKING MACHINE. ERECK C. MILLER, Newark, N. J., assignor, by mesne assignments, to Racine Confectioners Machinery Company, Racine, Wis., a Corporation of Wisconsin. Filed Dec. 7, 1922. Serial No. 605,516. 13 Claims. (Cl. 107—8.)

8. In a lollypop machine, a turntable having a plurality of mold cavities, a plunger adapted to co-operate with said cavities successively, and means for rotating said turntable to bring said cavities successively into position to co-operate with said plunger, said rotating means comprising a ratchet connected with said turntable, a pawl for advancing said ratchet, a second pawl for preventing reverse movement of said ratchet, and a third pawl controlled by movement of said first-named pawl for limiting the advance movement of the ratchet.

12. The combination with sizing and feeding rollers, of a guideway extending to and from said rollers and disposed axially of the passage between the rollers, and a cutting device disposed transversely across the delivery end of the guideway, the cutting device comprising upper and lower blades pivotally supported at opposite sides of the guideway, means for causing the blades to simul-

taneously move in opposite directions, and a hammer adjacent the said blades and adapted to be operated subsequently to the movement of the blades to sever the candy material to drive the separated section thereof away from the blades.

---

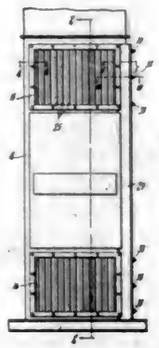


1,692,560. STOPPING MECHANISM FOR STRINGED MUSICAL INSTRUMENTS. JOHN MOKREJS, New York, N. Y. Filed Nov. 27, 1925. Serial No. 71,658. 35 Claims. (Cl. 84—314.)

7. A chord control device for stringed instruments, said device comprising a bank of chord selector plates, said plates being individually adapted to control the setting of a musical chord and having each a rigid finger piece disposed in a different position whereby the plates may be independently manipulated, the finger pieces forming virtually a keyboard.

---

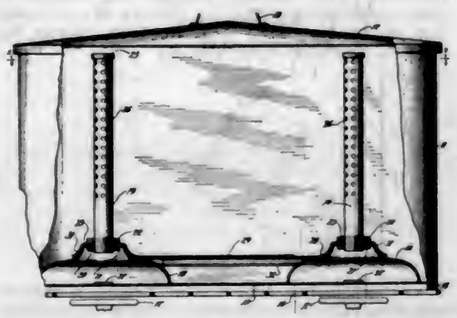
1,692,561. EJECTOR FOR COIN-HANDLING MACHINES. AXEL MONSON, Chicago, Ill., assignor to Universal Stamping & Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 10, 1927. Serial No. 211,955. 11 Claims. (Cl. 133—5.)



1. The combination with a coin handling mechanism having a magazine provided with an outlet, of an ejector comprising an arm movable transversely to said outlet, a shoulder on said arm adapted to engage the rim of a coin supported in said outlet, and a finger projecting beyond said shoulder and having a tip for engagement with

the lower face of the coin, said tip being offset from said finger for holding the coin out of engagement with the greater part of said finger.

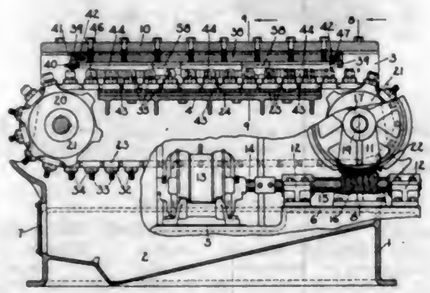
---



1,692,562. PLATE AIR HEATER. CHARLES D. MOSHER, Hyde Park, Mass. Filed Dec. 31, 1927. Serial No. 243,895. 5 Claims. (Cl. 257—245.)

1. An air heater of the plate type, comprising a heat-conducting casing adapted to receive hot gases at one end and discharge the same at the opposite end, and having side openings at its end portions, a group of air chambers extending side by side lengthwise of the casing, each chamber including a pair of parallel rectangular plates united at their edges to form a thin air passage which is oblong in cross section, one longitudinal edge of the chamber having at one end portion an air inlet port registering with one of the casing openings, and at its opposite end portion an air outlet port registering with the other casing opening, and attaching means adapted to detachably secure the chambers to the casing, the form of the chambers and the attaching means permitting the reversal of the chambers end for end, the chambers being provided with filling members surrounding the ports and formed to collectively close the casing openings around the chambers and space the chambers apart, the arrangement being such that the casing is adapted to conduct hot gases in one direction between the chambers, while the chambers conduct air in the opposite direction from the inlet to the outlet port.

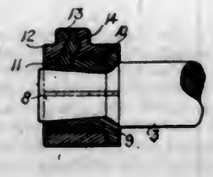
---



1,692,563. WASHING DEVICE. ALFRED C. MURR and FRANK L. CURRAN, Chicago, Ill. Filed Nov. 24, 1924. Serial No. 751,772. 2 Claims. (Cl. 68—30.)

1. A washing device adapted to be inserted in a wash boiler, comprising, two hollow members, each having an open mouth adapted freely to rest on the bottom of the tub, the upper portions of said members being perforated, a tube having a threaded end inserted in the perforation of each member, two sheet metal members, each having an aperture adapted to register with the mouth of the tubular member and nuts threading on said tube and maintaining the tube, the sheet metal members and the tubular members in assembled relation, said sheet metal members being arranged in overlapping relation between said hollow members to provide a clothes support.

---

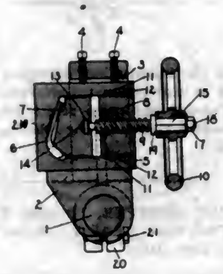


1,692,564. BROACHING MACHINE. JOHN OAKLEY, Springfield, Mass., assignor, by mesne assignments, to Perkins Machine and Gear Company, Springfield, Mass., a Corporation of Massachusetts. Filed Sept. 22, 1926. Serial No. 137,014. 2 Claims. (Cl. 90—33.)

1. In a broaching machine, a broach holder having a longitudinal dove-tail slot therein, and provided with end lugs, a bolt in one of said lugs, and broaches and spacers adapted to fit within said slot and be held at the ends between one of said lugs and said bolt in the other of said lugs.

---

1,692,265. TIE-ROD FASTENING. STEPHEN PAUL, Lansing, Mich., assignor of one-half to Samuel H. Davis. Filed May 21, 1926. Serial No. 110,769. 4 Claims. (Cl. 287—52.)

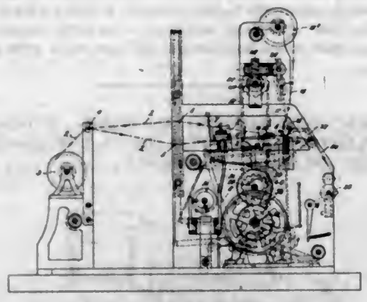


3. In combination with a tapering rod end, the tapering portion being largest at the end of the rod, a composite sleeve having a grooved part, an external sleeve provided with a passage registering with the said groove, a locking member engaging the said passage and groove, and means for retaining the said member in place.

---

1,692,566. WORK HOLDER. JULIAN L. PERKINS, West Springfield, and HIRAM D. CROFT, Springfield, Mass., assignors, by mesne assignments, to Perkins Machine and Gear Company, Springfield, Mass., a Corporation of Massachusetts. Original application filed Jan. 9, 1926, Serial No. 80,326. Divided and this application filed Aug. 17, 1926. Serial No. 129,701. 3 Claims. (Cl. 90—59.)

1. A work holder, of the class described, comprising a carrier having a top, bottom, and sides, and an opening therethrough from front to back, a female clamping block receivable in said opening, said block having a part at the rear end to support the work, and an opening through the sides and front end, means to secure said block in said carrier, a bearing block in said first-named block, and provided with means to hold said bearing block against



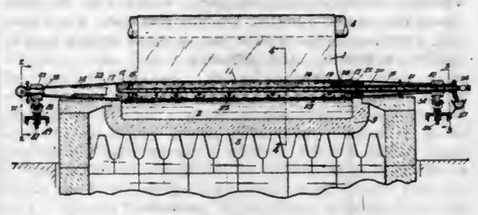
forward and backward movement, an operating screw in threaded engagement with said bearing block, and a male clamping block in said female clamping block, in front of said work-supporting part, said screw also being in engagement with said male clamping block and adapted when rotated to actuate said male clamping block toward or away from said work-receiving parts.

---

1,692,567. MEANS FOR PRODUCING A FABRIC BY COMBINED KNITTING AND WEAVING. FRIEDRICH HUGO PEUCKERT, Dresden-Kaditz, Germany, assignor to Edwin Wildt, Leicester, Great Britain. Filed May 1, 1926, Serial No. 106,175, and in Germany Dec. 24, 1925. 6 Claims. (Cl. 139—1.)

1. In a loom, a lay, means for operating said lay so as to effect a partial beating-up of the weft threads, reed dents adapted to enter the shed from between the warp threads, means for operating said dents so as to complete the beating-up, knitting needles arranged under the beating-up point of the loom, means for reciprocating said needles through the warp so as to form stitches around the weft threads, thread guides for the knitting needles arranged above the beating-up point, and means for moving said guides so as to feed the threads to the needles and change the threads over from one needle to another so as to enmesh the warp in the stitches.

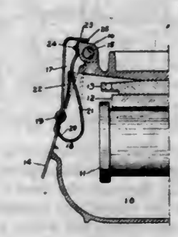
---



1,692,568. FURNITURE BRACE. GEORGE W. L. PRETTYMAN, Bergenfield, N. J. Filed Aug. 8, 1925. Serial No. 48,932. 3 Claims. (Cl. 155—197.)

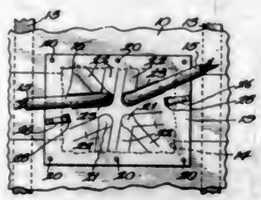
1. A furniture bracing device comprising tension elements, an adjustable coupler member therefor, comprising a coupler shank having its opposite end portions reversely threaded and having an intermediate shoulder portion for the engagement of a manipulating tool, nuts threaded to the shank end portions, connector members fitted to the shank inwardly of the nuts, said connector members being formed of stamped metal with their outer portions bending outwardly in angular relation to the body thereof and having their opposite sides slotted to form key shoulders for securing engagement with the tension elements in position whereby the latter are positioned to operate as locks for the nuts, substantially as described.

---



1,692,569. SHEET-GLASS-DRAWING APPARATUS. JOSEPH A. REECE, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 30, 1923. Serial No. 677,658. 18 Claims. (Cl. 49—17.)

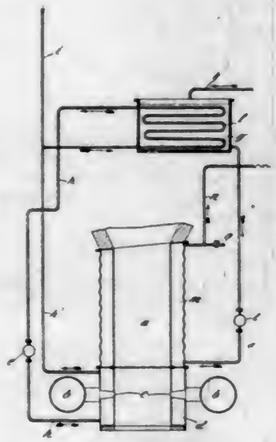
1. In an apparatus for drawing sheet glass, a pair of rotatable cylindrical coolers at opposite sides of the sheet, each rotary cylindrical cooler, provided with a longitudinally fluted outer surface, which is arranged out of contact with the glass.



---

1,692,570. JOURNAL BOX. FREDERIC O. REEMER, Chicago, Ill. Filed Aug. 3, 1925. Serial No. 47,863. 4 Claims. (Cl. 308—47.)

4. As an article of manufacture, the combination of a journal box lid adapted to be hinged to a journal box, a spring bent to form a loop with arms of unequal length, and means for securing the shorter arm to the lid adjacent to the bend of the loop, the longer arm extending upwardly in spaced relation to the lid and having a lug engaging surface adjacent to its free end, and the shorter arm extending upwardly between the lid and the longer arm and adapted to bear at its free end against the intermediate portion of the longer arm.



1,692,571. FLOOR PLATE AND HANGER. WILLIAM R. REIN, Chicago, Ill. Filed Apr. 16, 1926. Serial No. 102,592. 6 Claims. (Cl. 247—21.)

1. A closure member of plate like formation having a series of apertures therein and slots radiating from each aperture in combination with a knockout closure for each aperture and a bendable closure for each slot formed from and attached to said plate.

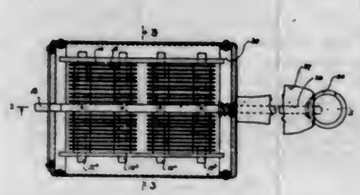
---

1,692,572. PRODUCER OR SHAFT FURNACE. JAMES WILSON REEER, London, England, assignor to Woodall-Duckham (1920) Limited, London, England. Filed Jan. 25, 1927, Serial No. 163,514, and in Great Britain July 7, 1926. 4 Claims. (Cl. 122—6.)

1. A method of operating a producer or shaft furnace having a jacket comprising two superposed sections and blast nozzles extending through the lower section, which comprises supplying water under high pressure to the upper section of the jacket and supplying water under low pressure to the lower section of the jacket.

---

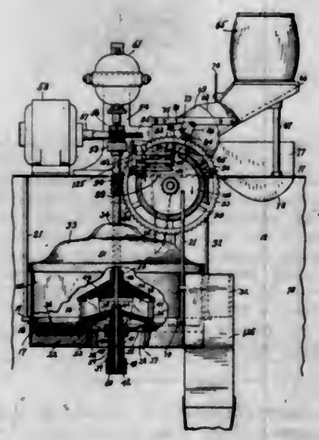
1,692,573. VACUUM ELECTRIC-TUBE DEVICE. ERNEST YEOMAN ROBINSON, Manchester, England, assignor to Metropolitan-Vickers Electrical Company Limited, a British Company. Filed Oct. 22, 1924, Serial No. 745,194, and in Great Britain Nov. 9, 1923. 3 Claims. (Cl. 250—27.5.)



1. For a vacuum electric tube device, a cathode comprising two substantially parallel filament arms, two lead-in members to which said filament arms at one end are respectively secured, an electrically conducting elongated member secured to the cathode at right-angles to the arms at the other end, said member, when the cathode is heated

being flexible in the longitudinal direction of the cathode but fixed length in a direction transversely of the cathode whereby it maintains the space relationship of the arms thereof, and resilient means for placing said filament arms in tension.

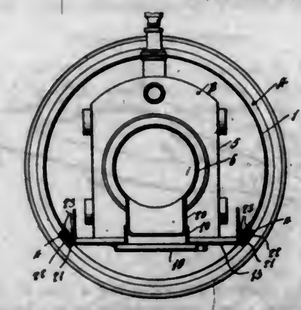
---



1,692,574. MEAT CHOPPER. ROBERT ROESSLER, Hoboken, N. J. Filed Sept. 22, 1927. Serial No. 221,274. 3 Claims. (Cl. 146—210.)

1. In a meat chopper the combination comprising a central rod, pins arranged in the same plane perpendicularly to and equidistantly on both sides of aforesaid rod, a plurality of safety razor blades arranged on said frame parallel to and in a short distance from each other, means holding said blades on aforesaid pins, an upper basket detachably arranged on aforesaid holding means, a lower basket, surrounding the aforesaid members, rotatably secured to aforesaid rod, and a handle slidably connected with aforesaid rod.

---



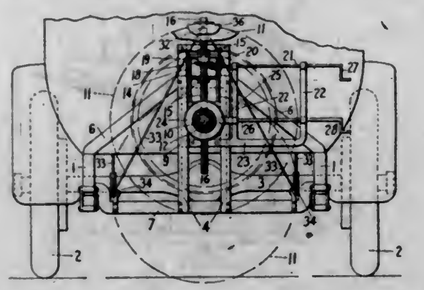
1,692,575. CORN-POPPING MACHINE. WILLIAM D. ROOT, Cleveland, Ohio. Filed May 19, 1927. Serial No. 192,699. 31 Claims. (Cl. 53—4.)

1. In a corn popping machine, a popping chamber, and pneumatic means within said chamber for discharging the corn.

1,692,576. EXPANSION MEANS FOR FURNACES. MORGAN M. ROTE, Sunbury, Pa., assignor of one-half to Charles J. Reitz, Sunbury, Pa. Filed Apr. 26, 1928. Serial No. 273,031. 1 Claim. (Cl. 126—114.)

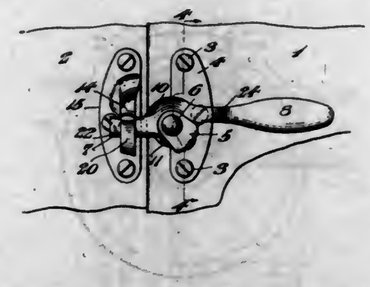
In a furnace structure, a casing, a heating unit in the casing, the casing and unit having returned flanges on their meeting edges and channeled slide members engaging said flanges to hold the heating unit in the casing and permit relative expansion of said parts.

---



1,692,577. EMERGENCY REPAIR LINK. ROBERT R. ROTH, Thomas, W. Va. Filed Jan. 6, 1927. Serial No. 159,416. 1 Claim. (Cl. 59—85.)

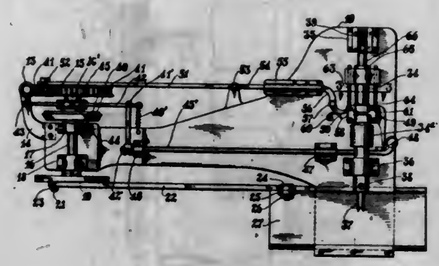
A link of the character described, comprising a body having loops extending from the opposite ends thereof, said loops being in planes at other than right angles to one another and having ends the prolongation of which overlie one another when the link is open, said ends being in abutment when the link is closed.



---

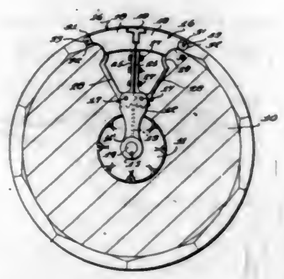
1,692,578. PARKING DEVICE FOR AUTOMOBILES AND THE LIKE. INGEMAR KRISTOFFER RYSTEDT, Dayton, Ohio. Filed Mar. 24, 1924. Serial No. 701,348. 16 Claims. (Cl. 180—1.)

1. The combination with an automobile comprising a frame, an axle having movement toward and from said frame, and wheels carried by said axle, of a supporting structure mounted on said frame and having means for rotatably supporting a spare wheel on an axis transverse to said axle, means for actuating said wheel supporting means to move said spare wheel into engagement with the ground and to cause the same to lift said frame, and means connected with said supporting structure for causing said axle to move with said frame when the latter is elevated by said spare wheel.



1,692,579. SPRING-CONTROLLED LATCH. THOMAS O. SCHRADER, Allentown, Pa., assignor to The Dent Hardware Co., Fullerton, Pa., a Corporation of Pennsylvania. Filed Apr. 12, 1928. Serial No. 269,316. 2 Claims. (Cl. 292—241.)

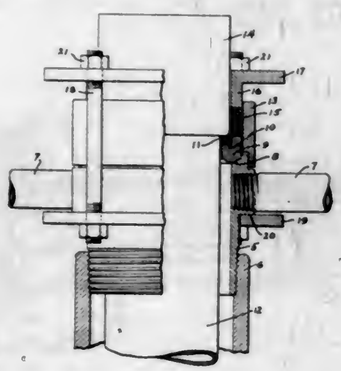
1. In a spring controlled latch, a supporting plate arranged for attachment to a door, a latch lever pivotally mounted thereon to swing in a plane parallel to the door, one end of which lever extends forwardly from the pivot point to form a keeper engaging nose while the opposite end of said lever is prolonged to form a handle, the longitudinal axes of said nose and handle being arranged in parallelism, a hub formed on said lever, an overhanging flange for said hub forming a spring chamber, a spring coiled around said hub within said overhanging flange, one end of said spring abutting against the end of said flange and the opposite end of said spring being fixedly secured to an extension of said supporting plate, a portion of the latter serving as an abutment for the bottom of said handle to retain the latter normally always in a horizontal position, and a keeper having its bottom edge inclined inwardly and downwardly for coaction with said nose.



---

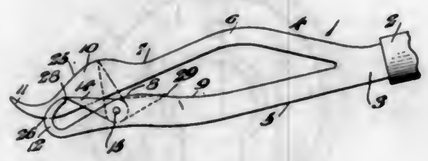
1,692,580. MORTISING MACHINE. REYNALDO SÁNCHEZ, Monterey, Mexico. Filed Aug. 23, 1927. Serial No. 214,904. 1 Claim. (Cl. 144—69.)

In a chiseling machine, a rod slidably mounted and adapted for holding a cutting tool, a means for urging the rod forward for operating the cutting tool, a release member attached to the rod and formed with teeth on one side, a bell crank pivotally mounted and arranged for normally engaging the said teeth for restraining forward motion of the rod, a second rod engaging against the said bell crank, a third rod hinged to the second rod, and eccentrically connected with a driver wheel for motion to move the bell crank and release the cutting tool.



1,692,581. COUNTERBALANCED BAND WHEEL. WILLIAM SCHWEMLEIN, Parkersburg, W. Va., assignor to The Parkersburg Rig & Reel Company, Parkersburg, W. Va., a Corporation of West Virginia. Filed July 1, 1927. Serial No. 202,953. 7 Claims. (Cl. 74—71.)

1. A device of the character described comprising a rotatable member, a supporting arm carried by and spaced from said member, counter-balancing means pivotally mounted on said supporting arm, said counter-balancing means being adapted to swing in a plane parallel to the plane of said rotatable member, and means for securing said counter-balancing means in operative or counter-balancing and inoperative or neutral positions.



---

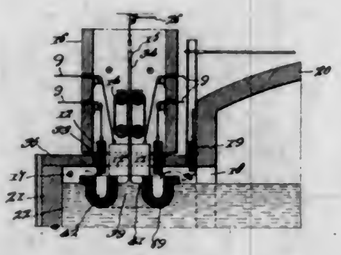
1,692,582. OIL-WELL PACKING HEAD. WILLIAM D. SHAFFER, Brea, Calif., assignor of one-third to E. J. Williams, Whittier, Calif., and one-third to George S. Fosnaugh, Compton, Calif. Filed Oct. 10, 1925. Serial No. 61,682. 2 Claims. (Cl. 166—14.)

2. A casing head construction comprising a tubular body member adapted to be detachably secured to the upper end of a string of well casing, said body member being provided with an internal seat adjacent its upper end, a metallic supporting ring disposed upon the seat of said body member, a circular sleeve detachably secured to the upper end of the body member, a packing ring disposed within said sleeve to pack the space between the tubing coupling and the circular sleeve, a gland follower disposed upon the packing ring, and means to move the gland follower to compress the packing ring.

1,692,583. RUNNER-MENDER NEEDLE. JOSEPH E. SHEPPERACK, Mont Clare, Pa., assignor of one-fourth to John Di Clo and one-fourth to Harry C. Simons, Norristown, Pa. Filed Aug. 3, 1928. Serial No. 297,145. 5 Claims. (Cl. 66—117.)

1. A runner mender for repairing a run in a knitted fabric, comprising a rear arm terminating in a hook adapted to be inserted through a loose loop in said run and having a pivotal latch coacting therewith, and a front arm having a guard for said latch to prevent the latter from engaging the cross threads in said run, said front arm extending beyond said hook to guide the latter between said cross threads.

---



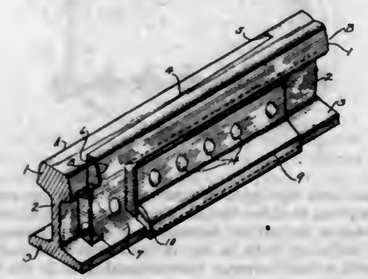
1,692,584. BRUSHING LACQUERS. STANLEY D. SHIPLEY, Stamford, Conn., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 28, 1925. Serial No. 59,164. 6 Claims. (Cl. 134—79.)

6. A nitrocellulose brushing lacquer, consisting of a nitrocotton base, and a liquid vehicle comprising the following ingredients combined in substantially the proportions stated

| | Per cent. |
|---|---|
| Ethyl glycol | 40 |
| Gum solution | 25 |
| Gasoline | 35 |

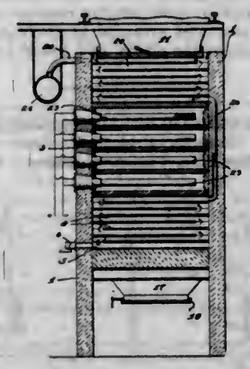
---

1,692,585. METHOD OF AND APPARATUS FOR DRAWING GLASS. ARTHUR E. SPINASSE, Mount Vernon, Ohio. Filed Jan. 10, 1918, Serial No. 211,266. Renewed Aug. 2, 1926. 43 Claims. (Cl. 49—17.)



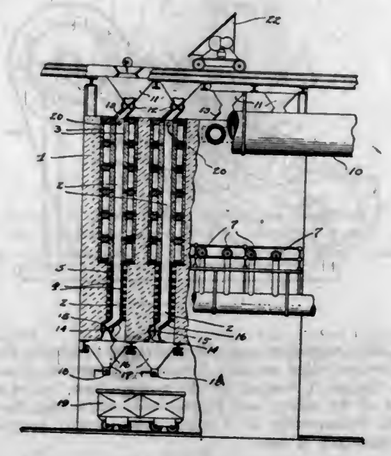
14. In an apparatus for drawing sheet glass, the combination of a furnace having molten glass therein, a segregating member placed in the molten glass for creating a restricted area from which the sheet is to be drawn, means for drawing the sheet from said restricted area, independent adjustable shields surrounding said restricted area for locally controlling the temperature of the glass from which the sheet is drawn whereby said restricted area may be kept at a uniform drawing temperature throughout, and means for controlling the temperature of the segregating member at diametrically opposite points and in line with the sheet being drawn whereby the glass forming the edges of the sheets is caused to adhere to said segregating member and the full width of the sheet maintained thereby throughout the drawing operation.

---



1,692,586. MORTISE JOINT. CHARLES E. SKAGGS and BYRON E. LOGAN, Bay Point, Calif. Filed Jan. 25, 1927. Serial No. 163,343. 4 Claims. (Cl. 238—287.)

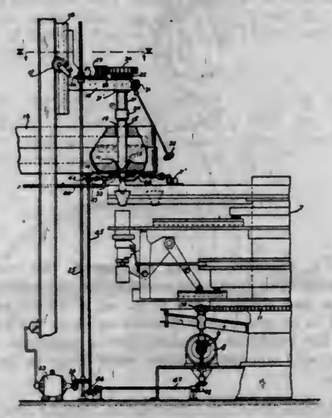
1. A device of the type described, comprising two rail sections having mitered ends, reinforcing means for the rail heads disposed at the ends of said sections and being integral with said sections, angle bars cooperating with said reinforcing portions for preventing lateral movement of said rail sections with respect to each other, said angle bars also aiding in reinforcing the heads of said sections.



---

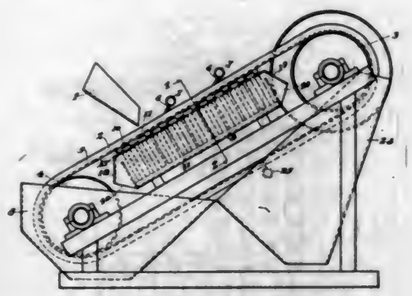
1,692,587. APPARATUS FOR REDUCING METALLIC OXIDES. WILLIAM H. SMITH, Detroit, Mich., assignor to General Reduction Corporation, Detroit, Mich., a Corporation of Delaware. Filed Feb. 17, 1926. Serial No. 88,774. 14 Claims. (Cl. 263—29.)

14. Iron ore reducing apparatus, comprising the combination of a plurality of retorts arranged in a row, said retorts being relatively long and narrow in cross section, means between each of the retorts to provide preheating, reducing the cooling zones, and heating means to heat each reducing zone to a substantially uniform reducing temperature.



1,692,588. METHOD OF REDUCING METALLIC OXIDES. WILLIAM H. SMITH, Detroit, Mich., assignor to General Reduction Corporation, Detroit, Mich., a Corporation of Delaware. Original application filed Feb. 17, 1926, Serial No. 88,774, and in Canada June 28, 1926. Divided and this application filed Nov. 26, 1926. Serial No. 150,715. 14 Claims. (Cl. 75—14.)

1. The method of reducing iron ore, or similar metallic oxides which consists in continuously passing the ore and its reducing agent through a reducing zone of fixed temperature, and absorbing the heat from the reduced iron to pre-heat the incoming ore.



---

1,692,589. METHOD AND APPARATUS FOR PRODUCING CHARGES OF MOLTEN GLASS. LEONARD D. SOUBIER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 22, 1926. Serial No. 96,497. 13 Claims. (Cl. 49—5.)

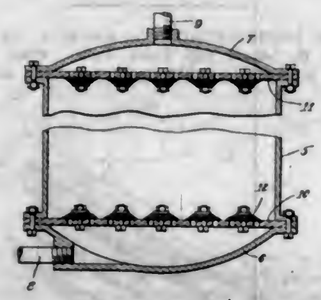
2. The method of producing formed charges of molten glass which comprises causing the glass to flow from a supply body through an outlet orifice, applying pneumatic pressure to a surface of the glass beneath said orifice, confining the pressure to a narrow annular surface between the main body of the issued glass and the walls of the orifice, and periodically severing the column of glass below the point of application of pneumatic pressure, to form charges.

1,692,590. METHOD OF AND APPARATUS FOR MAGNETIC SEPARATION. ROSWELL H. STEARNS, Milwaukee, Wis., assignor to Magnetic Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed May 28, 1924. Serial No. 716,416. 20 Claims. (Cl. 209—226.)

1. The method of magnetic separation consisting in moving finely divided material containing magnetite in a shallow stream of flowing water in opposition to the movement of the water, and magnetically attracting the magnetite transversely in a plane substantially parallel to the direction of flow.

---

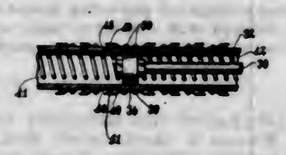
1,692,591. DIVING EQUIPMENT. HERMANN STELZNER, Lubeck, Germany, assignor to Alexander Bernhard Dräger, Lubeck, Germany; Elfriede Dräger, née Stangen, executrix of said Dräger, deceased. Filed Sept. 27, 1927, Serial No. 222,274, and in Germany Oct. 11, 1926. 2 Claims. (Cl. 61—70.)



1. In a dressless diving equipment, the combination with a breathing apparatus arranged to be positioned about the back and chest of the diver, of a weighting element adapted to be worn by said diver so as to act at approximately the height of the shoulders to overcome the buoyancy of said apparatus when said diver is in stooping position.

---

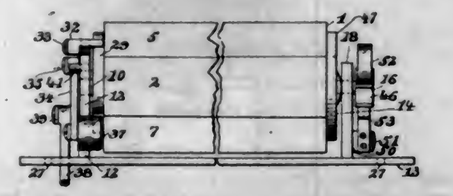
1,692,592. WATER-SOFTENER INJECTOR. CHARLES A. STICKNEY, Rockford, Ill., assignor to Stickney Hydraulic Co., Rockford, Ill., a Corporation of Illinois. Filed Apr. 18, 1927. Serial No. 184,519. 3 Claims. (Cl. 210—24.)



1. A liquid injector or ejector nozzle, such as adapted for use in distributing the water flow through a water softener, the said nozzle comprising a series of disks of graduated sizes one superposed on another in the order of size so that the peripheral portion of each disk is disposed above the marginal portion of the top of the next larger disk, or beneath the bottom thereof, as the case may be, the peripheral portion of each disk being offset in the form of a flanged rim between which rim and the next

adjoining disk an interstice is arranged to be formed, means serving to space the disks according to the predetermined size of interstices desired, and means for supporting the stack of disks in the relation described and provided with a fluid passage communicating with the interstices between the disks.

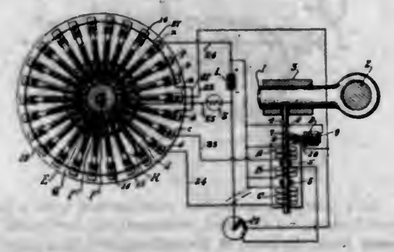
---



1,692,593. SHOCK ABSORBER FOR MOTOR CYCLES. LOUIS SZABÓ, Montreal, Quebec, Canada. Filed Jan. 16, 1928. Serial No. 247,138. 3 Claims. (Cl. 208—97.)

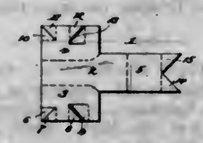
1. In a device of the class described, a tubular member provided with closed ends and with a slidable piston having a piston rod extending thru one of the ends, expansion springs acting on opposite sides of the piston, normally holding the piston in an intermediate position in the tubular member, said tubular member being formed with rows of apertures arranged in graduated order and on opposite sides of the piston, and means for closing the apertures.

---



1,692,594. ROTATABLE ADVERTISING DEVICE. WILLIAM J. TANNER, Bridgeport, Conn. Filed July 13, 1925. Serial No. 43,128. 7 Claims. (Cl. 40—69.)

1. An advertising device comprising a supporting base, standards thereon, a display reel having end journals detachably mounted in the standards, a ratchet plate adjustably secured to one end of the reel, a pivotally supported dog adapted to engage the teeth of the ratchet plate and check a reverse movement of the reel, and a pivotally supported pawl carrying lever for effecting a step by step rotation of the reel.

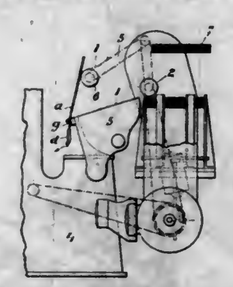


1,692,595. LOCKING MECHANISM. EDWARD H. THOMAS, East Orange, N. J. Filed July 27, 1926. Serial No. 125,223. 8 Claims. (Cl. 70—50.)

1. In a locking mechanism, the combination, with a locking bar having a notch, a latch bar arranged to enter said notch, means for forcing said latch bar into the notch, electro-magnetic means arranged to withdraw said latch bar from said notch, and a pair of solenoid arranged when both are energized to retract the locking bar and when only one is energized only to stress the locking bar without retracting it, of a key-actuated series of switch levers, circuit connections between three of said switch levers and the said electro-magnetic means and the said solenoids, respectively, a source of electric energy for energizing said circuits whereby when said three switch levers are operated to close their respective circuits the latch bar will withdraw from the notch in the locking bar and the latter will be retracted, and a circuit arranged to be closed by another switch lever to short circuit the said source of energy.

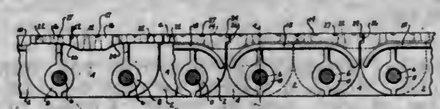
---

1,692,596. FASTENER FOR CRATES. JOSEPH O. TURNER, Winston-Salem, N. C., assignor to Mengel Company, Louisville, Ky. Filed Aug. 10, 1926. Serial No. 128,453. 5 Claims. (Cl. 217—22.)



1. As a new article of manufacture, a fastener for securing the adjacent edges of two abutting members standing at right angles to each other, said fastener being formed from a single piece of sheet metal, comprising a body portion, two flanges depending from opposite sides of said body portion adjacent an unobstructed edge thereof, a third flange spaced from the other flanges by an elongated portion of the body and depending therefrom, said flanges being notched inwardly of their edges with the pointed portions bent inwardly therefrom producing spurs adapted to be forced into the elements to be secured together, and to draw said members into closely engaging aligned relation.

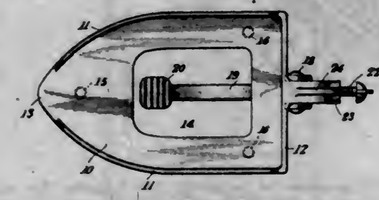
---



1,692,597. SHEET FEEDING-AND DELIVERING APPARATUS FOR PLATEN PRINTING PRESSES. KARL VICUM, Erfurt, Germany, assignor to Georg Spiess, Leipsic, Germany. Filed Nov. 29, 1927, Serial No. 236,504, and in Germany Dec. 6, 1926. 4 Claims. (Cl. 101—287.)

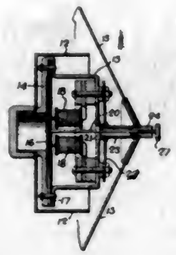
1. A sheet feeding and delivering apparatus for platen printing presses, comprising in combination with the platen, hollow grippers pivotally mounted on said platen for holding the sheet during the forward movement of the platen, means for producing vacuum in said hollow gripper when said platen is returning into its initial position to lift the printed sheet from the platen, and a rotatable suction device for receiving the printed sheet from the gripper and for conveying the printed sheet with the printed side uppermost.

---



1,692,598. CHAIN GRATE. JOHN VAN BRUNT, Flushing, N. Y., assignor to Combustion Engineering Corporation, New York, N. Y., a Corporation of New York. Filed July 19, 1923. Serial No. 652,514. 5 Claims. (Cl. 110—40.)

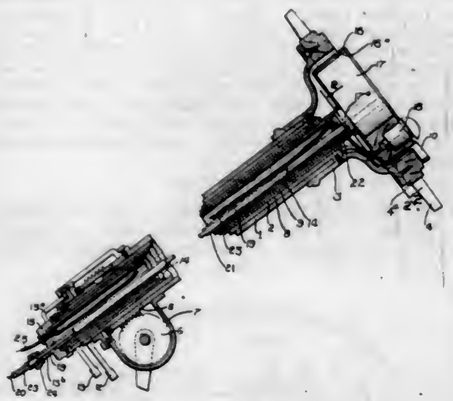
2. A chain grate comprising a plurality of rows of links, the links of each row being arranged end to end, the links of the several rows being arranged side by side in staggered relation with their ends pivotally connected, and adjacent links of adjacent rows having one flange extending longitudinally thereof and the other a recess for receiving the flange, the flange being spaced from the wall of the recess so as to enable air to pass upwardly between the flange and said wall, each of the links of alternate rows having one such flange on each side thereof and each of the links of the other rows having one such recess on each side thereof.



---

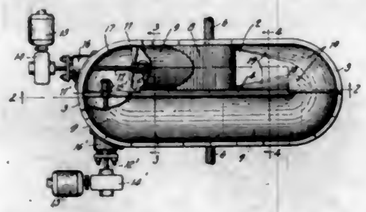
1,692,599. FLATIRON SUPPORT. CARL E. WENZEL, Newark, N. J., assignor to Hedwig Mfg. Co., Newark, N. J., a Corporation of New Jersey. Filed Dec. 3, 1927. Serial No. 237,848. 1 Claim. (Cl. 68—27.)

A flat iron support comprising a plate shaped to receive a flat iron on its upper surface, guide means at the side edges of said plate, a single foot at the bottom of said plate centrally at the front thereof, a pair of feet at the rear corners, said feet being longer than the first foot, a lug depending from the rear of said plate, an arcuate lever pivoted to said lug, a serrated plate at the free end of said lever to contact the bottom surface of a support on which said feet rest, and means for manually actuating said lever.



1,692,600. LOUD-SPEAKER UNIT. ROBERT B. WHEELAN, New York, N. Y. Filed June 23, 1926. Serial No. 117,923. 19 Claims. (Cl. 179—115.)

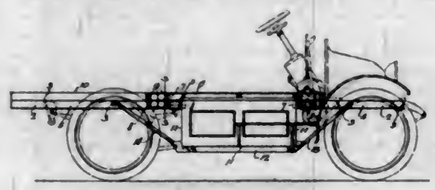
1. A reproducing unit, including an electromagnet, sound-reproducing means including a resilient armature adapted normally to extend in contact with the poles of said magnet, means for moving said armature to a position at which it is spaced from said pole pieces, a diaphragm, and a resilient element for operatively supporting said diaphragm disposed in operative conjunction with said means.



---

1,692,601. SPEEDOMETER MOUNTING FOR VEHICLES. WILLIAM H. WHEELER, San Diego, Calif. Filed Sept. 20, 1926. Serial No. 136,505. 4 Claims. (Cl. 180—78.)

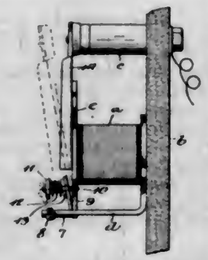
1. In a speedometer mounting for vehicles, the combination with a steering post and a steering wheel mounted thereon, of a supporting tube extending through said post and non-rotatably fixed relative thereto, said tube having an enlarged supporting portion at the end contiguous to said wheel, said supporting portion being spaced from said wheel, a speedometer mounted on said supporting portion, a small rigid shaft revolubly mounted within said tube and operatively connected at one end to the back side of said speedometer, and a flexible cable directly connecting the end of said shaft extending beyond said tube to a revolving part of the vehicle.



1,692,602. BEATING ENGINE. GEORGE STANFORD WITHAM, Jr., Hudson Falls, N. Y. Filed Dec. 13, 1926. Serial No. 154,508. 12 Claims. (Cl. 92—24.)

1. In a beating engine, the combination with a roll, of means forming an enclosed, substantially horizontal stock passage from the rear of the roll around to a point near the front thereof, and means within said passage for forcing the stock therethrough.

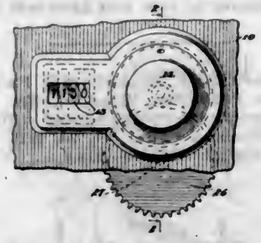
---



1,692,603. CHASSIS FOR MOTOR VEHICLES. EDDY R. WHITNEY, Philadelphia, Pa., assignor, by mesne assignments, to Walker Vehicle Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 5, 1924. Serial No. 736,049. 6 Claims. (Cl. 180—65.)

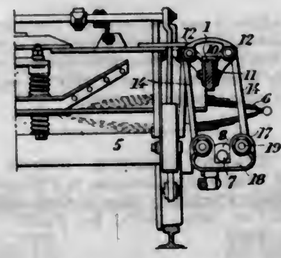
1. In a chassis frame, the combination with side beams comprising each a front section, a rear section aligned with and spaced apart from the front section, and an intermediate section connecting said front and rear sections and offset therefrom both laterally and upwardly, and a body-supporting beam mounted over the tops of said front and rear sections and bridging the space therebetween.

---



1,692,604. SWITCH MECHANISM. GEORGE H. WHITTINGHAM, Baltimore, Md., assignor to Monitor Controller Company, Baltimore, Md., a Corporation of Maryland. Filed Apr. 26, 1924. Serial No. 709,163. 3 Claims. (Cl. 200—87.)

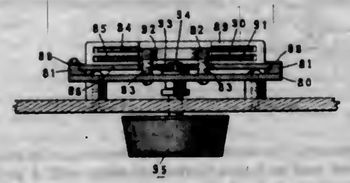
1. An electro-magnetic switch comprising a magnet, a sheet metal support forming part of the magnetic circuit of the magnet and having a transverse notch, an armature member fulcrumed on the bottom wall of the notch and interlocking with the end walls of the notch, a locking member detachably secured to said support and having a part extending close to the armature and retaining the latter in the notch and a part extending longitudinally of the armature from the support, and a spring interposed between said latter part and a part on the armature.



1,692,605. CONTROL KNOB AND INDICATOR. ROBERT E. WOLF, Chicago, Ill. Filed May 8, 1926. Serial No. 107,733. 6 Claims. (Cl. 40—68.)

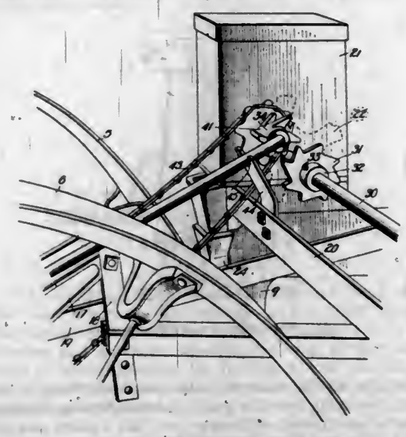
1. In a radio apparatus, a tunable element having a shaft, a knob, a speed reducing train connecting said knob and said shaft, an indicating device independent of said shaft, and a speed multiplying train connecting said knob and said indicating device whereby said knob actuates said element at a speed lower than its own and said indicating device at a speed higher than its own so that a small movement of said element corresponds to a large movement of said indicating device.

---



1,692,606. CAR TRUCK. JACQUES WORMS, Paris, France, assignor to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 19, 1927, Serial No. 241,086, and in France Dec. 30, 1926. 5 Claims. (Cl. 105—192.)

1. In combination with a truck frame including sidebars, equalising rods disposed beneath said side-bars and disposed in offset relation thereto, and means for suspending the levers from the side-bars comprising structure in the form of a changeable parallelogram, one end of which is pivotally connected to said side-bars and the other end of which is pivotally connected to the end of the said rods.

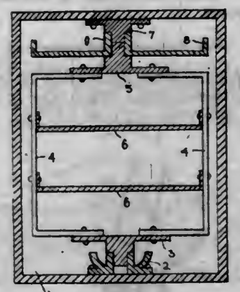


---

1,692,607. VARIABLE CONDENSER. WILSON AULL, Jr., Astoria, N. Y. Filed Sept. 1, 1926. Serial No. 132,974. 7 Claims. (Cl. 175—41.5.)

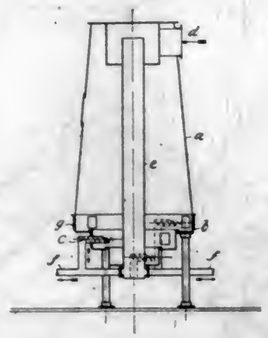
1. A condenser comprising an outer bearing ring, a substantially rigid rotor plate having its outer edge supported by said bearing ring and its center free and a stator plate supported from said outer bearing ring but insulated therefrom.

1,692,608. PLANTER. SILAS E. BAILOR, Dill, Okla. Filed July 20, 1927. Serial No. 207,185. 6 Claims. (Cl. 111—21.)



1. In a device of the character described, including a wheel-supported frame, a standard pivotally connected to said frame, and a seed-delivery element carried by the standard, means carried by the frame for actuating the seed-delivery element including a pivotal gear-supporting arm, means carried by the frame for lifting said standard, and means for removing said actuating means from actuating position including a fulcrum member supported by the standard, and engageable with said arm upon lifting of the standard.

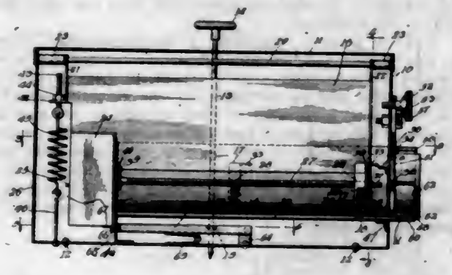
6. In a planter comprising a wheel-supported frame, a pair of seed hoppers pivotally connected thereto, a rotatable dropper disk in each hopper, a shaft connecting them, and a gear on the shaft, an arm pivotally mounted on the frame, a plurality of gears carried by the arm engageable with said shaft gear for rotating the same, means for fixing the gear on the shaft in alignment with any one of the gears on the arm, means for rotating said plurality of gears, and means including said gear rotating means for urging the gears on the arm into mesh with the gear on the shaft.



---

1,692,609. ANTPROOF CUPBOARD. BERNARD S. BASSETT, San Jose, Calif. Filed June 7, 1926. Serial No. 114,350. 2 Claims. (Cl. 45—71.)

1. A cupboard having a plurality of horizontal shelves, metal standards supporting said shelves, and top and base members affixed to said standards having slots to permit of the lateral adjustment of said standards for the accommodation of sets of shelves of different dimensions.



1,692,610. SILO. EMIL BARTHELMESS, Dusseldorf-Oberkassel, Germany. Filed Aug. 21, 1926, Serial No. 130,727, and in Germany Aug. 22, 1925. 5 Claims. (Cl. 214—17.)

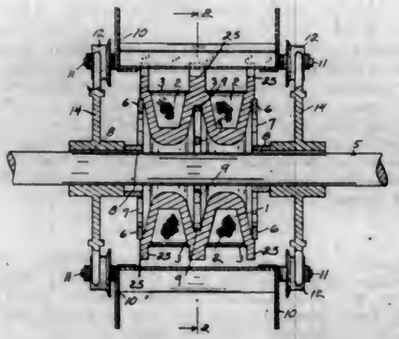
1. A silo of the character described comprising a bell-shaped, upwardly tapering single chamber having discharge apertures distributed uniformly over the bottom and disposed at different distances from the center.

---

1,692,611. RECORDING MECHANISM. JOHN B. BASKERVILLE, Roanoke, Va., assignor to Impactograph Corporation, Roanoke, Va., a Corporation of Virginia. Filed Dec. 18, 1924. Serial No. 756,668. 8 Claims. (Cl. 234—1.)

1. In a recording mechanism, the combination with a support for a record sheet; of a swingable member cooperating with said support for movement transversely thereto; and means for progressively feeding said member lengthwise of said support.

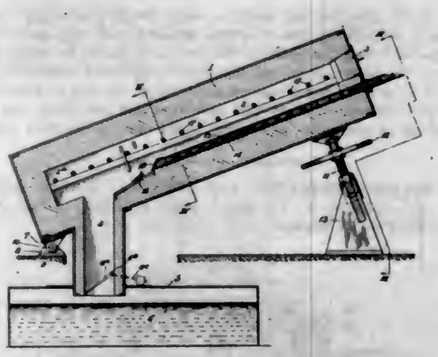
---



1,692,612. ILLUMINATED POINTING HEAD. LEMUEL BENNINGTON, Denver, Colo. Filed May 1, 1928. Serial No. 274,227. 7 Claims. (Cl. 40—126.)

1. An indicating device comprising an open V-shaped frame; a housing closing the open extremity of said frame; a light source in said housing adapted to illuminate the interior of said frame; transparent faces in said frame; a reflector in said housing adapted to direct light rays between said transparent faces; and a secondary reflector in said frame adapted to turn said light rays toward said faces.

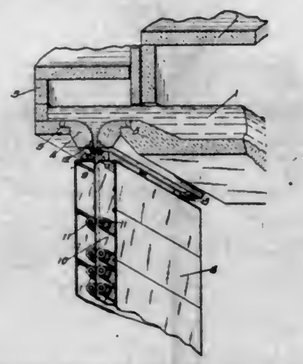
---



1,692,613. MAGNETIC PULLEY FOR PAN CONVEYERS. JOHN P. BETHKE, Milwaukee, Wis., assignor to Magnetic Separator Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 20, 1925. Serial No. 10,700. 18 Claims. (Cl. 209—218.)

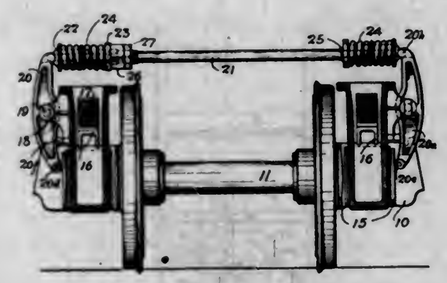
1. In a magnetic pan conveyer, the combination with an apron composed of interconnected pans, of a magnetic pulley having pole pieces provided with surfaces corresponding substantially in contour and area with the registering surfaces of the pans passing thereover.

---



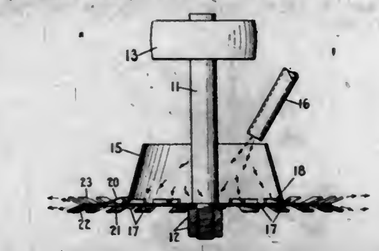
1,692,614. HEATING FURNACE. RICHARD E. BISSELL, Cleveland Heights, Ohio, assignor to Thompson Products, Incorporated, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 20, 1925. Serial No. 70,234. 12 Claims. (Cl. 263—6.)

1. A furnace for simultaneously heating a plurality of unit pieces, and having a heated chamber with a guideway therein at an angle to the horizontal and adapted to receive and guide the pieces, a discharge chute adjacent to the inner end of said guideway and within the heating chamber; and a slideway between the guideway and chute of greater angularity to the horizontal than the guideway and of greater length than the length of the unit piece being heated.



1,692,615. SHEET-GLASS DOWNFLOW APPARATUS. JAMES C. BLAIR, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 24, 1925. Serial No. 11,099. 3 Claims. (Cl. 49—17.)

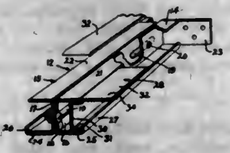
2. In an apparatus for producing sheet glass, the combination of a container for molten glass provided with a submerged elongated discharge outlet wider at each end than at its center, and means below the outlet and adjacent the end portions thereof for engaging the edge portions of the sheet to hold the same to width.



---

1,692,616. LATERAL-MOTION DEVICE FOR LOCOMOTIVE DRIVING BOXES. JAMES G. BLUNT, Schenectady, N. Y. Filed Nov. 19, 1927. Serial No. 234,322. 4 Claims. (Cl. 105—222.)

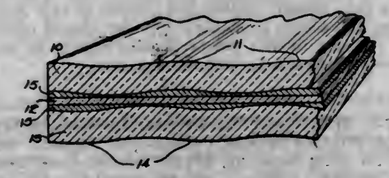
1. In a locomotive of the outside bearing type, the combination of a plurality of pairs of driving wheels; an axle for each pair of wheels, having journals disposed outside of the wheels; a frame, comprising two side frame members supported by the journals; pedestals in said side frame members; driving boxes mounted on the journals and fitted in the pedestals, with the capacity of a limited lateral movement; a lever, fulcrumed at the outerside of each side frame member, and having a lower leg disposed below the fulcrum, adapted to bear on an adjacent driving box, and an upper leg disposed above the fulcrum; and means, associated with the upper legs of a pair of levers, disposed on opposite sides of the frame, said means being adapted to store sufficient power when one of the levers is tilted by an outward lateral movement of a driving box, to cause the tilted lever to restore the outwardly moved driving box to normal position, when the force causing such outward lateral movement is removed.



1,692,617. CENTRIFUGAL DISINTEGRATOR FOR LIQUIDS. WILLIAM SPENCER BOWEN, Westfield, N. J. Filed July 19, 1928. Serial No. 293,857. 12 Claims. (Cl. 259—96.)

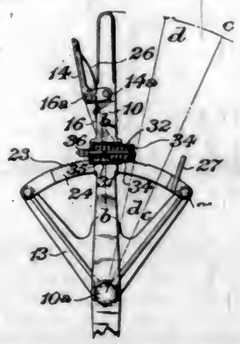
1. A centrifugal disintegrator for liquids having in combination a rotatable disk member, and a liquid container centrally secured thereto for receiving the liquid to be disintegrated and provided adjacent the disk surface with a series of outlet openings for the liquid, and the said disk having openings therethrough located beyond a number of the said outlet openings.

---



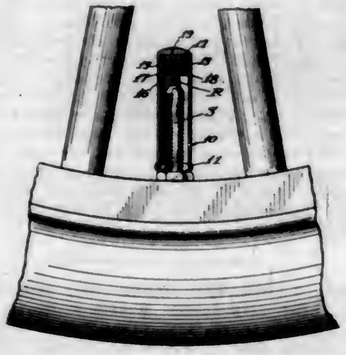
1,692,618. SLIDE FOR EXTENSION TABLES. CLAUDE E. BOWERS, Los Angeles, Calif. Filed Nov. 10, 1925. Serial No. 68,229. 1 Claim. (Cl. 45—115.)

An extension table slide comprising a guide bar including a pair of metal channel bars, means on the vertical webs of said channel bars for adjusting the bars longitudinally with respect to each other, the longitudinally extending edges of each of said bars having flanges extending therefrom, the flange of both bars extending in opposite directions, each of said bars having at one end thereof an attaching flange for rigidly securing the guide bar to the table frame, and a slide of channel form mounted to slide between the flanges of each metal bar, the upper flange of each channel slide extending beyond the longitudinal edges of the upper flanges of the metal guide bars, whereby the extension table top sections may be secured thereto to move therewith.



---

1,692,619. LAMINATED GLASS AND PROCESS OF PRODUCING THE SAME. WILBUR F. BROWN, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 26, 1926. Serial No. 104,656. 6 Claims. (Cl. 49—81.)

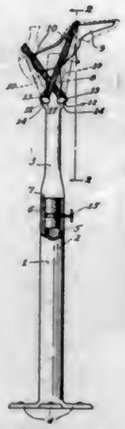


1. The process of producing laminated glass, consisting in uniting a plurality of sheets of glass having wave formations therein, in a manner that the formations in the sheets of glass extend in substantially the same direction in the finished laminated sheet.

1,692,620. METHOD OF AND APPARATUS FOR CONTROLLING THE CUT-OFF OF DISTRIBUTION VALVES OF LOCOMOTIVES. ALFRED W. BRUCE, New York, N. Y., and JOSEPH B. ENNIS, Paterson, N. J. Filed Apr. 5, 1927. Serial No. 181,100. 1 Claim. (Cl. 74—39.)

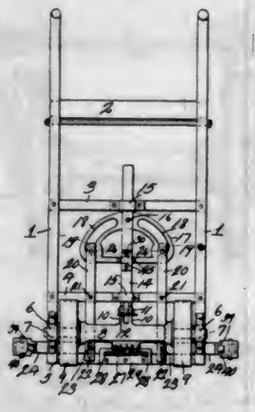
Distributing valve operating mechanisms, comprising, in combination with the reach rod and the hand lever operatively connected thereto, of a quadrant over which said lever plays, notches in the centre portion only of said quadrant, a latch carried by said lever to engage said notches, a handle for lifting said latch out of such engagement, a stop secured to one end of said quadrant, a socket carried by said lever adjacent the quadrant, a hollow piston slidable in said socket, a spring between the socket and piston ends, and means to limit the outward movement of said piston by said spring.

1,692,621. QUICKLY-DETACHABLE VALVE CAP. NELLIE L. BUCKMAN, Santa Ana, Calif. Filed Dec. 23, 1925. Serial No. 77,225. 3 Claims. (Cl. 152—12.)



1. In a quickly detachable valve cap, a tubular member, a valve stem closure confined and slidable in said tubular member, said closure including a disc and integral resilient arms, and said tubular member having therein an annular recess engageable by said resilient arms.

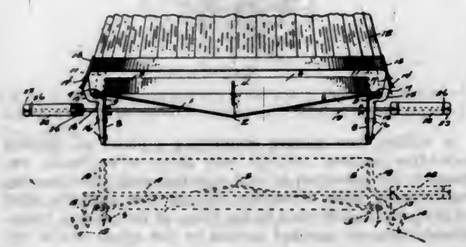
1,692,622. MANUFACTURE OF CELLULOSE ACETATE. JAMES WILLIAM BULMER, Cullingworth, England. Filed Feb. 15, 1928, Serial No. 254,635, and in Great Britain Jan. 2, 1928. 1 Claim. (Cl. 260—101.)



A process of preparing cellulose for acetylation which consists in mixing the cellulose with acetic acid of such strength that the acid crystallizes when cooled and then cooling the mixture until crystallization of the acid has occurred throughout the mass.

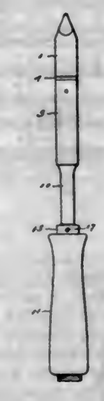
1,692,623. SHOE MAKING OR REPAIRING APPARATUS. SAMUEL W. BURTCHAELL, Oakland, Calif. Filed Sept. 27, 1927. Serial No. 222,241. 3 Claims. (Cl. 12—123.)

1. A shoe making or repairing apparatus comprising a jack member provided in its side wall near its upper end with a recess, one of the recess forming walls terminating in a lip overlapping the other in spaced relation, affording a contracted mouth for the recess.



1,692,624. HAND TRUCK. JAMES AUGUST BYINGTON, Orlando, Fla. Filed Aug. 8, 1927. Serial No. 211,451. 5 Claims. (Cl. 214—65.5.)

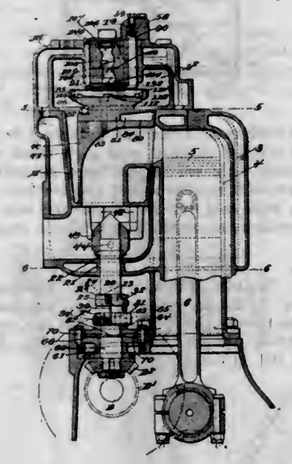
1. The combination with a truck, an axle carried by said truck, ground engaging wheels carried by said axle, gripping bars slidably mounted in the lower end of said truck, of means for controlling said gripping bars comprising a cam member having arcuate cam slots, a vertically movable slide bar carried by the truck and to which the cam member is connected, substantially vertically disposed rock bars pivotally connected to the truck below the cam member, bearing members carried by the rock bars and disposed in the cam slots of the cam member, the lower ends of said rock bars being connected to the gripping bars.



1,692,625. MEANS AND METHOD OF PACKING FRUITS, VEGETABLES, AND OTHER PRODUCTS. LUTHER HENRY CASKEY, Martinsburg, W. Va., assignor to Caskey Turn-Kwik Corporation, Martinsburg, W. Va., a Corporation of West Virginia. Filed Feb. 18, 1928. Serial No. 255,399. 16 Claims. (Cl. 226—17.)

2. A packing device of the type defined, comprising a support, and a handling device connected with the support and set off-center with respect to the center of dead weight of the load and support, thereby to automatically swing the load and support about the handling device to invert it when the same is lifted and thereby free to move.

1,692,626. ELECTRICALLY-HEATED IMPLEMENT HANDLE. CLARENCE M. CHAPMAN, Terryville, Conn., assignor to The Chapman Machine Company, Terryville, Conn., a Corporation of Connecticut. Filed Mar. 31, 1926. Serial No. 98,674. 5 Claims. (Cl. 219—26.)

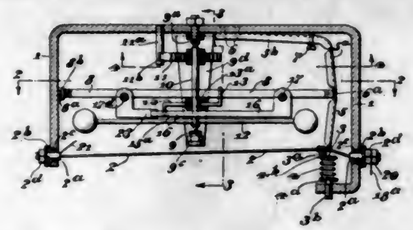


3. A handle for an electrically heated implement, said handle comprising a body of heat non-conducting material and having a central bore with a metallic bushing held against rotation in one end of said bore, said bushing having a socket at the outer end of the bushing, a tubular implement shank with a collar thereon, detachably fitted into said bushing and socket, means detachably fastening said collar in said socket, and an unexposed metallic ferrule surrounding but separated from said bushing, embedded in the end of the handle body whereby the metallic strengthening ferrule is heat insulated from the bushing, the socket, the shank, and the outer surface of the handle.

1,692,627. IGNITER. EDWARD FOSTER CLARK, North Attleboro, Mass., assignor, by mesne assignments, to Clark Lighter Co., Inc., North Attleboro, Mass., a Corporation of Maryland. Filed Mar. 1, 1927. Serial No. 171,883. 3 Claims. (Cl. 67—7.1.)

3. In an igniter, a burner tube, having an interior bore, and a multiplicity of projections or depression of capillary dimensions, within the bore, to form connecting capillary spaces from end to end of the tube.

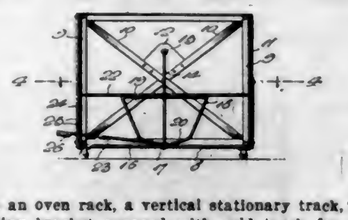
1,692,628. INTERNAL-COMBUSTION MOTOR. GUY B. COLLIER, Kinderhook, N. Y. Filed Dec. 2, 1925. Serial No. 72,653. 11 Claims. (Cl. 123—190.)



1. An internal combustion motor comprising a cylinder, a valve chamber adjacent the cylinder and communicating therewith, a conical valve in the chamber, means for rotating the valve, means for normally maintaining the valve on its seat governed in accordance with changes of pressure in the cylinder, and independent means for maintaining the valve on its seat automatically governed in accordance with variations in temperature of the valve.

1,692,629. ELECTRIC FLASH-LIGHT APPARATUS. GUSTAF DALÉN, Stockholm, Sweden, assignor to American Gasaccumulator Company, Elizabeth, N. J., a Corporation of New Jersey. Filed July 10, 1923, Serial No. 650,588, and in Sweden July 12, 1922. 13 Claims. (Cl. 200—113.)

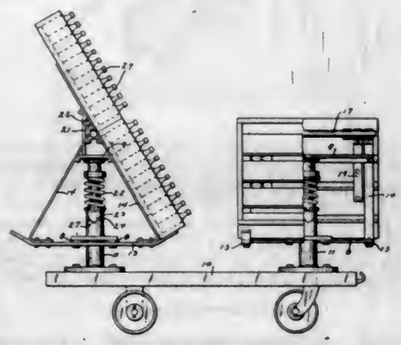
1. An electric flash light apparatus, comprising, in combination, a member adapted to be heated by an electric current, a switch device, a movable support for said switch device which support is adapted to be actuated by said



member, a spring connected to said support and adapted to rotate the same, and a pendulum device mounted upon said movable support and operating in conjunction with

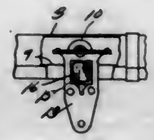
the said spring to regulate the movements of said support and of the said switch device, the said switch device being included within a circuit including an electric lamp.

---



1,629,630. OVEN RACK. FANNIE MITCHEN DELAIH, Chicago, Ill. Filed Oct. 20, 1927. Serial No. 227,584. 7 Claims. (Cl. 126—337.)

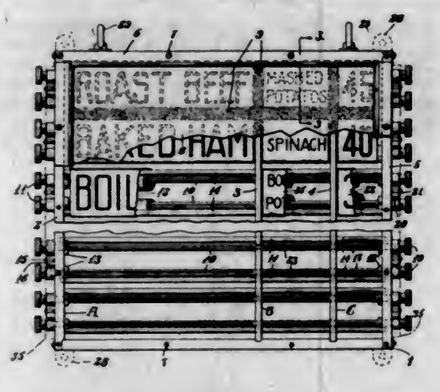
1. In an oven rack, a vertical stationary track, a grate supporting bracket engaged with said track for vertical sliding thereon, said bracket having a projecting arm by means of which it may be raised and lowered, and means co-operable with said arm for supporting said bracket at different positions along the length of the track.



---

1,692,631. WARE RACK. DAVID DENELSBECK and CLARENCE D. DILLE, Newark, Ohio, assignors to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 2, 1924. Serial No. 703,687. 4 Claims. (Cl. 211—1.)

1. The combination of a base comprising a pair of horizontally spaced interconnected triangular frames, each having downwardly and outwardly divergent sides, a horizontal pivot rod interconnecting the upper ends of said frames, trays hinged to the rod and normally resting on said sides, said trays being free to be individually swung upwardly above the pivot rod into alignment with the other tray, and means to hold either tray in the upward position.

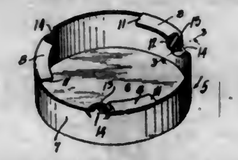


1,692,632. DOOR HANGER. JOSEPH DICKEY, Snyder, Nebr. Filed Mar. 23, 1927. Serial No. 177,624. 1 Claim. (Cl. 16—91.)

A sliding door hanger comprising a plate, an opening extending entirely through said plate, a vertically disposed roller mounted in said opening, said roller having its opposite sides extending beyond the opposite sides of the plate and its axis in the plane of the plate, a transversely disposed member carried by the upper end of the plate and antifrictional rollers carried by the ends of the transversely disposed member.

---

1,692,633. ADJUSTABLE MENU OR ADVERTISING DEVICE. JAMES DICOMES and PETER JANOS, Boston, Mass. Filed June 23, 1928. Serial No. 287,670. 3 Claims. (Cl. 40—86.)



1. In a device of the kind described, a casing, a plurality of partitions dividing said casing into at least three vertical compartments, a pair of spindles in each end compartment, a pair of spindles in the central compartment, said last pair of spindles being parallel with and of sufficient length to extend directly in back of the spindles in one end compartment, a flexible strip carried by each pair of spindles, the front of said casing having alined sight openings therein, guide rods extending the full length of said casing and in close proximity to said sight openings, each of said flexible strips passing over said guide rods and being fed past said sight openings, and means operable from the ends of said casing to selectively wind said flexible strips from one spindle to the other.

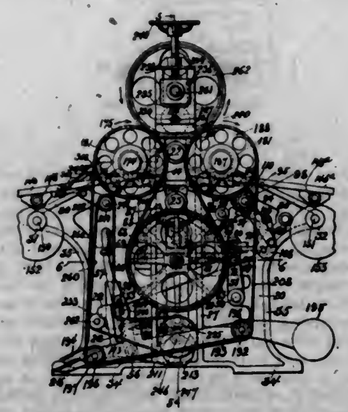
---

1,692,634. CLOSURE. JAMES C. DOWZIKO, Brooklyn, N. Y., assignor to National Seal Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Dec. 21, 1927. Serial No. 241,502. 7 Claims. (Cl. 215—44.)

7. In combination with a container having a lug, a closure having a lip to engage said lug upon rotation of the closure in one direction, said lip having a stop end to limit the rotation of the closure, and a supporting brace

for said stop end comprising a crimped, inwardly indented folded portion of the lip behind said stop end and integral therewith.

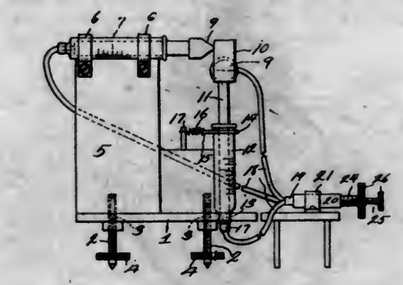
---



1,692,635. GRINDING HEAD. JOHN L. DRAKE, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 1, 1926. Serial No. 98,949. 3 Claims. (Cl. 51—209.)

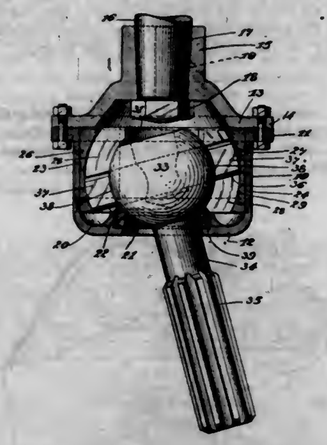
1. A grinding head for use in the surfacing of flat glass comprising a circular plate carrying on one surface thereof a plurality of projections arranged radially from the center in rows and positioned and shaped in a manner that the entire area of the glass will be subjected to the action of equal areas of grinding head surface.

---



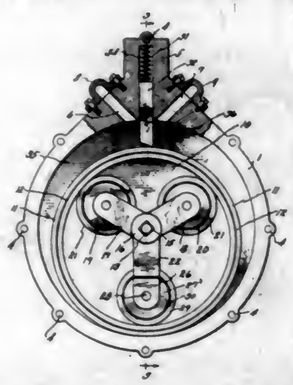
1,692,636. MACHINE FOR OBTAINING THE REGISTER OF THE ETCHINGS FOR MULTICOLOR INTAGLIO PRINTING CYLINDERS. ARTHUR DULTGEN, New York, and ADOLPH WEISS, Brooklyn, N. Y. Filed Dec. 8, 1925. Serial No. 74,034. 9 Claims. (Cl. 101—33.)

1. In a machine of the character described having an etched cylinder and a blank cylinder journaled therein, the combination of a transfer drum in rolling contact with said cylinders to transfer an impression from the etched cylinder to the blank cylinder, and means to adjust the transfer drum to different positions for cylinders of various diameters.



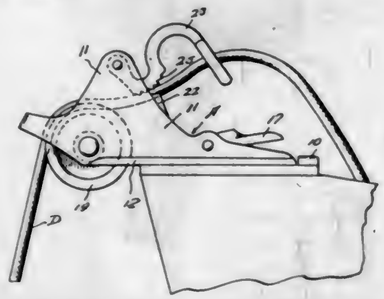
1,692,637. MEASURING DEVICE. FRANK L. DUNN, Omaha, Nebr. Filed Mar. 2, 1927. Serial No. 172,034. 3 Claims. (Cl. 33—1.)

2. A measuring device comprising a frame, plunger cylinders disposed at an angle to each other and carried by said frame, object engaging plungers in said plunger cylinders, liquid cylinders, pipe connections between the liquid cylinders and the plunger cylinders, sleeves threaded into the liquid cylinders and a liquid moving screw threaded into each of said sleeves.



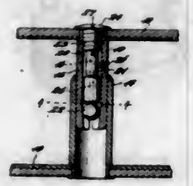
---

1,692,638. UNIVERSAL JOINT. EUGENE P. EDWARDS, Flemington, N. J., assignor to Simplex Universal Joint, Inc., Flemington, N. J., a Corporation of New Jersey. Filed Mar. 25, 1927. Serial No. 178,166. 3 Claims. (Cl. 64—91.)



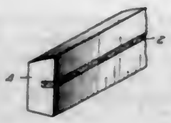
1. In a universal joint, a cylindrical casing having oppositely disposed walls in which there are similarly placed longitudinal bores, cylindrical bearing members each fitting within one of said bores and having a longitudinal groove therein with the edge portions defining the groove having a spherical recess therein, a shaft having a ball head adapted to fit between the oppositely disposed walls of the cylinder casing, a pin passing through and journalled in a transverse bore in the said ball head, the said pin extending beyond the surface of the ball head with the ends of the pin having flattened surfaces with spherical shoulders at the inner ends thereof adapted to co-operate with said spherical recesses in the said cylindrical bearings, and means for connecting a second shaft to the said cylindrical casing.

1,692,639. PUMP. HENRY L. ELSNER, Detroit, Mich. Filed Dec. 11, 1926. Serial No. 154,078. 3 Claims. (Cl. 103—123.)



1. A pump comprising a casing having a cylindrical chamber therein, a shaft extending through the center of the chamber and rotatably mounted in the casing, a member secured to the shaft within the chamber and supporting three rollers, one of the said rollers being movable toward or away from the shaft, a ring smaller in diameter than the chamber and positioned about the three rollers, yieldable means tending to move the movable roller outwardly to move the ring into contact with the wall of the cylindrical chamber, the ring being equal in width to the depth of the chamber, a tongue extending from the wall of the chamber and yieldable means forcing the tongue into contact with the outer peripheral face of the ring, the casing being provided with an intake conduit opening into the chamber on one side of the tongue and a discharge conduit opening into the chamber on the opposite side of the tongue.

1,692,640. ANCHOR-CABLE GUIDE AND HOLDER FOR BOATS. ERICK G. ERICKSON, Alexandria, Minn. Filed Apr. 21, 1928. Serial No. 271,879. 3 Claims. (Cl. 114—199.)



1. In an anchor cable guiding and locking means for boats, a plate casting constructed for rigid association with the boat, a second casting consisting of a pair of spaced vertical walls, and a bottom bridge wall extending between the rear end of said vertical walls, complemental construction between the bridge wall of the second mentioned casting, and the said plate casting, means associated with the bridge wall of said second mentioned casting for automatically engaging with the said complemental sliding construction of the plate casting to prevent sliding movement of the second casting upon said plate casting, a cable guide pulley arranged between the walls of the casting, and releasable means whereby the cable may be locked between said walls.

1,692,641. LOOSE-LEAF BINDER. CHARLES A. FINLEY, Rutherford, N. J., assignor to Boorum & Pease Company, New York, N. Y., a Corporation of New York. Filed July 28, 1928. Serial No. 296,016. 2 Claims. (Cl. 129—13.)

1. In a loose leaf binder a locking member comprising a tube and a cooperating slotted sleeve, the split walls of the sleeve being formed with a tapering bore at its free end, in combination with a ball of smaller diameter than the bore of the greater part of the sleeve, but of greater diameter than the bore at the free end of the sleeve and a screw pin adapted to bear against the ball.

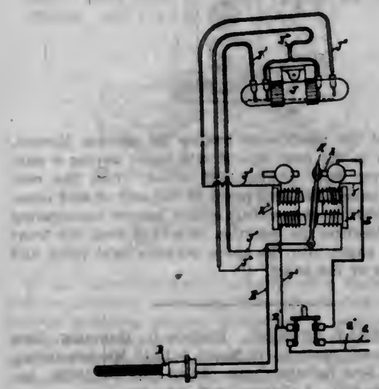
1,692,642. RAIL FILLER. ALBERT C. FISCHER, Chicago, Ill. Filed July 23, 1927. Serial No. 207,953. 12 Claims. (Cl. 238—9.)

1. A rail filler having a weakened portion extending longitudinally of the exterior face of the rail filler.

1,692,643. IDENTIFYING RIBBON OR CHECK HOLDER. ALBERT C. FORTE, Virginia, Minn. Filed July 9, 1925. Serial No. 42,575. 1 Claim. (Cl. 40—1.5.)

A holder for the purpose set forth comprising a retaining section consisting of a hollow body portion including a top, a side and a dish-shaped bottom formed with a central opening, said bottom being concavo-convex in cross section and a frusto-conical sleeve integral at its larger end with said bottom and arranged completely within the body portion and of a length to project beyond said bottom, the inner end of said sleeve being spaced from the inner face of said top, and a supporting section consisting of a circular base and an integral stem extending through said sleeve into said body portion, said stem formed of two portions of different diameters to provide a shoulder, that portion of smallest diameter integral concentrically with one face of said base and of less length than the portion of greatest diameter, said portion of greatest diameter slitted to provide a series of resilient arms, and a triangular shaped head integral with the free end of each arm and having its outer face curving outwardly and downwardly throughout from its apex to its base, said heads co-acting with the inner edge of said means for securing the retaining section and supporting section together, and said shoulder and base co-acting to secure a check to said stem.

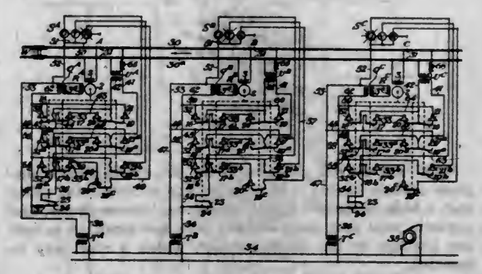
1,692,644. ELECTRIC COOKING UTENSIL. BERNARD M. FROMKNECHT, Erie, Pa., assignor to The Griswold Manufacturing Company, Erie., Pa., a Corporation of Pennsylvania. Filed Dec. 2, 1926. Serial No. 152,163. 5 Claims. (Cl. 53—10.)



1. In an electric cooking utensil, the combination of a hot plate having a cooking surface thereon; a heating element secured under the plate; and a guard plate clamped at its center to the underside of the hot plate and having a depending drip protecting skirt at its edge.

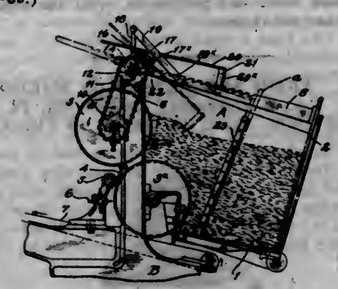
1,692,645. SAFETY PAPER. LOUIS GAILER, New York, N. Y., assignor to E. E. Lloyd Paper Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 6, 1928. Serial No. 244,844. 9 Claims. (Cl. 283—9.)

5. A safety paper having a coating of dye coloring having compressed portions to provide identification matter in said coating.



1,692,646. SYSTEM FOR HEATING WATER. JAMES E. GANNON and MONTAGUE W. WARD, Erie, Pa.; said Ward assignor to John Mark Gannon, Erie, Pa. Filed Dec. 29, 1926. Serial No. 157,774. 1 Claim. (Cl. 219—20.)

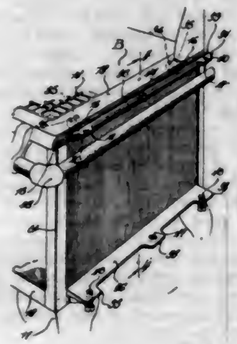
In a system for heating water, a tank, an electric heating unit within said tank, a main electric circuit including a make and break device, a shunt circuit including a magnetic coil connected with said main circuit, a make and break device in said shunt circuit by means of which said shunt circuit can be closed, a second shunt circuit including a magnetic coil connected with said main circuit, a make and break device in said second shunt circuit by means of which said second shunt circuit can be closed, and a thermostatic device actuated by the temperature of the water in said tank to alternately energize said magnetic coils.



1,692,647. RAILWAY SIGNALING APPARATUS. ROBERT M. GILSON, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Original application filed Jan. 8, 1923, Serial No. 611,275, Patent No. 1,682,749, dated Sept. 4, 1928. Divided and this application filed Jan. 12, 1928. Serial No. 246,179. 9 Claims. (Cl. 246—38.)

1. In combination, a plurality of successive sections of railway track, a relay for each section having a winding connected with the rails of the section and having a movable member responding to reversals of relative polarity of the current in the rails by moving to two extreme positions in opposite directions from a biased position, means controlled by said member when in either extreme position for supplying current of one relative polarity to the rails of the section in the rear and when in its biased position for supplying current of the opposite relative polarity to the rails of the section in the rear, a signal for each section, means controlled by the movable member of each relay for causing the associated signal to indicate proceed or caution or stop according as said member is in one extreme position or the other extreme position or the biased position, an auxiliary contact for each relay arranged when open to prevent the supply of current of said opposite relative polarity to the rails of the section in the rear and also to prevent the associated signal from indicating stop when said movable member of the relay is in the biased position, said auxiliary contact being open when said member is in either extreme position and closed when said member is at rest in its biased position, and means associated with said auxiliary contact for preventing momentary closure thereof during continuous movement of said member from one extreme position to the other.

1,692,648. CONSTANT-LEVEL HOPPER FOR TOBACCO-FEEDING MACHINES. CLAIBORNE WATTS GOOCH, Jr., Lynchburg, Va., assignor to United Cigarette Machine Co. Inc., Lynchburg, Va., a Corporation of Virginia. Filed Sept. 9, 1926. Serial No. 134,352. 5 Claims. (Cl. 131—39.)

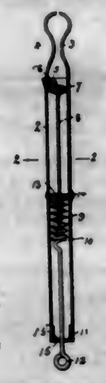


1. In a device of the character described, a chamber adapted to contain tobacco, a registering device the position of which is determined by the quantity of the tobacco in said chamber, and a movable member and actuating means therefor controlled by said registering device for decreasing the effective area of said chamber when the registering device reaches a predetermined position.

1,692,649. JUMP-RING COUPLING. GILBERT W. GOODRIDGE, Fairfield, and WILLIAM J. GAGNON, Bridgeport, Conn., assignors to The Bead Chain Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 1, 1927. Serial No. 171,846. 5 Claims. (Cl. 24—116.)

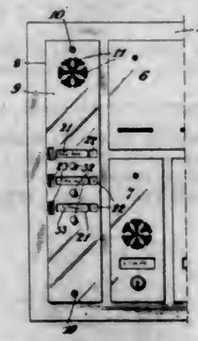
1. A coupling for chains and the like comprising a one-piece capsule having a hole in its side to admit the chain end, a hole in its end, a slot connecting the two holes, and opposite said first hole another hole too small to permit the passage of the chain through which a ring may be inserted.

1,692,650. RANGE. WILLIAM L. GREGG, Milwaukee, Wis., assignor to The Fuller-Warren Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 14, 1925. Serial No. 75,349. 10 Claims. (Cl. 126—332.)



1. In a gas range having a burner section and a top frame for the section, a supporting rail connectible with the top frame, a heater removably supported from the supporting rail and having an interlocking connection therewith, and a shelf structure carried by the range below the supporting rail and engageable with the heater at its inner lower end portion to, with the supporting rail, give support thereto.

1,692,651. BRAID AND METHOD OF MAKING THE SAME. CARL J. GREENSPAN, Philadelphia, Pa. Filed Feb. 13, 1926. Serial No. 88,006. 9 Claims. (Cl. 96—26.)



1. A rug braid comprising strands on opposite surfaces thereof extending longitudinally of said braid and substantially parallel with one another; and binder threads engaging said strands together and concealing such strands only at spaced points.

1,692,652. CIGARETTE CLIP. JOHN G. HABBART, Prairie du Chien, Wis. Filed Sept. 13, 1926. Serial No. 135,265. 3 Claims. (Cl. 131—51.)

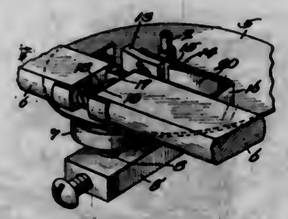
1. A device as described consisting of a tube having an integrally extending jaw, a movable jaw having a lever end pivotally mounted within said tube, and means for operating the last jaw to cooperate with the first jaw to hold a cigarette.

1,692,653. METAL RECEPTACLE. SAMUEL HAMMER, Brooklyn, N. Y. Filed Oct. 19, 1926. Serial No. 142,541. 3 Claims. (Cl. 40—64.)

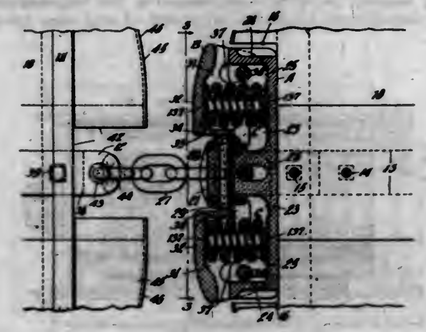
1. A panel for receptacles having an opening therein, a plate fixed to the rear side of said panel having a part extending over said opening and spaced from the rear face of said panel, and said panel at one end of said opening therein having an inwardly struck tongue constituting means for directing the insertion of a card from the front side of said panel into the space between said plate and the rear face of the panel.

1,692,654. BELT BUCKLE. HORACE G. HANCOCK, New Britain, Conn., assignor to North & Judd Manufacturing Company, New Britain, Conn. Filed July 23, 1926. Serial No. 124,435. 7 Claims. (Cl. 24—191.)

1. A belt buckle comprising a buckle body, a lever mounted thereon, and a gripper permanently carried by the lever, the gripper consisting of a split elliptical loop, and there being retaining elements on the lever extending over the terminals of the loop and across the edges thereof.

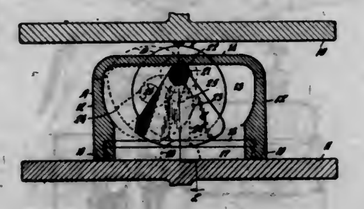


1,692,655. FLYING HORSE. CLYDE R. HARDING, Council Bluffs, Iowa. Filed May 5, 1927. Serial No. 189,153. 5 Claims. (Cl. 155—65.)



1. A swing including a seat rigidly secured to a depending tubular member, said tubular member being adapted to be pivotally secured at its upper extremity to an overhead support, an operating linkage secured to said tubular member and to an overhead support at points remote from said tubular member, and foot actuated means for imparting movement to said operating linkage for propelling said swing, said means being inside said tubular member and connected at its upper extremity to said operating linkage and at its lower extremity to a stirrup below said seat and said tubular member.

1,692,656. ELECTRICITY METER. JESSE HARRIS, La Fayette, Ind., assignor to Duncan Electric Manufacturing Company, La Fayette, Ind., a Corporation of Illinois. Filed Dec. 27, 1926. Serial No. 157,228. 4 Claims. (Cl. 171—84.)

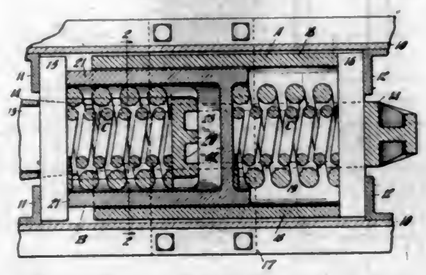


1. An electricity meter inclusive of a motor having a motion damping armature upon its moving element; a motion damping magnet furnishing a magnetic field in which said armature turns; a block of magnetic material disposed in the polar region of said magnet to alter the strength of the aforesaid magnetic field in which said armature turns; a mounting strip carrying said block at one end and having a mounting to which it is secured at its other end, said strip being formed to flex in response to change in temperature whereby the proximity of said block to said magnet is varied to vary the effect of said block upon the aforesaid magnetic field; and a fulcrum located between the mounted end of said strip and said block and positioned to enable said strip to become engaged therewith or separated therefrom in response to changes in temperature to vary the effective length of said strip and its consequent influence upon the position of said block.

1,692,657. CAR CONSTRUCTION. STACY B. HASELTINE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Sept. 26, 1923. Serial No. 664,869. 6 Claims. (Cl. 213—9.)

1. In a car, the combination with a draw-bar fixed to one end of the car and projecting outwardly therefrom, said drawbar being slotted; of a buffing member; a pin fixed to said buffing member and working in the slot of said drawbar; a draft member adapted to abut the ends of the car, said buffing and draft members being movable relatively toward and from each other; cushioning means interposed between said buffing and draft members; and means for detachably connecting the draft member to an adjacent car.

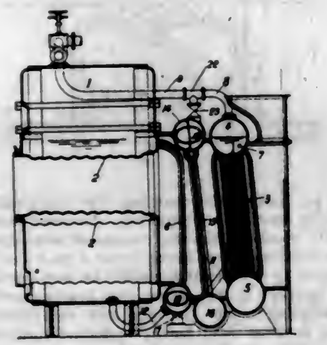
1,692,658. ANTIFRICTION BEARING. STACY B. HASELTINE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Feb. 9, 1924. Serial No. 691,577. 5 Claims. (Cl. 308—226.)



3. In an anti-friction bearing, the combination with a mounting having a horizontally disposed bearing surface; of a member pivotally connected with said mounting at one of its ends to swing about a fixed axis and normally urged to a vertical position; an anti-friction roller adapted to move to and fro on said bearing surface; and inter-connecting means between said anti-friction roller and said member, said means including contacting surfaces on said member and said roller operating upon movement of said roller to either side of central position to displace said member from normal vertical position, said surfaces being shaped to effect returning force upon said roller by said member in a direction substantially parallel with the line generated by the center of said roller at all points during the movement of said roller.

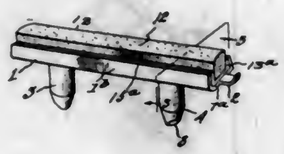
1,692,659. SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 16, 1927. Serial No. 168,557. 8 Claims. (Cl. 213—48.)

1. In a tandem spring shock absorbing mechanism adapted for co-operation with the usual front and rear main fol-



lowers of a railway draft rigging, the combination with a casing open at opposite ends and adapted to bear on one of said main followers, said casing having intermediate follower means thereon; of a pressure transmitting member telescoped within said casing, said pressure transmitting member including arms spanning the intermediate follower of said casing, the outer ends of said arms being

adapted to bear on the other main follower; a second intermediate follower serving as a connecting section for said arms; and tandem arranged springs, one of said tandem springs being interposed between the main follower on which said casing bears and the second named intermediate follower, and the other tandem spring being interposed between said first named intermediate follower and the remaining main follower.



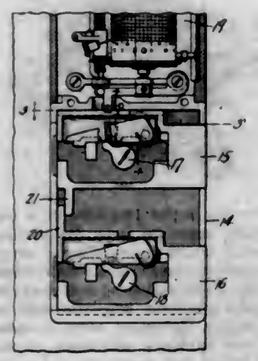
---

1,692,660. STEAM-GENERATING PLANT. JAMES HOWDEN HUME, Glasgow, Scotland. Filed Mar. 25, 1927, Serial No. 178,234, and in Great Britain May 27, 1926. 3 Claims. (Cl. 122—42.)

1. A steam generating plant comprising a boiler of the cylindrical type, an economizer spaced from the back end of the boiler and comprising upper and lower drums and substantially vertical tubes connecting said drums, a connection between the steam space of the upper drum and the steam space of the boiler, the lower drum being unconnected with the boiler otherwise than by way of said tubes, a water box at about the level of the bottom of the boiler, a connection between said water box and the lower side of the boiler, upcast circulating tubes led from said water box to the back of the boiler, said circulating tubes being located nearer the back end of the boiler than said first-mentioned tubes, and a downcomer connection from said upper drum to said water box.

1,692,661. COMBINED ABRASIVE AND CARRIER. MARSDEN C. HUTTO, Detroit, Mich. Filed Dec. 11, 1926. Serial No. 154,280. 5 Claims. (Cl. 51—206.)

1. As a new article of manufacture, a combined abrasive and holder therefor adapted for replacement of similar articles used in a cylinder grinder such as described comprising a channeled member and a grinding stone or abrasive secured in the channel by means of a solder and with the face of the stone parallel with the back of the channel member, guide pins secured to the back of the member each having its axis at a right angle to the said back and finished to an equal length from the face of the stone.

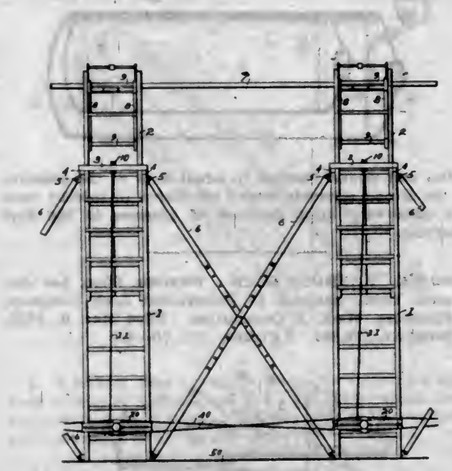


---

1,692,662. ETHYL-ALCOHOL SUBSTITUTE AND PROCESS FOR MAKING SAME. ROBERT M. ISHAM, Okmulgee, Okla., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed May 6, 1926. Serial No. 107,262. 9 Claims. (Cl. 252—1.)

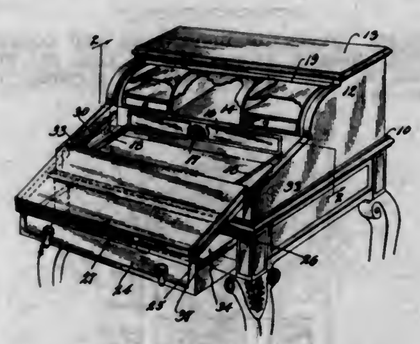
3. A product including isopropyl alcohol, acetaldehyde and butyl acetate, the proportion of alcohol being greatly in excess of the combined amount of aldehyde and acetate and the odor of the product resembling that of ethyl alcohol.

---



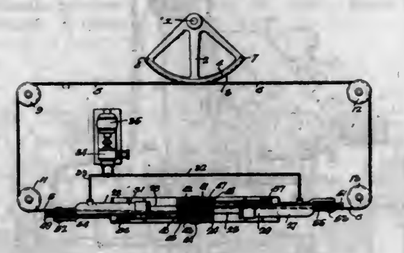
1,692,663. DOUBLE LOCK FOR DOORS. THEODORE H. JOSEPH, New York, N. Y., assignor to The Silent Watchman Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 7, 1927. Serial No. 181,683. 4 Claims. (Cl. 70—74.)

1. The combination comprising a lock case, first and second lock bolts slidably mounted in the case, a portion of the first bolt adapted to engage forward of a part of the second bolt and a key operated member adapted to throw the bolts into locked position by first engaging with and locking the first bolt and then engaging with and locking the second bolt.



1,692,664. MULTIPLE-UNIT SINGLE-CONTROL EXTENSION STAGING. MICHAEL KIRSCH, Milwaukee, Wis. Filed June 30, 1927. Serial No. 202,662. 7 Claims. (Cl. 304—10.)

1. A staging comprising a main ladder and an extension ladder section and a drum rotatably supported by the main ladder section, a pulley on the main ladder section, and spaced from the drum and a cable wound upon the drum and operable over the pulley for control of the extension ladder section and a second cable wound upon the drum for remote control of rotation thereof.



---

1,692,665. CABINET DESK. LEON KNABSTER, Union City, N. J. Filed Mar. 1, 1927. Serial No. 171,816. 5 Claims. (Cl. 45—6.)

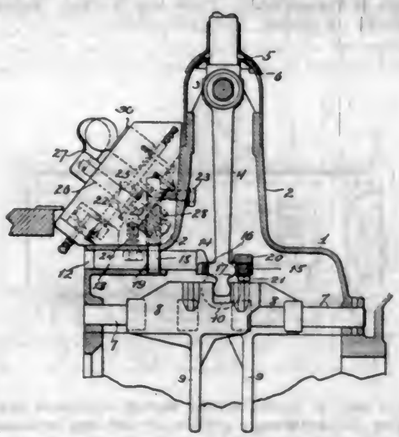
4. In a desk, a platform, a public cabinet section disposed above the same, a secret container intermediate said cabinet and platform and withdrawable toward the front of the desk, means at the forward portion of the desk for concealing said container and movable to permit access thereto, a cover for the cabinet section cooperating with the concealing means, a drawer beneath said platform connected to said cover and provided with an extended front panel, and means upon the platform to engage said panel for limiting the inward movement of said drawer.

1,692,666. HYDRAULIC STEERING GEAR. CHARLES VERNON KOONS, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 8, 1925. Serial No. 49,146. 4 Claims. (Cl. 114—150.)

1. A pair of spaced motors having a common ram extending therebetween, a portion of said ram intermediate said motors being recessed to receive a sheave, and means for supporting said sheave in said recess.

---

1,692,667. TOY HORSE. JEROME P. KRIMKE, Newark, N. J. Filed Apr. 20, 1928. Serial No. 271,529. 4 Claims. (Cl. 208—42.)



1. A toy comprising a body simulating that of an animal, a saddle pivoted upon the body, a lever fulcrumed upon the body and having one end frictionally engaging the saddle, an axle pivotally connected with the lower end of the lever, wheels carried by said axle, a ratchet wheel mounted upon the axle, a pawl pivotally supported with relation to the lever and engaging said ratchet wheel, an axle journalled at the rear portion of the body, wheels carried by the last mentioned axle, a ratchet wheel carried by the last mentioned axle and a pawl pivotally mounted with relation to the body and engaging the last mentioned ratchet wheel.

---

1,692,668. AUTOMOBILE LOCK MEANS. JOSEPH S. LACH, Bridgeport, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Aug. 4, 1926. Serial No. 127,089. 1 Claim. (Cl. 70—90.)

The combination with a transmission housing member, shift block, and a shifting member cooperable with said shift blocks, of a lock casing secured to said housing, a bolt mounted in said casing and movable through the

top of the housing to engage the shifting member, said bolt having rack teeth, a manually operable shaft mounted in the lock casing, a pinion carried by said shaft and

meshing with the rack teeth on the bolt, and key-controlled means mounted in the lock casing for controlling the operation of said shaft.

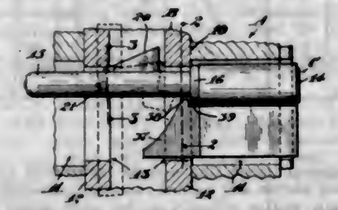
---

1,692,669. ELECTRODE TO BE APPLIED TO THE HUMAN BODY. EAWIN LAST, Vienna, Austria. Original application filed Dec. 18, 1925, Serial No. 76,165, and in Austria Nov. 14, 1925. Divided and this application filed Feb. 17, 1927. Serial No. 168,873. 5 Claims. (Cl. 174—89.)

1. In an electrode to be applied to the human body for diathermic treatment, the combination of an electrically non-conductive carrier molded from a material of a nature possessing sufficient pliability to adapt itself intimately and closely to the surface to be treated and capable of maintaining its molded shape and configuration, an electrically conductive lining on the side of such carrier next to the said part of the body and means for electrically connecting such lining with a source of electric current.

---

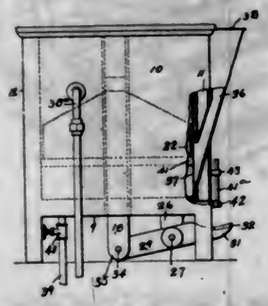
1,692,670. APPARATUS FOR STORING FLUID UNDER PRESSURE. LOUIS JOHN LE MESURIER, Belmont, England. Filed July 20, 1925, Serial No. 44,953, and in Great Britain Dec. 30, 1924. 8 Claims. (Cl. 220—3.)



1. In apparatus for storing fluid under pressure, in combination with a reservoir adapted to contain fluid under pressure a reservoir disposed within the first reservoir and subjected to the pressure of the fluid therein and adapted to contain fluid at a higher pressure than that in the first reservoir, and a connection between said reservoirs including a main valve, a piston controlling said

valve, and means operable to admit fluid at the pressure of the second reservoir behind the piston to thereby open the main valve upon decrease of pressure in the first reservoir.

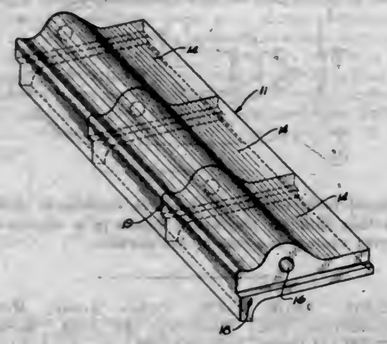
---



1,692,671. KEYHOLE LOCK. WENDELL LOGG, Los Angeles, Calif., assignor to Independent Lock Company, Fitchburg, Mass., a Corporation. Filed Mar. 9, 1927. Serial No. 173,867. 3 Claims. (Cl. 70—8.)

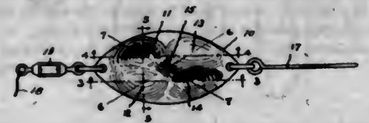
3. A device of the class described comprising a keyhole stoppel consisting of a substantially cylindrical portion and a radially extending web said web having a plurality of bores formed therein to receive lock tumblers, a lock cylinder rotatably mounted in said stoppel, a stem extending from the lock cylinder, a spring actuated catch carried by the stem, a collar between said cylinder and stem, there being a key slot formed in said cylinder and through said collar, a portion of said web being extended through the slot in said collar and said collar being burred to prevent movement of the said web portion axially relative to the stem.

---



1,692,672. BEVERAGE DISPENSING AND COOLING BOX. HENRY R. LOOSLEY, East St. Louis, Ill. Filed Mar. 25, 1927. Serial No. 178,332. 2 Claims. (Cl. 62—76.)

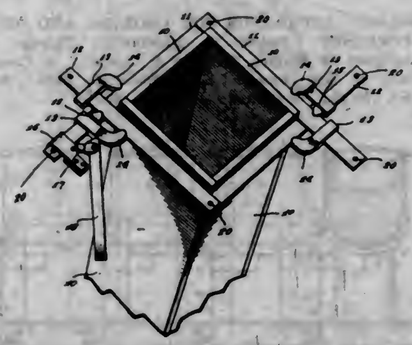
1. A beverage dispensing and cooling box comprising a box having a lid, a tray divided into compartments suspended in said box, means for raising and lowering said tray, means located within said box for limiting the lowering of said tray, means carried by the front of said box through which crushed ice can be inserted in said box below said tray without removing said tray or draining or opening the lid of said box, and means for holding said tray in raised position.



1,692,673. SHEET-GLASS APPARATUS. NESTOR NAMBOURG, Lancaster, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 11, 1926. Serial No. 134,823. 7 Claims. (Cl. 49—17.)

1. In a sheet glass apparatus, means for drawing a sheet from a mass of molten glass, and a lip tile arranged above the molten glass, a support therefor, said lip tile comprising a plurality of sections threaded on said support.

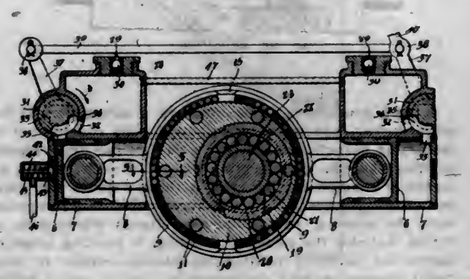
---



1,692,674. TROLLING SPOON. GEORGE MAPEL, Seattle, Wash. Filed Aug. 13, 1927. Serial No. 212,675. 5 Claims. (Cl. 43—42.)

1. In a trolling spoon, a thin metal body member having four symmetrically arranged spoon shaped portions, two of which are formed side by side near each end of the body member the two spoon shaped portions near each end of the body member being dished in opposite directions.

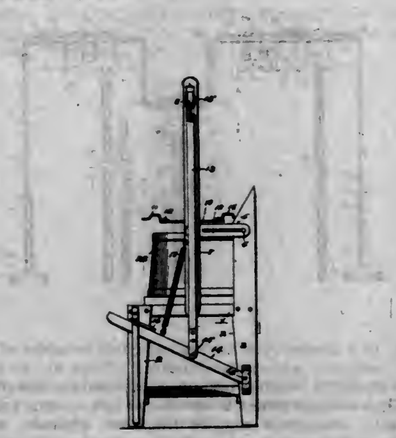
---



1,692,675. COLUMN CLAMP. CHARLES M. MARKHAM, Indianapolis, Ind. Filed July 27, 1925. Serial No. 46,247. 5 Claims. (Cl. 144—291.)

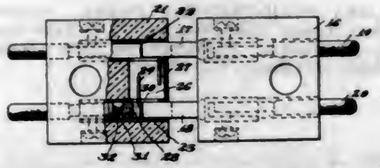
1. A clamp for clamping together hollow polygonal column forms, comprising a bar adapted to extend across each outer face of such form, said bars being arranged to cross in pairs at corners of such form, a locking dog on each bar having a portion rigid with the remainder of the dog for engaging the intersecting bar, each of said dogs being adapted to grip its own bar by outward pressure of such intersecting bar to prevent loosening of the clamp, and clamp-tightening means adapted to draw each of said bars through the dog thereon.

---



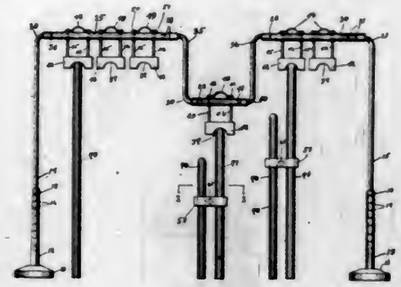
1,692,676. FLUID-PRESSURE BRAKE. HOWARD E. MARSH, Lompoc, Calif., assignor to J. F. Frick and E. J. Talbott, trustees. Filed Sept. 29, 1926. Serial No. 138,509. 6 Claims. (Cl. 188—99.)

1. A fluid pressure brake comprising a cylinder, a plunger in the cylinder, a chamber provided with a port, an inwardly opening check valve controlling said port, valve means to control the flow of fluid between the cylinder and chamber, and means to operably connect the plunger with a vehicle wheel.



---

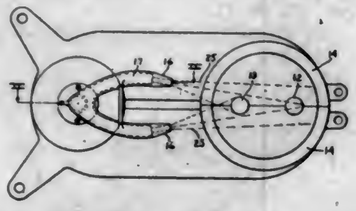
1,692,677. FRUIT-PACKING DEVICE. ROBERT E. MARTIN, Crozet, Va. Filed Oct. 18, 1926. Serial No. 142,838. 2 Claims. (Cl. 147—1.)



1. In a device for assembling the ends of a container, and packing and pressing same and its contents, said device comprising a platform and a removable frame supported thereby and of substantially the same contour as the container, a manually and positively operated resilient pressure member adapted to maintain the component parts of said container in position upon said frame for assembly, and subsequently after the removal of the frame, the reversal of, and the filling of said container, adapted to be applied thereto for pressing said container and its contents.

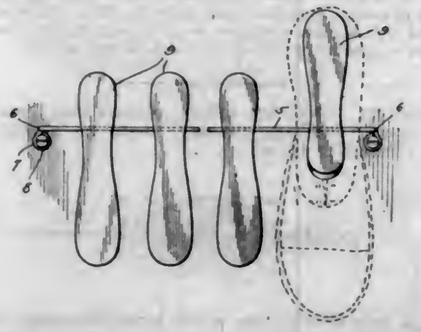
1,692,678. ELECTRICAL CONNECTION. THOMAS H. MCCOMSEY, Los Angeles, Calif. Filed Nov. 26, 1924. Serial No. 752,342. 3 Claims. (Cl. 200—2.)

1. As a new article of manufacture, a socket element for an electrical connection comprising a body constructed of insulating material and having a pair of relatively spaced cavities therein, a conducting sleeve in each cavity, an immobile contact consisting of a tongue struck out from one of said sleeves, a mobile contact electrically connected with the other of said conducting sleeves whose path of travel includes the immobile contact, a yielding pressure means for normally holding the mobile contact in electrical connection with the immobile contact, and a device carried by and movable with the mobile contact, whereby a circuit including both of said conducting elements will be normally closed by said mobile and immobile contacts, and whereby such circuit will be broken upon the insertion of a plug in the cavity having the mobile contact.



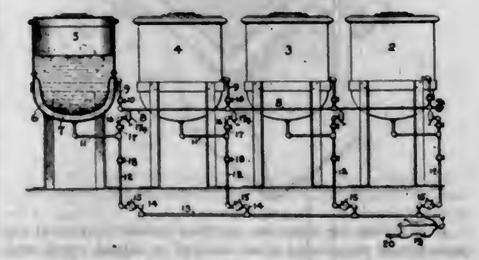
1,692,679. DISPLAY AND STORAGE RACK. LEE L. MCGOOGAN, St. Pauls, N. C. Filed Jan. 26, 1927. Serial No. 163,700. 6 Claims. (Cl. 211—123.)

4. In a display rack for head and foot members of beds, two vertically adjustable standards, elbows at the top of the standards leading towards each other, a plurality of tubular sections joined to the elbows and to each other to form a continuous support from one standard to the other, holes through the sections, vertically slidable members mounted in the holes, members having a notch in their lower edges being secured to the vertically slidable members, said notches being adapted to engage the tops of hand and foot members to hold the same in approximately vertical position.



1,692,680. MACHINE FOR FORMING GLASS ARTICLES. JOHN E. MCLAUGHLIN, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 19, 1927. Serial No. 227,092. 6 Claims. (Cl. 49—14.)

1. In a glass forming machine, the combination of means for suspending a parison of glass while in a plastic condition, and means for directing cooling air against one side of the parison comprising a plurality of air nozzles

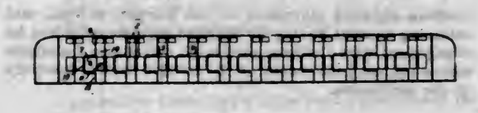


arranged to direct blasts of air in convergent directions such that said air blasts are united in a stream of air directed against one side of the parison.

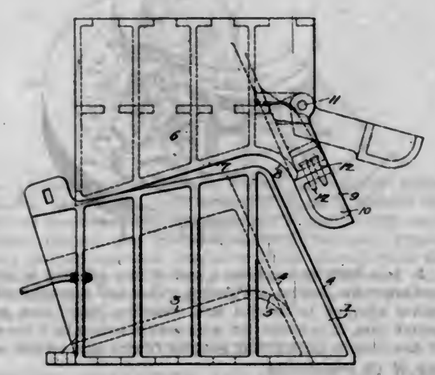
1,692,681. SHOE RACK. CUBAN ALFRED MONSEES, Brownsville, Tex. Filed Sept. 27, 1927. Serial No. 222,291. 1 Claim. (Cl. 211—35.)

A shoe rack including a supporting rod, said supporting rod having right angled ends formed with eyes, a plurality of shoe forms having openings to receive the rod, means for supporting the forms in a position to cause the forms to swing inwardly under the weight of shoes positioned thereon, and means extending through the eyes for securing the supporting rod to a supporting surface.

1,692,682. APPARATUS FOR COOKING AND OTHER PURPOSES. FRANK H. MONTREUIL, Chicago, Ill., assignor to Warren Webster & Company, a Corporation of New Jersey. Filed Dec. 27, 1924. Serial No. 758,332. 5 Claims. (Cl. 126—370.)

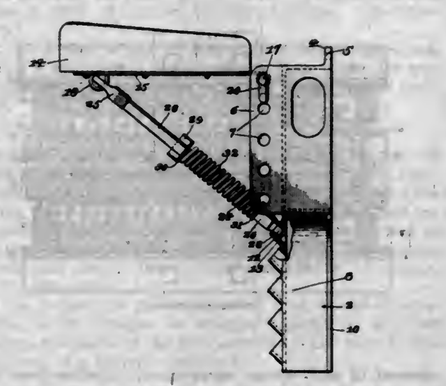


1. In apparatus of the character stated, a plurality of steam heated units and a common source for supplying steam to the several units, in combination with a drainage



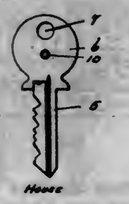
main common to all of the heating units for receiving the water of condensation therefrom, a trap for normally sealing the drainage main but permitting the escape of water therefrom, and a plurality of connecting means each between said drainage main and one of the heating units each connecting means comprising a stand-pipe receiving water of condensation from the lower part of the heating unit and at its bottom connecting with the drainage main and further provided with a check valve at the bottom of the stand-pipe for permitting water to pass therefrom into the drainage main but prevent the passage of water from the drainage pipe into the stand-pipe, and means for permitting the escape of air from the upper portion of the stand-pipe.

1,692,683. RAILWAY CAR. WOOLRIDGE B. MORTON, New York, N. Y. Filed July 16, 1927. Serial No. 206,294. 4 Claims. (Cl. 105—315.)



1. In a compartment car, a plurality of separate compartments extending transversely of the car, a berth in each compartment, the berths for two adjacent compartments being arranged one above the other, one of said compartments having its free floor space on one side of said berths and the other of said compartments having its free floor space on the other side of said berths, windows in the side wall of said car at the end of said free floor space, and mirrors adapted to be closed against said windows or moved away therefrom.

1,692,684. DIES FOR FORMING THROAT SHEETS FOR BOILERS. WILLIAM NEES, Drexel Hill, Pa. Filed June 8, 1927. Serial No. 197,496. 3 Claims. (Cl. 113—49.)

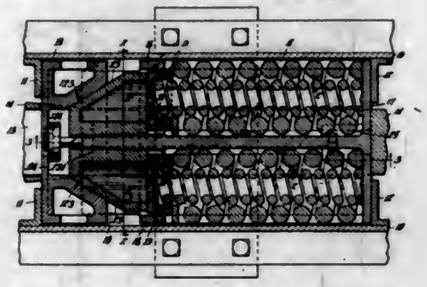


1. The combination in a die for forming sheet metal having a body portion and a deep flange, such as a throat sheet of a locomotive boiler, of a lower die having a segmental cavity and a face to form the flange of the blank; and a single upper die conforming to the shape of the lower die and having a movable nose section arranged to be moved from the path of the formed blank so that the flanged piece can be removed from the lower die.

1,692,685. LOCOMOTIVE-CAB SEAT. WILLIAMS S. A. NEWMAN, Childress, Tex. Filed July 19, 1927. Serial No. 206,940. 8 Claims. (Cl. 155—51.)

1. A seat for the purpose set forth comprising a stationary standard, a seat member, a combined seat member supporting and pivot bar for detachably connecting said member to the standard, and an inclined cushioned supporting means for the seat member, said means detachably engaging into said standard and connected with the seat member, said standard provided with means at its sides and centrally thereof for selectively positioning said bar and cushioned supporting means respectively relative thereto.

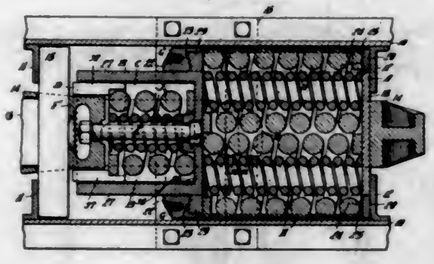
1,692,686. TACTUAL INDICATOR. HARRY J. NICHOLS, Washington, D. C. Filed Apr. 17, 1924. Serial No. 707,053. 3 Claims. (Cl. 70—9.)



2. In combination with a key having a flat grip provided with a plurality of holes arranged in predetermined relation in said grip, and indicating means mounted in any one of said holes and projecting in a predetermined relation laterally from the flat face of said grip, whereby the key may be distinguished from other keys of similar shape by a sense of touch.

1,692,687. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 11, 1925, Serial No. 14,591. Renewed Apr. 23, 1928. 5 Claims. (Cl. 213—36.)

1. In a friction shock absorbing mechanism, the combination with a spring cage having top and bottom walls; of a central, longitudinally disposed partition dividing the cage into spring compartments, said partition having V-

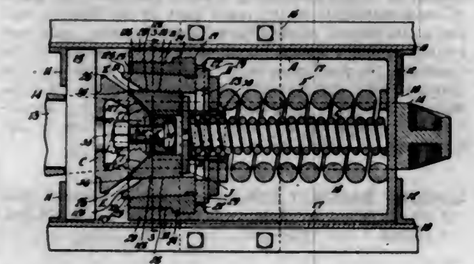


arranged friction surfaces at the forward end thereof, the top and bottom walls of said cage being co-extensive in length with the partition and being formed integral with the latter to reinforce the same; a main spring resistance

element in each spring compartment; friction-shoes having wedge faces and V-arranged friction surfaces co-operating with the friction surfaces of the partition; and a hollow wedge element having interior wedge faces.

---

1,692,688. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed May 21, 1927. Serial No. 193,345. 7 Claims. (Cl. 213—24.)



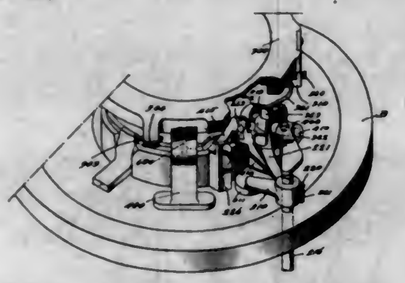
1. In a friction shock absorbing mechanism, the combination with a spring cage having detachable side wall sections, said side wall sections having overhanging retaining portions at the forward end thereof; of a friction shell, said shell and cage being relatively movable to a limited extent, said shell having means thereon engaging behind said overhanging portions of the side wall sections for limiting outward movement of the shell with respect to the cage; friction means cooperating with the shell; and spring resistance means opposing movement of the friction means and movement of the shell with respect to the spring cage.

---

1,692,689. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed May 21, 1927. Serial No. 193,346. 9 Claims. (Cl. 213—34.)

1. In a friction shock absorbing mechanism, the combination with a combined friction shell and spring cage; of a friction system cooperating with the friction shell section of the cage; removable liners mounted on opposite walls of the friction shell, said liners having friction surfaces cooperating with the friction system; wear elements for the remaining walls of the friction shell, said wear elements forming a part of the liners; a retaining element for

limiting outward movement of the friction system, said retaining element having its outward movement limited by engagement with the wear elements; and spring resistance means opposing movement of the friction system inwardly of the mechanism.



---

1,692,690. RAPID MAGNETIZING AND DEMAGNETIZING METAL ALLOYS. SIDNEY OSSEA, Wichita, Kans. Filed June 26, 1926. Serial No. 118,040. 3 Claims. (Cl. 75—1.)

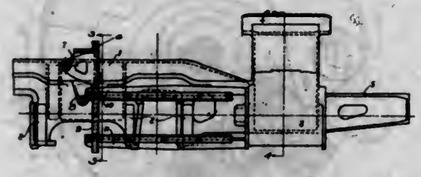
1. A rapidly magnetizable and demagnetizable metal alloy resulting from a combination of or including iron, manganese, substantially .51%, phosphorus, from .10% to .15%, and silicon, from .3% to .5%, and iron sufficient in quantity to make the other ingredients according to the percentage employed 100%.

---

1,692,691. KNITTING MACHINE. ALBERT E. PAGE, Brooklyn, N. Y., assignor to Scott & Williams, Incorporated, New York, N. Y., a Corporation of Massachusetts. Filed Apr. 8, 1927. Serial No. 182,130. 3 Claims. (Cl. 66—48.)

1. In a knitting machine, a switch cam adapted to raise and lower the needles, a widening picker and cam-controlled means adapted to control said widening picker and said switch cam, in combination with means moved by a change of direction in the knitting adapted to give said switch cam one of its movements.

---



1,692,692. PROCESS FOR THE MANUFACTURE OF SULPHATE OF ALUMINUM. LOUIS GABRIEL PATROUILLEAU, Paris, France, assignor to Société Alumine et Dérivés, Paris, France, a Joint Stock Company. Filed Sept. 23, 1925, Serial No. 58,100, and in France Sept. 29, 1924. 4 Claims. (Cl. 23—124.)

4. The herein-described process for obtaining an insoluble sulphate of aluminum from bauxite, consisting in subjecting the bauxite to the action of sulphuric acid to reduce the bauxite to a solution of multiple sulphates, transforming the salts of iron contained therein to soluble ferrous salts through the addition of iron and the action of heat, diluting the resultant so as to precipitate the basic sulphate of aluminum, and recovering the insoluble sulphate of aluminum.

---

1,692,693. LOCOMOTIVE CONSTRUCTION. HARRY M. PFLAGER, St. Louis, Mo., assignor to Commonwealth Steel Company, Granite City, Ill., a Corporation of New Jersey. Filed Mar. 10, 1927. Serial No. 174,273. 20 Claims. (Cl. 105—172.)

1. A locomotive frame and a cross head guide formed integrally with each other.

---

1,692,694. COMBINED SHIELD AND BRACKET SUPPORT FOR DOUBLE SHADES. ELMER F. PIDGEON, Spiceland, Ind., assignor of one-half to Luther O. Draper, Spiceland, Ind. Filed Mar. 10, 1927. Serial No. 174,275. 8 Claims. (Cl. 156—10.)

1. A combined shield and bracket support for double shades, comprising a light excinding shield of angular formation in vertical section adapted to support double shade rollers thereon and having a vertical dimension greater than the corresponding dimension of the space between the rollers, and the shield being arranged at the outer sides of the rollers with its apex extending into the space between the rollers.

---

1,692,695. ANÆSTHETIC AND PROCESS FOR MANUFACTURING SAME. WILLIAM JACKSON POPE, Cambridge, England, assignor to The British Drug Houses Limited, London, England, a British Company. Filed Mar. 18, 1926, Serial No. 95,785, and in Great Britain July 28, 1925. 11 Claims. (Cl. 260—105.)

1. As a new article of manufacture a borate of an anæsthetic base which borate has a composition of approximately one molecular proportion of the base to 5 molecular proportions of boric acid and has in solution a high anæsthetic effect when applied to a sensitive surface.

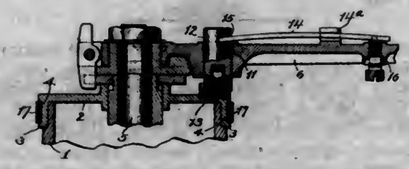
1,692,696. BENZAMINE BORATE AND PROCESS OF MAKING SAME. WILLIAM JACKSON POPE, Cambridge, England, assignor to The British Drug Houses Limited, London, England, a British Company. Original application filed Mar. 18, 1926, Serial No. 95,785, and in Great Britain July 28, 1925. Divided and this application filed Dec. 7, 1926. Serial No. 153,212. 7 Claims. (Cl. 260—43.)

2. As a new article of manufacture benzamine borate having a composition of approximately one molecular proportion of benzamine to five molecular proportions of boric acid.

---

1,692,697. PROCESS FOR THE MANUFACTURE OF BENZAMINE BORATE. WILLIAM JACKSON POPE, Cambridge, England, assignor to British Drug Houses Limited, London, England, a British Company. Original application filed Mar. 18, 1926, Serial No. 95,785, and in Great Britain July 28, 1925. Divided and this application filed Dec. 7, 1926. Serial No. 153,213. 2 Claims. (Cl. 260—43.)

1. A process for the manufacture of a borate of benzamine, which consists in bringing together in a liquid medium benzamine in the form of sulphate and boric acid in the form of a barium compound.



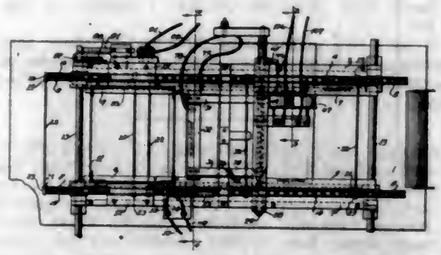
---

1,692,698. PHARMACEUTICAL PRODUCT. WILLIAM JACKSON POPE, Cambridge, England, assignor to The British Drug Houses Limited, London, England, a British Company. Original application filed Mar. 18, 1926, Serial No. 95,785, and in Great Britain July 28, 1925. Divided and this application filed Dec. 7, 1926, Serial No. 153,211. Renewed Sept. 11, 1928. 4 Claims. (Cl. 260—105.)

1. A process for the manufacture of borates of anæsthetic bases which consists in bringing together in a liquid an anæsthetic base in the form of sulphate and boric acid in the form of a barium compound.

---

1,692,699. DOOR CLOSER. ROBERT S. POTTER, Greenwich, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Apr. 22, 1925. Serial No. 25,087. 4 Claims. (Cl. 16—49.)



1. The combination with the casing, cover and lever arm of a door closer, of a holding member carried directly by the cover, an engaging member carried by the lever arm for cooperation with said holding member, a clamping band operable to clamp the cover to the casing, and means for anchoring said clamping band to the casing.

---

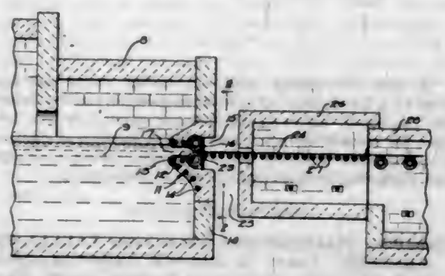
1,692,700. MACHINE FOR REJECTING FAULTY SEPARATORS. FRANK B. RAE and VERNON A. SMITH, Berkeley, Calif., assignors to Western Lumber Manufacturing Co., Incorporated, San Francisco, Calif. Filed Feb. 2, 1927. Serial No. 165,293. 14 Claims. (Cl. 209—81.)

1. In a machine for rejecting faulty separators, a primary circuit, a high tension secondary circuit having a

spark gap therein, means for advancing a separator to pass through the spark gap, the spark gap being arranged to allow a spark to jump thereacross when a defective part of the separator passes therethrough whereby a change

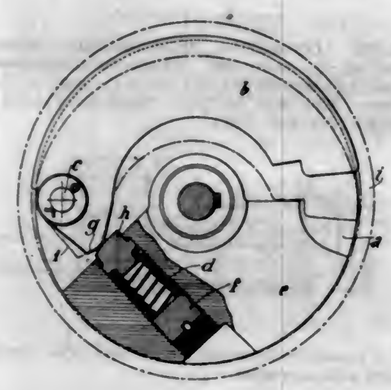
in current is produced in the primary circuit, means for ejecting the faulty separator from the machine and means timed relative to the advance of said separator utilizing the change of current in the primary for rendering the said means active.

---



1,692,701. SNAP FASTENER. LUES REITER and ALLAN B. COLBY, Providence, R. I., assignors to Rau Fastener Co., Providence, R. I., a Corporation of Rhode Island. Filed Nov. 5, 1927. Serial No. 231,238. 2 Claims. (Cl. 24—217.)

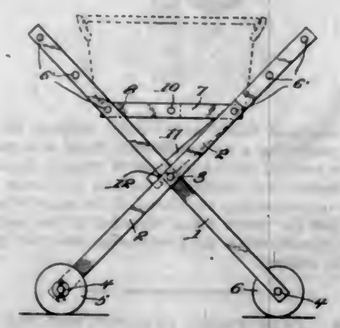
2. A female snap fastener element comprising a cup-shaped body having a beaded rim and split at its mouth to provide a spring socket having an opening in its bottom, a headed rivet having a hollow shank, the head having a rounded edge and the shank passed through the opening and upset against the bottom of the cup, and a ring having one of its edges rolled, said ring being mounted on the body in engagement with the head of the rim with its rolled edge projecting beyond the bottom of the socket of said body.



---

1,692,702. METHOD AND APPARATUS FOR FORMING SHEET GLASS. JOSEPH A. REECE, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 19, 1926. Serial No. 102,843. 29 Claims. (Cl. 49—33.)

2. In an apparatus for producing a continuous sheet of glass, a tank for containing a mass of molten glass, an end wall extending inwardly and rearwardly thereof, said wall having an orifice therein, and a sheet glass rolling means associated with the orifice.

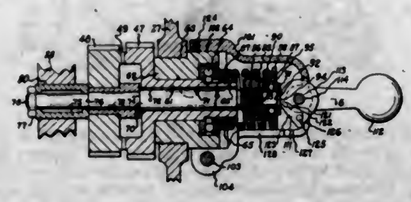


1,692,703. CONSTRUCTION OF AUTOMATIC CLUTCHES PROVIDED WITH A CENTRIFUGAL MASS. MAURICE JEAN JOSEPH RIOOLAOB, Paris, France, assignor to Société d'Eugins Graisseurs, Paris, France. Filed Oct. 13, 1924, Serial No. 743,426, and in France Oct. 24, 1923. 2 Claims. (Cl. 192—105.)

1. In an automatic clutch, a drive plate, a drum loosely mounted with respect to the plate, and constituting an oil-tight casing enclosing the plate, a clutch shoe pivoted to the plate, said plate having a passage therein, a thrust member guided in said passage, an adjustable stop member in said passage, a coil spring located in the passage intermediate the stop and thrust members, an inclined face on the thrust member, said clutch shoe having an inclined face corresponding with the inclined face of the thrust member, the respective profiles of said inclined faces being formed in such manner that when said shoe has entered into contact with the drum to effect clutching the point of contact between them is moved into line with the axis of the shoe and the axis of movement of the thrust member.

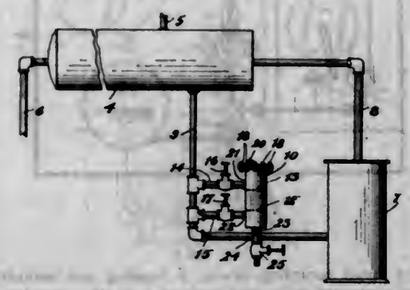
---

1,692,704. CLOTHES BASKET CARRIER AND RACK. CLARA E. ROHRIG, Davenport, Iowa. Filed Mar. 21, 1928. Serial No. 263,514. 1 Claim. (Cl. 280—43.)



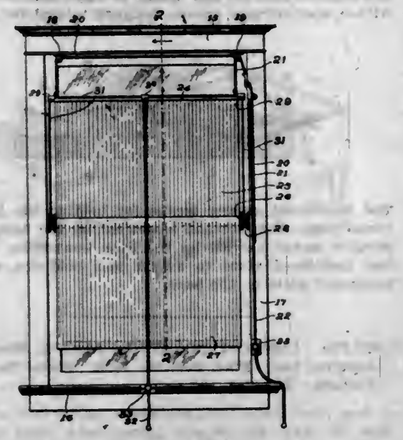
In a device for the purpose set forth, four legs arranged in crossed pairs, a rod pivotally connecting the legs, rollers on which the legs are mounted, spaced rounds connecting the legs above the pivot rod, comparatively long plates pivoted on the lower round of one pair of legs and having beveled ends to contact with the inner edges of the second pair of legs when the device is arranged in one position, comparatively short plates pivoted on the lower round for the second pair of legs and a pivot rod connecting the comparatively long plates with the free ends of the comparatively short plates, and a hook member pivotally secured on one of the lower rounds, swingable to engage with the pivot which connects the legs and likewise swingable to engage with the lower round of the second pair of legs when the said comparatively long and comparatively short plates are swung at opposite upward angles.

---



1,692,705. CLUTCH-ACTUATING MEANS FOR MACHINE TOOLS. WILLIAM L. SCHELLENBACH, Wyoming, Ohio, assignor to The American Tool Works Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 3, 1927. Serial No. 172,404. 4 Claims. (Cl. 82—22.)

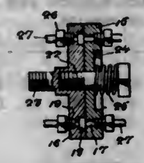
1. The combination, in a lathe, of a tool-holder, a lathe apron, and means on said lathe apron for feeding said tool-holder comprising a driving member journaled and held endwise in said lathe apron, a shaft slidable endwise in and held rotatively to said driving member, a driven member at one side of said driving member held endwise to said shaft, said shaft rotatable in said driven member, a clutch between said members, a spring about said shaft at the other side of said driving member, means on said shaft for adjusting the tension of said spring, an end-thrust bearing for said shaft, a housing on said apron about said spring and end-thrust bearing, means securing said housing to said apron independent of support by said shaft, and a cam lever pivoted to said housing and arranged for coaction with said end-thrust bearing.



---

1,692,706. RUST PREVENTION. RALPH A. SEALEY, Newark, N. J. Filed May 18, 1927. Serial No. 192,853. 1 Claim. (Cl. 210—36.)

In a water handling system, the combination of a water heater, a hot water container, a hot water line from the heater to said container, a cold water line from said container back to the heater, a receptacle for a rust minimising material, a valved connection from said cold water line to a point on said receptacle, a valved connection from a lower point on said receptacle back to said cold water line, and a drain connection from still a lower point on said receptacle, there being within said receptacle a perforate means for supporting said material to hold the bottom level thereof above the valved connection from the receptacle to the cold water line.

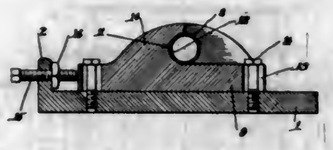


1,692,707. WINDOW SHADE. ARTHUR D. SEARS, Nashville, Tenn. Filed June 28, 1924. Serial No. 722,927. 2 Claims. (Cl. 156—27.)

1. In a shade structure, a roller having a shade extended in opposite directions therefrom, a vertically movable mounting for the roller, means to shift the mounting and separate means to extend and retract the shade, the means to extend the shade including a cord attached to the shade extremity, and the means to shift the mounting including also a cord, the two said cords connected to form a continuous element extending from the shade mounting to the shade end, means forming a common adjustment for the cords, and means to take up one of the cords only, at will, being included in the structure.

---

1,692,708. JOINT. ERNEST J. SERPAS, New Orleans, La. Filed Aug. 22, 1925. Serial No. 51,780. 1 Claim. (Cl. 285—21.)

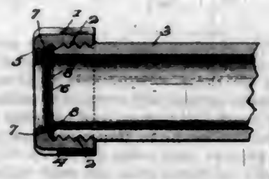


A lubricant coupling joint comprising stationary and movable sections, a stud carried upon the stationary section for anchoring the same upon its work, the inner face of the stationary section being provided with circumferentially disposed recesses having discharge openings at right angles to the face of the stationary member, the movable section lying flush agains tthe recessed face of the stationary section and having openings adapted for selective communication with the openings in the stationary section, a pin passed through the movable section and having connection with the stationary section axially of the stud therefor, and a spring encircling the pin and having its ends in engagement with the pin and the outer surface of the movable section to resiliently seat the latter upon the stationary section to prevent leakage between the sections incident to back pressure of lubricant.

---

1,692,709. BEARING BOXING. SAMUEL A. SHIELDS, Eureka, Calif. Filed Nov. 26, 1927. Serial No. 235,937. 2 Claims. (Cl. 308—65.)

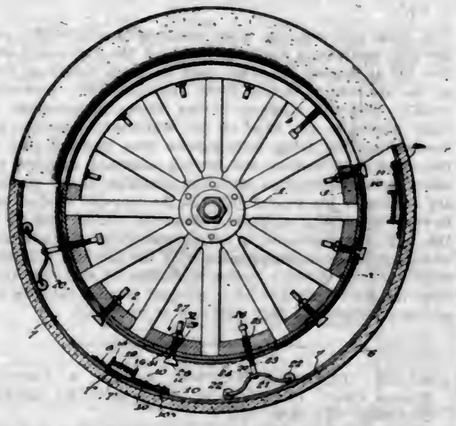
1. A bearing for a line shaft including a base, and having integral rightangularly disposed spaced plates on one of the faces thereof, each of said plates having one of their ends arched upwardly and merging into a straight face



which has a semi-circular groove therein, a second plate slidable between the first mentioned plates and having an upwardly arched portion whose straight face is provided with a semi-circular groove designed to register with the

first mentioned groove, means for holding the last mentioned plate from vertical movement on the base and adjustable means carried by the base, contacting with the last mentioned plate to adjust and hold the said last mentioned plate on the base.

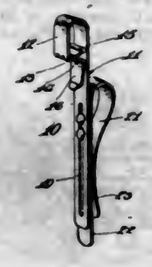
---



1,692,710. CONDUIT BUSHING. JOHN A. SPAHN, Wilmington, Del. Filed Feb. 25, 1925. Serial No. 11,616. 1 Claim. (Cl. 247—26.)

A conduit bushing having a rounded enlargement upon its outer end which projects inwardly beyond the bore of the bushing and opposes one end of a conduit upon which the bushing is received, and a sealing disk of deformable and malleable metal for closing the outer end of the bushing and having a relatively thick edge portion to be clamped between the rounded enlargement and conduit end whereby such edge portion will be mashed to lock the bushing against counter rotation and to afford a seal between the conduit and bushing.

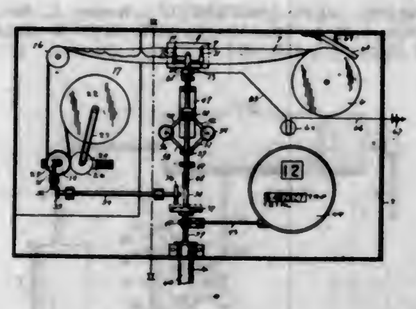
---



1,692,711. VEHICLE SPRING TIRE. LITCH J. SWARTZ, Wenatchee, Wash. Filed May 21, 1926. Serial No. 110,726. 6 Claims. (Cl. 152—8.)

3. A spring tire for vehicle wheels comprising a supporting ring comprising a plurality of cooperative sections having complementarily beveled meeting end portions, compression spring means urging adjacent sections of said ring apart and tending to expand said ring circumferentially, and adjustable spring means for resiliently supporting said ring on the rim of a wheel.

---



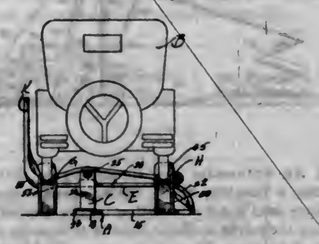
1,692,712. POCKET GUARD. CARL TANNEBAUM, New York, N. Y. Filed Dec. 30, 1927. Serial No. 243,716. 1 Claim. (Cl. 24—3.)

A pocket guard comprising an elongated body member bent upon itself at one end to provide an arm, a clamping device pivoted to said arm and adapted to co-act with said body member for clamping the wall of a pocket therebetween, said elongated member having an elongated slot therein, and a spring clip provided with headed pins extending through said slot for slidably mounting said clip upon said body member.

---

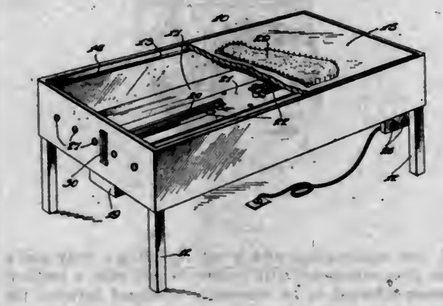
1,692,713. AUTOGRAPHIC SPEED RECORDER. LEONARD A. WEBER, San Francisco, Calif. Filed Mar. 4, 1927. Serial No. 172,851. 1 Claim. (Cl. 234—31.)

In a speed recording device, a housing and actuating means connected with said housing, a shaft connected to said actuating means, a second shaft in axial alignment with said first mentioned shaft, a spring interposed between said shafts, and connected to each of said shafts, a governor secured to said second mentioned shaft, and adapted to move said shaft endwise, a stylus adapted to be moved through the endwise movement of said shaft, a tape passing beneath said stylus, means for moving said tape, said means comprising a friction disc secured on said first mentioned shaft, a second friction disc adapted to be contacted by said first mentioned disc, a driving drum over which said tape is reaved, and means for rotating said driving drum from said second mentioned friction disc.



1,692,714. PROJECTING FIGURE WHEEL TOY. CLARE A. WETZELL, Sterling, Ill. Filed Nov. 12, 1926. Serial No. 148,080. 10 Claims. (Cl. 46—45.)

1. A toy including a body having a recess formed in an end portion thereof, supporting members pivotally connected to the body portion, said body portion being adapted to be pivoted relative to said supporting members, kick-off members pivotally connected to the body portion at said end portion and adapted to pivotally move relative to the body portion when said body portion is pivoted relative to said supporting members, means normally confined in said recess under tension for pivoting said kick-off members relative to the body portion, means for releasably holding said kick-off members in a position to increase the tension of said pivoting means, and means connected to said body portion for pivoting the body portion relative to said supporting members to release the kick-off members from said holding means whereby said kick-off members will be pivoted relative to the body portion in kick-like action by action of said pivoting means, and a member positioned in the path of movement of said kick-off members and adapted to be projected free from the body portion by pivotal movement of the kick-off members in a direction to strike an object remotely positioned from the body.



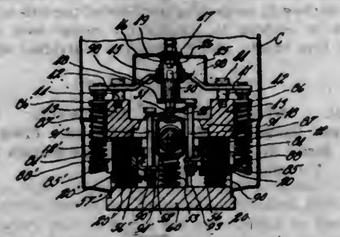
---

1,692,715. TILTING DEVICE FOR VEHICLES. ALVA WILLIAMSON, San Bernardino, Calif. Filed Apr. 15, 1926. Serial No. 102,266. 9 Claims. (Cl. 214—1.)

1. In a vehicle tipping device the combination of a supporting base, an elongated frame pivotally mounted longitudinally thereof for transverse tipping, said frame having vehicle wheel receiving trackways thereon in parallel relation, and disposed parallel with respect to the pivot axis of the frame, one of said trackways being disposed closer to the pivot axis of the frame than the other trackway, that trackway which is disposed closest to the pivot axis of the frame having an inclined entrance and exit runway thereon pivotally mounted with respect to the trackway for swinging out of alignment therewith laterally toward the other trackway.

1,692,716. FUR-DRYING APPARATUS. HENRY A. ALTER, Yonkers, and MORRIS SCHWARTZMAN, New York, N. Y. Filed Mar. 7, 1928. Serial No. 259,779. 9 Claims. (Cl. 34—26.)

7. In a fur drying apparatus, a heated oven, and a reversible panel constituting one of the walls of said oven and adapted to have the pelts to be dried applied to the exterior side of the same and the panel reversed to dispose the pelts within the oven to subject them to the action of the heat therein.



---

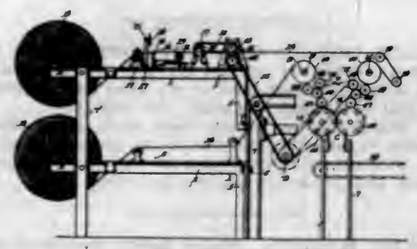
1,692,717. METHOD OF TREATING SPUN YARNS IN THE COURSE OF THEIR MANUFACTURE. JAMES J. BOYLE, New York Mills, N. Y. Filed Aug. 27, 1926. Serial No. 132,032. 4 Claims. (Cl. 118—69.)

1. The method of treating spun rayon yarns which consists in subjecting the yarn in the presence of moisture to a reverse twisting after the yarn has been completely spun to thereby improve the luster.

---

1,692,718. MAGNETO. PHELPS BROWN, Springfield, and IRA E. HENDRICKSON, West Springfield, Mass.; said Hendrickson assignor to Wico Electric Company, West Springfield, Mass., a Corporation of Massachusetts. Filed Dec. 3, 1926. Serial No. 152,487. 27 Claims. (Cl. 123—149.)

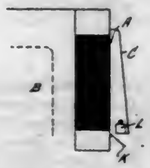
1. In a magneto, having two magnetic circuits including two sets of magnetic poles, reciprocable means forming part of said circuits for connecting first one and then the other of said sets of poles, a normally short circuited choke winding for each magnetic circuit, a generating winding for each circuit, a single set of relatively movable breaker points for simultaneously opening and subsequently simultaneously closing said choke windings, and means operable first from one armature and then from the other for separating said breaker points at an intermediate point in the flight of each armature away from its poles, and connections between said generating windings for merging the currents produced therein.



1,692,719. CAP FASTENER. RUTH BUSEY, Seattle, Wash. Filed Jan. 3, 1928. Serial No. 244,292. 2 Claims. (Cl. 132—59.)

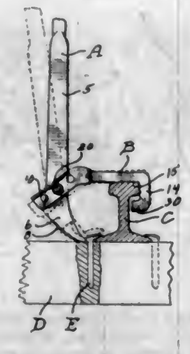
1. The combination with a cap including a body and a front piece superposed with respect to said body, a resilient fastener adapted to be removably arranged between the body and front piece for the purpose of securing the cap to the wearer's head.

---



1,692,720. WEB-CONVERTING APPARATUS. WILLIAM H. CANNARD, Green Bay, Wis. Filed May 7, 1926. Serial No. 107,474. 12 Claims. (Cl. 270—39.)

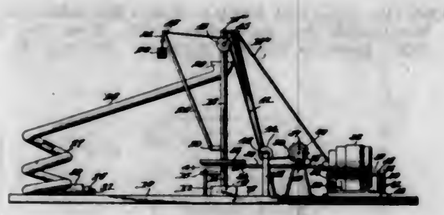
1. The herein-described method of producing folded crepe products from a traveling web of material which includes the steps of spreading the web, moistening the spread web, subjecting the moist web to pressure against one of its surfaces to transversely narrow it, subjecting the web to pressure upon both surfaces to corrugate and further narrow it, subjecting portions of the web to unequal pressure to emboss it, drying the moist web, severing the web into sheets, and folding the individual sheets.



---

1,692,721. MOTOR-VEHICLE RADIATOR. RICHARD HERBERT CARPMAEL, Moulton, England. Filed Feb. 2, 1928, Serial No. 251,385, and in Great Britain Nov. 22, 1926. 1 Claim. (Cl. 257—132.)

In combination with a radiator and its core, a shield at the front of the core restricting the entrance of air and insuring entrance thereof at the lower end of the core, heating means carried by the shield at its lower end, and an air-regulating shutter carried by the lower part of the radiator, said shutter being movable toward and away from said end.

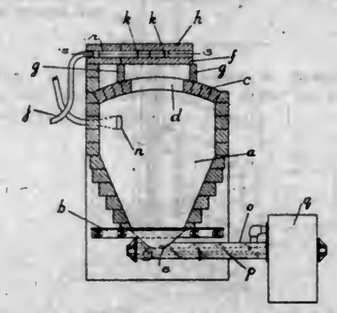


1,692,722. CLAW BAR. ALBERT E. DAYTON and JAMES V. CARLSEN, Pocatello, Idaho. Filed June 20, 1927. Serial No. 200,140. 3 Claims. (Cl. 254—25.)

1. A device of the class described comprising a lever bar embodying a handle portion and a shoe portion having claws provided at its end for engaging beneath the head of a track spike, a rail engaging member embodying a head portion provided with a laterally projecting tread plate, and a hooked portion formed at the opposite end of the member from said head for engaging over the ball of a rail, and means pivotally and adjustably connecting the lever bar at its shoe portion to the head of the rail engaging member against movement of the member transversely of the bar.

---

1,692,723. AUTOMATIC TOY CRANE. GARRETT B. DOWNS, Mauch Chunk, Pa. Filed Apr. 23, 1924. Serial No. 708,596. 3 Claims. (Cl. 46—37.)

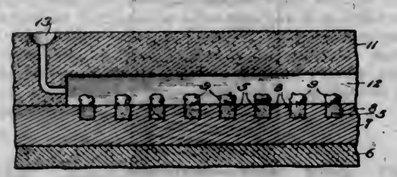


2. An automatic toy simulating a crane or the like having a turnable shaft, lifting means thereon, means to actuate said shaft and lifting means, the second mentioned means including a motor, means to reverse the direction of flow of current through the motor including a rocker and associated contacts, electro-magnets to actuate said rocker, a contact extending from the shaft, and contacts in circuit wtih said magnets engageable by the last contact.

---

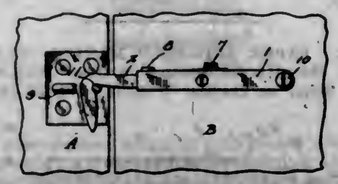
1,692,724. GAS PRODUCER. FREDERICK LINDLEY DUFFIELD, Brassington, England. Filed Jan. 10, 1924, Serial No. 685,296, and in Great Britain Mar. 19, 1923. 4 Claims. (Cl. 48—63.)

2. A gas producer comprising a gas generating chamber of conoidal form having a gas outlet in the top, means for introducing powdered carbonaceous matter into the generating chamber, means for introducing primary air and means for introducing steam for causing gasification within the chamber, means for admitting secondary air to unite with the gas, said means comprising refractory plates spacedly positioned above the gas outlet in the chamber,



means for admitting the secondary air between the said plates, means provided between said plates for distributing said secondary air, and means for supplying the steam to the generator from an aperture provided in its base.

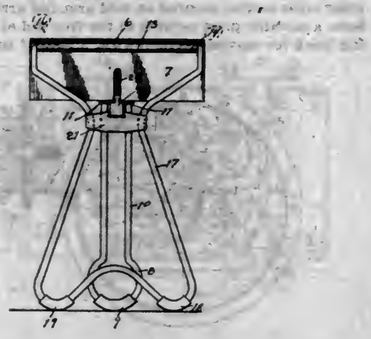
---



1,692,725. MANUFACTURE OF ARTICLES ADAPTED TO RESIST ABRASION. RALPH S. EDMONDSON, Elizabeth, N. J., and EUGENE HAHN, Philadelphia, Pa., assignors to American Abrasive Metals Company, a Corporation of New York. Filed Feb. 9, 1926. Serial No. 87,019. 3 Claims. (Cl. 22—202.)

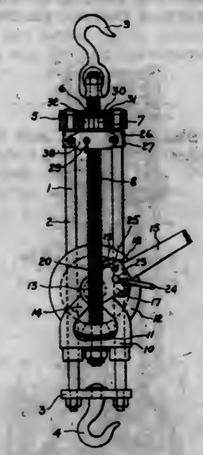
1. The method of casting chilled metal articles with wear-resisting inserts, which method consists in providing a mold with a permanent chill-section formed with recesses, filling said recesses with non-chill material, anchoring to said non-chill material the wear-resisting elements, and pouring into the mold the molten metal without incorporating the non-chill material in the resultant casting.

---



1,692,726. DOOR HOOK. MAURICE A. ESTABROOKS, Augusta, Me. Filed July 25, 1927. Serial No. 208,350. 2 Claims. (Cl. 292—113.)

1. A latch of the class described comprising a pivoted part and a hook part, a guide on the pivoted part through which the other part passes, a plate pivoted to the pivoted part and having one end pivoted to the inner end of the hook part and a lever connected with the plate for turning the same on its pivot to project and retract the hook part and also to raise and lower the hook part as it is projected and retracted.

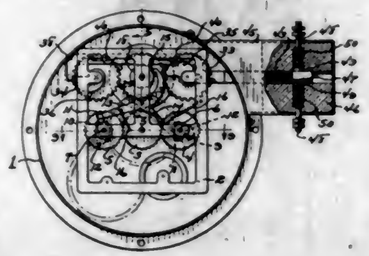


1,692,727. BOOKHOLDER. JAMES W. GRABHART, Fresno, Calif. Filed Sept. 12, 1927. Serial No. 219,067. 3 Claims. (Cl. 45—80.)

1. A book holder comprising a substantially U-shaped member, a brace extending from the base of said U-shaped member, a support pivotally secured to one of the sides of said U-shaped member and a locking device interposed between said brace and U-shaped member.

---

1,692,728. ROPE PULLER. JOSEPH OSCAR GRENIER, Vancouver, British Columbia, Canada. Filed Sept. 15, 1927. Serial No. 219,769. 4 Claims. (Cl. 254—67.)

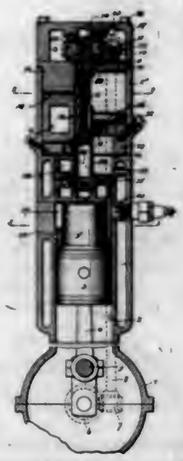


1. In a rope puller comprising a pair of slides connected by transverse members, one of said members having a recess, a screw rack adapted for attachment to the rope to be pulled and having endwise movement through said recess, a split nut engaging said screw rack and normally housed in said recess, said nut comprising a pair of half portions slidably connected to a collar slidably movable along the screw rack, and means for imparting parallel movement to the half portions.

---

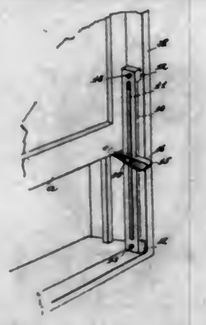
1,692,729. CLOCK AND TIME CONTROLLED SWITCH FOR ELECTRIC LIGHTS. FRANK GROSSI, Providence, R. I. Filed Jan. 27, 1927. Serial No. 164,047. 4 Claims. (Cl. 200—40.)

1. In a device of the character described, a clock, a time controlled switch associated with said clock and including a



casing laterally disposed and secured to the casing of the clock, an arm mounted for reciprocation in the clock casing, insulating material arranged in said first mentioned casing and being provided with a bore, an insulating block of circular cross section secured on said arm and arranged in said bore, a metallic piece secured to the free end of said insulating block for movement therewith, a pair of spaced binding

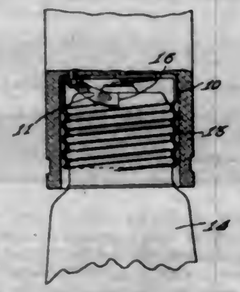
posts arranged in alignment in bores formed in said insulating material, heads on said posts and being arranged in the path of the insulating block and metallic piece respectively, means on one of said heads and being engageable in grooves formed in the metallic piece and said insulating block, and mechanism operated by the clock mechanism for reciprocating said arm at predetermined times.



---

1,692,730. INTERNAL-COMBUSTION ENGINE. EMIL C. GUNDELACH, New Rochelle, N. Y., assignor of one-half to Robert J. Ehlers, New York, N. Y. Filed Feb. 1, 1927. Serial No. 165,181. 6 Claims. (Cl. 123—80.)

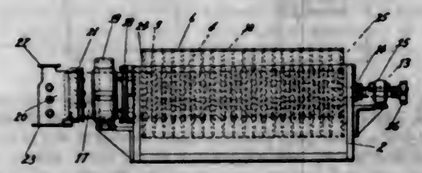
1. An internal combustion engine comprising a cylinder provided with an inlet port and an exhaust port, an ignition device carried by said cylinder, said ignition device and ports being approximately in the same horizontal plane with the ignition device positioned intermediate said ports, a piston adapted to reciprocate in said cylinder, said piston having a reduced upper extension, a reciprocating and rotary valve positioned in the upper end of said cylinder and provided at its lower portion with a working chamber into which said extension of the piston extends, said valve having a single port adapted to register successively with said inlet port, said ignition port and said exhaust port, a series of stationary cams, and a series of movable cams coacting with said valve for causing the same to rotate and reciprocate in proper time with the movement of the piston.



1,692,731. WINDOW-SASH HOLDER. ANTON M. GUNDERSON, Ironwood, Mich. Filed Nov. 22, 1927. Serial No. 235,075. 2 Claims. (Cl. 292—67.)

1. A sash holding means, including a strip adapted to be secured vertically on a window frame, and a sash holding element movable along said strip and vertically rockable, said sash holding element having a lateral member adapted to bind against said strip at the side edge thereof when said element is projected beneath the window sash.

---

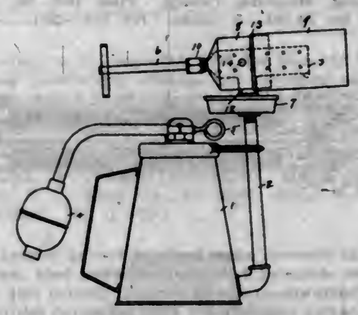


1,692,732. ELECTRIC-LIGHT SOCKET AND BULB BASE. PAUL S. HALL, Austin, Minn., assignor of one-half to Gustav J. Voss, Austin, Minn. Filed Sept. 22, 1926. Serial No. 137,095. 1 Claim. (Cl. 173—356.)

The combination with an electric light socket, a lamp bulb base received by said socket and having a peripheral inclined surface and a vertical shoulder formed thereon, and a horizontally disposed flat resilient finger terminally secured to the base of said socket and spaced therefrom, said finger being twisted at a point in its length to position its free end tangentially to the bulb base and contact said shoulder for locking the bulb against movement within the socket.

---

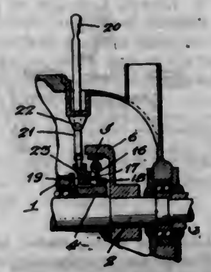
1,692,733. PAPER AND PULP MAKING CYLINDER MOLD. TOM HARVEY, Middletown, Ohio. Filed Aug. 23, 1927. Serial No. 214,954. 1 Claim. (Cl. 92—43.)



In a paper making machine the combination of a pulp vat, a cylinder mold within the vat, said mold having closed ends, a hollow tubular axial support extending

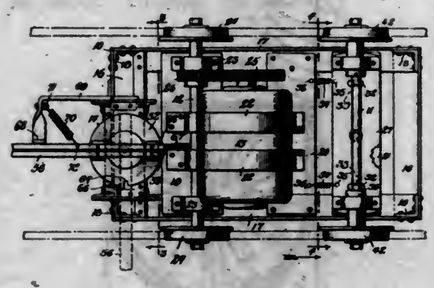
through said mold having suction apertures, said support having spiders fixedly mounted thereon supporting said mold, a plug in one end of said support having a drive shaft connected therewith, said support having its other end open, and means for connecting said open end with a water and air escape line.

---



1,692,734. BLOWTORCH. WARREN W. HASLETT, Baltimore, Md. Filed June 21, 1927. Serial No. 200,485. 1 Claim. (Cl. 158—33.)

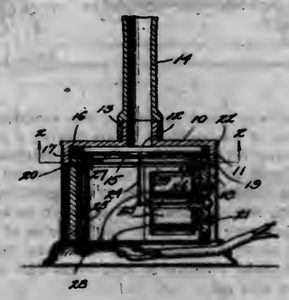
The combination with a burner, of an air and gasoline receptacle, a pipe connecting said receptacle with the burner, a needle valve to control the flow of air and gasoline to the burner, a wind shield surrounding said burner and comprising two sections, one of which sections is removably fitted to the needle valve stem and is provided with a cut out portion which fits around the lower portion of the burner and an annular shoulder on its outer surface and the other section being removably fitted over the end of the first named section and adapted to impinge against said annular shoulder.



---

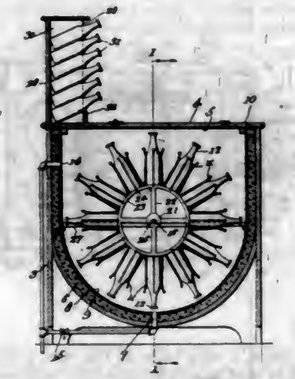
1,692,735. ELECTROMOTOR. BJÖRN HEGER, Vestre Aker, near Oslo, Norway. Filed Feb. 16, 1925, Serial No. 9,691, and in Norway May 14, 1924. 1 Claim. (Cl. 172—120.)

In an electric motor having its rotor loosely mounted on the motor shaft, a centrifugal friction coupling adapted to interconnect said rotor and said shaft on said shaft attaining a predetermined speed comprising a two part coupling having one part fixedly mounted on the rotor and the other part fixedly mounted on the shaft within the motor housing, said members adapted to frictionally engage one another, a handle extending through the casing of the motor, and means associated with said handle and said centrifugal friction coupling whereby upon the actuation of said handle the centrifugal friction members are prevented from engaging.



1,692,736. RABBIT-CARRYING TRUCK FOR GREYHOUND RACING. GEORGE WILLIAM HEINTZ, New Orleans, La. Filed Oct. 20, 1926. Serial No. 142,916. 2 Claims. (Cl. 272—4.)

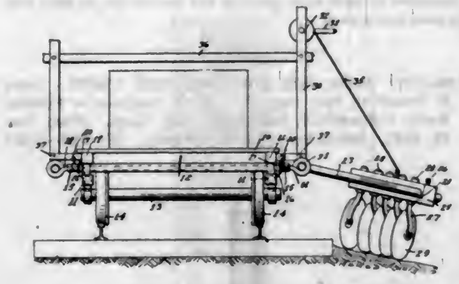
1. On a truck, a turn table at the rear, a lure carrying arm carried by said turn table, said turn table having radial notches therein, a pivoted member in advance of said turn table, said pivoted member having a holding portion, said pivoted member positioned with respect to the turn table so that said holding portion will be movable into and out of each of said notches, means acting on said member and having a normal tendency to move said holding portion toward said turn table and operative to move said holding portion into a notch when brought into registration with said holding portion, means constantly acting on said arm for effecting the movement of the arm to a non-luring position when said member has been moved to disengage the holding portion, and means rigidly secured which is encountered by said arm limiting the movement of said arm by said last means.



---

1,692,737. BASE FOR LOUD-SPEAKER UNITS. JOHN S. HEMMING, Salt Lake City, Utah, assignor to Fidelity Radio Corporation, Salt Lake City, Utah. Filed Jan. 15, 1927. Serial No. 161,376. 1 Claim. (Cl. 179—179.)

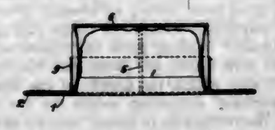
In a reproducer unit, a receptacle, a cover for the top of the receptacle, said cover having a sound escape opening therein, a flange carried by the cover and extending into the top of the receptacle and having an annular groove upon its inner face, a diaphragm within the flange and spaced from the cover, a gasket bearing upon the diaphragm, a cross sectionally flat ring within the flange and bearing upon the gasket, a split ring within the groove of the flange to hold the parts assembled, actuating means for the diaphragm, means within the receptacle to mount said actuating means, and means connecting the flat ring with the means to mount the diaphragm actuating means to hold the parts assembled.



1,692,738. CONTAINER FOR COOLING BOTTLED LIQUIDS. FRANK N. HENKEL, Hammond, La. Filed July 21, 1927. Serial No. 207,458. 4 Claims. (Cl. 312—36.)

2. A container for cooling bottled liquids comprising a cooled cabinet, a shaft in the cabinet having spaced flanges, spiders spaced by the flanges and joined at their outer portions, and bottle-holding means on the outer portions of the spiders.

---



1,692,739. WEED-DESTROYING ATTACHMENT FOR RAILWAY CARS. MARTIN HOLLAND, Laurens, Iowa. Filed Nov. 9, 1926. Serial No. 147,258. 4 Claims. (Cl. 37—105.)

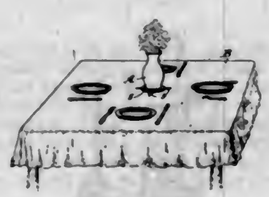
1. In a railway weed destroyer, the combination with a railway car, of an auxiliary frame having a pair of laterally extending pivoted arms, a beam adjustably secured to the free ends of said arms to move toward and from said car and capable of having its angularity adjusted relative to the line of advance of said car, means for elevating and lowering said beam, and a series of disks carried by said beam, and means for adjusting the angle of each of said disks relative to said beam and to the line of advance of said car.

---

1,692,740. HAT. ALBERT CONRAD HUBER, Zurich, Switzerland. Filed Oct. 1, 1927. Serial No. 223,380. 1 Claim. (Cl. 2—180.)

A method of manufacturing hat frames of sheet metal, consisting in cutting a brim part including two rings connected by arms and connecting members projecting from the inner ring out of sheet metal, cutting a ring forming the crown and also having connecting members out of sheet metal, bending the first connecting members upwardly and the last mentioned connecting members downwardly, bending the free ends of all of the connecting members at right angles, and fixing certain of the right angular ends to the brim and others of said ends to the crown.

---

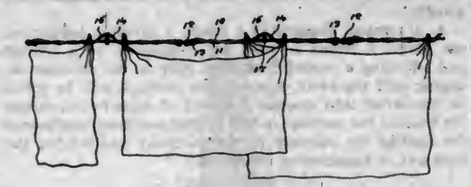


1,692,741. ELECTRIC HEATER. WILLIAM HURST, Winnipeg, Manitoba, Canada. Filed Dec. 10, 1925. Serial No. 74,581. 5 Claims. (Cl. 219—39.)

4. In an electrical water heater, a heating element comprising an elongated cylindrical insulating body provided with a lengthwise extending centrally located bolt opening and having concentrically arranged spaced coil receiving openings passing lengthwise therethrough and slots connecting the ends of the coil receiving openings, insulating closure caps applied on the ends of the body, a bolt fastening the caps to the body and passing through the bolt opening aforesaid, binding posts carried by one of the caps, a heating coil passing successively through the coil receiving openings and across the slots and having the end terminals passing through the adjacent end cap and connected to the binding posts and a cylindrical guard cap provided with pockets to receive and enclose the outer ends of the binding posts and with outlet holes for feed wires leading to the posts.

---

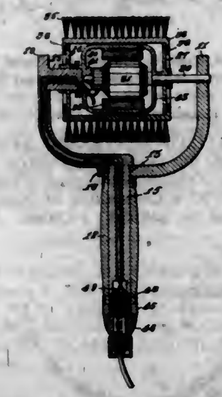
1,692,742. PLACE INDICATOR FOR TABLES. CHARLES F. JACOBS, Brooklyn, N. Y. Filed July 10, 1928. Serial No. 291,660. 5 Claims. (Cl. 116—114.)



1. A place indicator for dining tables, including a support, and pointer elements bearing identification indicia detachably associated with the support and pointing outwardly toward the places to be indicated.

---

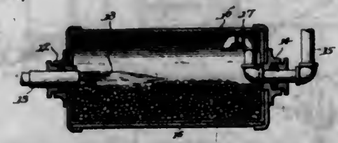
1,692,743. CLOTHESLINE. THOMAS J. JAMES, Buckner, Va., assignor of one-half to Edward W. Higgins, Crewe, Va. Filed June 22, 1927. Serial No. 200,784. 1 Claim. (Cl. 68—3.)



A clothes line comprising a plurality of identically constructed links arranged in end to end relation, each link including two strands one of said strands having a substantially straight portion terminating to provide eyes whereby the links are pivotally connected and permitted to fold when not in use, the other of said strands being twisted in opposite directions about the straight portion of the first mentioned strand and having is intermediate portion coiled about the first mentioned strand and offset to provide loops adapted to receive the corner ends of

the article to be suspended from the line, the loops including intertwisted portions, and the outer extremities of said second mentioned strand being coiled about the eyes of the first mentioned strand.

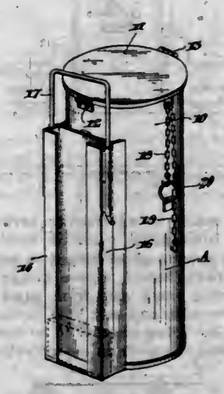
---



1,692,744. MOTOR-DRIVEN BRUSH. MAX KAPLAN, Passaic, N. J. Filed Sept. 22, 1926. Serial No. 137,094. 1 Claim. (Cl. 15—23.)

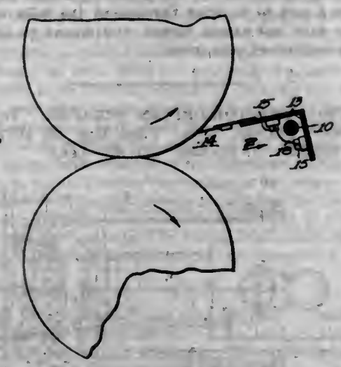
1. A flagman's kit comprising a cylindrical casing having one end two spaced elements forming a fork, one of said elements being rigid with the handle and the other element mounted on the fixed element to rotate about the axis of the handle, said fixed element having mounted thereon a motor and housing therefor, the shaft of the motor having an extension beyond the housing for mounting in said rotatable element, and a brush detachably connected to said extension.

---



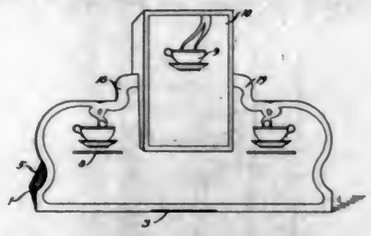
1,692,745. METHOD OF TREATING BONE BLACK OR CHAR. WILLIAM WALLACE KEMP, Baltimore, Md. Filed Oct. 28, 1924. Serial No. 746,321. 5 Claims. (Cl. 252—3.)

1. The method of revivifying char, which consists in enclosing the char in a container, burning within the container a gaseous body, homogeneously premixed outside the container and composed of fuel gas and air, the proportion of air not exceeding that required to furnish oxygen necessary to effect combustion of the gas, while excluding other air from the container, and discharging from the container the products of combustion and vapors and gases released by the treatment.



1,692,746. FLAGMAN'S KIT. WILLIAM LEACH, deceased, Moose Jaw, Saskatchewan, Canada, by Norman William Leach, administrator, Moose Jaw, Saskatchewan, Canada, assignor of one-half to Clarence W. Leach, Ottawa, Ontario, Canada. Filed May 6, 1927. Serial No. 189,411. 2 Claims. (Cl. 246—488.)

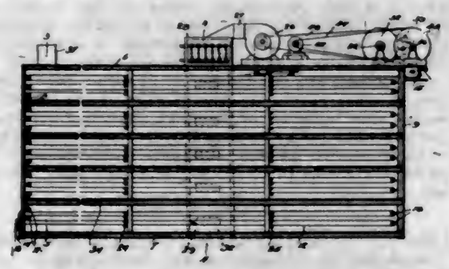
1. A flagman's kit comprising a cylindrical casing having an open end provided with a hinged cap, a magazine member on the outside of the casing adapted to detachably carry torpedoes, a handle connected to the magazine, a tubular member open at the top adapted to be suspended within the casing, a signalling flag with a pole formed of hinged foldable sections designed to fit within the tubular member, rings pivoted on opposite sides of the container outside, slots in the top of the casing registering with said rings, carrying chains connected to the rings and adapted in an inoperative position to engage with said slots to permit the chains to fit within the casing when not in use.



---

1,692,747. CALENDER DOCTOR. CARL G. LINDSTROM, Worcester, Mass., assignor to Rice, Barton & Fales, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 10, 1927. Serial No. 232,881. 3 Claims. (Cl. 92—74.)

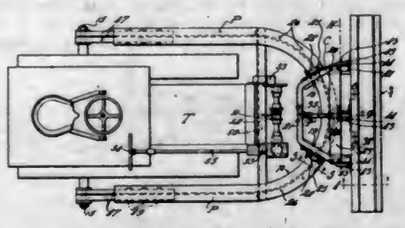
3. In a doctor support, the combination with a shaft, and a doctor back for carrying the doctor, of means for applying the turning movement of the shaft to the doctor back at the center only and means for freely supporting the doctor back near its ends.



1,692,748. DISPLAY STAND. EDWIN A. LOCKE, Jr., Arlington, Mass., assignor to The Nevins Church Press, New York, N. Y., a Corporation of New Jersey. Filed Mar. 14, 1928. Serial No. 261,652. 4 Claims. (Cl. 211—157.)

2. A display stand or advertising device, comprising an ornamented front panel provided with a notch centrally thereof, a bracing panel hinged to said front panel near the upper part thereof, a base hinged to the lower edge of said bracing panel, said front panel having a slit at the front lower edge and said base having a tab at its front edge, said tab being adapted to be inserted through said slit for holding the parts in operative position.

---

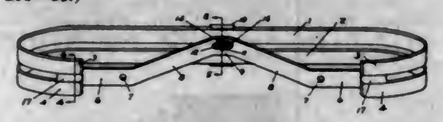


1,692,749. DRIER. ABNER JUDSON LURRY, New Orleans, La. Filed Jan. 26, 1928. Serial No. 249,717. 4 Claims. (Cl. 34—49.)

1. A drier comprising a drying chamber having outlets for saturated gas at opposite ends and inlets for drying medium at opposite sides of its central portion, a cellular interior structure within the chamber, means to movably support a web to be dried throughout the cells, means for driving said last-named means, and means to supply the drying medium to said inlets.

---

1,692,750. TRACTOR-DRIVEN SCRAPER. VINCENT P. MARRAN, Holyoke, Mass. Filed Mar. 15, 1927. Serial No. 175,521. 11 Claims. (Cl. 37—144.)



1. A scraper, comprising, supporting and driving means adapted for attachment to a tractor, a carriage mounted on said means for angular adjustment relative thereto about a vertical axis, a blade pivoted to the carriage on a horizontal axis, and stops provided on said carriage to limit the rearward swinging movement of the blade and to abut the blade when the same is propelled forwardly, said blade being free to swing forwardly about its pivotal connection to said carriage while it is being drawn rearwardly.

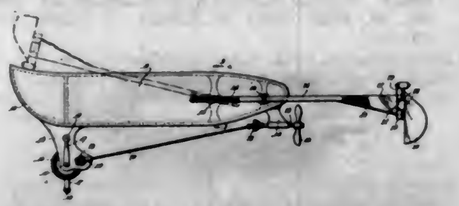
3. A scraper, comprising a blade, a carriage supporting the blade, a frame adapted for connection to a tractor and affording a curved trackway, rolls on the carriage engaging said trackway, whereby the carriage may be rolled on the latter into various positions of adjustment, means for holding the carriage in any of said positions, and means for binding the carriage to the trackway and forcing the rolls out of engagement therewith.

---

1,692,751. BUMPER. EDWARD H. MCCLOUD, Columbus, Ohio, assignor to The Central Brass and Fixture Company, Springfield, Ohio, a Corporation of Ohio. Filed Mar. 5, 1928. Serial No. 259,059. 10 Claims. (Cl. 293—55.)

7. In a bumper, spaced bumper bars and a supporting bar attached thereto at its ends rigidly and its center slidably.

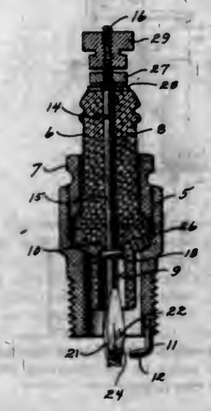
---



1,692,752. TIRE-CHAIN FASTENER. ARCHIBALD LACHLAN MCKINNON, St. Catharines, Ontario, Canada, assignor to The Columbus-McKinnon Chain Company, Tonawanda, N. Y., a Corporation of Ohio. Filed Dec. 12, 1927. Serial No. 239,430. 4 Claims. (Cl. 24—68.)

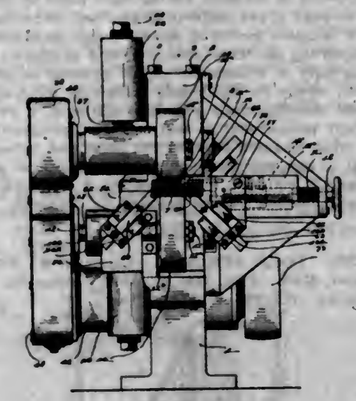
1. A fastener for a side chain of an anti-skid chain including a hook connected with one end of the side chain and a keeper therefor, said hook having its free end formed with two recesses, one beyond the other to be engaged by said keeper.

---



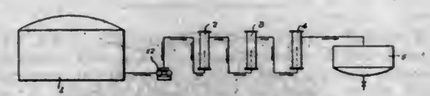
1,692,753. SWIMMING DEVICE. CHRISTIAN MEYER, New York, N. Y. Filed July 13, 1927. Serial No. 205,409. 1 Claim. (Cl. 9—18.)

A swimming device, including a buoyant hull upon which the user is adapted to lie in prone position, hand-operated propulsion means carried by and disposed beneath the hull, a rearwardly-projecting frame carried by the hull, a foot-operated rudder on said frame, and a forwardly and upwardly inclined planing surface on said frame for elevating the rear end of the device upon forward motion thereof.



1,692,754. SPARK PLUG. PAUL MILLER, Pittstown, N. Y., assignor of one-third to Frederick C. Claessens, Troy, N. Y. Filed Mar. 23, 1927. Serial No. 177,809. 5 Claims. (Cl. 123—169.)

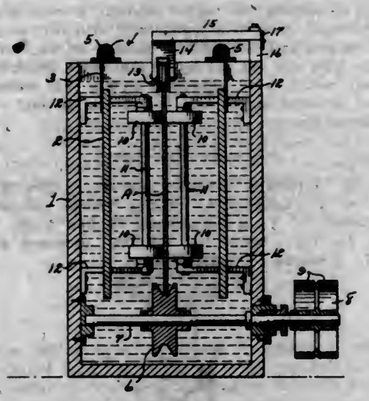
3. In a spark plug, the combination of an insulating core, a core supporting shell carrying a ground electrode at its inner end, and a central electrode carried by the core having a divided inner end forming independent firing tines extending in divergent relation and oppositely curved longitudinally and each being formed with a corrugated inner edge.



---

1,692,755. BEVELING MACHINE FOR STRIP MATERIAL. EDWIN S. MIX and JOHN RALPH WHITEHOUSE, Rochester, N. Y., assignors to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Dec. 12, 1925. Serial No. 74,984. 6 Claims. (Cl. 164—39.)

1. A beveling machine comprising a guide for a strip of material, means for feeding a strip along the guide, a cutter having a cutting edge and a portion which engages the material in immediate proximity to the cutting edge and means for yieldingly supporting said cutter for movement in a line at an angle other than a right angle to the plane of travel of a strip under the action of the cutter portion engaging the material in proximity to the cutting edge so that a uniform bevel is provided notwithstanding any variation in the thickness of the strip.

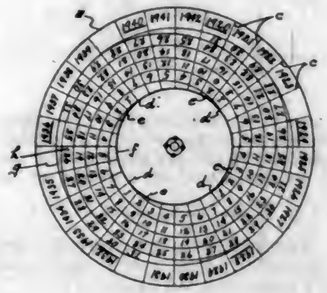


1,692,756. DESULPHURIZING HYDROCARBON OILS. ROBERT C. MORAN, Woodbury, N. J., assignor to Vacuum Oil Company, New York, N. Y., a Corporation of New York. Filed Jan. 18, 1927. Serial No. 161,784. 8 Claims. (Cl. 196—24.)

1. The process of desulphurizing hydrocarbon oils which consists in subjecting the oil to be treated to the action of metallic mercury and simultaneously subjecting the metallic mercury to a water solution of an alkali sulphide.

---

1,692,757. ELECTROLYTIC APPARATUS. FOSTER C. NIXON, Apollo, Pa. Filed Feb. 8, 1927. Serial No. 169,325. 1 Claim. (Cl. 204—11.)

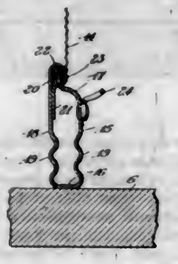


An electrolytic apparatus for treating plates comprising a tank, a pair of rods extending longitudinally across the top of the tank and insulated therefrom, anode plates, hooks at the upper edges thereof for engaging the rods so that the plates will be suspended in the tank, a plurality of shafts journaled in the lower part of the tank, a grooved roller on each shaft for engaging the lower edges of the plates to be treated, means for rotating the shafts, vertically arranged shafts in the tank arranged in pairs, a pair of rollers on each shaft for engaging the faces of the plates to be treated, the rollers on one pair of shafts being staggered with relation to the rollers on another pair of shafts, a grooved roller for engaging the upper edges of the plates to be treated, means for supporting the same, means for connecting said roller and the rods to a source of supply and an arm hinged to a part of the tank and carrying the supporting means for the last mentioned roller.

---

1,692,758. MULTIPLE-YEAR CALENDAR. HENRY NOGRADY, Detroit, Mich., assignor of one-half to Alexander Weiss, Fordson, Mich. Filed July 25, 1927. Serial No. 208,232. 10 Claims. (Cl. 40—115.)

1. A multiple year calendar comprising: a disk having the ordinals of a number of years arranged in numerical order in a ring but with blank spaces preceding leap years, radial lines dividing said disk into sectors corresponding to said year ordinals, a series of ordinals for days of a month circularly spaced according to said sectors and arranged spirally upon said disk in such manner that any

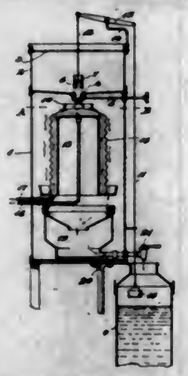


seven adjacent sectors will properly represent a calendar month divided into weeks, and a second disk arranged coaxially with said first disk and rotatable thereupon, said second disk having a sector cut out exposing a calendar month on the first disk, and also having a portion cut out exposing a plurality of the year ordinals in said ring, and

indexes identifying the twelve calendar months arranged each thereupon so as to be registerable with any one of said year ordinals and individually located in such relative position with said cut out sector that when the index for a certain month is set opposite a certain year ordinal the exposed calendar month will be correct for said certain month and year.

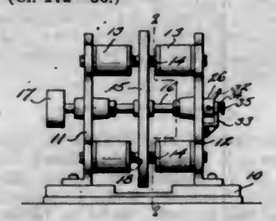
---

1,692,759. WINDOW SCREEN. ALVIN F. NYE, Rochester, N. Y., assignor to Fil-Bac Screen Corporation, Rochester, N. Y., a Corporation of New York. Filed May 14, 1921, Serial No. 469,503. Renewed Apr. 1, 1927. 3 Claims. (Cl. 156—39.)



1. A binding rail for a window screen comprising an integrally formed substantially channel shaped bottom rail having its intermediate portion at the bottom for contact with the window sill and upwardly extending flanges at the sides thereof, an upper portion on one of said flanges bent downwardly on itself to form an upwardly projecting ridge and a downturned edge for attachment to the other flange, and an upper portion on the other of said flanges bent over and closely embracing said ridge with a downwardly extending edge adapted to hold a screen material between said ridge and said embracing portion.

---



1,692,760. MILK COOLING AND FILTERING APPARATUS. ANGEL FRANCISCO ORTIZ, Buenos Aires, Argentina. Filed Jan. 7, 1927. Serial No. 159,513. 1 Claim. (Cl. 31—4.)

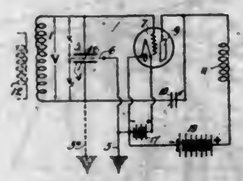
In a milk receiving apparatus of the character described, the combination of an upright casing, a receiving receptacle supported on said casing, a valve in the bottom of the receptacle to control the flow of milk therefrom, a strainer in the head of the receptacle, a cooling unit disposed within the casing and beneath the receptacle, a filter receptacle beneath the cooling unit to receive the milk and direct its flow to an awaiting receptacle, and a float controlled system of levers and rods at the side of the casing connected at one end to the valve in the receiving receptacle and a float suspended at the other.

---

1,692,761. MAGNETIC MOTOR. SIDNEY OSSER, Wichita, Kans. Filed June 21, 1926. Serial No. 117,554. 4 Claims. (Cl. 172—36.)

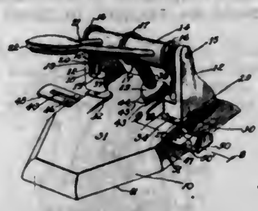
1. In a motor, a field comprising a series of magnets, a second series of magnets having their poles in alinement with the poles of the magnets first named, mounting means for the magnets including spaced frame members and a base mounting the frame members, said members and base forming part of a magnetic circuit common to all alined magnets, means for electrically energizing the magnets of the field simultaneously and intermittently, a rotor mechanically independent of said means of energization, the rotor being mounted between the poles and including an element of non-magnetic material and individual members of magnetic material for completing a magnetic circuit between oppositely located poles of the magnets.

---



1,692,762. LOUD SPEAKER. CHARLES W. PETERSON, Detroit, Mich. Filed Dec. 30, 1925. Serial No. 78,287. 5 Claims. (Cl. 181—31.)

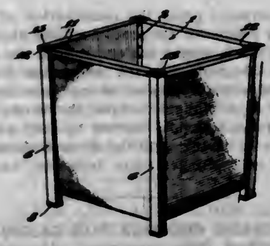
1. In a loud speaker, a cone diaphragm supported in free access to air, a supported ring for mounting the diaphragm, and a ring detachable from the supported ring, and having a conical spider of arms tapering to a center, so as to surround but not touch the convex face of the cone.



1,692,763. RADIOFREQUENCY AMPLIFYING CIRCUITS. WLADIMIR J. POLYDOROFF, Chicago, Ill., assignor to Johnson-Williamson Laboratories, Inc., Chicago, Ill., a Corporation of Illinois. Filed Feb. 5, 1927. Serial No. 166,107. 12 Claims. (Cl. 179—171.)

11. A radio apparatus including an oscillatory circuit, a three-electrode tube having the usual filament, grid and plate, one plate of the condenser in said oscillatory circuit being connected with the grid electrode and the other plate thereof being connected with the plate electrode of said tube through an adjustable condenser, and an element electrostatically associated with and insulated from said condenser and connected with the filament of said tube.

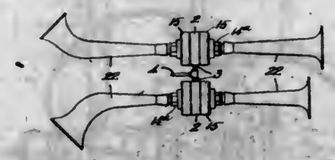
---



1,692,764. PUNCH. ELMER H. SALT, Norwood, Ohio, assignor to The Globe-Wernicke Company, Cincinnati, Ohio. Filed Dec. 13, 1926. Serial No. 154,424. 9 Claims. (Cl. 164—91.)

3. In a perforator, a base, an eccentric shaft journaled thereon and having an arcuate operating stroke and a like return stroke, and a resilient return device compressible by said eccentric shaft on the operating stroke of the latter, said device being mounted angularly on said base so as to exert a tangential pressure on said eccentric shaft when the latter is at the bottom of its operating stroke.

---



1,692,765. SHEET-METAL WASTE-PAPER BASKET. ELMER H. SALT, Norwood, Ohio, assignor to The Globe-Wernicke Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 20, 1927. Serial No. 207,244. 1 Claim. (Cl. 220—4.)

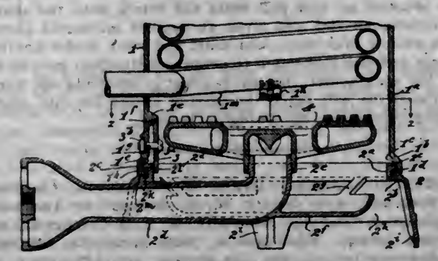
A sheet metal waste paper basket, comprising a body of sheet metal, side walls, the walls at their upper ends each bent into a hollow rim open at opposite ends, a corner brace, one for each corner engaged into the end of the rims of adjoining walls, tubular molding engaged longitudinally over each of the corners of said body and providing legs therefor, each corner molding at its upper end socketed into a respective corner brace and at the base of the body engaged over an extension thereof, and a rod for each corner extending longitudinally through the molding and engaged with said corner brace and base extension.

---

1,692,766. FLUID-PRESSURE HORN. HARLEY E. ANDERSON, Kansas City, Mo., assignor to Gustin-Bacon Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed June 22, 1928. Serial No. 287,626. 14 Claims. (Cl. 116—142.)

1. A body for fluid-pressure actuated sound producing devices comprising a member formed with a securing base adapted for attachment to a support, a nipple for attachment to a source of compressed fluid supply, a plurality of diaphragm seats, and a plurality of air supply passageways of equal length.

---

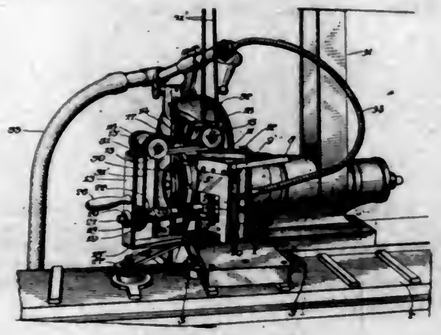


1,692,767. STRANDED SECTOR-SHAPED CONDUCTOR. NORMAN C. DAVIS, Perth Amboy, N. J., assignor to General Cable Corporation, New York, N. Y., a Corporation of New Jersey. Original application filed Apr. 20, 1927, Serial No. 185,096. Divided and this application filed Mar. 31, 1928. Serial No. 266,357. 2 Claims. (Cl. 173—13.)

1. The method herein described of forming a stranded sector-shaped electrical conductor which consists in forming a tubular blank of individually free, helically stranded wires, each wire extending in a true helix, the turn of all of the helices extending in the same direction, and while the component wires are individually free to move both longitudinally and transversely with respect to adjacent wires crushing and elongating such blank and the component wires thereof and bringing the blank to sector shape with elimination of the tubular space within, and bringing the component wires to polygonal section with extended surfaces of contact between adjacent wires.

---

1,692,768. WATER HEATER. LORAN F. DORN, Cleveland, Ohio, assignor to The Cleveland Heater Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 11, 1924. Serial No. 749,173. 14 Claims. (Cl. 122—250.)

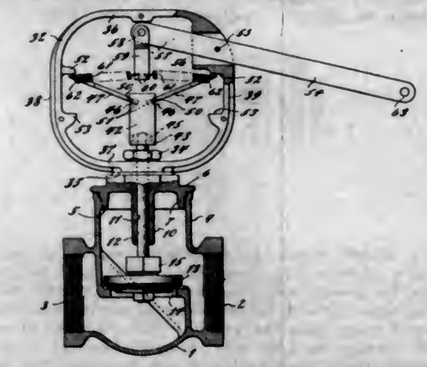


8. In a water heater assembly a heater casing comprising a fixed and a relatively movable section, a unitary

skirted base member, drip pan and gas supply conduit, cast in one piece and means to secure said unitary skirted base member to the fixed section of said heater casing.

---

1,692,769. GRINDING MACHINE. EDMOND E. DROWNS, Cleveland, Ohio. Filed June 23, 1925. Serial No. 38,965. 16 Claims. (Cl. 51—97.)

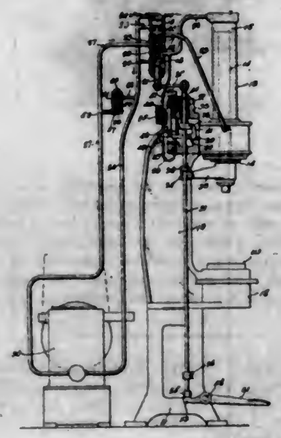


1. In a grinding machine having a shiftable table, a grinding wheel, and means for driving it, the combination of supporting means carried by the table, a pair of opposed ball seats carried by said supporting means, one shiftable toward and from the other, a bracket swingable about an axis common to the ball seats, a rotatable shaft carried thereby and having its axis transverse to the axis of the ball seats so as to be capable of occupying a position radial to the axis of the ball seats, means for driving it, and a work holder carried by said shaft for carrying the work in position to be positioned between the ball seats, the relation of the parts being such that the spherical portion of the work may be steadied by said ball seats but rotate with the shaft therebetween and also given an angular movement about the axis of said seats.

5. In a grinding machine having a shiftable table, a grinding wheel, and means for driving it, the combination of supporting means carried by the table, a pair of opposed ball seats carried by said supporting means, one located above the other and one shiftable toward and from the other, a bracket swingable about an axis common to the ball seats, a rotatable shaft carried thereby and having its axis transverse to the axis of the ball seats so as to be capable of occupying a position radial to the axis of the ball seats, means for driving it, and a work holder carried by said shaft for carrying the work in position to be positioned between the ball seats, the relation of the parts being such that the spherical portion of the work may be steadied by said ball seats but rotate with the shaft therebetween and also given an angular movement about the axis of said seats, said shaft and work holder having a pin and slot connection to permit longitudinal movement of the work holder, thereby to assist in centering the work between the ball seats, the driving means for said shaft being carried by the swinging bracket.

---

1,692,770. VALVE. LEWIS W. EGGLESTON, Clarence Township, Erie County, N. Y., assignor to American Radiator Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 1, 1923, Serial No. 622,062. Renewed July 2, 1926. 19 Claims. (Cl. 137—139.)

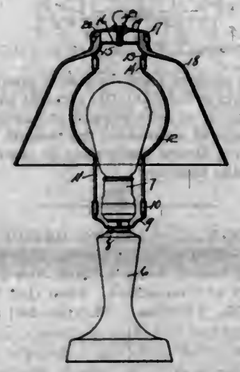


19. A valve of the character described, comprising a casing, a valve in the casing, an element adapted to move said valve, oppositely disposed members fulcrumed on said element, fixed stops in the paths of movement of

said members, and means to move said members into engagement with said stops, the force exerted by said means reacting through said members to move said element.

---

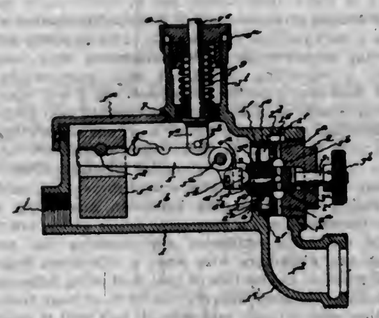
1,692,771. HYDRAULIC PRESS. WALTER FERRIS, Milwaukee, Wis., assignor to The Oilgear Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 8, 1924. Serial No. 748,634. 10 Claims. (Cl. 138—10.)



1. In a hydraulic press the combination of a plunger, fluid actuated means for reciprocating said plunger toward and from the work, means for controlling the direction of movement of said plunger, latch mechanism for releasably retaining said control means in one position to effect movement of said plunger toward the work, and means responsive to the pressure exerted by said plunger upon the work for releasing said latch mechanism to effect movement of said plunger away from the work.

---

1,692,772. SHADE SUPPORT FOR LAMPS. JOHN J. FOLEY, Hartford, Conn., assignor to Henry Reuber, jr., and himself, doing business as The Art Lamp and Novelty Company, Hartford, Conn. Filed Sept. 30, 1927. Serial No. 223,140. 1 Claim. (Cl. 240—148.)



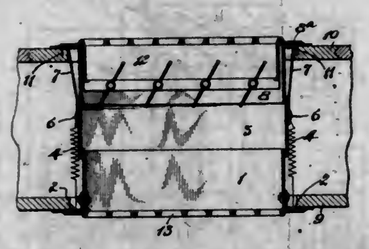
A shade support comprising a top and bottom member of like construction each having a transverse part and sides together forming a dish-shaped structure terminating in spaced parallel sockets, posts mounted at their ends in the sockets and spread apart to provide a bulb

clearance, a shade having a part thereof mounted on the sides of the top member, and retaining means for the shade engaged with the shade and top member.

---

1,692,773. RELIEF VALVE. ARTHUR FRIEDMAN, Cleveland, Ohio, assignor to The Cleveland Heater Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 30, 1924. Serial No. 740,749. 13 Claims. (Cl. 137—53.)

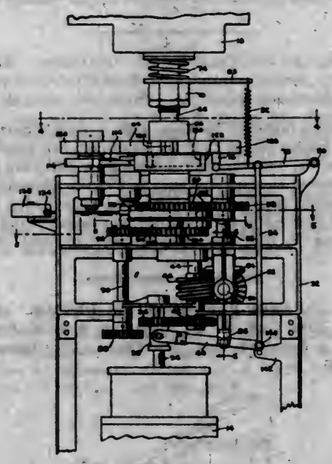
1. In a device of the character described, a valve housing, a head provided with main port and branch ports, the latter terminating in an annular recess on the face side of said head, and a removable and replaceable thermostatic member comprising a diaphragm having openings sealed with a fusible material normally closing said annular recess and branch ports.



---

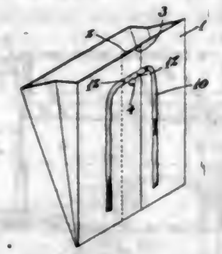
1,692,774. PAPER AND PAPER STOCK AND METHOD OF PRODUCING THE SAME. LEWIS GRAFFLIN, Springfield, Ohio, assignor to Ball Brothers Company, Muncie, Ind., a Corporation of Indiana. Filed June 18, 1925. Serial No. 38,105. 11 Claims. (Cl. 92—9.)

1. A paper containing straw fibres and the residue of a weak sodium sulphate liquor in which the straw has been disintegrated.



1,692,775. VENTILATOR THIMBLE. HOWARD S. HART, New Britain, Conn., assignor to The Hart & Cooley Manufacturing Company, New Britain, Conn., a Corporation of Connecticut. Filed May 24, 1928. Serial No. 280,140. 6 Claims. (Cl. 126—314.)

1. A ventilating thimble comprising a lower thimble section, a flange carried thereby for engaging the surface of a surrounding wall, an upper thimble section slidable on the lower thimble section, spring means serving to draw said sections toward each other, with means carried by said upper section for withdrawing the same from the first section and increasing the tension of the spring means and for holding said upper section in said position.

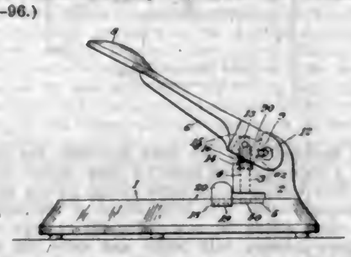


---

1,692,776. VALVE-OPERATING MECHANISM. STANLEY G. HARWOOD and DONALD GRISWOLD, Minneapolis, Minn., assignors to Ward-Love Pump Corporation, Rockford, Ill., a Corporation of Illinois. Filed Mar. 21, 1925, Serial No. 17,446. Renewed July 6, 1926. 46 Claims. (Cl. 137—78.)

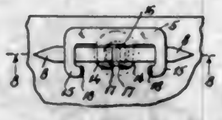
3. In mechanism of the class described, the combination of a fluid operated meter, a fluid supply pipe connected with said meter, a valve casing having fluid passage communication with said meter, a shiftable valve in said valve casing for controlling the passage of fluid, connections between said meter and valve for shifting said valve for differently controlling the passage of fluid when a predetermined amount of fluid has passed through said meter, a signal device, means for operating said signal device shortly before said shifting movement commences, and means whereby said connections may be rendered inoperative, after said signal device has been operated.

1,692,777. PAPER LAUNDRY BAG. THEODORE E. JEWELL, Newton, Mass., assignor to Waltham Bag and Paper Company, Waltham, Mass., a Corporation of Massachusetts. Filed June 21, 1927. Serial No. 200,484. 1 Claim. (Cl. 229—53.)



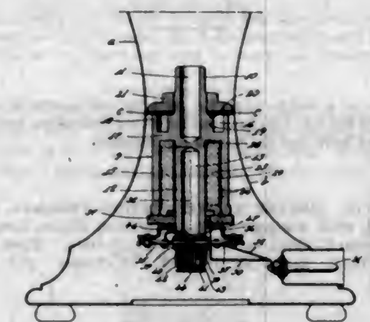
An improved laundry bag of the type described comprising a paper bag having overlapping portions, a recess through said portions to receive a hook to hang the bag thereon, and a combined reenforcing tape or cord and bag closing member secured to the overlapped portions adjacent to the recess to cooperate therewith in supporting the bag when hung on a hook or like member.

1,692,778. HINGED PIN FASTENER. GEORGE A. KING, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Jan. 3, 1928. Serial No. 244,156. 5 Claims. (Cl. 24—150.)



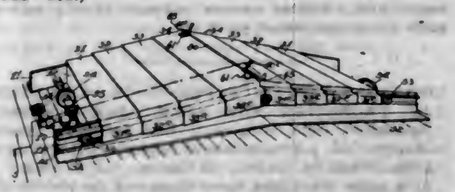
1. A snap-fastener member and a double-pointed pin hingedly connected, so that the snap-fastener member may be rotated on the pin, and a prong on the snap-fastener member below and apart from the hinging elements of the snap-fastener member and extending rearwardly between the limbs of the pin, the snap-fastener member and the pin cooperating to hold the snap-fastener member in closed position.

1,692,779. PAPER-PERFORATING DEVICE. FRED J. KLINE, New York, N. Y. Filed Jan. 4, 1926, Serial No. 79,129. Renewed May 31, 1928. 10 Claims. (Cl. 164—96.)



7. In a paper perforating device, the combination of a base having an upright portion provided with a punch bearing, a punch vertically slidable in said bearing, said upright portion having a fulcrum slot transverse to the axis of said punch, a lever connected to said punch, and a fulcrum pin slidable in said fulcrum slot and connecting said lever to said upright portion.

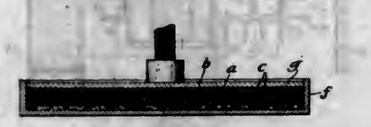
1,692,780. LOCK FOR PAPER FASTENERS. FRED J. KLINE, Bayville, N. Y. Filed Oct. 7, 1926. Serial No. 139,996. 5 Claims. (Cl. 24—153.)



2. A lock for pronged paper fasteners comprising a plate having a plurality of substantially straight parallel tongues adapted respectively to pass beneath and above and thereby to grip the prongs of a fastener, the tongues which overlie the prongs having lateral projections at their ends to hold the lock in locking position.

1,692,781. ELECTRIC HEATING DEVICE. JOSEPH F. LAMB and JOSEPH FREDERICK SMART, New Britain, Conn., assignors to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed Oct. 20, 1925. Serial No. 63,755. 7 Claims. (Cl. 219—44.)

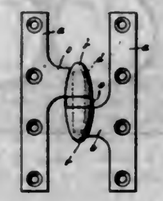
7. A heater of the character described including a part having a body portion, an upwardly extending projection, a depending extension in vertical alinement with said projection, a depending cylindrical skirt surrounding and spaced from said depending extension and a well constituting a vaporizing chamber extending through said projection and down into said body portion; a cylindrical heating unit within said skirt and in direct heat conductive relation thereto and comprising a cylindrical member of insulating material and a resistance wire wound thereabout, said unit surrounding said depending extension and being slight spaced therefrom, and a protective device at the lower end of said depending extension for breaking the current through said resistance wire when a dangerous degree of heat is reached, the bottom of said well being adjacent the top of said extension whereby the path of heat from said resistance wire through said skirt to said well is relatively shorter than to said protective device.



1,692,782. HATCH COVER. JAMES F. MACKIN, Chicago, Ill., assignor to Charlotte K. Mackin, Chicago, Ill. Filed Jan. 29, 1927. Serial No. 164,406. 7 Claims. (Cl. 114—202.)

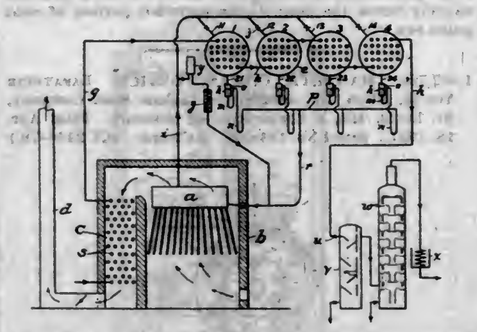
1. Closing means for hatches and like floor openings, comprising in combination with a hatch coaming a plurality of cover sections mounted for sliding on the coaming successively overlapping one another longitudinally of the hatch, said lapipng edges having hook flanges adapted to interlock at closed position of the cover sections, and means interposed in the hook flanges for water-tight interlocking of said hook flanges of the consecutive cover sections.

1,692,783. BUILDING SLAB AND METHOD OF MAKING SAME. CHARLES E. MCMANUS, New York, N. Y., assignor to Crown Cork & Seal Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 25, 1925. Serial No. 71,300. 12 Claims. (Cl. 18—59.)



6. The herein described method of making building slabs consisting in bringing a semi-fluid batch of granular material and a plaster cement within a mould cavity and in intimate surface contact with a previously formed thin sheet composed of granular cork and a binder, and subjecting the same to a continuing slight pressure until the cement is set, whereby the granules of said granular material will be bonded together and be simultaneously bonded to said thin sheet.

1,692,784. FUEL AND FUEL INGREDIENTS. JOHN W. OBELUP, East Orange, and O. IVAN LEE, Jersey City, N. J., assignors, by mesne assignments, to Boyce-Ite Products, Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 23, 1925. Serial No. 4,255. 6 Claims. (Cl. 44—9.)

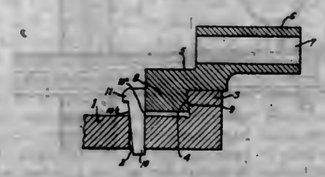


1. A hydrocarbon fuel suitable for automobile use containing ethyl esters of the higher fatty acids in the approximate proportion of 1/10 of one per cent as a carbon removing agent.

1,692,785. METHOD OF FORMING A HINGE LEAF. STUART W. PARSONS, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed July 24, 1924. Serial No. 727,943. 8 Claims. (Cl. 29—11.)

4. The herein described method of forming a hinge leaf of the character described, which consists in stamping from a sheet of metal a blank having an attaching portion, a shank extending from one edge of said attaching portion, and a knuckle forming portion extending above the upper edge of said shank and having its outer edge inclined to the length of the attaching portion, said knuckle forming portion having its lower edge on an arc and having at its upper outer corner a projection, rolling the metal of the knuckle forming portion in an arc back upon itself into conical form, and then swaging the partially formed conical knuckle to dome shape.

1,692,786. PROCESS OF CRACKING MINERAL OIL. ARTHUR E. PEW, Jr., Bryn Mawr, and HENRY THOMAS, Ridley Park, Pa., assignors to Sun Oil Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Jan. 25, 1926. Serial No. 83,437. 7 Claims. (Cl. 196—58.)

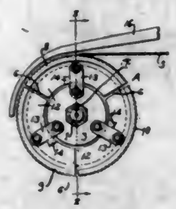


6. The process of cracking mineral oil which comprises heating a body of liquid mercury under an absolute pressure required to produce mercury vapor at a temperature above that at which substantial cracking of the oil will occur, establishing a continuously flowing stream of oil at a temperature below that of the mercury vapor and flowing said stream and the mercury vapor into heat exchange relation to effect condensation of mercury vapor and such transfer of its latent heat to the oil as will decompose higher boiling constituents thereof into lower boiling products, maintaining at the locus of heat exchange a predetermined absolute mercury vapor pressure less than that at the locus of mercury vapor generation by restricting the rate of flow of the mercury vapor to the locus of heat exchange, returning the condensed mercury to the body of liquid mercury and continuously removing the oil from the locus of heat exchange.

1,692,787. METHOD OF PURIFYING GASES CONTAINING PHOSPHORUS. GUSTAV PISTOR, Bitterfeld, and ERNEST BORSBACH, Bitterfeld-Sandersdorf, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Dec. 8, 1925, Serial No. 74,158, and in Germany Feb. 6, 1925. 5 Claims. (Cl. 23—223.)

1. The method of separating the dust from the raw gases escaping from a phosphorus furnace, which comprises passing the said gases through a filter chamber kept at a temperature above the dew-point of phosphorus.

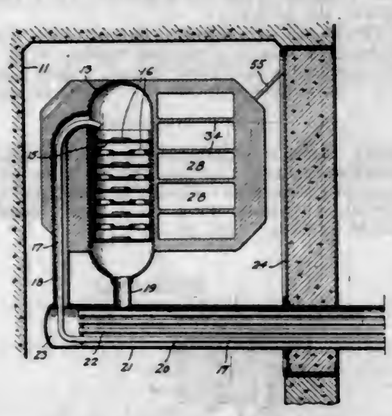
1,692,788. REST BAR AND GUIDE BOX FOR METAL-ROLLING MILLS. LAFAYETTE YOUNG, Alton, Ill., assignor to Laclede Steel Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 9, 1927. Serial No. 182,288. 3 Claims. (Cl. 80—51.)



3. A metal rolling mill comprising a rest bar having a plurality of spaced apertures formed through a portion thereof and an upwardly extended portion provided with an inclined face, a guide box provided with a downwardly extended portion having an inclined face adapted to cooperate with the inclined face of said rest bar to prevent upward movement of said guide box relative to said rest

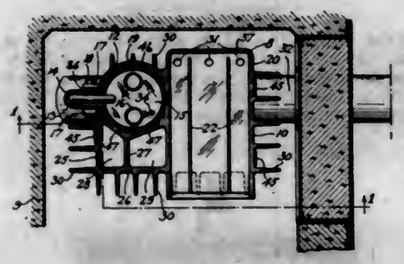
bar, and wedge-shaped members driven into said apertures in said rest bar in a manner to abut against said guide box and prevent disengagement of said inclined faces, said wedge-shaped members having overhanging head portions adapted to facilitate easy removal of said members from said apertures, said plurality of apertures being disposed entirely below the downwardly extended portion of said guide box.

---



1,692,789. MAGNETIC COILING DEVICE. LAFAYETTE YOUNG, Alton, Ill., assignor to Laclede Steel Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 18, 1927. Serial No. 184,605. 2 Claims. (Cl. 242—78.)

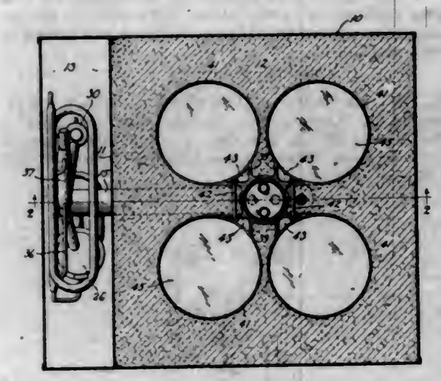
1. A machine for coiling metal, comprising a drive shaft, a reel mounted on said drive shaft, said reel comprising a cylindrical member having annular flanges at its opposite ends, disks adjacent to said annular flanges, means whereby said cylindrical member and said disks are caused to rotate with said drive shaft, a plurality of segmental members, means whereby said segmental members are pivotally attached to said disks, and a plurality of electro-magnets supported by said cylindrical member, said electro-magnets being of a shape corresponding to the shape of said segmental members and being adapted to attract an end of said metal so that it will be attached to said reel.



---

1,692,790. REFRIGERATION. CARL GEORG MUNTERS, Stockholm, Sweden, assignor to Electrolux Servel Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 21, 1926, Serial No. 136,753, and in Germany Aug. 3, 1926. 33 Claims. (Cl. 62—95.)

6. An evaporator comprising a steel shell, means to supply refrigerant to and withdraw refrigerant from said shell, a heat transmitting member comprising walls forming an enclosure adapted to receive ice-molds and a curved portion integral with and extending outwardly from said enclosure and secured around said shell with heat transmitting contact surfaces tightly bound together.



1,692,791. REFRIGERATION. ALVAR LENNING, Newburgh, N. Y., assignor to Electrolux Servel Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 9, 1927. Serial No. 218,418. 7 Claims. (Cl. 62—95.)

1. A refrigerator comprising a cabinet, an evaporater within said cabinet, said evaporator comprising a shell, a heat transmitting casting comprising a boxshaped portion adapted to hold ice trays, a plurality of arms extending from said box-shaped portion and encircling said shell, and tightening means for drawing said arms toward each other.

---

1,692,792. CABINET FOR ICE CREAM AND THE LIKE. CARL GEORG MUNTERS, Stockholm, Sweden, assignor to Electrolux Servel Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 5, 1928, Serial No. 244,599, and in Germany Jan. 22, 1927. 7 Claims. (Cl. 62—95.)

3. Refrigerating apparatus including an evaporator comprising a vertically extending shell, a casting comprising a hub portion, said hub portion having metallic contact with said shell, a web extending from said hub portion and an arc-shaped member extending from said web.

---

1,692,793. EARTH-BORING DRILL. CLARENCE E. REED, Wichita, Kans. Filed Feb. 27, 1928. Serial No. 257,259. 2 Claims. (Cl. 255—71.)

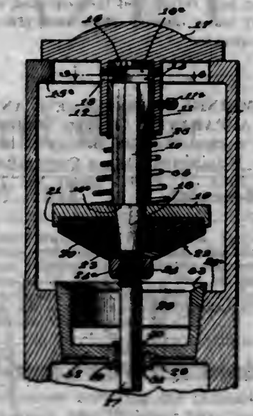
1. A roller cutter unit for earth boring drills comprising a spindle and shank, said spindle having an annular groove in its surface, a ring of one piece mounted to turn

on said spindle, segmental pieces seated in the annular groove, and furnishing a retaining bearing for and engaging the front face of the ring, and a roller cutter

mounted on the spindle and to which the ring is attached, said roller cutter having a bore adapting it to slip axially along the spindle over the segmental pieces to the ring for attachment thereto substantially as described.

---

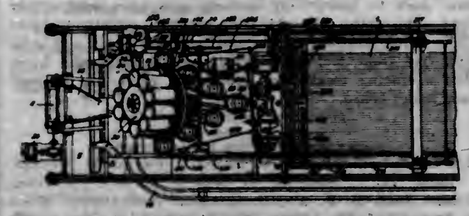
1,692,794. RECEPTACLE. HENRY C. ASH, Duluth, Minn. Filed Aug. 9, 1926. Serial No. 128,052. 1 Claim. (Cl. 220—62.)



A receptacle of the class described characterized by being formed of a single sheet of metal cut inwardly in equal distances on the four corners thereof at an angle of forty-five degrees and the corners made to overlap each other with the cut edges thereof brought into the same plane with the bottom, forming a receptacle having a rectangular bottom and an elliptical opening for the purpose described.

---

1,692,795. PUMP VALVE. LESLIE B. CLIFFORD, Texarkana, Ark. Filed Jan. 7, 1927. Serial No. 159,650. 1 Claim. (Cl. 251—144.)



A valve having a body construction comprising a valve formed of composition material, a metal cover in contact with the valve, a stem having a threaded portion for engagement with the valve body, the stem projecting upon opposite sides of the valve, a tubular guide at one side of the valve, a bushing received by the guide, said bushing and guide having aligned passages, one end of the stem being slidably mounted in said bushing, a cup-shaped member at the opposite side of the valve and provided with a valve seat, a guide carried by the cup-shaped member for the other end of the stem, said cup-shaped member being

provided with openings for permitting the free passage of the water, the seat and valve being sheared off at an angle of 25° so that foreign matter will be prevented from collecting on the valve seat.

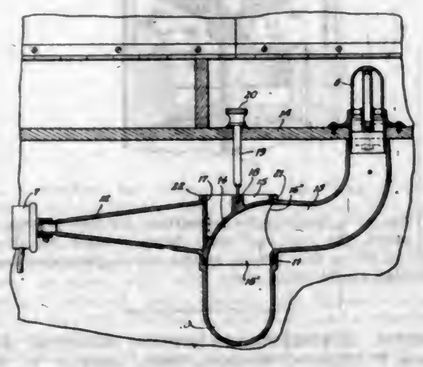
---

1,692,796. AUTOMATIC PIN-SETTING MACHINE. JOSEPH W. BISHOP, Muskegon, Mich., assignor to The Brunswick-Balke-Collender Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 2, 1925. Serial No. 20,093. 69 Claims. (Cl. 273—43.)

1. A bowling alley pin setter, comprising an elevator, a plurality of buckets on the elevator, and means for maintaining said buckets in a vertical position on the downward travel of the elevator and in a horizontal position on the upward travel of the elevator.

8. In a pin setter, an elevator comprising a stationary back and having a plurality of buckets, each bucket adapted to carry a pin, and means on said back operating when more than one pin is carried by a bucket to discharge the extra pin.

29. In a pin setter, a distributor comprising a plurality of superposed plates each plate provided with holes through which pins may pass, said holes being normally out of alignment to prevent passage of pins therethrough, means operated by the pin before it enters the distributor for rotating said distributor to bring the holes in one of said plates successively into position to receive the pin, and means for causing relative movement between said plates to bring said holes into alignment at a predetermined point.

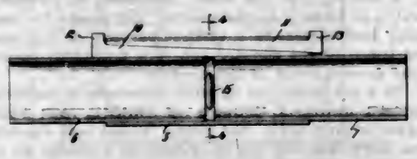


40. In a pin setting mechanism, a setter having a plurality of containers for pins, and a frame disposed above

said setter and controlling the passage of pins into said containers, the operation of said frame being controlled by the presence or absence of pins in said setter.

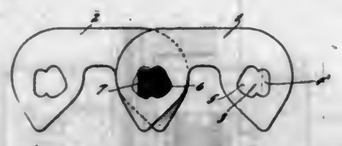
68. In a pin setting mechanism, a setter, means controlling the passage of pins to said setter, means for raising and lowering said setter and including an electric circuit, said circuit being opened when said pin controlling means is being operated.

---



1,692,797. COMBINED PHONOGRAPH AND RADIO RECEIVING APPARATUS. JOSEPH W. BISHOP, Muskegon, Mich., assignor to The Brunswick-Balke-Collender Company, Wilmington, Del., a Corporation of Delaware. Filed June 30, 1924. Serial No. 723,115. 6 Claims. (Cl. 179—100.1.)

1. In a device of the character described, a motor-board, a phonograph, a radio loud speaker, an amplifying horn, a neck having arms connected to said phonograph, said loud speaker and said horn respectively, a valve in said neck to operatively connect said horn with either said phonograph or said loud speaker, selectively, said valve being located between and independent of said arms and free from said phonograph, loud speaker and horn, and operating means for said valve extending through said motor-board.



---

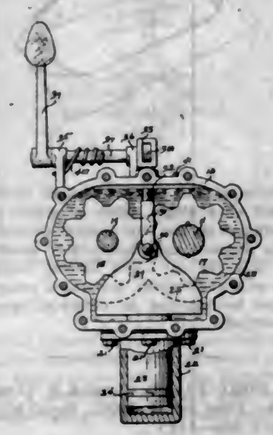
1,692,798. CONDUIT COUPLING. FRANK M. POTTER, Rome, N. Y., assignor to General Cable Corporation, New York, N. Y., a Corporation of New Jersey. Filed Aug. 19, 1925. Serial No. 51,155. 2 Claims. (Cl. 247—27.)

1. A coupler for elliptical conduits comprising in combination a sleeve substantially elliptical in cross-section, its smaller diameter being substantially that of the conduit sections to be connected and its larger diameter being greater than the larger diameter of the conduit ends, opposed wedges superposed within said sleeve and each extending from end to end thereof, the inner wedge substantially fitting the edge of the conduit section, the outer wedge substantially fitting the sleeve, whereby movement of said wedges upon each other in opposite directions will cause said sleeve to firmly engage substantially the entire enclosed surface of the conduit sections.

1,692,799. POWER-TRANSMISSION CHAIN. HAROLD E. STURTEVANT, Hartford, Conn., assignor to The Whitney Mfg. Co., Hartford, Conn., a Corporation of Connecticut. Filed June 20, 1925. Serial No. 38,397. 2 Claims. (Cl. 74—32.)

2. A chain of the silent link type having joints between the pitches, two-part pintles passing through the links at the joints, said pintle parts being symmetrical and one fixed with each set of links, each having flat parallel sides and rounded edges, the said parts being reversible and interchangeable.

---



1,692,800. ACOUSTIC DIAPHRAGM. HERMAN G. PAPE, Newark, N. J. Filed Jan. 14, 1925. Serial No. 2,358. 13 Claims. (Cl. 179—181.)

1. In a sound instrument, a diaphragm having plane surfaces free of loading material at the central and outer parts thereof, and magnetic comminuted loading material arranged in a comparatively narrow annular ring concentrically on one of said surfaces about the center of said diaphragm and in a pile for shunting the magnetic lines of force through said pile while substantially maintaining the resilience and flexibility of said diaphragm, said pile being superposed upon and secured to the said surface of said diaphragm and serving to increase the effective thickness thereof.

---

1,692,801. FLUID BRAKE FOR ROTATING SHAFTS. OLUF FRED JENSEN, Council Bluffs, Iowa. Filed Oct. 24, 1927. Serial No. 228,299. 9 Claims. (Cl. 188—92.)

1. In combination with a rotating shaft, a brake comprising a housing, a spur gear permanently secured to said shaft and inside said housing, a second spur gear rotatably mounted in said housing and meshing with said first mentioned spur gear, a fluid in said gear housing, and a means for partially or totally housing the lower portions of said spur gears.

Patents Nos. 1,602,802 to 1,603,587.

THE

# OFFICIAL GAZETTE

OF THE

# United States Patent Office.

Vol. 376—No. 4. TUESDAY, NOVEMBER 27, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

## Adjudicated Patents.

(D. C. Ill.) Cowles patent, No. 1,103,567, for interchangeable automobile wheel, claims 9, 11, and 18 *Held* infringed. *Packard Motor Car Co. v. Overland Motor Co.*, 28 F. (2d) 206.

(D. C. N. Y.) Rousso design patent, No. 42,206, for design for towel cabinet, *Held* valid and infringed. *Rousso v. Rico Towel Cabinet Co.*, 28 F. (2d) 200.

## International Convention—Adhesion.

### Portugal.

This Office has been notified by the Secretary of State of the receipt of a notice from the Swiss Legation that the Government of Portugal has adhered to the Convention of the Union for the Protection of Industrial Property, as revised at The Hague November 6, 1925, the adhesion to take effect November 17, 1928.

THOMAS E. ROBERTSON,
*Commissioner of Patents.*

## Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,521,441, J. W. Fraser, Rectifier, decided October 30, 1928, claims 1, 2, and 3.

Pat. 1,581,922, R. T. Ferngren, Glass feeder, decided October 15, 1928, claims 1, 4, 11, and 12.

Pat. 1,615,225, Rosenberger and Zimmerman, Thermostat for heating systems, decided September 6, 1928, and September 24, 1928, claims 1, 4, 11, and 15.

Pat. 1,617,686, J. M. Soares, Articulated car, decided October 16, 1928, claim 8.

---

Final decision in interference has been rendered against the following trade-mark:

T. M. 222,631, Liquid motor fuel, The Denver Powerine Company (The Powerine Company substituted), Denver, Colo. Registered January 4, 1927. Decided October 19, 1928.

## Amendments and Status Letters.

DIVISION OR ROOM NUMBER SHOULD BE INDICATED.

Attorneys and applicants should, in making amendments and in writing letters asking for the status of applications, indicate the division to which the application was assigned or the room number of the division.

If papers are thus marked, it will save a large amount of time of this Office in looking up the records in order to ascertain to what divisions they should be sent.

## Notice of Cancellation.

U. S. PATENT OFFICE, *Washington, Nov. 5, 1928.*

*Frederick Edward Veasey Baines, his assigns or legal representatives, take notice:*

A cancellation proceeding having been instituted by this Office upon the application of The Apex Electrical Manufacturing Company, of Cleveland, Ohio, to effect the cancellation of the trade-mark registration of Frederick Edward Veasey Baines, of 2 Orchard Road, Blackheath, county of Kent, England, No. 70,782, dated October 6, 1908, and the notice of such proceeding sent by registered mail to the said Frederick Edward Veasey Baines at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Frederick Edward Veasey Baines, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
*First Assistant Commissioner.*

## Condition of Applications Under Examination at Close of Business November 16, 1928.

(Total number of applications awaiting action, excluding Trade-Mark Division, 110,109; Trade-Mark Division, 1,747. Oldest new case, Jan. 12, 1928; oldest amended, Jan. 26, 1928. The dates given are 1928.)

# DECISIONS IN PATENT AND TRADE-MARK CASES.

## Commissioner's Decisions.

### Ex parte Hall.

*Decided November 8, 1928.*

Applications—Examination—Making Special.

The examination of an application will not be made "special" merely because the application was filed more than 12 months after the filing of the corresponding application in a foreign country.

Petition to make case "special."

Robertson, *Commissioner:*

This is a petition to make this case "special" because not filed within 12 months of the filing of the foreign application.

The International Convention and Revised Statutes 4887 permit a foreign inventor to file an application within 12 months, one whole year, after filing in the home country and preserve his priority rights. If filed after the year, the patent would be invalid if issued after the grant in the home country (R. S. 4887). During the war an application not filed within the year was made "special" if it could be issued before the grant abroad. Several years after the war this rule was changed to require a showing as to the issuance of the foreign patent, etc. (*Ex parte Tesorn et al.*, 305 O. G. 633.) However whenever a case was made "special" it necessarily resulted in discrimination against the citizens of this country by taking the application of the foreigner out of its turn and placing it ahead of hundreds of applications of American citizens so as to give immediate action to the foreign case. This might have been continued if there had been only several such cases each year, but there were hundreds each year and hence the rule was changed on July 28, 1927 (effective Jan. 1, 1928), to revert to prewar conditions. Since then applications of foreign citizens have not been made "special" merely because filed late, and foreigners must file their applications within the year specified in the Convention or run the risk of rejection if the foreign patent issues first.

In view of the foregoing the petition is denied.

### Ex parte Jones.

*Decided July 30, 1927.*

1. Application—Combination Claims—Anticipation.

"A claim for a combination of cooperating elements forming a unitary device is not anticipated by a combination lacking some of those elements or by a combination in which some of the operations are performed by hand, even though some of those elements may be stated in the form of means qualified by a statement of function."

2. Same—Broad Claims.

Claims for a knitting machine for knitting stockings of a certain type *Held* not broad enough to cover all ways of producing such stockings, where it appears that they can be made by hand manipulations of machines of a known type or that mechanism having no pickers could be devised for producing them which would not infringe those claims.

[This application has resulted in Patent No. 1,641,589.]

Appeal from Examiners in Chief.

Hosiery Machine for Making Right and Left Toe Pockets.

*Messrs. Emery, Booth, Janney & Varney* for appellant.

Moore, *Assistant Commissioner:*

This is an appeal from the decision of the Examiners in Chief affirming the decision of the Examiner finally rejecting claims 1 to 11, inclusive, 16, 17, 19, 23, 29, 30, and 35, of which the following will serve as an illustration:

1. A circular hosiery knitting machine having a relatively rotatable needle cylinder and cam ring, and means for automatically imparting such relative movement, narrowing and widening pickers having fixed stations with respect to the cam ring but having needle elevating and depressing movements at their fixed stations, and means for automatically controlling said pickers, so as to form a stocking or hose having fashioned heel gores, and a toe pocket fashioned at one edge only of said toe pocket.

The references relied on are: Folsom, No. 369,637, September 6, 1887; Barr, No. 1,160,819, November 6, 1915.

The invention relates to a circular hosiery knitting machine having narrowing and widening pickers with means for automatically controlling said pickers so as to form a stocking or hose having fashioned heel gores, and a toe pocket fashioned at one edge only of said toe pocket.

Such a stocking is old in the prior art, as shown in either of the patents to Barr or Folsom. Appellant, however, is not claiming a stocking, but a machine for making a stocking. The stocking of Barr can be made on known commercial machines by certain manipulations of the needles of the machine as described by Barr at page 1, lines 70 to 88. How the manipulation is accomplished is not stated in the patent, but it could be a hand manipulation by some knitter's tool which, however, would result in the stocking being slowly, awkwardly, and expensively produced.

[1] Appellant has conceived that by adding to the known commercial machines, means for automtically controlling the pickers in the manner claimed, stockings of the form admittedly old in the art may be rapidly and expeditiously produced, which amounts to a new machine or combination of elements for producing an old article. A claim for a combination of cooperating elements forming a unitary device is not anticipated by a combination lacking some of those elements or by a combination in which some of the operations are performed by hand, even though some of those elements may be stated in the form of means qualified by a statement of function.

Of course every element defined in the form means for performing a function does, and is intended to, cover every means for performing the function stated for the element.

[2] The objection of Examiners in Chief that certain of the appealed claims are broad enough to cover all ways of producing the stocking shown in Folsom or Barr or the known commercial hosiery

knitting machine does not appear warranted. These stockings may still be produced by hand manipulations on machines of the type described by Barr at page 1, lines 70–88, without infringing the appealed claims. Or if a mechanism be devised for producing these stockings, said mechanism having no pickers, that mechanism would not infringe the appealed claims.

Appellant's claims define a new combination of elements for producing an old article, but do not appear so broad as to cover all means for producing that article. The appealed claims are accordingly considered allowable.

The decision of the Examiners in Chief is reversed as to all the appealed claims.

---

## U. S. Circuit Court of Appeals—Third Circuit.

CRAFT-STONE, INC., v. ZENITHERM CO., INC.

*Decided September 24, 1927; rehearing denied.*

[22 Fed. Rep. (2d) 401.]

1. PATENTABILITY—FIREPROOF INSULATING BUILDING MATERIAL.

Sutter patent, No. 1,183,694, for fireproof insulating building material and process of making same, claims 1 and 4 *Held* not anticipated, valid, and infringed.

2. SAME—COMPOSITION OF MATTER—COACTION OF ELEMENTS.

Bringing together for the first time of different elements into a unitary whole forming a new and useful product is patentable.

3. INFRINGEMENT—PROCESS—TRANSPOSITION OF STEPS OF—DOES NOT AVOID.

Transposition of some steps in patented process, which does not change the principle, mode of operation, or result, does not avoid infringement.

APPEAL from the District Court of the United States for the District of New Jersey; Joseph L. Bodine, Judge.

Suit in equity by the Zenitherm Company, Inc., against Craft-Stone, Inc. Decree for complainant and defendant appeals. Affirmed.

*Mr. Walter W. Burns*, (*Mr. Merritt Lane*, and *Mr. Robert Watson* of counsel) for the appellant.

*Mr. Fred J. Beckert* and *Messrs. Mitchell & Beckert* for the appellee.

Before BUFFINGTON, WOOLLEY, and DAVIS, Circuit Judges.

DAVIS, *Cir. J.*:

This is an appeal from a decree adjudging United States Letters Patent No. 1,183,694, issued to Balthasar Sutter, to be valid and infringed.

The defendant has brought the case here for review on 14 assignments of error, but they all relate to two main questions: validity and infringement. The defendant filed a counterclaim which the court dismissed, but his action in so doing is not before us, for it has not been made the subject of an assignment or discussion.

[1] The patent relates to new and useful improvements in fireproof insulating building material and the process of producing the same. We have, therefore, a patent for a process and a product. It has nine claims, only two of which, the first and the fourth, are in issue. The first claim is for the process and the fourth for the product.

The process consists in mixing granulated vegetable and mineral matter in its natural state, such as wood chips or shavings, with granulated mineral matter—powdered magnesite—until each particle of vegetable matter is coated with the mineral matter. Then these chips or shavings coated with magnesite are mixed with a binder solution of magnesium chloride. The magnesite or magnesium oxide and magnesium chloride form a cement which lightly coats the wood particles, leaving them in a loose, nonhomogeneous, and incompacted state. This loose mass or aggregation of coated wood particles is put into a mold so as to form a layer of uniform thickness, which is then compressed, under a pressure of about 2,500 to 3,000 pounds per square inch, into a homogeneous mass, the cement being permitted to set so as to form a solid slab, mainly made from the wood particles which have been crushed and brought into intimate contact with each other, with a minimum amount of cement holding them together.

This product may be sawed, nailed, or otherwise worked as wood. Yet it is light, fireproof, strong, nonhygroscopic, possesses high insulating and sound-deadening properties, will not warp, and is well adapted to use on floors and interior and exterior walls. There seems to have been no product just like it before.

The plaintiff company had two men in its employ, Mr. George C. Wilson, its sales manager, and Mr. Thomas Garvin, a salesman. After working for the plaintiff for some time and, one or both, becoming more or less acquainted with its process and product, and the names and location of its customers, they left its employ and early in 1925 incorporated the defendant, Craft-Stone Corporation. Mr. Wilson became its president and Mr. Garvin its vice president. They began to manufacture an insulating building material which the plaintiff says is substantially identical with its own in character and was made by practically the same process.

The primary question is validity. None of the many patents of the prior art upon which the defendant relies had taught the world the art of coating granulated, vegetable matter in its natural state with granulated mineral matter, and then of compressing this loose, nonhomogeneous mass into a solid, homogeneous, useful slab having characteristics of both wood and stone. There seems to be some controversy between the district court and appellant as to whether or not the appellant's "best reference is the Mattison patent, No. 893,961," or whether "the nearest approach to defendant's process is found in Bidtel, 827,286." However that may be, the proofs show that there never was a product on the market like Zenitherm before the invention of the patent and none since except that of the defendant. Judge Bodine, after carefully analyzing the Mattison patent, defendant's best reference, said:

> The Mattison floor differs in no essential from any other magnesite floor. Neither Mattison's product nor his process has the slightest resemblance to Dr. Sutter's invention.

In the Mattison floor, there was a layer of cork coated with Sorel cement; then a layer of wood splinters bound together with Sorel cement and troweled; the next and last layer was of wood flour, asbestos, and Sorel cement troweled to form the finishing floor surface. This invention neither in process nor product anticipates the invention of Sutter's patent.

The defendant said:

> The nearest approach to defendant's process is found in Bidtel, 827,286.

If the defendant's process is substantially identical with that of plaintiff's, which we will later discuss, we would expect Bidtel to anticipate it.

What Bidtel claims to have invented are "certain new and useful improvements in magnesia cement," which "consists in mixing a concentrated solution of chloride of magnesium, sawdust, or other suitable filler, preferably of a porous nature, which will absorb the solution." Such a filler remains moist and difficult to handle. To overcome this, he added infusorial earth or fossil flour, which forms a coating over the particles of the filler, absorbs the moisture and renders the mixture dry and easy to handle. After the cement has been shipped to the point where it is to be used, Bidtel there adds to the mixture finely-pulverized burnt magnesite and water which effects the chemical reaction necessary to cause the mass to set and become hard. The proportions of these ingredients are stated in his claims as follows:

> 1. The combination of substantially thirty-six parts by weight of sawdust, eighty-five parts of magnesium chloride solution (30.5° Baumé) and twenty-five parts of infusorial earth, forming a substantially dry ingredient of magnesium cement.
>
> 2. The herein described composition of matter, which consists substantially of thirty-six parts by weight of an absorbent filler, eighty-five parts of magnesium chloride solution (30.5° Baumé), twenty-five parts infusorial earth, seventy-five parts pulverized burnt magnesite, and forty-three and one-half parts water.

The plaintiff's product has three ingredients: granulated cork, wood chips, shavings, or other vegetable matter; magnesite or other granulated mineral matter; and a binder solution of magnesium chloride, acetyl cellulose, etc. The process by which the patentee made his product had three steps: (1) mixing the shavings with magnesite until they were coated; (2) mixing coated shavings with a binder solution of magnesium chloride, which produces a loose nonhomogeneous mass; and (3) compressing by regulated—"sufficient" but not "excess"—pressure this loose mass into a homogeneous mass.

The invention lies in the creation and compression of this loose, nonhomogeneous mixture of mineral-coated vegetable matter into a homogeneous mass of artistic appearance and useful qualities. Whatever may be said about the different constituent elements used by the plaintiff and Bidtel, the latter did not have the third and important element of the plaintiff's process. This the defendant admits, but says that the state of the art permits the use of pressure with any Sorel cement process. The patentee invented a new and useful product, and it is not permissible for an infringer to go to the prior art and defeat the patent by selecting the various elements of the patentee's process from different patents, bring them together, and say that this aggregation anticipates.

Knowledge after the event is always easy, and problems once solved present no difficulties. *Loom Co.* v. *Higgins*, 105 U. S. 580, 26 L. Ed. 1177; *Diamond Rubber Co., Etc.*, v. *Consolidated Rubber Tire Co.*, 220 U. S. 428, 31 S. Ct. 444, 55 L. Ed. 527.

Many other patents were cited to show that the Sutter patent was anticipated and is invalid. We have examined them, together with argument of counsel bearing on them, but do not think that they anticipate the patent in issue here. The Sorel patent, No. 100,945, is an illustration of the many patents cited. Counsel says:

> The ingredients of Zenitherm product are all mentioned by Sorel; the steps of the process are the same, and the order of the steps is the same.

If this is true, anticipation is unescapable. Sorel's own statement in describing his process disproves defendant's contention:

> I throw into a furnace the natural rock magnesite, and subject it to a red heat from one to fifty hours; I prefer for general use about twenty-four hours; I pulverize what remains. I use this product, or the magnesia of commerce, according to convenience or economy, which may depend, in part, upon the place where the cement is made and in part upon the result proposed. I thoroughly mix with the magnesia, however obtained, any mineral substance, as sand, gravel, the dust and fragments of marble and other stones, emery or other grits, or cotton, wood, or other fibrous material, according to the result desired. The proportion of such substances varies with the work to be done, from one-half to twenty or more to one. This mixture is then moistened with a solution of either of the following substances of the density of from 20° to 28° Baumé, instead of the chloride of magnesium or the bittern water, as described in my said patent, viz, chloride of barium, chloride of strontium, chloride of aluminum, chlorhydrate and bisulphate of ammonium, sulphate of magnesia, sulphate of aluminum, solutions of potash or of soda, or of the carbonates of these bases, as well as by the solutions of most of the double chlorides and other double salt containing salts with magnesia basis. These solutions can be employed singly or mixed together, or with the chloride of magnesium. They are employed more or less concentrated, according to the nature of the cement desired to be obtained. The mixture is wet sufficiently, in some cases, to form a mortar, and in some cases only to produce a dampness like that of molding sand when prepared for use. The plastic substance thus formed is then poured, pressed, or rammed into molds, or rolled or spread in slabs or sheets, or other form required, and soon sets, and forms hard, strong, and durable stone or other product, partaking of the color and qualities of the substances combined.

It will serve no good purpose to analyze all the other patents. We have carefully considered them, and do not think that they anticipate Sutter.

[2] The several elements in Sutter's combination conjointly, each element acting according to the law of its own nature, produced a new floor. He was the first to bring these elements together in a unitary whole, which is therefore patentable. *National Cash Register* v. *American Cash Register* (C. C. A.) 53 F. 367; *Macbeth-Evans Glass Co.* v. *L. E. Smith Glass Co.* (C. C. A.) 284 F. 128; *Blake* v. *Robertson*, 94 U. S. 729, 24 L. Ed. 245; *Lock Co.* v. *Sargent*, 117 U. S. 536, 6 S. Ct. 934, 29 L. Ed. 954.

Did the defendant infringe? The proofs show that defendant moistens wood chips or sawdust with magnesium chloride and then mixes them or it with powdered magnesium oxide until they are coated, and thereafter mixes these coated chips with magnesium chloride, which results in a loose mixture of coated chips which are then compressed, by hydraulic pressure, into a homogeneous mass substantially identical with the plaintiff's product. Just why the vegetable material is first moistened with magnesium chloride or what final effect it has does not clearly appear.

[3] The gist and principle of the invention lie in lightly coating the chips with mineral matter and then compressing them into a homogeneous mass having the qualities described in the patent, and these the defendant's product has. The patentee had to mix the chips either with magnesite or magnesium chloride first. But the patent does not state, nor do the proofs show, any advantage in the order. So far as appears, the order might have been reversed without effect. The transposition of some of the steps in a patented process, which does not change the principle, mode of operation, or result, does not avoid infringement. *Malignani et al.* v. *Germania Lamp Co.* (C. C.) 169 F. 290; *Malignani et al.* v. *Hill-Wright Electric Co.* (C. C.) 177 F. 430; *General Electric Co.* v. *Hill-Wright Electric Co.* (C. C. A.) 174 F. 996. The defendant in our opinion uses the process and obtains the product of the patent and therefore infringes it.

The decree is accordingly affirmed.

## Patent Suits.

[Notices under sec. 4911, R. S., as amended Feb. 18, 1922.]

1,013,672, W. B. McCann, Ice-cream freezer, D. C., S. D. N. Y., Doc. E 41/360, *Auto Vacuum Freezer Co., Inc.*, v. *The Stirrup Mfg. Co., Inc.* Stipulation dismissing case Oct. 27, 1928.

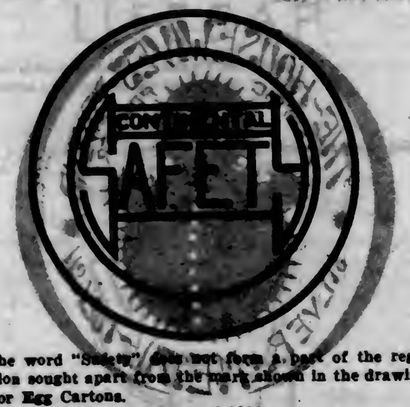
# TRADE-MARKS

OFFICIAL GAZETTE, NOVEMBER 27, 1928.

[VOL. 376. No. 4.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.



Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

## CLASS 2.

### Receptacles.

Ser. No. 246,001. THE SAFETY CARTON & CONTAINER COMPANY, Cincinnati, Ohio. Filed Mar. 18, 1927.

The word "Safety" does not form a part of the registration sought apart from the mark shown in the drawing.

For Egg Cartons.

Claims use since beginning of 1909.

Ser. No. 265,507. UNION BAG & PAPER CORPORATION, New York, N. Y. Filed Apr. 27, 1928.

MARSHMALLOW

For Paper Bags.

Claims use since Mar. 15, 1922.

## CLASS 3.

### Baggage, Animal Equipments, Portfolios, and Pocketbooks.

Ser. No. 270,771. LIVINGSTON BROS., INC., San Francisco, Calif. Filed Aug. 8, 1928.

*Solette*

For Children's and Ladies' Hand Bags.

Claims use since July 21, 1928.

Ser. No. 273,956. JESSICA M. BRADY, Mamaroneck, N. Y. Filed Oct. 18, 1928.

BRADKA

For Traveling Bags.

Claims use since Sept. 5, 1928.

## CLASS 4.

### Abrasive, Detergent, and Polishing Materials.

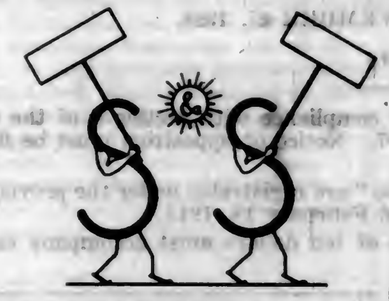
Ser. No. 256,856. MAYER & SCHMIDT, SCHLEIFMASCHINEN & SCHMIRGELWERKE, A. G., Offenbach-on-the-Main, Germany. Filed Oct. 20, 1927.

*Elektrorubin*

For Abrasive Materials in Blocks and Grains and Abrasive Grinding Wheels, Disks, and Segments.

Claims use since October, 1901.

Ser. No. 258,306. WILLIAM R. ZEMINGER, West Baden, Ind. Filed Dec. 1, 1927.



TAM O'WATER
HOROLOGIC STONE

No claim is made for the exclusive use of the words "Horologic Stone."

For Abrasive Stones.

Claims use since Sept. 1, 1927.

Ser. No. 265,043. GERTRUDE GREEN, doing business as S. & S. Cleaning Products Co., Birmingham, Ala. Filed Apr. 18, 1928.

For Household Cleaning Compound.
Claims use since Apr. 3, 1928.

---

Ser. No. 267,020. WALGREEN CO., Chicago, Ill. Filed May 25, 1928.

The words "Peau-Doux" form a part of the registration sought only in association with the other features of the mark shown in the drawing.
For Shaving Cream.
Claims use since Mar. 1, 1926.

---

Ser. No. 267,357. OTTO HOLZMAN, doing business as Le Roy Manufacturing Co., Chicago, Ill. Filed June 13, 1928.

**Magicleen**

For Soaps.
Claims use since about May, 1927.

---

Ser. No. 271,942. G. H. PACKWOOD MFG. CO., St. Louis, Mo. Filed Sept. 5, 1928.

**PAX**

For Powdered Soap Product That Has Antiseptic Properties, and That Very Efficiently Cleans the Skin of All Grease, Paint, Dirt, Etc.
Claims use since June, 1928.

---

Ser. No. 272,644. DARNEE INC., New York, N. Y. Filed Sept. 19, 1928.

**LA SPANGLA**

For Toilet Soaps.
Claims use since Sept. 11, 1928.

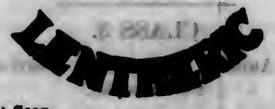
---

Ser. No. 273,482. B. ALTMAN & CO., New York, N. Y. Filed Oct. 6, 1928.

**ALSAM**

For Toilet Soap.
Claims use since May 3, 1927.

---



Ser. No. 273,492. JOSEPH FEIGLESON, Brooklyn, N. Y. Filed Oct. 8, 1928.

No claim is made to the words "Powder" and "Silver and Metal Polish" apart from the mark shown in the drawing.
For Silver and Metal Polish.
Claims use since Sept. 1, 1928.

---

Ser. No. 273,552. LENTHERIC, INCORPORATED, New York, N. Y. Filed Oct. 9, 1928.

For Toilet Soap.
Claims use since 1873.

---

Ser. No. 273,722. SAPOLIN CO. INC., New York, N. Y. Filed Oct. 12, 1928.

**RONORO**

For Metal Polish.
Claims use since Oct. 5, 1928.

## CLASS 5.
## Adhesives.

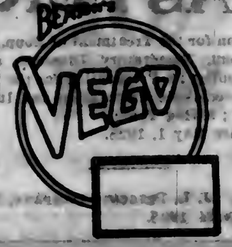
Ser. No. 272,961. CRYSTAL SPRINGS PASTE COMPANY, Boston, Mass. Filed Sept. 26, 1928.

**HANDY**

For Adhesive Paste, Adhesive Paste Powder, and Adhesive Wall Size.
Claims use since November, 1906.

---

## CLASS 6.
## Chemicals, Medicines, and Pharmaceutical Preparations.



Ser. No. 239,123. IRVING KULIK, doing business as Kulik Lifesap Products Corporation, Brooklyn, N. Y. Filed Oct. 28, 1926.

**LIFESAP**

For Hemoglobin Enriching Iron Tonic.
Claims use since on or about Apr. 1, 1926.

---

Ser. No. 243,504. SMITH CHEMICAL CORPORATION, Johnson City, Tenn. Filed Jan. 28, 1927.

No claim is made for the word "Vego" aside from the mark shown in the drawing.
For Tonic Having Laxative and Diuretic Qualities.
Claims use since Oct. 16, 1926.

---

Ser. No. 260,791. MARTIN VAN BUREN CREAGAN, doing business as Van Seaton Chemical Co., Fort Worth, Tex. Filed June 20, 1927.

**Aspir-Mint**

The descriptive word "Mint" is disclaimed apart from the mark shown.
For Soluble Aspirin Tablets to be Used for La Grippe, Colds, Neuralgia, Lumbago, Acute Rheumatism, Sore Throat, and Headache.
Claims use since Jan. 1, 1926.

---

Ser. No. 256,165. H. TH. BÖHME A. G., Chemnitz, Germany. Filed Oct. 17, 1927.

**Benso**

For Finishing and Dressing Preparations for Textile Goods.
Claims use since May 25, 1914.

---

Ser. No. 261,542. THE WEINBERGER DRUG COMPANY, Cleveland, Ohio. Filed Feb. 10, 1928.

**SUPERIOR HEALTHO LABORATORIES**

For Medicines and Pharmaceutical Preparations—Eczema Lotions, Emulsion of Cod-Liver Oil, Insecticides, Syrup of Hypophosphite, Laxative Preparations, Stomach-Tonic, an Antiseptic and Deodorant; a Preparation for the Relief of Tired, Aching, Swollen, and Inflamed Feet; Analgesic Liniment, Astrin, Lemon Cream, Cold Cream, Foot Powder, Skin Salve, Vanishing Cream, Diuretic Capsules, Cinchophen (Acid Phenylcinch. U. S. P.), Rheumatic Capsules, and Hemorrhoidal Suppositories.
Claims use since Nov. 25, 1927.

---

Ser. No. 261,965. LA POMPADOUR, INC., Minneapolis, Minn. Filed Feb. 20, 1928.

Ser. No. 271,723. EDGAR T. WARD'S SONS COMPANY, Pittsburgh, Pa. Filed Aug. 29, 1928. Under 10-years proviso.

MUNKFORS BRAND

The word "Brand" is disclaimed apart from the mark shown in the drawing.

For Strip Steel.

Claims use since Feb. 18, 1894.

Ser. No. 273,059. MORRIS, WHEELER & CO., INC., Philadelphia, Pa. Filed Sept. 27, 1928.

**"Mor Weld"**

For Steel Welding Rods for Welding by the Acetylene and Electric Method, Alloy-Steel Welding Rods for Welding by the Electric Method, Cast-Iron Welding Rods, Aluminum Welding Rods, Nickel-Steel Welding Rods, High-Carbon-Steel Welding Rods, Vanadium-Alloy Welding Rods, Manganese-Bronze Welding Rods, and Manganese-Steel Welding Rods for Welding by the Acetylene Method.

Claims use since Dec. 15, 1927.

Ser. No. 273,824. LUDLUM STEEL COMPANY, Watervliet, N. Y. Filed Oct. 15, 1928.

KA2

For Alloy Steel.

Claims use since Oct. 11, 1928.

Ser. No. 273,825. LUDLUM STEEL COMPANY, Watervliet, N. Y. Filed Oct. 15, 1928.

KA2S

For Alloy Steel.

Claims use since Oct. 11, 1928.

## CLASS 15.

### Oils and Greases.

Ser. No. 265,688. PHILLIPS PETROLEUM COMPANY, Bartlesville, Okla. Filed Apr. 30, 1928.

WOOLAROC

For Gasoline and Lubricating Oils.

Claims use since August, 1927.

Ser. No. 269,495. UTILITY OIL CORPORATION, Long Island City, N. Y. Filed July 12, 1928.

SUPER X MOTOR OIL

The words "Motor Oil" appearing on the drawing are disclaimed apart from the mark as shown and used.

For Petroleum Products—Namely, Gasoline, Kerosene, Lubricating Oils, and Lubricating Greases.

Claims use since February, 1926.

Ser. No. 269,804. STANCO INCORPORATED, Wilmington, Del., and New York, N. Y. Filed July 18, 1928.

PRIMOL

For Highly-Refined White Lubricating Oils and Non-Sticking Oils for Confectioners' and Bakers' Use.

Claims use since June 14, 1928.

Ser. No. 270,812. UTILITY OIL CORPORATION, Long Island City, N. Y. Filed Aug. 9, 1928.

SUPER-X

For Petroleum Products—Namely, Gasoline, Kerosene, Lubricating Oils, and Lubricating Greases.

Claims use since February, 1926.

Ser. No. 271,328. WHITE STAR REFINING CO. OF DELAWARE, Detroit, Mich. Filed Aug. 20, 1928.

STAR-O-PENN

For Lubricating Oils and Greases.

Claims use since about Apr. 10, 1928.

Ser. No. 271,981. THE PURE OIL COMPANY, Chicago, Ill. Filed Sept. 6, 1928.

DARK POCO

No claim is made to the exclusive use of the word "Dark" apart from the mark as shown in the drawing.

For Hydrocarbon Motor-Fuel Oils, Lubricating Oils and Greases, and Steam-Cylinder Oils.

Claims use since Sept. 10, 1924.

Ser. No. 271,982. THE PURE OIL COMPANY, Chicago, Ill. Filed Sept. 6, 1928.

ENERGY

For Hydrocarbon Motor-Fuel Oils, Lubricating Oils, Lubricating Greases, and Gasoline.

Claims use since July 5, 1923.

Ser. No. 271,987. THE PURE OIL COMPANY, Chicago, Ill. Filed Sept. 6, 1928.

M—MINERAL

No claim is made to the word "Mineral" apart from the mark as shown in the drawing.

For Hydrocarbon Motor-Fuel Oils, Lubricating Oils and Greases, Steam-Cylinder Oil, Calender-Lubricating Oil, and Crusher-Lubricating Oil.

Claims use since Sept. 10, 1924.

Ser. No. 271,996. THE PURE OIL COMPANY, Chicago, Ill. Filed Sept. 6, 1928.

PUROLA

For Hydrocarbon Motor-Fuel Oils, Lubricating Oils, Lubricating Greases, and Engine, Dynamo, Diesel, Compressor, and Harvester Lubricants.

Claims use since Sept. 10, 1924.

376 O. G.—51

Ser. No. 271,998. THE PURE OIL COMPANY, Chicago, Ill. Filed Sept. 6, 1928.

PURON

For Hydrocarbon Motor-Fuel Oils, Lubricating Oils and Greases, Engine, Dynamo, Gas-Engine, and Bearing Lubricants.

Claims use since Sept. 10, 1924.

Ser. No. 272,000. THE PURE OIL COMPANY, Chicago, Ill. Filed Sept. 6, 1928.

ROLLEX

For Hydrocarbon Motor-Fuel Oils, Lubricating Oils, Lubricating Greases, and Engine, Dynamo, Spindle, Turbine, Gas-Engine, Crank-Case, and Compressor Lubricants.

Claims use since Sept. 10, 1924.

Ser. No. 272,003. THE PURE OIL COMPANY, Chicago, Ill. Filed Sept. 6, 1928.

TIOL

For Hydrocarbon Motor-Fuel Oils, Lubricating Oils and Greases, Engine, Diesel, Compressor, and Harvester Lubricants.

Claims use since Sept. 10, 1924.

## CLASS 16.

### Paints and Painters' Materials.

Ser. No. 253,295. SOCIETE ANONYME DES ETABLISSEMENTS LEFRANC, Paris, France. Filed Aug. 10, 1927.

MARQUE

DE FABRIQUE

The words "Marque de Fabrique" are disclaimed. The lining shown on the drawing is for shading purposes only.

For Artists' Oil Colors, Water Colors in Granular Form and in the Form of Paste, Powder, and Cakes; Varnishes; and Paints, Dry and Ready Mixed.

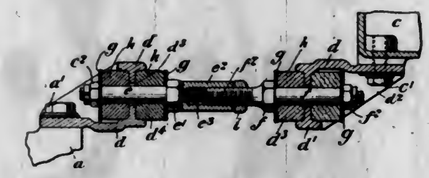
# REISSUES

## NOVEMBER 27, 1928.

17,145. PROTECTIVE GUARD FOR WINDING OR OTHER MACHINES. JAMES A. CAMERON, Brooklyn, N. Y., assignor to Cameron Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 5, 1928. Serial No. 310,652. Original No. 1,605,170, dated Nov. 2, 1926, Serial No. 678,336, filed Dec. 3, 1923. 4 Claims. (Cl. 74—105.)



1. The combination with a surface winding drum and a winding shaft to receive wound material that engages the upper surface of the winding drum of a support in front of the drum, a bar above the support, a plurality of parallel links pivotally connected with the support and bar, an actuating device to move the links, to raise the bar and thereby to shield the lip between the drum and wound material, driving mechanism to operate said drum, a clutch to control the draving connection between said drum and driving mechanism, and connections between said actuating device and said clutch.

---

17,146. YIELDING CONNECTIONS FOR RELATIVELY-MOVABLE MEMBERS. ERVING R. GURNEY, Beechhurst, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed July 20, 1928. Serial No. 294,297. Original No. 1,660,671, dated Feb. 28, 1928, Serial No. 56,911, filed Sept. 17, 1925. 4 Claims. (Cl. 180—54.)

1. A connection and support between a radiator and the top of an engine comprising, in combination, a bracket carried with the radiator, a bracket carried with the engine top, seats formed on the brackets, respectively, and apertures formed in the seat portions, a telescoping element passing through the apertures in the respective brackets, blocks of yielding non-metallic material interposed operatively between the adjustable elements and the

seat portions, means to retain said yielding non-metallic material under compression, and means to vary the effective length of the connecting elements.

---

17,147. VEHICLE BRAKE. ROY S. SANFORD, South Bend, Ind., assignor, by mesne assignments, to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 25, 1928. Serial No. 315,089. Original No. 1,668,338, dated May 1, 1928, Serial No. 581,945, filed Aug. 15, 1922. 33 Claims. (Cl. 188—78.)

19. A brake comprising, in combination, a drum, a support at the open side of the drum, friction means housed within the drum and between the drum and support, applying means within the drum, a flexible conduit fixedly secured at its end to the support, and a flexible device extending through the conduit and inside of the drum beyond the conduit and there connected to said applying means.

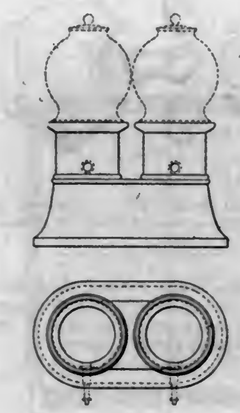
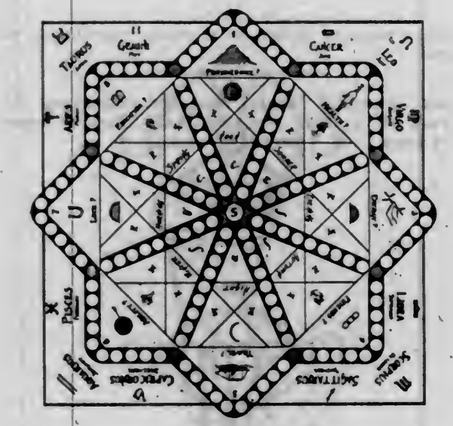
76,986. TUMBLER OR SIMILAR ARTICLE OF MANUFACTURE. JEDDIA B. CLARK, Dunkirk, Ind., assignor to The Indiana Glass Company, Dunkirk, Ind., a Corporation of Indiana. Filed Sept. 24, 1928. Serial No. 28,254. Term of patent 7 years.

The ornamental design for a tumbler or similar article of manufacture.



76,987. TABLE LAMP OR ARTICLE OF ANALOGOUS NATURE. PAUL CRICCHIO, New York, N. Y., assignor to Majestic Lamp Works, New York, N. Y., a Partnership consisting of Philip Silberhartz, Jacob Silberhartz, and Harry Scheiner. Filed Sept. 5, 1928. Serial No. 28,050. Term of patent 7 years.

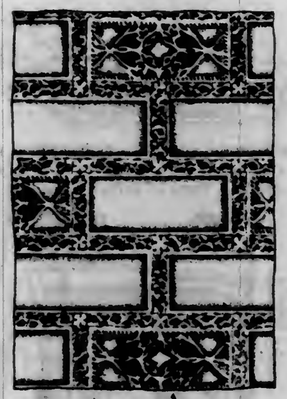
The ornamental design for a table lamp or article of analogous nature substantially as shown and described.



76,988. VENDING STAND. ALVIE C. CRIMMEL, Hartford City, Ind. Filed Mar. 1, 1928. Serial No. 25,630. Term of patent 3½ years.

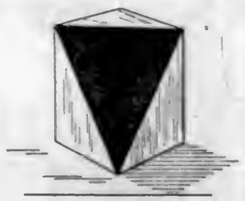
The ornamental design for a vending stand, as shown and described.

76,989. GAME BOARD. JOSEPH G. CULLIGAN, New York, N. Y. Filed June 25, 1928. Serial No. 27,265. Term of patent 3½ years.

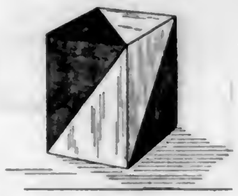


The ornamental design for a game board, as shown and described.

76,990. BOTTLE. JEROME P. CURRAN, Toledo, Ohio, assignor to The American Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 12, 1927. Serial No. 20,351. Term of patent 14 years.



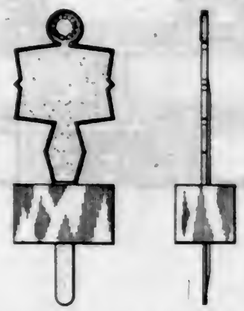
The ornamental design for a bottle, substantially as shown.



76,991. OILCLOTH. HENRY W. DIECK, Brooklyn, N. Y., assignor to The Standard Textile Products Company, New York, N. Y., a Corporation of Ohio. Filed Nov. 17, 1927. Serial No. 24,148. Term of patent 3½ years.

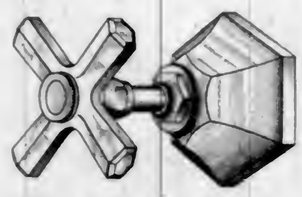
The ornamental design for oilcloth as shown.

76,992. CARTON OR SIMILAR ARTICLE. WALTER W. FAWCETT, Shaker Heights, Ohio, assignor to Fuller & Smith, Cleveland, Ohio, a Corporation of Michigan. Filed Oct. 2, 1926. Serial No. 19,232. Term of patent 14 years.



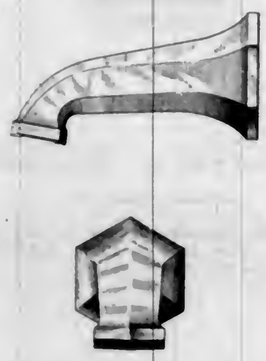
The ornamental design for a carton or similar article substantially as shown and described.

76,993. AUTOMOBILE RADIATOR EMBLEM. ELMER W. FERGUSON, New Haven, Conn., assignor to Connecticut Chiropractors' Association, New Haven, Conn. Filed June 25, 1928. Serial No. 27,282. Term of patent 7 years.



The ornamental design for an automobile radiator emblem, as shown.

76,994. MEMORIAL GRAVE MARKER. FRANK F. FISCHER, Oklahoma City, Okla. Filed May 3, 1928. Serial No. 26,559. Term of patent 3½ years.



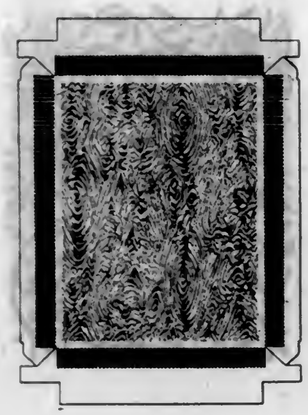
The ornamental design for a memorial grave marker, as shown.

76,995. COMBINED VALVE STEM, HANDLE, AND ESCUTCHEON. JAMES FRASER, Edge Moor, Del., assignor to The Speakman Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 5, 1928. Serial No. 25,676. Term of patent 7 years.

The ornamental design for a combined valve stem, handle, and escutcheon, substantially as shown.

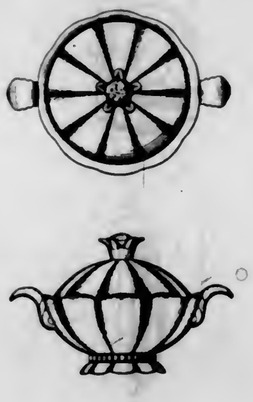
76,996. NOZZLE. JAMES FRASER, Edge Moor, Del., assignor to The Speakman Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 5, 1928. Serial No. 25,677. Term of patent 7 years.

The ornamental design for a nozzle, substantially as shown.

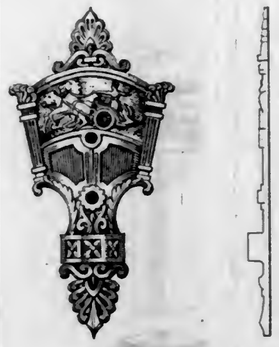


76,997. HOSIERY. ROBERT FRIEDRICH, Philadelphia, Pa. Filed Dec. 9, 1927. Serial No. 24,427. Term of patent 14 years.

The ornamental design for hosiery, as shown.

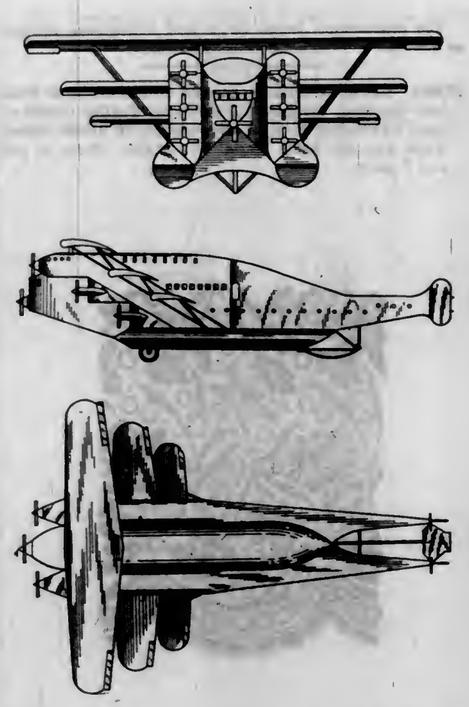


76,998. BOX BLANK OR SIMILAR ARTICLE. LOUIS H. GEBHART, Dayton, Ohio, assignor to The Gebhart Folding Box Company, Dayton, Ohio, a Corporation of Ohio. Filed May 17, 1928. Serial No. 26,711. Term of patent 14 years.



The ornamental design for a box blank or similar article as shown.

76,999. COVERED DISH. JOHN V. GODDARD, Trentham, England, assignor to Hugh C. Edmiston, New York, N. Y. Filed Aug. 24, 1928. Serial No. 27,950. Term of patent 7 years.



The ornamental design for a covered dish, substantially as shown.

77,000. LIGHTING-FIXTURE BACKPLATE OR ANALOGOUS ARTICLE. JULIUS GROSSMAN, New York, N. Y., assignor to Eagle Lites, Inc., a Corporation of New York. Filed Sept. 21, 1928. Serial No. 28,228. Term of patent 3½ years.

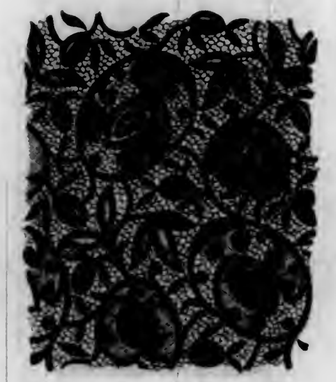
The ornamental design for a lighting fixture backplate or analogous article substantially as shown.

77,001. AIRSHIP. AUGUSTUS J. HARPSTRITE, Los Angeles, Calif. Filed Aug. 1, 1927. Serial No. 22,969. Term of patent 3½ years.

The ornamental design for an airship substantially as shown.

77,002. BIRD-HOUSE ROAD MARKER. ROBERT R. HARTMAN, Perry, Okla. Filed July 30, 1928. Serial No. 27,619. Term of patent 14 years.

The ornamental design for a bird house road marker, as shown.



---

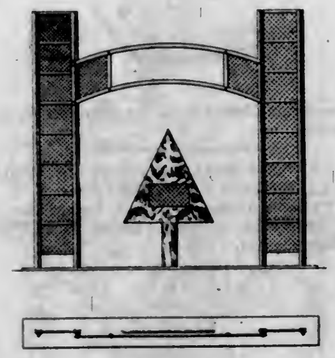
77,003. LACE. REGINALD ARTHUR HOLLINGWORTH, Beeston, England, assignor to American Textile Company, Inc., Pawtucket, R. I., a Corporation of Rhode Island. Filed Aug. 24, 1928. Serial No. 27,956. Term of patent 7 years.

The ornamental design for lace, substantially as shown.

77,004. LACE. REGINALD ARTHUR HOLLINGWORTH, Beeston, England, assignor to American Textile Company, Inc., Pawtucket, R. I., a Corporation of Rhode Island. Filed Aug. 24, 1928. Serial No. 27,957. Term of patent 7 years.

The ornamental design for lace, substantially as shown.

---

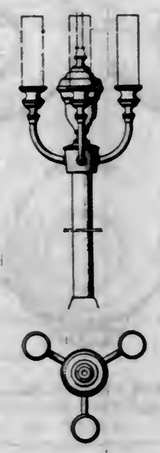


77,005. WATCHCASE. ELLISON S. IRELAN, Elgin, Ill., assignor to Illinois Watch Case Company, Elgin, Ill., a Corporation of Illinois. Filed Aug. 22, 1928. Serial No. 27,910. Term of patent 7 years.

The ornamental design for a watchcase, as shown.

77,006. ROAD SIGN. THOMAS H. JOHNS, Etowah, Tenn. Filed Aug. 15, 1928. Serial No. 27,823. Term of patent 14 years.

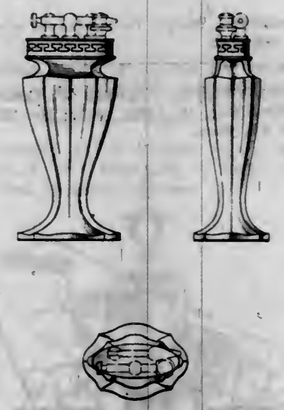
The ornamental design for a road sign, as shown.



---

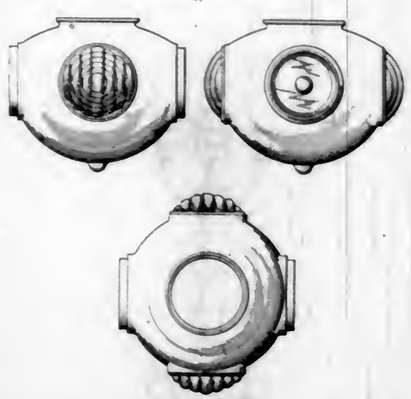
77,007. SUPPORTING PEDESTAL FOR LAMPS. ALEXANDER R. KANNÉ, Brooklyn, N. Y. Filed Aug. 24, 1928. Serial No. 27,945. Term of patent 7 years.

The ornamental design for a supporting pedestal for lamps, as shown.



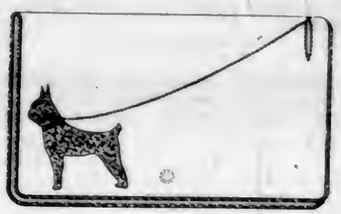
77,008. CLUSTER LAMP. ALEXANDER R. KANNÉ, Brooklyn, N. Y. Filed Aug. 24, 1928. Serial No. 27,946. Term of patent 7 years.

The ornamental design for a cluster lamp, as shown and described.



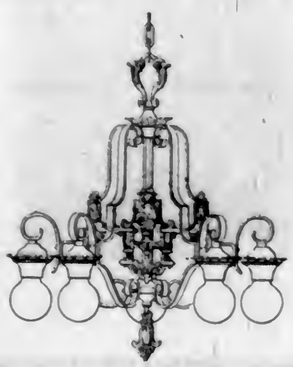
---

77,009. BODY FOR CIGAR AND CIGARETTE LIGHTERS. RAYMOND S. KNAPP, New York, N. Y. Filed July 30, 1928. Serial No. 27,623. Term of patent 3½ years.



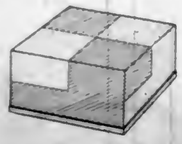
The ornamental design for a body for cigar and cigarette lighters, as shown.

77,010. COMBINED LIGHT GLOBE AND TRAFFIC SIGNAL. ROLPH J. LACKNER, Ozone Park, N. Y., assignor to Lackner Products Corporation, Brooklyn, N. Y., a Corporation of Delaware. Filed Apr. 5, 1928. Serial No. 26,144. Term of patent 14 years.



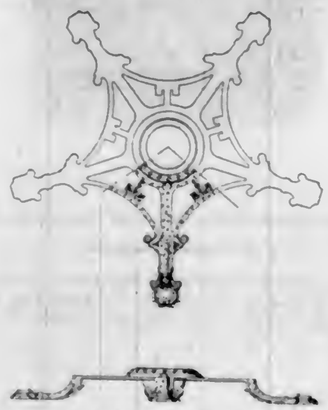
The ornamental design for a combined light globe and traffic signal, as shown.

77,011. LADY'S POCKETBOOK. SALLY M. LODEWICK, New York, N. Y. Filed May 22, 1928. Serial No. 26,807. Term of patent 3½ years.



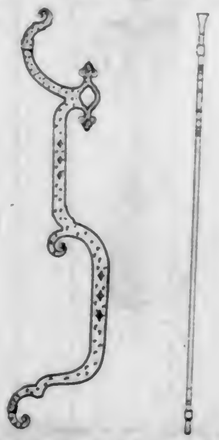
The ornamental design for a lady's pocketbook, as shown and described.

77,012. CHANDELIER. CHARLES W. LOGAN, Kenmore, N. Y. Filed Mar. 10, 1928. Serial No. 25,789. Term of patent 3½ years.



The ornamental design for a chandelier, as shown.

77,013. BOX. ROBERT LIDDELL, Puteaux, France, assignor to Société Parisienne des Produits de Beaute "Ganna Walska," Pantin, France. Filed Oct. 3, 1927. Serial No. 23,614, and in France June 3, 1927. Term of patent 7 years.



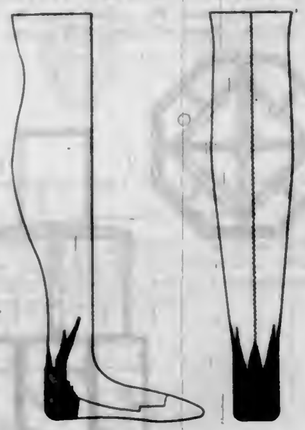
The ornamental design for a box substantially as shown and described.

77,014. LIGHTING-FIXTURE PLATE OR ANALOGOUS ARTICLE. NORMAN LIPSKY, New York, N. Y., assignor to Halcolite Company, Inc., a Corporation of New York. Filed Sept. 18, 1928. Serial No. 28,187. Term of patent 7 years.

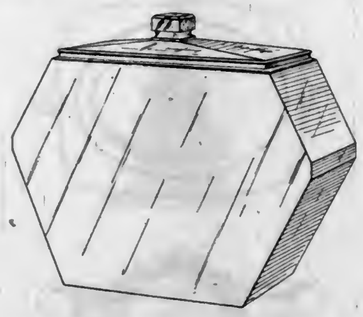
The ornamental design for a lighting fixture plate or analogous article, substantially as shown and described.

77,015. LIGHTING-FIXTURE STREAMER OR ARTICLE OF ANALOGOUS NATURE. NORMAN LIPSKY, New York, N. Y., assignor to Halcolite Company, Inc., a Corporation of New York. Filed Sept. 18, 1928. Serial No. 28,188. Term of patent 7 years.

The ornamental design for a lighting fixture streamer or article of analogous nature substantially as shown.



77,016. LIGHTING-FIXTURE WALL BRACKET OR ARTICLE OF SIMILAR NATURE. NORMAN LIPSKY, New York, N. Y., assignor to Halcolite Company, Inc., a Corporation of New York. Filed Sept. 18, 1928. Serial No. 28,189. Term of patent 7 years.

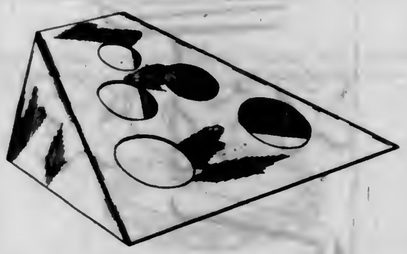


The ornamental design for a lighting fixture wall bracket or article of similar nature substantially as shown.

77,017. HOSIERY. FRED H. L. LUEDDE, Philadelphia, Pa. Filed Dec. 16, 1927. Serial No. 24,506. Term of patent 14 years.

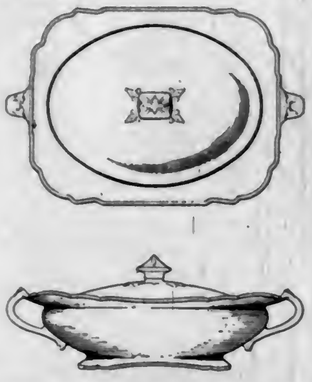
The ornamental design for hosiery as shown.

77,018. FISH BOWL OR SIMILAR ARTICLE. THOMAS W. MCCREARY, Monaca, Pa., assignor to The Phoenix Glass Company, Monaca, Pa., a Corporation of West Virginia. Filed May 17, 1928. Serial No. 26,720. Term of patent 7 years.



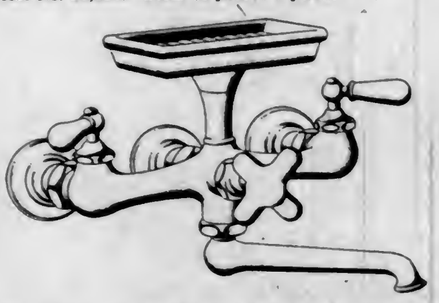
The ornamental design for a fish bowl or similar article, as shown.

77,019. SCROLL ARM FOR AN ELECTRIC-LIGHTING FIXTURE OR SIMILAR ARTICLE. GLENN E. MCFADDEN, Kansas City, Mo. Filed Feb. 23, 1928. Serial No. 25,531. Term of patent 7 years.



The ornamental design for a scroll arm for an electric lighting fixture, or similar article, substantially as shown.

77,020. FIRESIDE GOLF GREEN. CARL ARNO MEILICKE, Chicago, Ill. Filed Feb. 6, 1928. Serial No. 25,246. Term of patent 14 years.

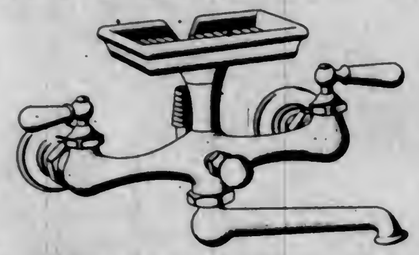


The ornamental design for a fireside golf green, as shown.

77,021. COVERED DISH OR SIMILAR ARTICLE. THOMAS C. MERRIMAN, Tunstall, England, assignor to William S. Pitcairn Corporation, a Corporation of New York. Filed June 30, 1928. Serial No. 27,335. Term of patent 7 years.

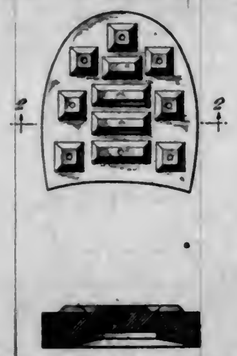
The ornamental design for a covered dish or similar article as shown.

77,022. COMBINATION SINK FAUCET. ROBERT H. MUELLER, Decatur, Ill., assignor to Mueller Co., Decatur, Ill., a Corporation of Illinois. Filed May 23, 1928. Serial No. 26,814. Term of patent 7 years.



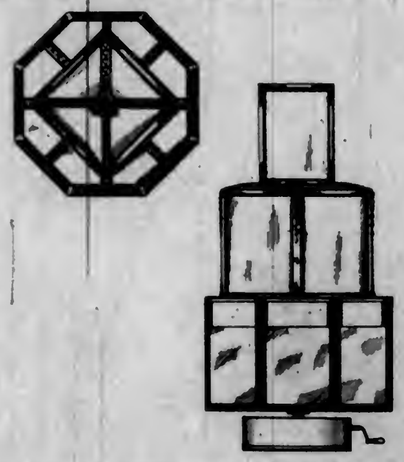
The ornamental design for a combination sink faucet, substantially as shown.

77,023. COMBINATION SINK FAUCET. ROBERT H. MUELLER, Decatur, Ill., assignor to Mueller Co., Decatur, Ill., a Corporation of Illinois. Filed May 23, 1928. Serial No. 26,815. Term of patent 7 years.



The ornamental design for a combination sink faucet, substantially as shown.

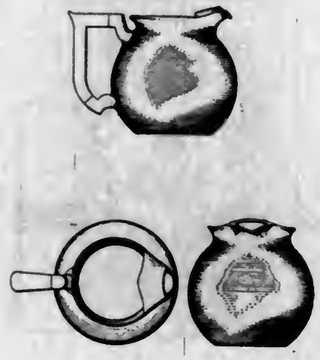
77,024. COMBINATION SINK FAUCET. ROBERT H. MUELLER, Decatur, Ill., assignor to Mueller Co., Decatur, Ill., a Corporation of Illinois. Filed May 23, 1928. Serial No. 26,816. Term of patent 7 years.



The ornamental design for a combination sink faucet, substantially as shown.

77,025. SHOE HEEL. LAURENCE M. OAKLEY, Trenton, N. J., assignor to Essex Rubber Company, Trenton, N. J., a Corporation of New Jersey. Filed Sept. 24, 1928. Serial No. 28,259. Term of patent 14 years.

The ornamental design for a shoe heel as shown.



77,026. ADVERTISING-DISPLAY FIXTURE. JOHN P. RILEY, Philadelphia, Pa. Filed Sept. 3, 1927. Serial No. 23,285. Term of patent 3½ years.

The ornamental design for an advertising display fixture as shown.

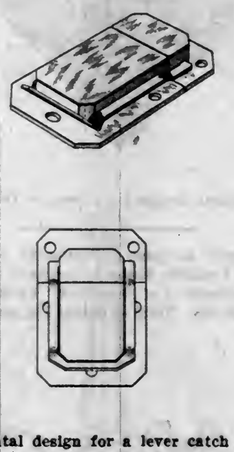
77,027. PITCHER. MARSDEN JESIAH PERRY, Jr., Providence, R. I. Filed Aug. 4, 1928. Serial No. 27,705. Term of patent 14 years.

The ornamental design for a pitcher substantially as shown.

77,028. VALVE FITTING. EMIL PRICE and WILLIAM A. PFISTER, Los Angeles, Calif. Filed May 15, 1928. Serial No. 26,680. Term of patent 14 years.

The ornamental design for a valve fitting, as shown.

77,029. SOLE FOR A SHOE. JAROSLAV RICHTER and RUDOLF JEŽEK, Holice, Czechoslovakia. Filed July 6, 1928, Serial No. 27,401, and in Czechoslovakia May 8, 1928. Term of patent 14 years.

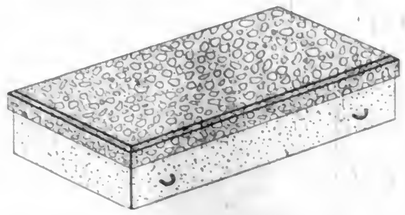


The ornamental design for a sole for a shoe as shown.

77,030. ARTIFICIAL TREE. FRANK JOSEPH RIHA, known as Don Riha, Chicago, Ill. Filed Aug. 31, 1927. Serial No. 23,252. Term of patent 3½ years.

The ornamental design for an artificial tree, as shown and described.

77,031. LEVER CATCH. JOHN B. RUSS, Shelton, Conn. Filed July 2, 1928. Serial No. 27,360. Term of patent 7 years.

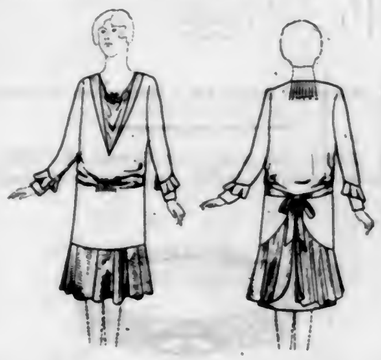


The ornamental design for a lever catch as shown.

77,032. RING. ABRAHAM SAGER, Chicago, Ill. Filed Sept. 19, 1928. Serial No. 28,199. Term of patent 14 years.

The ornamental design for a ring as shown.

77,033. GRAVE COVER OR SIMILAR ARTICLE. IRA E. SARBER, Elmore, Ala. Filed Apr. 5, 1928. Serial No. 26,134. Term of patent 14 years.



The ornamental design for a grave cover or similar article, as shown.

77,034. BOX. FRANK J. SCHLEISCHER, St. Louis, Mo. Filed May 31, 1928. Serial No. 26,924. Term of patent 14 years.

The ornamental design for a box, as shown.

77,035. DRESS. MILDRED C. SCHMOLZE, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 19, 1928. Serial No. 28,208. Term of patent 3½ years.

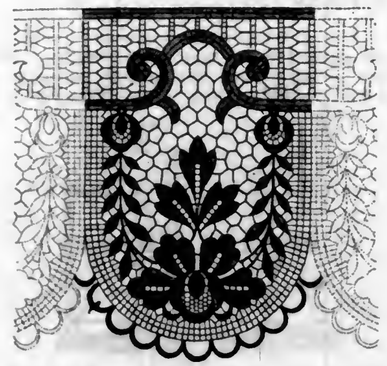
The ornamental design for a dress substantially as shown and described.

77,036. DRESS. MILDRED C. SCHMOLZE, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 19, 1928. Serial No. 28,209. Term of patent 3½ years.

The ornamental design for a dress substantially as shown and described.

77,037. DRESS. MILDRED C. SCHMOLZE, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 19, 1928. Serial No. 28,210. Term of patent 3½ years.

The ornamental design for a dress substantially as shown and described.



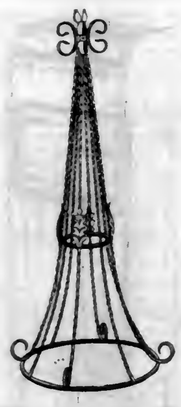
77,038. EMBROIDERED LACE EDGING. HENRY SCHWARBER, Weehawken, N. J. Filed Sept. 15, 1928. Serial No. 28,152. Term of patent 3½ years.

The ornamental design for embroidered lace edging, as shown.

77,039. EMBROIDERED LACE EDGING. HENRY SCHWARBER, Weehawken, N. J. Filed Sept. 26, 1928. Serial No. 28,280. Term of patent 3½ years.

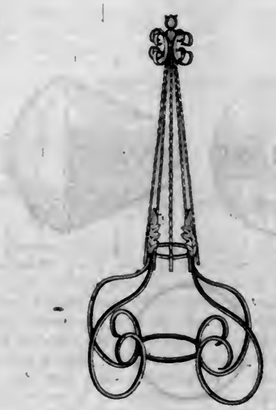
The ornamental design for embroidered lace edging, as shown.

77,040. DRESS. MAUDE SIEGEL, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 17, 1928. Serial No. 28,178. Term of patent 3½ years.



The ornamental design for a dress substantially as shown and described.

77,041. LAMP SHADE. CHARLES F. STALLBAUM, Everett, Wash. Filed May 31, 1928. Serial No. 26,925. Term of patent 3½ years.

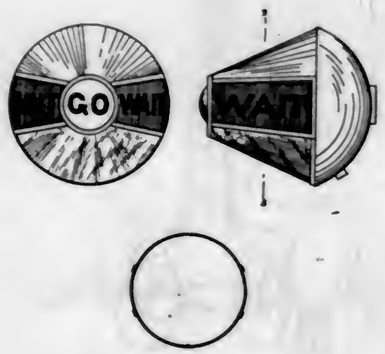


The ornamental design for a lamp shade, as shown.

77,042. LAMP BASE. CHARLES F. STALLBAUM, Everett, Wash. Filed May 31, 1928. Serial No. 26,927. Term of patent 3½ years.

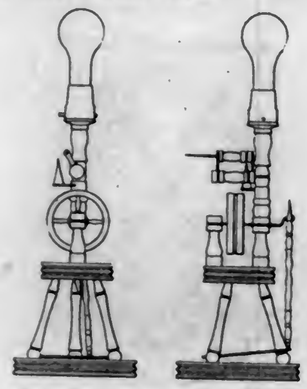
The ornamental design for a lamp base, as shown.

77,043. LAMP BASE. CHARLES F. STALLBAUM, Everett, Wash. Filed May 31, 1928. Serial No. 26,928. Term of patent 3½ years.



The ornamental design for a lamp base, as shown.

77,044. TOWEL CABINET. FRANK M. STEINER, Minneapolis, Minn., assignor to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed June 29, 1928. Serial No. 27,326. Term of patent 14 years.

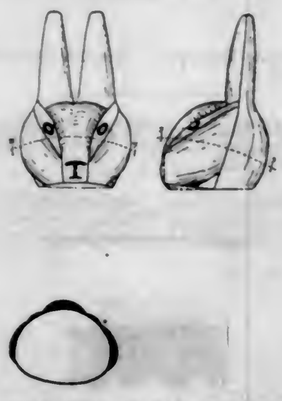


The ornamental design for a towel cabinet, as shown.

77,045. SIGNAL-LAMP CASING. DUANE F. SWARTWOUT, Los Angeles, Calif. Filed Aug. 8, 1928. Serial No. 27,745. Term of patent 3½ years.

The ornamental design for a signal lamp casing, substantially as shown.

77,046. LAMP STAND. LEO H. TUTT and EUGENE C. CLARK, Topeka, Kans. Filed June 12, 1928. Serial No. 27,095. Term of patent 7 years.

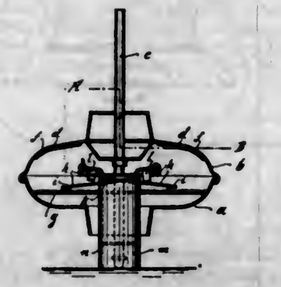


The ornamental design for a lamp stand, as shown.

77,047. LIGHTING-FIXTURE WALL BRACKET. WALTER VON NESSEN, New York, N. Y., assignor to Efcolite Corporation, a Corporation of New York. Filed Sept. 22, 1928. Serial No. 28,239. Term of patent 7 years.

The ornamental design for a lighting-fixture wall bracket substantially as shown and described.

77,048. DOLL HEAD. LORENA B. WALKER, Irving Township, Barry County, Mich. Filed Dec. 10, 1927. Serial No. 24,441. Term of patent 3½ years.



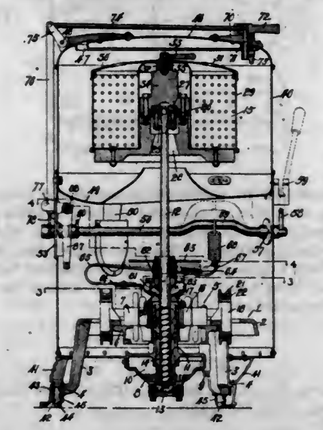
The ornamental design for a doll head substantially as shown.

# PATENTS

## GRANTED NOVEMBER 27, 1928.

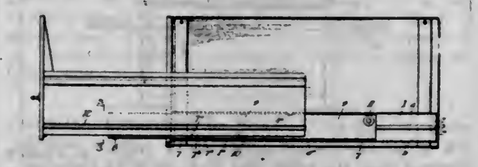
1,692,802. ILLUMINATED TOP. CARL ARNOLD, Nuremberg, Germany. Filed July 21, 1926, Serial No. 124,057, and in Germany Feb. 22, 1926. 1 Claim. (Cl. 46—32.)

An illuminated top comprising in combination a body of the top, a top plate of the body, apertures in said top plate, transparent ring segments in different colours covering said apertures, a bottom plate, a vertical stationary sleeve in the bottom plate serving as support for said body, a horizontal plate fixed on the top of said vertical sleeve, a ring on the lower portion of said body, a band of emery on said ring, radial arms movably mounted at their outer ends on said horizontal plate, a block of cerium iron on the end of each arm and resting upon said emery band, and two stops integral with the arms, inwardly projecting from the arms, and engaging with the outer edge of the horizontal plate in such a manner as to necessarily limit the vibratory movements of said arms.



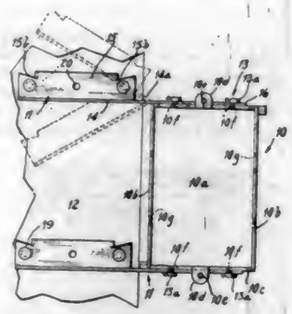
1,692,803. PROPULSIVE AMUSEMENT CAR OR EXERCISER. HAROLD F. BARTLEY, New York, N. Y. Filed Aug. 9, 1927. Serial No. 211,686. 15 Claims. (Cl. 208—38.)

1. A propulsive vehicle or exerciser, comprising a body capable of lateral movement in alternately-opposite directions, and a plurality of propelling devices having articulated connection to the body and arranged for successive ground-contact and thereupon effective to propel the vehicle longitudinally.



1,692,804. CENTRIFUGAL MACHINE. WILLIAM EMIL BOCK, Eagle Point Colony, Ohio, assignor, by mesne assignments, to The Bock Laundry Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed Aug. 24, 1923. Serial No. 659,120. 5 Claims. (Cl. 192—136.)

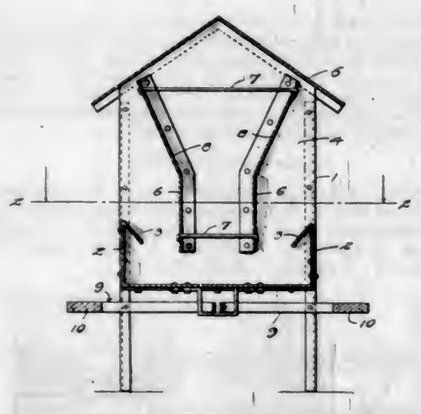
4. In combination, a driven means, an enclosing case for the means having a cover capable of opening to permit access thereto, a manually controlled locking means for the cover having a reciprocally movable member, a lever having an arm engaging said member and operable when in one position of its movement to prevent cover releasing movements of the locking means, movable means normally standing in one position of its movement and adapted



when held in such position to coact with said member and prevent cover releasing movements of said locking means, and means centrifugally operated by said driven means to move a part thereof into the path of movement of said movable means to hold it in its normal position of movement until the speed of movement of the driven means has been reduced a predetermined extent.

1,692,805. DRAWER SUPPORT. AXEL H. ANDERSSON, Benton Harbor, Mich., assignor, by mesne assignments, to Remington Rand Inc., Tonawanda, N. Y., a Corporation of Delaware. Filed Feb. 7, 1924. Serial No. 691,127. 2 Claims. (Cl. 45—77.)

2. A drawer support comprising a pair of stationary track members each having a vertical intermediate portion secured to the drawer casing and horizontal upper and lower flanges extending towards each other, a pair of floating members each having a vertical body portion arranged parallel with and adjacent said stationary track member and having four rollers mounted on the inner side thereof, the said rollers including a front bottom roller above the plane of the bottom flange and a pair of upper and lower intermediate rollers and an upper rear roller below the plane of said upper flange, the upper flanges of the track members being severally longitudinally slitted and the portion of each member adjacent its slit being bent down in a short loop below the level of the top of the associated floating member, and a pair of rails secured to the drawer and severally arranged to pass below said upper rollers and above said lower rollers of its corresponding floating member.

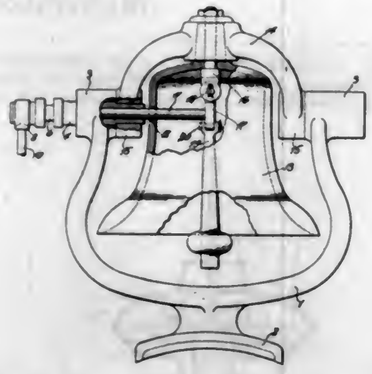


1,692,806. ELECTRIC OUTLET-BOX SUPPORT. LOUIS BARNETT, Brooklyn, N. Y., assignor to Standard Flexible Electric Cable Corporation, Brooklyn, N. Y., a Corporation of New York. Filed May 7, 1927. Serial No. 189,466. 4 Claims. (Cl. 247—21.)

1. A device of the character described for attaching an outlet box to a stud, comprising a member having an angled portion, a flange of said portion formed with means for attaching the device to the face of the stud, the other flange of said angled portion being extended to form a flat strip, said strip being provided with means for attachment to the outlet box.

---

1,692,807. POULTRY FEEDER. HAROLD S. BARNES, Allentown, Pa. Filed July 23, 1927. Serial No. 208,008. 3 Claims. (Cl. 119—55.)



1. A poultry feeder comprising a frame, a housing mounted upon the frame and enclosing a food hopper, a trough mounted upon the frame below the hopper and forming part of the housing, a perch pivoted to the frame, the outer portion of the perch extending beyond the trough and the inner portion being disposed beneath the trough and against which it is adapted to strike when the outer end of the perch is depressed by the weight of a fowl, and means attached to the bottom of the trough and depending below the same limiting the downward movement at the inner end of the perch.

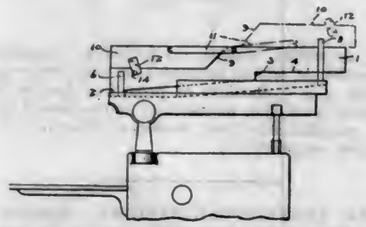
---

1,692,808. BELL-RINGING MECHANISM. ALBERT L. BAUER, St. Louis, Mo., assignor of one-half to Barnett Morse Brownell, St. Louis, Mo. Filed Aug. 26, 1927. Serial No. 215,553. 5 Claims. (Cl. 116—25.)

1. A bell ringing mechanism comprising a stationary frame, a yoke pivoted to swing in said frame, a bell supported by said yoke, a bell clapper, a link pivotally connected to said bell clapper, a support, a pivot connection between said support and said link, said pivot connection

having an axis transverse of the axis of the pivot connection between the clapper and the link, and a reciprocating plunger extending through the bell and adapted to reciprocate said link.

---



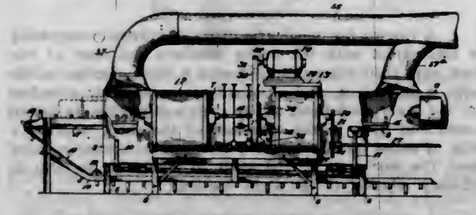
1,692,809. BRACELET CHAIN. SIDNEY O. BIGNEY, Attleboro, Mass., assignor to S. O. Bigney & Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Feb. 18, 1927. Serial No. 169,231. 1 Claim. (Cl. 63—5.)

A bracelet comprising a series of connected units, each unit comprising a body member and a slide member movable relatively thereto from one end only thereof, each of said units being disposed to permit the slide member to extend in the same direction from the body member, similar hooks connected to the end units of the bracelet, one hook having a tongue folded about the body member, and the other hook having a loop through which the slide member passes whereby each of said units is extendible in the same direction and the end hooks are attached to relatively different parts of the end units.

---

1,692,810. GUIDE FOR MEAT SLICERS. JOHN STANLEY BLAIKIE, Toronto, Ontario, Canada. Filed Sept. 27, 1927. Serial No. 222,362. 4 Claims. (Cl. 146—102.)

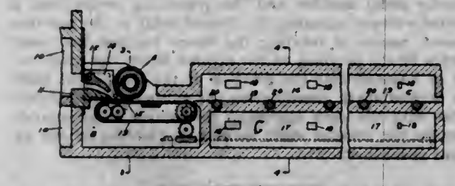
1. A guide for meat slicers, comprising a thin metal plate adapted to be supported in a vertical position at the outward side of the slicer table and having the forward end formed with a removable section.



1,692,811. MANUFACTURE OF HYDROGEN. FRANK C. BLAKE, deceased, Wilmington, Del., by Roberta L. Blake, administratrix, Wilmington, Del., assignor to Lazote Inc., Wilmington, Del., a Corporation of Delaware. Filed July 20, 1927. Serial No. 207,319. 5 Claims. (Cl. 23—213.)

4. The process of manufacturing hydrogen which comprises subjecting steam together with carbon monoxide to the action of a non-ferrous catalyst in an apparatus the interior surfaces of which are of a non-ferrous material.

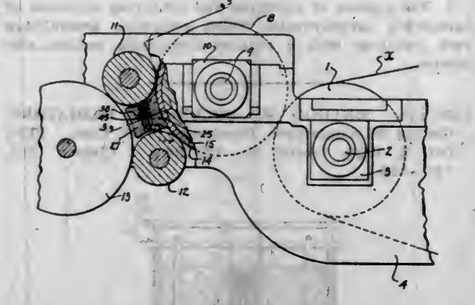
---



1,692,812. MACHINE FOR WASHING AND DRYING SHEET-METAL BOXES OR CANS. GEORGE S. BLAKESLEE, Oak Park, Ill.; George R. Blakeslee executor of the said George S. Blakeslee, deceased. Filed Jan. 17, 1921. Serial No. 437,826. 13 Claims. (Cl. 34—12.)

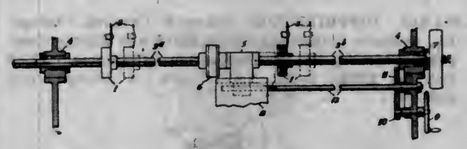
1. A machine of the class described comprising a horizontally extending housing, one portion of which constitutes a cleansing compartment and another portion of which constitutes a drying compartment, said compartments being directly contiguous and in constant communication, a conveyor passing through said cleansing and drying compartments for conducting articles through both, means in said cleansing compartment for cleansing said articles, said means tending to saturate the air contained in said cleansing compartment with moisture, a first outlet flue connected to said housing adjacent the inlet end of said cleansing compartment, a second outlet flue connected to said housing adjacent the inlet end of said drying compartment, suction means connected to both of said outlet flues, a hot air flue extending alongside said drying compartment, means establishing communication between said hot air flue and said drying compartment at a plurality of spaced points, and means for impelling a flow of heated air through said hot air flue, the circulation of heated air being in a direction counter to the movement of the articles through said compartments and said circulated air being exhausted through both of said outlet flues, whereby the moisture laden air of said cleansing compartment is prevented from passing into or through said drying compartment.

---



1,692,813. MANUFACTURE OF GLASS. EDWARD T. BROWN, Detroit, Mich., assignor to Ford Motor Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 16, 1920. Serial No. 358,979. 24 Claims. (Cl. 49—3.)

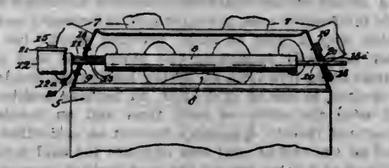
1. The method of manufacturing plate glass continuously consisting of allowing the molten glass to flow from the melting tank through a spout of substantially the width of the glass desired onto a moving conveyor, thence between the conveyor and a roller to reduce the glass to a predetermined thickness, thence through a leer to temper and harden the glass, thence between pulling devices which draw the glass through and out of the leer.



1,692,814. PRINTING PRESS. MARTIN W. BRUESHABER, Chicago, Ill., assignor to Goss Printing Press Company, a Corporation of Illinois. Filed Apr. 20, 1923. Serial No. 633,399. 2 Claims. (Cl. 101—220.)

1. A rotary printing press including in combination a form cylinder, an impression cylinder, means for supplying ink to the form cylinder comprising an ink drum and two form rollers, and a member engaging medianly with the exterior of the form cylinder to insure true running thereof, said member being mounted in the space between the ink drum, form rollers and form cylinder so as to resist the major component of thrust from the impression cylinder.

---

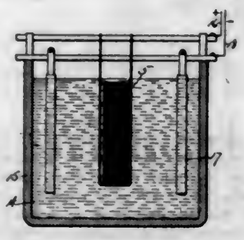


1,692,815. SLITTING MEANS. JAMES A. CAMERON, Brooklyn, N. Y., assignor to Cameron Machine Company, Brooklyn, N. Y, a Corporation of New York. Filed Sept. 21, 1927. Serial No. 220,870. 3 Claims. (Cl. 164—60.)

1. The combination with slitting means consisting of a plurality of sets of overlapping shears, of a plurality of shaft sections arranged and sustained end to end to support one of the members of each set of shears, and flexible coupling means between the shaft sections to admit of misalinement of said sections but not of disengagement of the members of the sets of shears from overlapping relation.

---

1,692,816. HUMIDIFIER. EARL A. CHAMBERLIN, Cedar Rapids, Iowa. Filed Sept. 30, 1927. Serial No. 223,139. 4 Claims. (Cl. 126—113.)

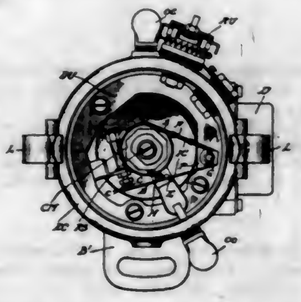


1. A humidifier, comprising a pan adapted for insertion in the upper part of a furnace jacket, means for supporting the pan, a plate carried thereby and adapted to close the opening for the pan in the furnace jacket, a valve-chamber formed with a trap open at its upper end, and serving as an outer receptacle for water, and a pipe connecting one end of the pan with said trap.

1,692,817. PROCESS OF TREATING CORN-SYRUP AND CORN-SUGAR LIQUORS. CLARENCE H. CHRISTMAN, Chicago, Ill., assignor, by mesne assignments, to National Aluminate Corporation, Chicago, Ill., a Corporation of Delaware. Filed Feb. 21, 1927. Serial No. 170,060. 20 Claims. (Cl. 127—40.)

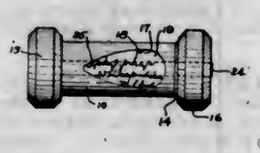
1. The process of purifying and clarifying solutions of hydrolyzed carbohydrates which comprises neutralizing such solutions with a reagent comprising sodium aluminate.

---



1,692,818. METHOD OF SOLDERING RADIATORS. GEORGE W. CHRISTOPH, Warehouse Point, Conn. Filed Oct. 2, 1926. Serial No. 139,096. 7 Claims. (Cl. 113—112.)

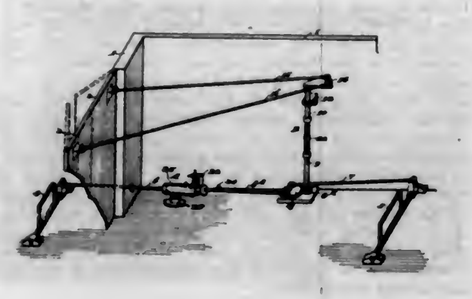
1. The process of securing members together which consists in assembling said members leaving pockets at the joints therebetween, applying a coating to the outer surfaces of said members and simultaneously filling the pockets with the coating material, and then removing the coating material until the surfaces of the members with the exception of said pockets are free of the material.



---

1,692,819. DISTRIBUTOR. HIRAM D. CURRIER, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 16, 1924. Serial No. 743,868. 4 Claims. (Cl. 200—30.)

1. A device of the character described including a rotatable interrupter cam, a nonperiodic interrupter member provided with a pair of arms, pivoting means for said member integrally formed at the junction of said arms, said arms being free from all spring tension, an insulating strip secured to one of said arms, an angular member integral with the other of said arms and an insulating strip secured thereto, a movable contact on said other arm located on the end of said arm opposite the said pivoting means and at a point beyond the said angular member and a stationary contact associated therewith, said insulating strips on said first arm and said angular member of said other arm engaging said cam in two places to cause said movable contact to move in and out of engagement with said stationary contact upon rotation of said interrupter cam, said cam comprising the sole means for causing the movement of said arms.

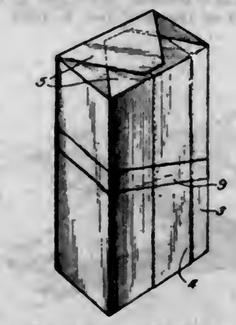


1,692,820. CARRIER FOR PNEUMATIC-DISPATCH SYSTEMS. WILLIAM HENRY DINSPEL, New York, N. Y., assignor to G. & G. Atlas Systems, Inc., New York, N. Y., a Corporation of New York. Filed June 15, 1926. Serial No. 116,242. 3 Claims. (Cl. 243—35.)

1. A carrier for pneumatic dispatch systems comprising a shell fitted with felt buffer members and open at one end, said shell being provided with a sight opening in the side wall thereof, and a looped spring member attached to the inner closed end of the shell and having its bowed outer end lying in the open end of the shell, whereby a slip of paper may be inserted between the spring member and the side wall of the shell to maintain the slip in display relation to the sight opening.

---

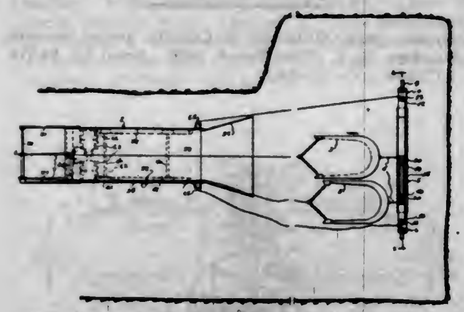
1,692,821. DOOR-OPERATING MECHANISM. PERCY ROBERT DOBSON, Calgary, Alberta, Canada, assignor to Bell Equipment Company Limited, Calgary, Canada. Filed July 21, 1927, Serial No. 207,525, and in Canada June 30, 1927. 5 Claims. (Cl. 268—35.)



1. The combination with door operating mechanisms employing exterior and interior pivotal pedal members actuated by vehicle wheels, a divided shaft intermediate the exterior pedal member and the remaining mechanism, a rotatable sleeve engaging the divided shaft at the junction thereof, means of rotating the sleeve through the intersection of the portions of the divided shaft, the whole being so adapted that the position of the sleeve will unite the divided shaft, coordinating the motion of the exterior pedal with the door operating mechanism or alternately disunite the divided shaft making the motion of the exterior pedal ineffective.

---

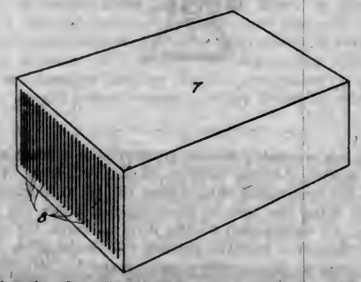
1,692,822. MANUFACTURE OF MOISTUREPROOF PAPER PACKAGES. HENRY G. ECKSTEIN, Chicago, Ill., assignor to The Cracker Jack Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 2, 1923. Serial No. 629,375. 5 Claims. (Cl. 93—2.)



1. The method of moisture-proofing elongated, filled cartons, which consists in enfolding the same in paper wrappers, tightly sealing the folds of the wrapper, then separately immersing the opposite end portions of each package while sustained by an undipped portion in a bath

of melted paraffin, and, immediately after each immersion inverting the package to prevent excess drainage, substantially as described.

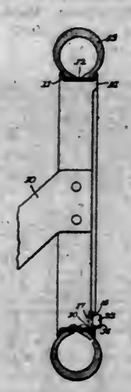
---



1,692,823. APPARATUS FOR HANDLING LOOSE MATERIAL. SIDNEY W. FARNHAM, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 12, 1926. Serial No. 128,753. 16 Claims. (Cl. 37—115.)

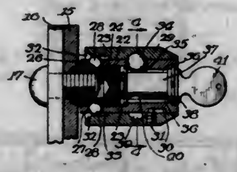
10. In a device of the character described, the combination of an inclined chute, a pair of scrapers, and means for alternately operating said scrapers on said chute in coincident paths.

---



1,692,824. FILTER OR STRAINER AND METHOD OF MAKING THE SAME. WILLIAM H. FURNESS, National Park, N. J., assignor to Cellocilk Company, Philadelphia, Pa., a Corporation of Delaware. Filed Sept. 1, 1925. Serial No. 53,800. 1 Claim. (Cl. 210—203.)

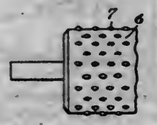
The herein described process of making a filter or strainer which consists in embedding a plurality of thin metallic sheets in a wax-like block, in shaving said block, in removing the wax-like substance from the metallic shavings produced and in baling the clean shavings.



1,692,825. LOCK. WILLIAM GANZ, Chicago, Ill. Filed May 13, 1927. Serial No. 191,083. 2 Claims. (Cl. 70—122.)

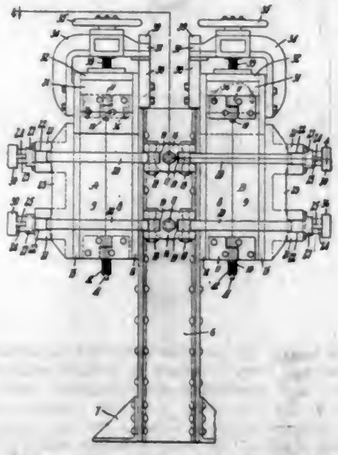
1. In a device of the class described, a shield having two cylindrical bores arranged in parallel relation and a transverse bore connecting the cylindrical bores, a ball mounted in the transverse bore and having a diameter greater than the distance between the two bores, a lock mechanism in one of the bores including means for forcing the ball to project into the other bore.

---



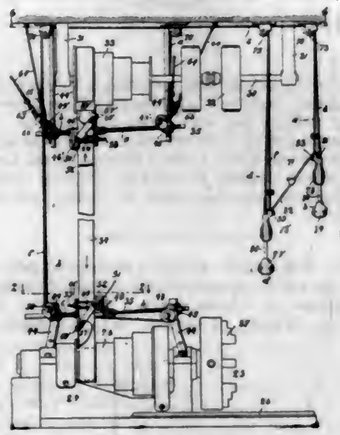
1,692,826. LOCK. WILLIAM GANZ, Chicago, Ill. Filed June 15, 1927. Serial No. 198,996. 5 Claims. (Cl. 70—122.)

1. In a device of the class described, a lock barrel having a longitudinal bore and a plurality of transverse bores extending through the wall of the longitudinal bore and of a diameter greater than the thickness of said wall, balls in said transverse bores, a sleeve slidable on the barrel and adapted in one position to force the balls to project into the longitudinal bore and means for locking the sleeve in that position.



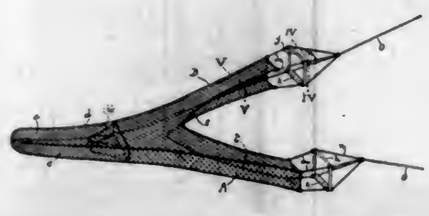
---

1,692,827. WRINGER. VINCENT GEHRLEIN, Erie, Pa., assignor to Lovell Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed June 1, 1926. Serial No. 112,885. 3 Claims. (Cl. 15—262.)



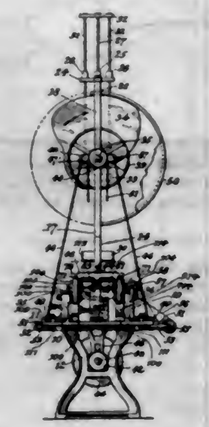
1. In a wringer, the combination of a frame; and rolls mounted in the frame, one of said rolls being a driving roll and having a central rod and a surrounding integral wall of comparatively soft rubber, the surface of the soft rubber being formed with protuberances, said protuberances being yieldable under the pressure of the wringer to approximately flatten out to the general contour, or surface of the wringer roll.

1,692,828. MOLD FOR RUBBER BOOTS. ALFRED A. GLIDDEN, Watertown, HOWARD G. ELLIS, Waltham, and HERBERT L. DAVIS, Walpole, Mass., assignors to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Aug. 23, 1927. Serial No. 214,941. 9 Claims. (Cl. 18—38.)



1. A mold for rubber boots and the like having, in combination, a standard, a forming plate for a side of the leg and foot portions of a boot rigidly fast to said standard, another forming plate for the other side of the leg and foot portions of said boot pivotally mounted upon said first-mentioned forming plate, an outer sole forming plate, and an expandible tree between the forming plates and co-operating therewith to form a boot.

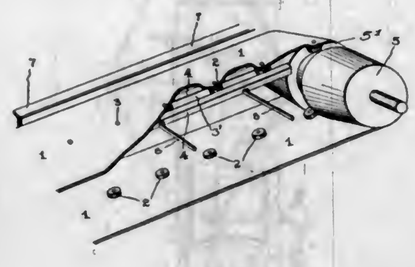
1,692,829. CONE BELT SHIFTER. NILS E. GOODACTIVE, New York, N. Y. Filed Nov. 3, 1922. Serial No. 598,809. 25 Claims. (Cl. 64—4.)



1. In a belt shifter of the character set forth, the combination with a pair of pulleys and a belt operating thereover, of shifter units co-operating with the belt adjacent to the respective pulleys, hand grip devices remote from the belt and located for movement in the same direction and in the same line, and cables extending from the belt shifter units to the respective hand grip devices, said grip devices constituting means for operating positively the cables independently of each other and in succession as a result of a single movement of the operator's hand in a single direction.

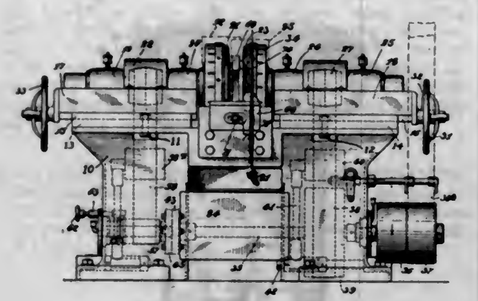
1,692,830. COMBINED SEINE NET AND BOTTOM DRAGNET WITH TRAPPING WINGS. CARL HANSEN, Esbjerg, and PAUL LETH, Copenhagen, Denmark; said Leth assignor to said Hansen. Filed Dec. 2, 1926, Serial No. 152,129, and in Denmark Dec. 3, 1925. 3 Claims. (Cl. 43—9.)

1. A combined seine and drag-net, comprising a net proper, trapping wings extending forward from said net and each having a top portion, a bottom portion and a side portion, and a stretching frame secured to the forward end of each of said trapping wings and adapted to maintain the wings approximately channel-shaped in cross section.



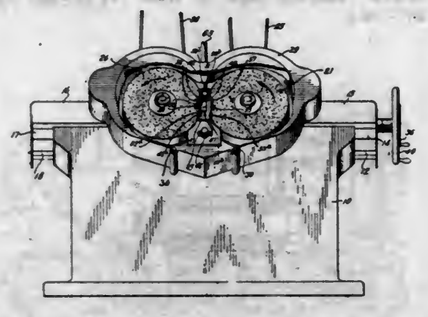
1,692,831. BOX-COVERING MACHINE. IRVING HANSHE, Brooklyn, N. Y. Filed Feb. 6, 1926. Serial No. 86,374. 4 Claims. (Cl. 93—54.)

1. A box wrapping machine comprising a box blank and cover carrier, folders, tuckers, strippers and a conveyor, means for controlling said carrier to permit an unretarded drop to make one fold, a dwell during which the tuckers operate, an unretarded second drop to make the end fold and to impart a positive upward movement after the box is delivered to the conveyor, and means for retracting certain of the folders, said retracting means comprising a frame, retracting cams thereon, a leaf spring normally moving said retracting means out of actuating position, and a cam bearing on said spring to deflect same to actuate said retracting means.



1,692,832. CONVEYER-BELT GUIDE. WILLIAM H. HARRISON, Paterson, N. J., assignor to Portable Machinery Company Inc., Clifton, N. J., a Corporation of New Jersey. Filed July 13, 1927. Serial No. 205,297. 4 Claims. (Cl. 198—202.)

1. In a device of the character described, the combination of a frame, an endless belt thereon, pulleys for said belt, guide lugs on the under side of the belt, and rails extending longitudinally of the belt and spaced to form a channel for said guide lugs.

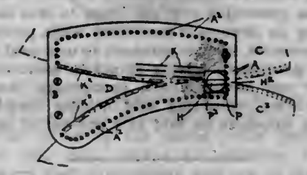


1,692,833. ROLL-GRINDING APPARATUS. LEWIS R. HEIM, Danbury, Conn., assignor, by mesne assignments, to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 8, 1921. Serial No. 443,389. 16 Claims. (Cl. 51—116.)

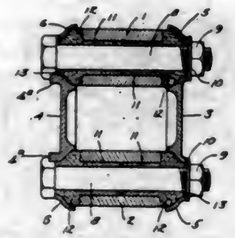
1. In apparatus of the general nature of that herein described, in combination, a grinding wheel, a regulating wheel, a pair of telescoping hoods, one for each of said wheels for substantially enclosing said wheels, a carrier extending between said wheels for supporting cylindrical bodies in operative relation thereto, and means for adjusting one of said hoods toward or away from the other.

1,692,834. ART AND APPARATUS FOR PRODUCING GROUND ARTICLES. LEWIS R. HEIM, Danbury, Conn., assignor, by mesne assignments, to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 17, 1923. Serial No. 619,597. 14 Claims. (Cl. 51—103.)

1. In apparatus of the character described, in combination, a grinding wheel, a regulating wheel rotatable at relatively low speed, said wheels being adapted to present operative surfaces traveling in opposite directions with respect to an intermediate point, and means positioned between the operative surfaces of said wheels for holding work of round section in operative relation to said two wheels and for guiding the work in an axial direction in a path making an angle with the horizontal equal to or greater than that at which gravity will feed the work along without a feeding component of either of said wheels.

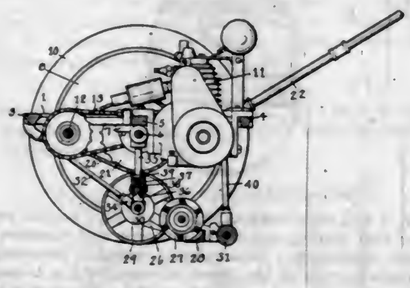


1,692,835. BIRD CAGE. NATHAN W. HENDRYX, New Haven, Conn., assignor to The Andrew B. Hendryx Company, New Haven, Conn. Filed Sept. 1, 1925. Serial No. 53,903. 16 Claims. (Cl. 119—17.)



16. A bird cage, comprising an upper body portion and a lower base portion, and means to secure said members together, comprising a hook member swingably mounted to the body portion of the cage and comprising a U-shaped member bent in the form of a hook and a cam-shaped body portion, a slide secured to the bars of the cage and engaging the body portion of said hook to positively move it into and out of engaging position.

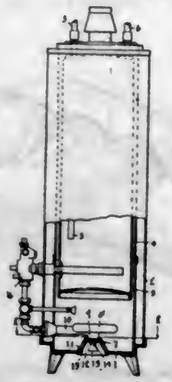
1,692,836. DABBING BRUSH FOR WOOL-COMBING MACHINES. PATRICK HENRY, Bradford, England. Filed May 12, 1927, Serial No. 190,729, and in Great Britain Feb. 25, 1927. 5 Claims. (Cl. 19—124.)



1. The combination with a dabbing brush provided with an air pressure dab at the tangent part of the two circles, of knives mounted between bristling to dab into the large circle, said knives acting as guides for the surplus air to distribute same over a large area of the dabbing brush.

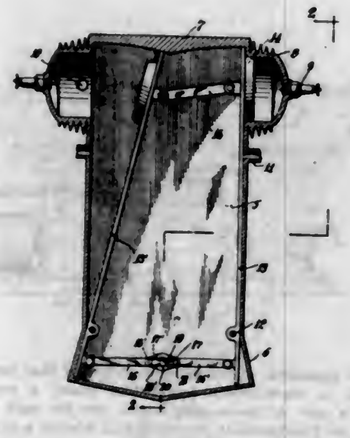
1,692,837. OILLESS SPRING SHACKLE. RAYMOND HENRY, Rock Island, Ill., assignor, by mesne assignments, to O.-N. Spring Shackle Company, Davenport, Iowa, a Corporation of Iowa. Filed Jan. 15, 1926, Serial No. 81,384. Renewed Sept. 6, 1928. 14 Claims. (Cl. 267—54.)

1. A connection of the type described comprising a member having a cylindrical bearing, a bolt extending through said bearing, an elastic tubular bushing interposed between said bolt and said bearing, said bushing having a substantially frusto-conical head at its outer end, and means co-acting with said bolt to apply inward pressure to the inclined face of said head, to press the bushing tightly between the bolt and the bearing.



1,692,838. POWER LAWN MOWER. HERBERT S. HUMPHREY, Kalamazoo, Mich. Filed Dec. 16, 1924. Serial No. 756,229. 15 Claims. (Cl. 56—26.)

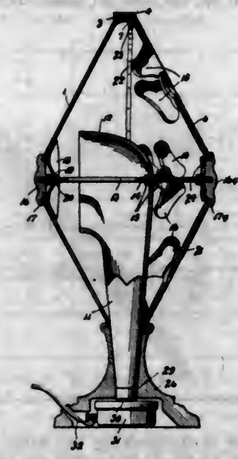
5. The combination of a main frame, an axle, carrying and driving wheels having ratchet connections to said axle, a driven sprocket on said axle, a motor mounted on said main frame at the rear of said axle, a jack shaft mounted on said main frame at the front of said axle, driving connections from said motor to said jack shaft, a sub-frame disposed below said main frame, a cutter unit on said sub-frame provided with a driven sprocket, driving connections from said motor to said cutter unit, carrying wheels for said sub-frame, draft bars pivotally mounted at the front end of said main frame and pivotally connected to said sub-frame, links connecting said sub-frame to said main frame for limiting its downward movement while permitting its upward movement, springs arranged to urge said sub-frame yieldingly downward, driving sprockets mounted on said jack shaft and having clutch connections thereto, and sprocket chains connecting said driving sprockets with said driven sprockets on said axle and cutter unit.



1,692,839. WATER HEATER. HERBERT S. HUMPHREY, Kalamazoo, Mich., assignor to Rudd Manufacturing Company, Pittsburgh, Pa. Filed Feb. 3, 1928. Serial No. 251,584. 5 Claims. (Cl. 126—350.)

1. In a water heater, the combination of a casing provided with a bottom having a raised conical central portion with side air openings therein, a burner seated on said raised portion and having a laterally extending Bunsen tube, a conical air inlet valve seating within said conical

raised portion of said bottom and having ports adapted to be brought into register with the air inlet openings of said raised portion, and an attaching screw for said burner constituting a supporting pivot for said valve.



1,692,840. INTERNAL-COMBUSTION ENGINE. EMIL JUST, Bronx, N. Y. Filed Apr. 26, 1927. Serial No. 186,607. 1 Claim. (Cl. 123—18.)

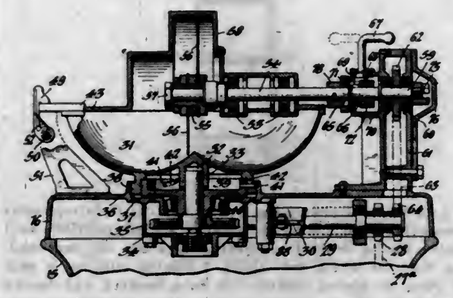
An internal combustion engine comprising the combination with a chamber having means to produce a spark and inlet and outlet ports, of a pair of flat, rectangular levers pivotally mounted in said chamber, raised, conical piston heads on the ends of said levers, said levers being adapted to be oscillated by successive explosions in said chamber, a pair of shafts, and a crank lever system whereby power is transmitted from said levers to said shafts.

1,692,841. SOUND AMPLIFIER. JACOB KERSTEN, Allegan, Mich. Filed Mar. 22, 1926. Serial No. 96,410. 8 Claims. (Cl. 181—27.)

1. In a sound amplifier device, a hollow shell formed from two conical members having their base edges placed together, one of said members having sound emitting openings therein, means for binding said members together, an

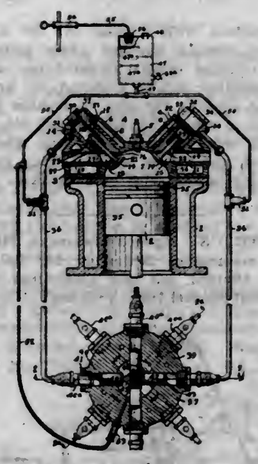
amplifying horn located within said shell and extending through a side thereof and adapted to have a loud speaker device attached to its outer end.

1,692,842. METHOD OF MANUFACTURING BLACK-HEART MALLEABLE CAST IRON FROM WHITE CAST IRON. TARIO KIKUTA, Tobata City, Fukuoka Ken, Japan, assignor to Tobata Imono Kabushiki Kaisha, Tobata City, Fukuoka Ken, Japan, a Corporation of Japan. Filed Sept. 29, 1926. Serial No. 138,575. 2 Claims. (Cl. 148—13.)



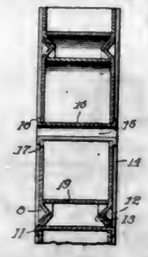
2. A method of manufacturing black heart malleable cast iron from white cast iron without using packing material which comprises first maintaining the white cast iron at a temperature between 850° and 950° C. for 15 to 60 hours, then cooling the iron to a temperature between 730° and 650° C., then maintaining the iron at the latter temperature for 20 to 50 hours, and then removing the iron from the furnace and cooling it rapidly.

1,692,843. TRANSOM-OPERATING MECHANISM. THOMAS EDWARD KING, Westfield, N. J., assignor to Hitchings & Company, Elizabeth, N. J., a Corporation of New Jersey. Filed June 2, 1925. Serial No. 34,384. 4 Claims. (Cl. 74—40.)



1. In a device of the character described an element comprising separable members provided with axial pintles, a closure for said element adapted to rotatively engage said members and resilient means supported by said pintles for forcing said separable members in close assemblage.

1,692,844. MEAT-CUTTING MACHINE. EUGENE W. KNOWLTON, Buffalo, N. Y., assignor to John E. Smith's Sons Co., Buffalo, N. Y., a Corporation of New York. Filed Sept. 14, 1925. Serial No. 56,141. 14 Claims. (Cl. 146—67.)



2. In a machine of the character described, the combination of a frame, a rotatable head mounted thereon, and a container having a depending flange engaging said head, the latter and said container-flange having complementary pins and slots for detachably holding the container on the rotatable head.

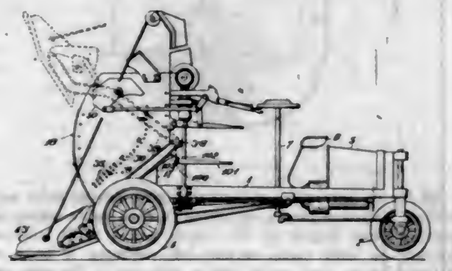
1,692,845. INTERNAL-COMBUSTION ENGINE. GEORGE A. KOLB, Bedford, Ohio. Filed Aug. 3, 1925. Serial No. 47,775. 16 Claims. (Cl. 123—90.)

15. In an internal combustion engine having inlet and exhaust valves, a piston connected to each valve, valve actuating cams driven by the engine crank shaft, pistons bearing on said cams, means for confining a body of liquid between each valve piston and one of the cam engaging pistons, and means for maintaining a predetermined volume of liquid in each body so confined comprising a supply tank communicating with each confined body of liquid, check valves preventing return flow to the tank, and means connected with the tank for supplying air under pressure to the tank above the body of liquid therein.

1,692,846. FILM REEL. JOSEPH LA VIA, Long Island City, N. Y. Filed Feb. 1, 1927. Serial No. 165,075. 7 Claims. (Cl. 242—70.)

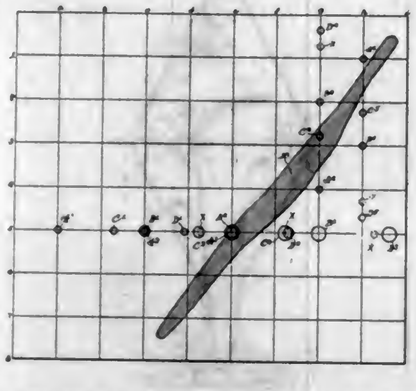
1. A film reel comprising a pair of circular plates, means connecting said plates in parallel spaced relation, said plates having central registering openings the surrounding walls of which are inbent, a slotted bushing, a pair of discs in spaced relation on said bushing and means formed on the periphery of said discs adapted to confine and frictionally engage said inbent walls.

---



1,692,847. METHOD AND DEVICE FOR DISCHARGING CHLORINE FROM TANK CARS. WILLIAM B. LEACH, Jr., Niagara Falls, N. Y., assignor to The Mathieson Alkali Works, New York, N. Y., a Corporation of Virginia. Filed Aug. 2, 1927. Serial No. 210,096. 1 Claim. (Cl. 105—358.)

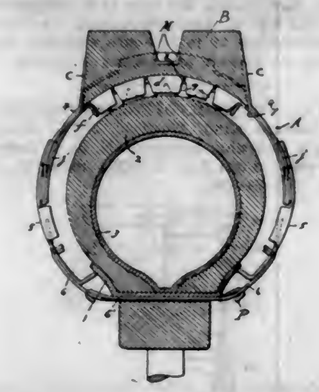
In combination with a tank car for shipping liquid chlorine and similar liquefied gases including tankage therefor, air-drying means mounted on and carried by said car, coupling means mounted on and carried by said car and adapted for easy connection to and disconnection from a source of compressed air, a connection between said coupling means and the inlet to said air-drying means, and means for connecting the outlet from said air-drying means with said tankage.



---

1,692,848. TRUCK. GEORGE MANIERRE, Milwaukee, Wis. Original application filed Feb. 14, 1921, Serial No. 444,868. Divided and this application filed Mar. 17, 1924. Serial No. 699,766. 3 Claims. (Cl. 298—1.)

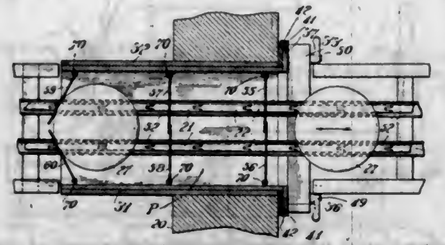
1. A load carrying box for vehicles having partition walls, the partition walls comprising portions fixed to the outer walls of the box, other portions movably attached to the fixed portions, and additional portions adjustable with respect to the movable portions and movable together with the same.



1,692,849. METHOD OF DETERMINING THE NATURE OF SUBSOIL. MAX MASON, Chicago, Ill. Filed May 3, 1926. Serial No. 106,188. 3 Claims. (Cl. 175—182.)

1. The method of determining the nature of subsoil, which consists in applying electromagnetic energy at two points of a given tract, fixing the position of a third point lying betwen said two points colinear with and spaced a predetermined distance therefrom, placing a fourth point also substantially colinear with the preceding three points and locating said fourth point at a distance from one of said other points so that there is a predetermined electrical relationship between said point and the fourth point, and noting the distances between the various points as an indication of the electromagnetic character of the subsoil.

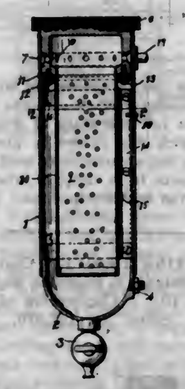
---



1,692,850. TIRE PROTECTOR. JOHN J. MCDONALD, Westview, Pa. Filed May 18, 1925. Serial No. 30,930. 2 Claims. (Cl. 152—16.)

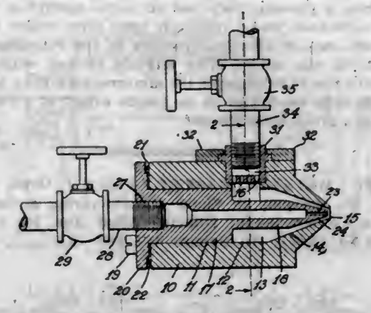
1. In a pneumatic tire protector, an annular shield surrounding the same and comprising a plurality of sections arranged side by side, each section including a base member, a tread member arranged on the base member and including a substantially S-shaped intermediate portion, means arranged on the inner side of the base member and disposed to engage the tread of the tire for spacing the protector therefrom, means for attaching the section in an applied position and connected with said tread member, said means including interlocking straps, and interlocking cooperating means carried by the base member of one section and the tread member of the adjacent section, whereby said sections are connected together in overlapping relation.

1,692,851. CONVEYER PORT. JULIUS J. MOJONNIER, Oak Park, Ill., assignor to Mojonnier Bros. Co., a Corporation of Illinois. Filed May 17, 1926. Serial No. 109,720. 6 Claims. (Cl. 198—204.)



1. A structure of the class described comprising a wall, a tubular port structure extending through said wall and terminating at one end adjacent to one face of said wall, a frame about said port at said end, a metal bail extending along the sides of said frame at its lower ends and well above said frame at its top, an insulating door slidably mounted on said bail and movable above said frame to open said port and down to a position against said frame to close said port, and means for securing the upper part of said bail to said wall.

2. In a structure of the class described, a port, a pair of doors for closing said port, said doors being hinged near their outer edges and free at their inner edges, and a tension member secured at its ends to said doors, respectively, inward of their hinged points, whereby said doors are yieldingly held closed and are readily opened under pressure.



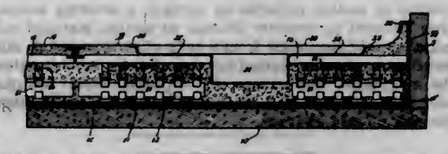
---

1,692,852. OIL FILTER FOR ENGINES. FRED C. MORRIS, San Francisco, Calif. Filed Nov. 25, 1925, Serial No. 71,280. Renewed Apr. 25, 1928. 2 Claims. (Cl. 210—167.)

1. An oil filter for engines comprising a tube internally threaded at one end, a threaded cover for said tube, a screen tube fixed to said cover, a cloth cover for said screen adapted to be clamped to said threaded cover, a brush adapted to bear on said cloth, a flat spring ring at each end of said brush, said rings adapted to frictionally engage the inside of said tube, and a bell shaped member for the bottom of said tube.

1,692,853. LIQUID-FUEL BURNER. VERGIL MULHOLLAND, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed June 1, 1925. Serial No. 33,978. 11 Claims. (Cl. 299—119.)

1. A burner comprising a central fuel tube, a hollow member surrounding said tube, the said tube and the said member being formed to produce an annular air chamber surrounding said fuel tube, an air supply member mounted in said outer member and slidable transversely of the axis of said fuel tube, the said air supply member being provided with an air inlet port, and the said outer member being provided with a recess adjacent to said air supply member of such size as to permit the adjustment of said air inlet port between a position to project a stream of air substantially tangent to the said air chamber and a position to project a stream of air substantially radially with respect to said air chamber, means for supplying air to said inlet port, and manually operable means for adjusting the position of said air supply member.



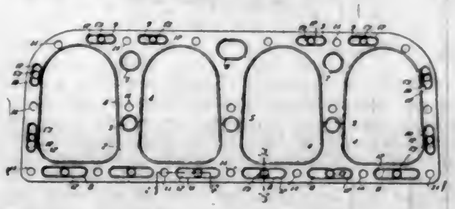
---

1,692,854. PRODUCTION OF ANTHRAQUINONE COLORING MATTERS. WILFRED M. MURCH, Hamburg, N. Y., assignor to National Aniline & Chemical Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 2, 1926. Serial No. 99,405. 7 Claims. (Cl. 260—31.)

1. In the production of an anthraquinone coloring matter by inducing a reaction between caustic alkali and an aminoanthraquinone body, the improvement which comprises conducting the reaction in a nickel iron vessel.

---

1,692,855. SOUNDPROOFED SHOCK-ABSORBED LAUNDRY FLOOR. EVERETT N. MURPHY, Chicago, Ill., assignor to Stevens Partition & Floor Deadener Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 22, 1924. Serial No. 738,984. 20 Claims. (Cl. 20—6.)

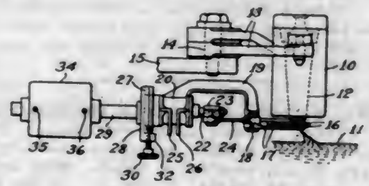


1. A sound-proof floor construction including an upper finishing floor divided into distinct, disconnected areas which are out of vibration transmitting contact with the walls of the room and which are supported on individual vibration deadening structures out of vibration transmitting contact with each other and the walls of the room.

1,692,856. PRODUCTION OF PLASTIC COMPOSITION MATERIALS. CLARENCE A. NASH, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 12, 1921. Serial No. 451,806. 20 Claims. (Cl. 260—5.)

1. A process of producing plastic composition material having as constitutents a condensation product binder produced from a phenolic body and an active methylene containing substance, and a relatively inert filler, which comprises the step of effecting reaction of the complete ingredients of the binder after mixture thereof with the filler and prior to molding of the mixture, such filler being added in such quantities as to enable arrest of such reaction at a given stage thereof.

---

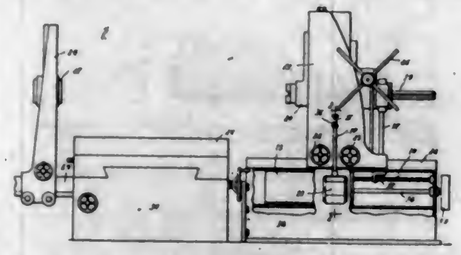


1,692,857. METALLIC GASKET. FRANK J. OVEN, Chicago, Ill., assignor to Victor Manufacturing & Gasket Co., a Corporation of Illinois. Filed Apr. 17, 1925. Serial No. 23,867. 10 Claims. (Cl. 288—1.)

1. A gasket having a metallic inner and outer layer and an intermediate layer of non-metallic material, the layers being provided with registering openings extending through the gasket, reinforcing rings with flanges inserted into said openings, and means for bracing opposite walls of said flanges.

---

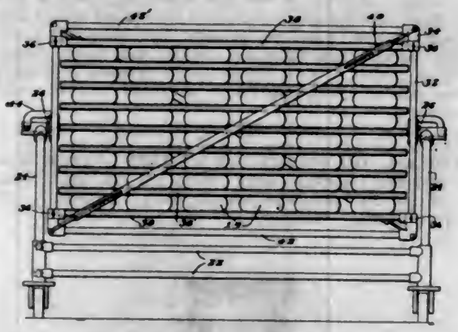
1,692,858. GLASS-WORKING APPARATUS. KARL E. PEILER, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Continuation of application Serial No. 24,988, filed Apr. 21, 1925. This application filed Dec. 7, 1926. Serial No. 153,093. 20 Claims. (Cl. 49—5.)



1. In combination with a receptacle for segregating charges of molten material by suction, a severing mechanism adapted to separate charges of molten material collected by said receptacle from a body of such material, said severing mechanism including shear blades spaced below the receptacle, and means for adjusting said severing mechanism toward and from said receptacle to regulate the size of said charges.

---

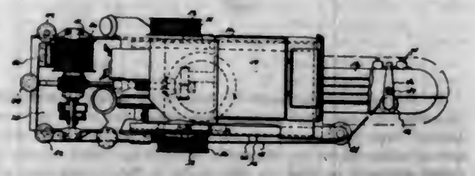
1,692,859. CHANGE-SPEED-TRANSMISSION MECHANISM. JUEL L. PETERSON, Rockford, Ill. Filed Dec. 30, 1926. Serial No. 157,890. 47 Claims. (Cl. 74—59.)



1. In a transmission mechanism the combination with a set of change-speed gears, of a selector shaft arranged to be rotated to different angularities for the selection of gear trains for different speeds, a knob for turning said shaft, means for indicating the speed selected, a single control lever mounted for swinging movement back and forth and transversely arranged when swung in one direction to move the selector shaft endwise, means operated by the endwise movement of said shaft for throwing the

selected gears into action, the return movement of said lever being arranged to cause the return of the selector shaft to throw the selected gears out of action, and clutching means operable in the transverse movement of said control lever to transmit drive to the selected gears.

---

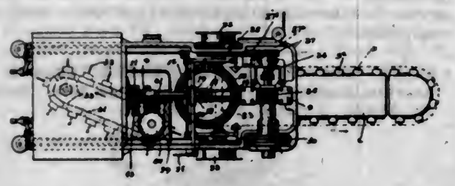


1,692,860. BREAD-MAKING APPARATUS. GUNTHER H. PETRI, Boston, Mass., assignor to The Petri and Jones Company, Incorporated, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 20, 1922. Serial No. 595,746. 3 Claims. (Cl. 107—7.)

3. Apparatus for use in connection with dough during the proofing comprising a stack of plane dough supports; a revolvable holder for said stack of dough supports and a frame upon which the holder is pivotally mounted; there being a cross bar attachable to said holder for maintaining said supports from slippage when said holder is rotated to invert the said stack.

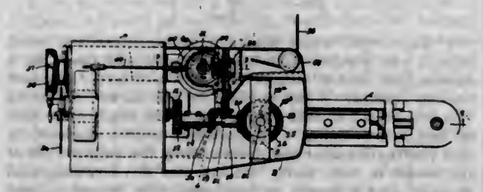
---

1,692,861. FLITTING DEVICE. CLARENCE F. POOLE, Evanston, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 25, 1926. Serial No. 157,010. 2 Claims. (Cl. 262—30.)



1. In combination with a cutting mechanism having a flexible draft feeding drum, an auxiliary flexible draft device comprising a transversely disposed shaft having a winding drum mounted thereon of greater rope capacity than said feeding drum, and means whereby said auxiliary flexible draft device may be bodily detachable from and connected with the rear end of said cutting mechanism within the vertical boundaries thereof and form therewith a continuous supporting shoe for engagement with the mine floor.

---

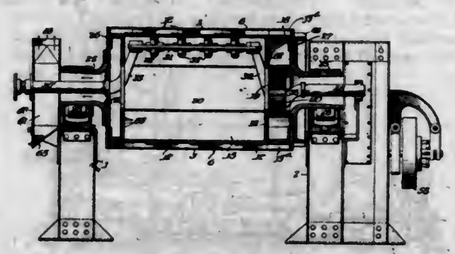


1,692,862. MINING MACHINE. THOMAS E. PRAY, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 26, 1924. Serial No. 758,036. 4 Claims. (Cl. 262—30.)

1. A mining machine comprising a frame slideable on its bottom along a mine floor and having flexible draft means, a chain carrying cutter bar projecting forwardly of said frame, a motor rearwardly of said frame and cutter bar, an underframe vertically spacing said motor from the ground, and an endless conveyor extending from a point adjacent the rearward portion of said cutter chain rearwardly beneath said motor for conveying the cuttings discharged from said cutter chain from the rear end of said machine.

---

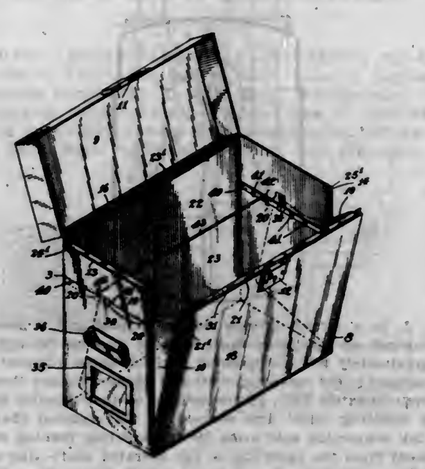
1,692,863. MINING MACHINE. THOMAS E. PRAY, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 26, 1924. Serial No. 758,037. 6 Claims. (Cl. 262—30.)



1. In a mining machine, a frame having a cutting element projecting longitudinally from the forward end thereof, flexible feeding and guiding means including a feed element operable on the forward end of said frame to move the same laterally during the cutting operation, a winding drum for said feed operating element located on the advancing side of said frame on a vertical axis and rearwardly of said cutter arm, a motor mounted rearwardly of said winding drum, and operative connections between said motor and said drum including a variable speed planetary device located concentric with and above said drum.

---

1,692,864. SAND-BLAST MACHINE. ELMER A. RICH, Jr., and RAYMOND H. MOORE, Chicago, Ill. Filed Jan. 14, 1924. Serial No. 686,234. 3 Claims. (Cl. 51—13.)

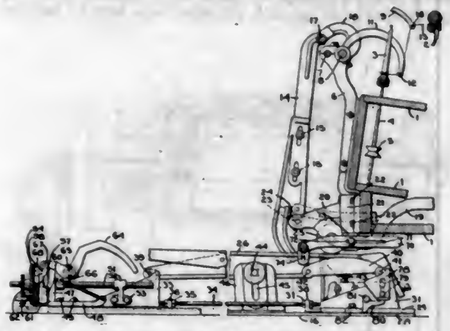


2. A sand blast machine comprising a rotary barrel provided with sand blast nozzles and feeding means for said nozzles at one end of the barrel, said feeding means comprising a sand reservoir located centrally at one end of the barrel and a sand blast pipe extending through the end of the barrel to said reservoir and thence to said nozzles, and means for collecting sand from the barrel and delivering it for reuse to said sand reservoir, said nozzles being interiorly arranged in the barrel and being supported in part by said air blast pipe and in part by

another supporting member extended to the other end of the barrel, said last mentioned end of the barrel having a tubular trunnion through which said supporting member extends, said tubular member being in communication with the interior of the barrel to permit escape of extraneous matters.

---

1,692,865. FILING DEVICE. HERMAN S. RIEDERER and ARTHUR PAULSON, New York, N. Y.; said Paulson assignor to Christean Iverson, Inc., New York, N. Y. Filed Mar. 2, 1927. Serial No. 172,071. 9 Claims. (Cl. 120—43.)

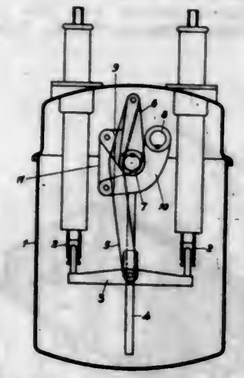


3. A filing device comprising a body portion, including a hinged front extension, and a cover, the body portion and the extension being provided with the inner walls in spaced relation to the outer walls thereof.

---

1,692,866. BUNCH-BUILDING SPINNING MULE. SAMUEL F. ROCKWELL and JOSEPH W. RANDALL, North Andover, Mass., assignors to Davis & Furber Machine Company, North Andover, Mass., a Corporation of Massachusetts. Filed Feb. 9, 1925. Serial No. 7,787. 20 Claims. (Cl. 118—28.)

1. A spinning mule comprising a movable carriage, yarn receivers rotatably mounted thereon, means to move the



carriage forwardly to draw the yarn and rearwardly to wind the yarn on the yarn receivers, a faller on the carriage moveable to effect the required traverse of the yarn

during the winding operation, and means temporarily to retard the traverse movement of the faller, thereby to form a bunch on the yarn receiver during such retardation.

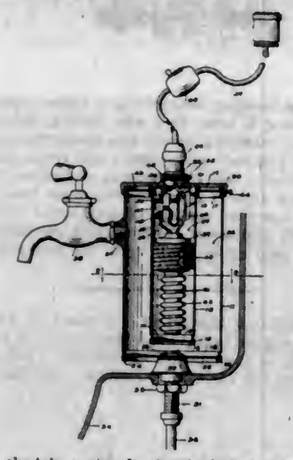
---

1,692,867. LINK MECHANISM FOR CIRCUIT BREAKERS. DANIEL RÖNNBERG and ADOLF ROOTH, Ludvika, Sweden, assignors to Allmänna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a Corporation of Sweden. Filed June 4, 1926, Serial No. 113,639, and in Sweden June 19, 1925. 2 Claims. (Cl. 200—150.)

1. In a circuit breaker having a fixed and a movable contact, an operating shaft adapted to turn through approximately 90°, an operated shaft mounted adjacent and parallel to the operating shaft and adapted to turn through approximately 180°, an arm secured on the operating shaft, a relatively short arm secured on the operated shaft, a link connecting said arms for transmitting turning movement from the operating to the operated shaft—the operating shaft being so disposed relatively to the path of movement of the said short arm that the latter may be swung freely through 180° by the said link without bringing the ends of the link and the operated shaft into locking or dead-center positions—, and connecting means between the operated shaft and the movable contact whereby rotation of the said shaft actuates the movable contact.

---

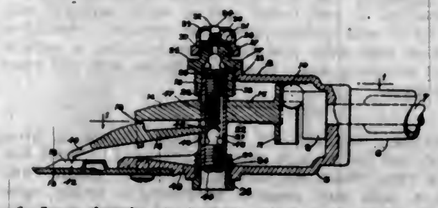
1,692,868. ACOUSTICAL APPARATUS FOR TELEPHONIC COMMUNICATION. WILHELM RUDOLPH, Kiel, Germany, assignor to the Firm Signal Gesellschaft m. b. H., Kiel, Germany. Filed Aug. 25, 1921, Serial No. 495,236, and in Germany Sept. 27, 1920. 5 Claims. (Cl. 179—109.)



5. An electrical acoustical transmitter having a plurality of oscillatory structures, one structure including in combination a sound detector and a tuned resonating chamber having a definite resonating frequency, a second structure comprising a transmitter having a second definite resonant frequency means for mechanically coupling

said structures together, each structure having its masses and elastic members so proportioned that the two resonant frequencies of the acoustically coupled system lie just outside, on either side respectively, of the speech range of frequencies.

---

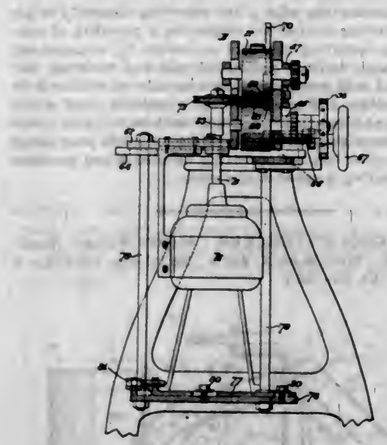


1,692,869. ELECTRIC WATER HEATER. CHESTER J. SCANLAN, Bloomington, Ill. Filed Oct. 23, 1925. Serial No. 64,309. 3 Claims. (Cl. 219—39.)

1. An electric water heater including inner and outer casings one providing a heating chamber and the other a surrounding water chamber, a socket disposed in said heating chamber, a core engaged in said socket, a heating element carried by said core for radiating heat to the wall of said inner casing, a thermostatic switch disposed in said heating chamber and controlled by the temperature of the water in said water chamber for de-energizing said element, and a length of insulating rope wound around said socket to frictionally coact with said inner casing for sustaining the socket and forming a heat resisting seal in said heating chamber between said heating element and said switch.

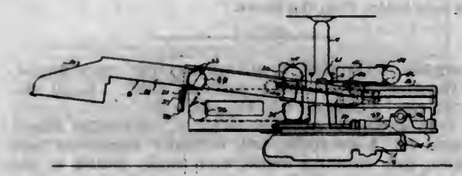
---

1,692,870. SHEEP SHEARS. FRANK W. SCOTT, Kirkland, Ill. Filed Jan. 21, 1927. Serial No. 162,423. 12 Claims. (Cl. 30—1.)



1. In a shearing tool of the character described, comprising a frame by which the tool is grasped for use, a fixed cutter comb on said frame and a reciprocating cutter cooperating with said comb, an actuator for said reciprocating cutter comprising two members of which the first is fulcrumed in said frame for vibratory action to reciprocate the cutter, and the second extends forwardly therefrom for engaging the cutter, the first member having an opening for receiving and supporting the second member whereby the latter is free to have endwise rocking movement to adjust its forward end in relation to the cutter so as to press the same toward the comb, and screw threading means mounted in the one member and engaging the other member positively to adjust the forward end of the second member toward the comb, the said means moving with the actuator and being independent of the frame so as not to tend to change in adjustment.

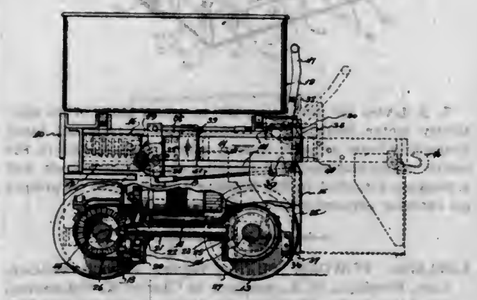
---



1,692,871. EDGE FINISHING. FREDERICK C. SIMMONS, Highland Park, Pa., assignor to Pioneer Suspender Company, a Corporation of Pennsylvania. Filed Aug. 26, 1926. Serial No. 131,589. 8 Claims. (Cl. 51—78.)

1. In an edge finishing machine the combination of a plurality of pairs of cooperating feed rollers for causing the movement of a strip of fibrous material in a definite path of travel, said pairs of cooperating rollers arranged in groups, so that one side edge of the strip will project laterally from the side margins of one group and the other side edge of the strip will project laterally from the side margins of another group, abrading elements operating upon the said side edges of the strip adjacent the cooperating pairs of rollers beyond which the side edges project and means for adjusting laterally one group of cooperating rollers with respect to another to suit the width of the strip operated upon.

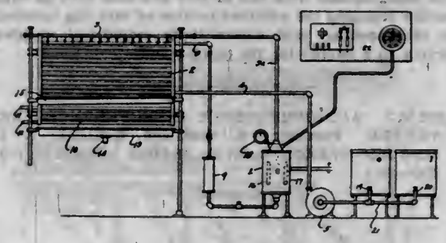
---



1,692,872. POWER SHOVEL. WILLIAM W. SLOANE, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 12, 1926. Serial No. 121,094. 19 Claims. (Cl. 214—132.)

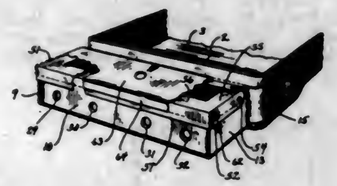
1. In a power shovel, the combination of a frame, a scoop beam, a support member mounted on said frame for bodily movement longitudinally of said beam, elevating means reacting on said support member and carrying said beam for longitudinal movement with respect to said support member, and increasing movement means for effecting said movement of said support member with a greater corresponding longitudinal movement of said beam.

---



1,692,873. ELECTRIC LOCOMOTIVE. WILLIAM W. SLOANE, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 24, 1927. Serial No. 221,660. 6 Claims. (Cl. 105—50.)

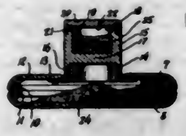
1. A storage battery locomotive comprising a frame, supporting wheels and a motor for driving the same, a horizontally disposed controller for said motor adjacent one end of said frame having a horizontally disposed contact drum therein, and means for turning said drum from the opposite end of said frame comprising a lever and segmental gear.



---

1,692,874. APPARATUS FOR PASTEURIZING MILK. JOHN O. TEMPLETON, Detroit, Mich., assignor to Electropure Corporation, Detroit, Mich., a Corporation of Delaware. Original application filed Mar. 13, 1925, Serial No. 15,399. Divided and this application filed Jan. 6, 1926. Serial No. 79,632. 3 Claims. (Cl. 219—40.)

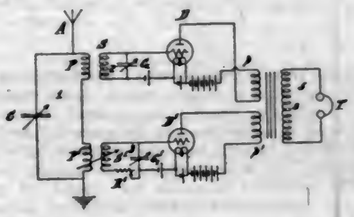
1. In apparatus for treating milk, a purifier having a pair of spaced electrodes, a current supply circuit therefor, a conduit for supplying liquid to the purifier to pass between the electrodes, a conduit for the discharge of liquid therefrom, a receptacle for milk and a receptacle for liquid having approximately the same electrical conductivity as milk, electrically controlled apparatus for causing the fluid to pass to the conduits and between electrodes, means controllable at will for supplying the milk or the liquid of the same electrical conductivity to said electrocally controlled apparatus, the said conduit leading to the purifier having a portion thereof in the form of a coil and the discharge conduit being arranged to discharge the treated fluid over the said coil, and means for causing cessation of operation of the apparatus when the temperature of the fluid or the milk in passing through the purifier falls below a predetermined temperature.



1,692,875. PROTECTIVE HOUSING FOR ELECTRICAL DEVICES. PHILIPP VANNINI, Zug, Switzerland, assignor to Landis & Gyr A.-G., a Limited Joint Stock Company of Switzerland. Filed Feb. 26, 1927, Serial No. 171,286, and in Switzerland Mar. 19, 1926. 9 Claims. (Cl. 171—34.)

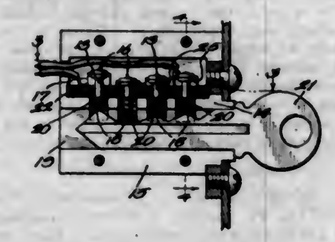
7. A device for protecting the terminal block of an electricity meter including in combination a terminal block projecting from a meter casing, a housing fastened to the meter casing and partially encasing the terminal block, and a member attached to the housing and movable to protect an exterior exposed edge of the terminal block.

---



1,692,876. POWDER PUFF. HENRY GEORGE VOLCKENING, Brooklyn, N. Y., assignor to Charles K. Volckening, Brooklyn, N. Y. Filed Jan. 31, 1928. Serial No. 250,757. 8 Claims. (Cl. 132—78.5.)

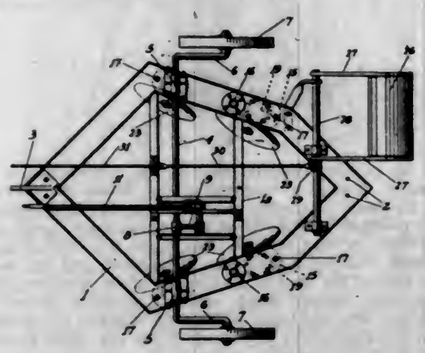
1. In a powder puff the combination of a bag serving as a container and provided with an opening, a flat ring located within said bag and provided with a neck extended through said opening, said neck being threaded, and a substantially cylindrical member provided with a threaded portion engaging said neck and further provided with an edge portion engaging the adjacent portion of said bag bounded by said opening, said substantially cylindrical member serving as a handle for the powder puff.



---

1,692,877. AUDIOFREQUENCY INTERFERENCE PREVENTER. FREDERICK K. VREELAND, Montclair, N. J. Filed July 12, 1921. Serial No. 484,060. 6 Claims. (Cl. 250—20.)

1. In a receiving system for radiant energy, a collecting circuit, two or more tuned circuits associated therewith, one of which is preferentially responsive to signal impulses and the other tuned to a definite interfering signal frequency, integrating means associated with each circuit, means for applying the integrated currents differentially to a receiver, means whereby the interfering effects neutralize each other, and means for observing the unbalanced signal effect.



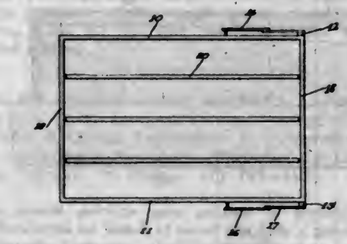
1,692,878. LOCKING MECHANISM. FELIX J. WATTS, Bronson, Mich., assignor to Harry A. Douglas, Bronson, Mich. Filed Mar. 7, 1927. Serial No. 173,585. 2 Claims. (Cl. 200—44.)

1. The combination with a key receiving element; of an electric switching mechanism employing a plurality of contacts having operating members accessible for engagement within the key receiving passage of said key receiving element, one of said contacts being normally constrained to a closed position and one to an open position; and a key having a ward formation engageable with one of said members to operate the contact pertaining thereto and being free of the other contact operating member when the first contact operating member is operated.

---

1,692,879. GROUND CHECKER. ALONZO WILLEY, Stockton, Calif. Filed Sept. 7, 1926. Serial No. 133,812. 4 Claims. (Cl. 97—56.)

2. A checking implement comprising a frame to be drawn along the ground, horizontal and longitudinally extending plates under the frame on opposite sides of the longitudinal center line thereof, ground engaging members depending from the plates in opposed relation to each other, and pivot connection means between the plates and the frame to enable the plates intermediate their ends to be reversed in position to correspondingly reverse the setting of said members relative to each other without disconnecting said plates from the frame.



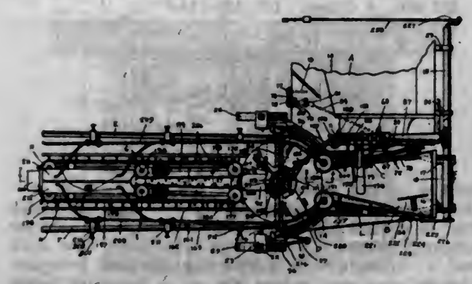
---

1,692,880. CLOTHES-HANGING DEVICE. MAX WIRTH, Brooklyn, N. Y. Filed Sept. 28, 1927. Serial No. 222,425. 2 Claims. (Cl. 211—99.)

1. In a clothes hanging device, a rectangular frame, means for horizontally and vertically supporting said frame, rods spanning across said frame, pintles at the ends of said rods, said frame comprising side bars and end bars, said end bars having longitudinal channels therein, said pintles being movable slidable in said channels, notches in said end bars communicating with said channels, said pintles being registerable in said notches when said frame

is located horizontally, means for displacing said pintles out of said notches into said channels, comprising shifter bars, said end bars having longitudinal grooves extending parallel to said channels and at right-angles thereto, said grooves receiving said shifter bars, said shifter bars having cut-out portions adapted to align with said notches to permit entrance of said pintles, an inclined track bounding each cut-out portion on one side of the latter, said inclined track being adapted to ride across said notches to displace said pintles from said notches, and means for simultaneously moving said shifter bars in opposite directions in opposing end bars.

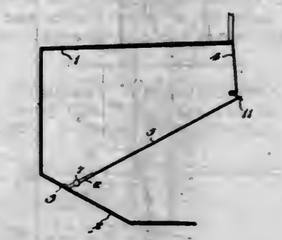
---



1,692,881. MOTOR VEHICLE. LEWIS A. WRIGHT, Birmingham, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 4, 1926. Serial No. 92,255. 6 Claims. (Cl. 267—21.)

1. In a motor vehicle, the combination with an axle and frame having side members, of a cross member extending beyond the sides of said side members, a housing comprising a stationary section fixedly mounted on and a movable section journalled on said cross member, a rubber block clamped between and having rib and groove connection with said housing sections, and an arm rigidly united to said movable section and having its outer end connected to the axle.

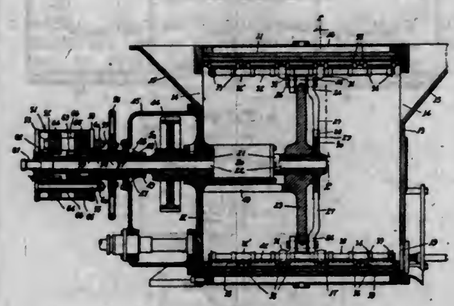
---



1,692,882. GRAIN SHOCKER. HERBERT E. WUNDERLICH, St. Paul, Minn. Filed Apr. 20, 1925. Serial No. 24,462. 20 Claims. (Cl. 56—416.)

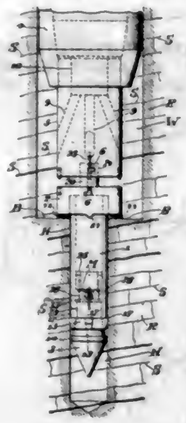
4. A shocker for use in conjunction with a binder delivering bundles in a horizontal position, comprising a frame, a receiver mounted thereon having an upwardly curved bottom, an arm normally extending across said bottom situated near the center of curvature thereof, said arm having a pivot inclining from the vertical away from the curved portion of said bottom and operating in conjunction with said curved bottom to right the bundles.

---



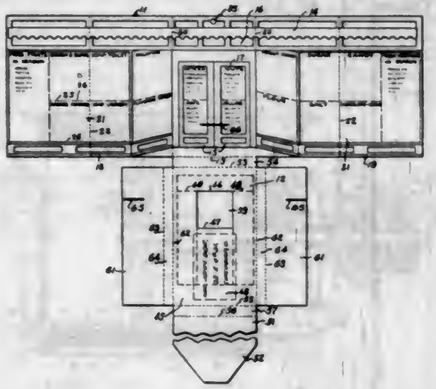
1,692,883. ENGINE-STARTING-SWITCH EXTENSION ATTACHMENT. ELLWOOD F. BENNETT, Blanton, Fla. Filed Jan. 24, 1928. Serial No. 249,133. 4 Claims. (Cl. 74—39.)

1. A motor vehicle starter attachment comprising a control element, a clamp therefor forming means for attaching the said control to the vehicle, a coupling adapted to be fitted to the starter button, and a rod forming connecting means between the said control element and coupling.



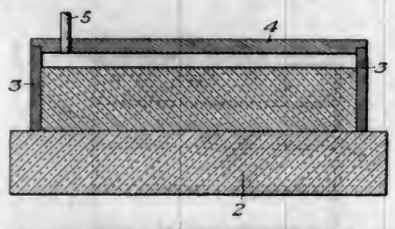
---

1,692,884. CRUSHING, GRINDING, AND REFINING MACHINE. SWINFEN BRAMLEY-MOORE, White Plains, N. Y. Filed Apr. 6, 1928. Serial No. 267,992. 18 Claims. (Cl. 83—11.)



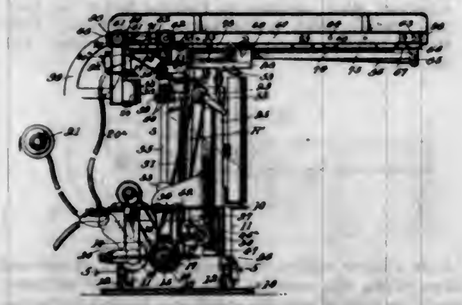
1. A machine of the character described comprising a cylindrical casing having a grinding surface therein, two shafts, a wheel on one shaft within the casing, levers carried by said wheel, a disk mounted on the other shaft and operably connected with said levers, grinding elements carried by said levers and working along said grinding surface, and means operably connecting said shafts for rotating one with the other and for adjusting them rotatably relatively to one another to swing said levers relatively to said wheel and regulate the pressure on said grinding elements.

1,692,885. SYSTEM OF DETERMINING CORE DIP. JOHN E. BRANTLY, Upper Darby, Pa., assignor to Atlantic Oil Producing Company, Philadelphia, Pa., a Corporation of Delaware. Filed Oct. 31, 1924. Serial No. 747,138. 21 Claims. (Cl. 33—205.)



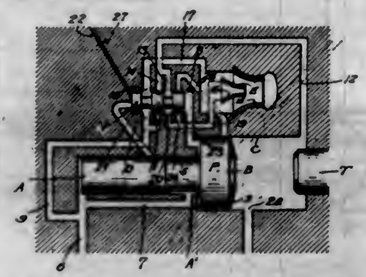
20. Apparatus of the character described comprising a casing adapted for insertion in a bore of substantially the same diameter as the casing, direction indicating structure in said casing and means for locking the same in direction indicating position, and means comprising a tapered plug for guiding the casing into said bore.

1,692,886. SALES CHART. JAMES FRANKLIN BROWN, Cincinnati, Ohio. Filed Apr. 22, 1927. Serial No. 185,798. 1 Claim. (Cl. 281—1.)



In a device of the character described, the combination of a transverse strip and a depending strip arranged at right angles to each other and each comprising foldable panels extending in the same direction when said device is open, said panels of said transverse strip foldable upon each other, said depending strip foldable endwise about said folded transverse strip with the panels of said depending strip encompassing the side edges of said folded panel of said transverse strip, said panels of said depending strip and a panel of said main strip thereunder when in folded relation provided with registering slits, and said depending strip provided with a tongue received in said slits for holding said folded panels in folded relation.

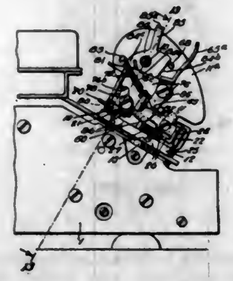
1,692,887. PROCESS OF AND APPARATUS FOR MAKING CLAY ARTICLES. ELBRIDGE J. CASSELMAN, Pittsburgh, Pa., assignor to Window Glass Machine Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Aug. 24, 1926. Serial No. 131,180. 6 Claims. (Cl. 25—156.)



4. The process of making clay articles, which comprises confining a clay slip so as to define an article of the desired size and shape, materially retarding absorption of water from at least some of the faces of the formed article, permitting absorption of water from one face thereof, and varying the pressure on the slip.

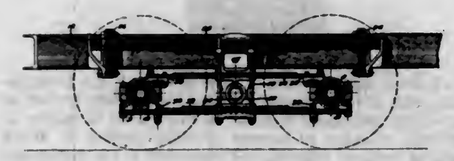
1,692,888. MECHANICAL SHEET AND TIN PLATE CATCHER. DAVID G. DAVIES and FRED T. RUNDELL, Morgantown, W. Va. Filed July 28, 1927. Serial No. 208,977. 29 Claims. (Cl. 198—84.)

2. In a mechanical sheet and tin plate catcher, a conveyor frame, a receiving-conveyor mounted in said frame, a returning-conveyor also mounted in said frame, said conveyors travelling in opposite directions, a device for lifting the sheet from said receiving-conveyor, and means for periodically elevating the returning-conveyor to lift the sheet from said lifting device so as to convey it in a reverse direction.



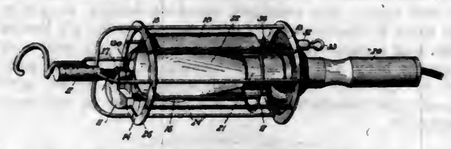
1,692,889. PNEUMATIC TOOL. ANDREW T. DUPONT, Washington, D. C. Filed Nov. 8, 1927. Serial No. 231,954. 4 Claims. (Cl. 121—18.)

1. In a fluid operated percussive tool, a cylinder having differential chambers, a piston having an enlarged head fitting in the larger of said chambers and a shank fitting in the smaller of said chambers, an ejector, means for connecting the ejector to the source of pressure fluid and to one side of the larger cylinder chamber, ports and passages for admitting pressure fluid to the cylinder chambers to operate the piston, a valve controlling certain of said ports and passages and the connection between the source and the ejector and between the ejector and the larger cylinder chamber and means controlled by the piston shank for reversing the valve at the end of each piston stroke.



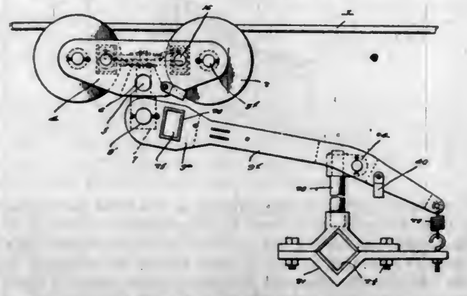
1,692,890. TYPEWRITING MACHINE. ALONZO B. ELY, Groton, N. Y., assignor, by mesne assignments, to L C Smith & Corona Typewriters Inc., Syracuse, N. Y., a Corporation of New York. Filed Nov. 13, 1926. Serial No. 148,247. 26 Claims. (Cl. 197—193.)

1. In a typewriting machine, a spring-driven platen carriage, escapement mechanism for the carriage, a normally ineffective carriage-centering stop pivoted on the carriage to swing transversely of the path of travel of the carriage, a co-operating non-traveling stop on the machine, a manually rockable stop-setting cam pivoted on the carriage to swing about an axis parallel with the pivotal axis of the centering stop and adapted to directly rock the centering stop to effective position, escapement releasing means operable by the centering stop upon movement of said stop to effective position, and a spring connecting the centering stop with the carriage to normally hold the stop in ineffective position, said cam and spring-returned centering stop being so engaged when the stop is moved to set position as to hold each other against return movement.

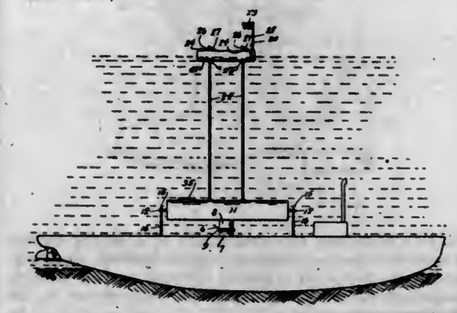


1,692,891. ROAD VEHICLE. ROLLIE B. FAGEOL, Los Angeles, Calif. Filed Apr. 23, 1923, Serial No. 633,867. Renewed Apr. 7, 1928. 7 Claims. (Cl. 280—124.)

1. In a road vehicle, a pair of substantially parallel axles; means interconnecting said axles comprising connections permitting universal movement of each of said axles with relation to said means; a bracket pivotally supported from the mid portion of said means; a leaf spring supported at its mid portion from said bracket; yielding connections supported from each end of said spring; and a frame supported from said yielding connections.



1,692,892. COMBINED REFLECTOR AND SHADE. WILLIAM J. FLOYD, Syracuse, N. Y. Filed May 16, 1927. Serial No. 191,829. 4 Claims. (Cl. 240—108.)

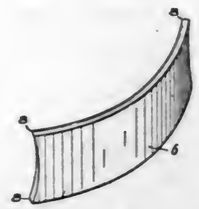


1. In a device of the character described, an open cage for an electric lamp; a shade mounted for oscillation within the cage; a counterbalanced weight connected to said shade to automatically maintain the same in its initial radial relation to the longitudinal axis of the cage while the cage may move relative to the shade; and means whereby the shade may be locked to the cage.

1,692,893. TROLLEY CONSTRUCTION. GUSTAV C. GUTZAT, Jersey City, N. J. Filed Jan. 31, 1927. Serial No. 164,821. 5 Claims. (Cl. 191—58.)

1. In combination, a sectional bracket lined with insulating material, a post on said bracket, a trolley arm swingable on the post about the axis thereof, said arm also swingable axially of the post, a retractile spring interposed between one portion of said arm and the bracket, and trolley wire engaging means carried by the opposite portion of the arm.

1,692,894. ESCAPE DEVICE FOR SUNKEN SUBMARINES. SILVIN G. HARRINGTON, Metz, Mo. Filed Mar. 10, 1928. Serial No. 260,786. 4 Claims. (Cl. 114—16.7.)



4. An attachment for submarines comprising a passenger carrying buoy releasably attached to the submarine and having an indicating means therebetween whereby to permit the crew of the submarine to enter said buoy, an air hose carrying buoy releasably attached to said carrying buoy, means operable from within said passenger carrying buoy for releasing either of the buoys from the submarine, said hose forming an air connection between said buoys, an intake pipe carried by said hose

carrying buoy, a control valve associated therewith, said air hose being wound circumferentially about the air hose carrying buoy when in attached position to the other of said buoys, and arranged, when so wound, to secure the valve in closed position with respect to the air intake pipe, and a signalling mast pivotally carried by said hose carrying buoy and normally secured in horizontal position by the hose when the buoy is attached to the submarine and releasable upon the unwinding of the hose therefrom.

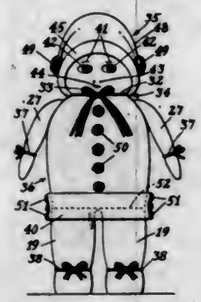
---

1,692,895. RAIL BOND AND METHOD OF MAKING THE SAME. WILLIAM F. HART, Pittsburgh, Pa., assignor to Verona Tool Works, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 3, 1926. Serial No. 99,683. 2 Claims. (Cl. 173—279.)

1. As an article of manufacture, a rail bond comprising a body of spring metal curved longitudinally throughout its length and having end portions cutaway substantially along the arcs of circles of large radius as compared to the width of the bond, for forming contact points of short length.

---

1,692,896. ORTHOPEDIC SHOE. MATHEW HILGERT, New York, N. Y. Filed Filed Feb. 15, 1923. Serial No. 619,131. 12 Claims. (Cl. 36—71.)



6. In a high shoe, the combination of a counter having an upward extension stiffened against bending longitudinally of the foot, and a tongue stiffened against bending transversely of the foot, said tongue being shaped to the transverse curve of the ankle and instep and adapted to be held thereagainst by the upper closing means.

---

1,692,897. NONBREAKABLE DRESSED DOLL. LEE E. HOWARD and MARGUERITE E. HOWARD, Los Angeles, Calif. Filed June 17, 1927. Serial No. 199,497. 1 Claim. (Cl. 46—40.)

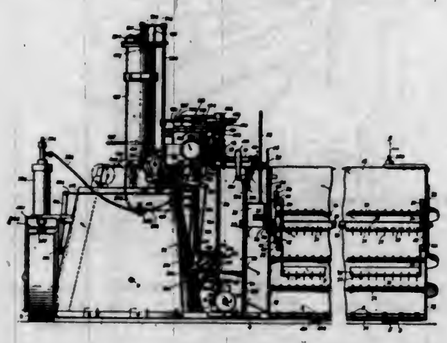
The method of forming a dressed doll out of a pair of socks which comprises cutting off the toe-portion of the first sock; slitting the ribbed-top portion thereof, longitudinally, front and back; sewing the cut edges of said ribbed-top portion to form two closed leg-tubes; stuffing said leg tubes, lower leg and heel parts, of said first sock, with flexible material, so as to form a suitably rounded body; closing the body opening by suitable stitching; cutting said cut-off toe-portion, longitudinally, into two equal parts, tapered at one end; sewing the cut edges of said equal parts to form arm tubes; stuffing said arm tubes with flexible material to a suitable roundness to represent arms; pulling the second sock over the head-end of said stuffed body until the heel portion of the former becomes stretched over the head end of the latter, so as to form a face thereon; folding the ribbed-top portion of said

second sock upwardly to form a roll about the legs of the stuffed body to simulate a coat; folding the toe portion of said second sock to form a tight-fitting hat on the head of the stuffed body with a roll rim encircling the face and neck thereof; attaching the arms to opposite sides of said second sock at suitable points to represent shoulders; tying colored material about the body, arms and legs of the resulting figure to mark off the head, hands and feet thereof; fastening tufts of like material to the hat and coat parts of the figure to form side rosettes on the former and to represent buttons on the sides and front of the latter, and embroidering, with colored materials, features on the heel part of said second sock which serves as the face of the figure.

---

1,692,898. FEET FOR SANDING MACHINES. ELTON E. HUMMERICH, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed May 1, 1925. Serial No. 27,198. 19 Claims. (Cl. 51—189.)

13. In a machine of the class described, the combination with a reciprocating member; of a foot formed of an elastic, gelatinous material of substantial thickness inherently adhesive to present a sticky surface to which rubbing material adheres, and connected to the reciprocating member.



---

1,692,899. HARVESTING MACHINE. PETER KETELSEN, Denver, Colo. Filed Nov. 22, 1923. Serial No. 676,343. 36 Claims. (Cl. 56—406.)

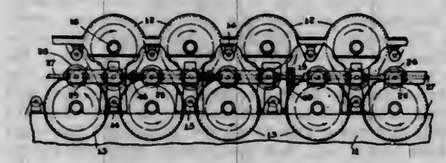
36. In a machine for uniting a plurality of sheaves each of which is bound with a loop of binding material, into an endless annular shock, a sheaf-holding magazine and a straw-tying device, reciprocatory means for imparting step-by-step rotation to said sheaf-holding magazine to

bring the sheaves held thereby into operative position with respect to said straw-tying device, said reciprocatory means being arranged to impart motion to said magazine on each stroke in one direction and having an idle return stroke, said straw-tying device including means for segregating a wisp of straw from one sheaf and holding

it during one step in the rotation of said magazine, means for tucking said wisp beneath the binding element of the adjacent sheaf, and means operated by said reciprocatory means for actuating the segregating means positively on the magazine-rotating stroke of said reciprocatory means and for positively actuating the tucking means on the idle stroke of said reciprocatory means.

---

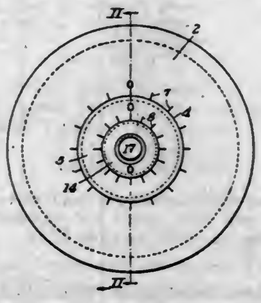
1,692,900. BASIC QUININE SOLUTION. ARTHUR LIEBRECHT, Frankfort-on-the-Main, Germany, assignor to the Firm Chemisch-Pharmazeutische Aktiengesellschaft Bad Homburg, Bad Homburg, Germany, a Corporation of Germany. Filed Jan. 17, 1928, Serial No. 247,450, and in Germany Nov. 4, 1925. 8 Claims. (Cl. 167—7.)



1. A method for making basic solutions of quinine comprising the step of mixing basic quinine with a quinine salt in the presence of water.

3. A method for making therapeutically utilizable aqueous solutions of basic quinine comprising the step of dissolving the quinine base in a solution of quinine salt under assistance of phenyldimethylpyrazolone.

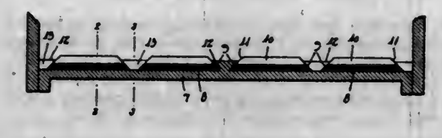
7. As a new composition of matter an aqueous solution of basic quinine, quinine salt and phenyldimethylpyrazolone.



---

1,692,901. DRIVE FOR PAPER-DRYING MACHINES AND THE LIKE. BERNARD A. MALKIN, Lachine, Quebec, Canada. Filed Nov. 27, 1925. Serial No. 71,809. 8 Claims. (Cl. 34—48.)

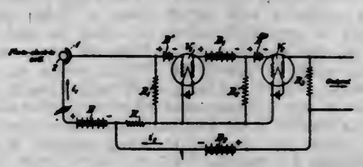
1. In a paper making machine, a frame, a plurality of upper and lower drier rolls secured to spindles rotatably mounted on said frame, toothed gear wheels secured to extensions of said spindles, toothed gear pinions meshing with the wheels and rotatably mounted on spindles secured to suitable bearings, a main driving shaft, extending the full length of the machine, bevel toothed wheels secured to said pinions and bevel toothed pinions mounted on the shaft and meshing with the bevel wheels to form a driving connection between the shaft and the toothed pinions.



1,692,902. DIE AND METHOD OF DRAWING SHAPES. JAMES T. MOLTRUP, Beaver Falls, Pa. Filed Sept. 1, 1927. Serial No. 216,820. 9 Claims. (Cl. 205—26.)

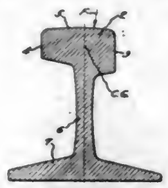
1. In a drawing die, a die holder, a die ring adjustably mounted therein and having a bore eccentric to its periphery, and a die in said die ring having a bore eccentric to its periphery.

---



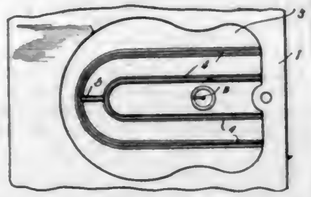
1,692,903. GRINDING, REFINING, AND MIXING MACHINE. SWINFEN BRAMLEY-MOORE, White Plains, N. Y., assignor of one-half to John McIntyre, Portobello, Midlothian, Scotland. Filed Oct. 15, 1927. Serial No. 226,375. 4 Claims. (Cl. 83—9.)

1. A device of the character described comprising a member having a groove, and rods of circular cross section seated side by side transversely in said groove to provide a ridged grinding surface, the ends of said rods abutting the walls of the groove, and said walls of the groove and ends of the rods being interengaged to hold the rods in the groove and to prevent rotation of the rods.



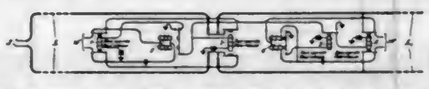
---

1,692,904. AMPLIFICATION OF PHOTO-ELECTRIC CALL RESPONSE. RALPH K. POTTER, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 6, 1926. Serial No. 127,675. 8 Claims. (Cl. 178—5.)



1. The method of amplifying the electrical response of a photo-electric cell to variation in the quantity of light impressed thereon, which consists in causing a variation of the cell current to produce a responsive current variation in an auxiliary circuit and causing said current variation in the auxiliary circuit to change the voltage across the electrode terminals of the cell so as to assist the variation of the cell current.

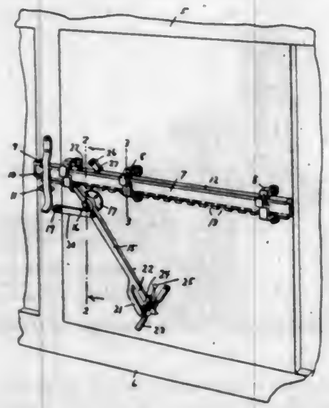
1,692,905. RUNNING RAIL. NORMAN C. RENDLEMAN, Pittsburgh, Pa., assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 17, 1928. Serial No. 247,347. 9 Claims. (Cl. 238—125.)



1. A running rail comprising a head having an inner face and an outer face, and a web disposed relatively nearer the inner face than the outer face.

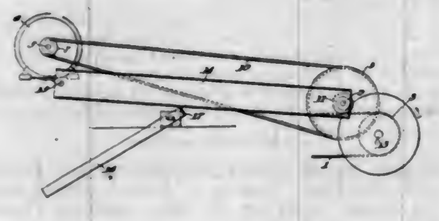
1,692,906. VAPORIZING HEAT UNIT FOR INTERNAL-COMBUSTION ENGINES. WILLIAM G. SCHNEE, Kansas City, Mo. Filed Aug. 12, 1927. Serial No. 212,595. 1 Claim. (Cl. 123—191.)

A vaporizing heat unit for internal combustion engines having a plurality of U-shaped ribs having parallel side portions and bridging portions connecting the parallel portions at one end of the unit and having an opening for a spark plug between the parallel side portions nearer the end thereof remote from the bridging portions.



1,692,907. RELAYING ARRANGEMENT. SAMUEL P. SHACKLETON, Wyoming, and ARNOLD A. HANSEN, West Orange, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 22, 1926. Serial No. 150,064. 1 Claim. (Cl. 179—84.)

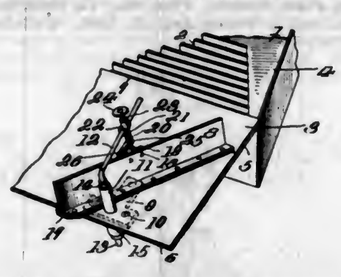
A transmission line comprising two line sections interconnected over the contacts of a cut-off relay, a bridge across one of said line sections including a signal responsive relay, means controlled by said signal responsive relay for operating said cut-off relay, a bridge circuit adapted to be connected across the other of said line sections by the operation of said cut-off relay, signal responsive means in said bridge circuit, means to complete a holding circuit for said cut-off relay directly over the contact of said last mentioned signal responsive means, and means controlled by said last mentioned signal responsive means for applying signaling current to said first mentioned line section.



1,692,908. COMBINATION LOCKING BOLT AND OPENING AND CLOSING DEVICE FOR CAR DOORS. JOHN H. SIMONTON, Brighton, Tenn., assignor of forty-eight per cent to C. B. Simonton, Covington, Tenn. Filed July 25, 1927. Serial No. 208,361. 2 Claims. (Cl. 268—44.)

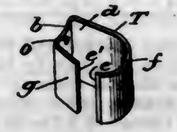
1. In combination, a slidably mounted door, a door jamb, a channel iron constituting a locking bolt slidably carried by the door and having a rack bar formed along one edge thereof, said jamb having means arranged thereon releasably engaging the bolt, a handle pivotally mounted intermediate its ends on the door and adapted to have one end moved into engagement with the rack

bar for slidably operating the same, means carried by the handle releasably engaging the handle with the jamb whereby to secure the handle against movement in one direction and means carried on the door releasably engaging the opposite end of the handle for securing the same against movement in an opposite direction.



1,692,909. FRICTION DRIVE. RUSSEL W. STEM, Allentown, Pa. Filed Sept. 18, 1924. Serial No. 738,468. 3 Claims. (Cl. 74—21.)

2. In a friction drive, a power shaft, a driven shaft, an intermediate shaft, a belt drive between said power and intermediate shafts, friction wheels on said intermediate and driven shafts, a link having means at one end thereof for supporting said intermediate shaft, and a pivotal support for the opposite end of said link, said pivotal support being positioned at one side of a line joining said power and driven shafts and said link being of such length that said intermediate shaft lies on the opposite side of said line when said friction wheels come into engagement with normal load, and passes the said line when a predetermined degree of overload acts.

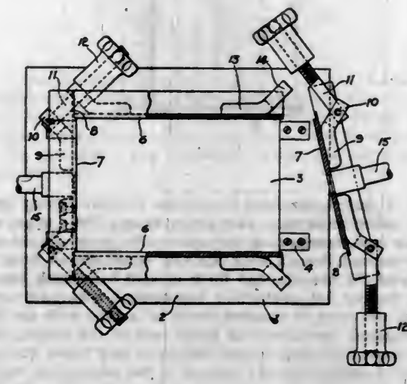


1,692,910. CUTTING FINGER FOR SEPARATING MACHINES. HENRY M. SUTTON, WALTER L. STEELE, and EDWIN G. STEELE, Dallas, Tex. Filed Feb. 8, 1928. Serial No. 252,852. 7 Claims. (Cl. 209—493.)

1. A cutting finger for separating machines comprising an apron, a support extending above said apron, a cutting finger adapted to have its lower edge held against the said apron, and means located on the said support for forcing

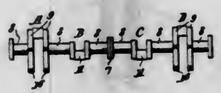
the lower edge of the finger against the apron and releasing it from the apron thereby enabling the finger to be adjusted as described.

1,692,911. TRIMMING TOOL. VERSAL V. VAUGHN, Los Angeles, Calif. Filed Nov. 1, 1926. Serial No. 145,495. 7 Claims. (Cl. 82—1.)



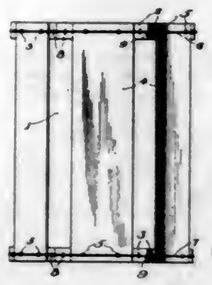
1. A terminal trimming tool including a supporting member, a tool formed of spring steel, attached to said member, and provided with spaced edges, one of said edges being a cutting edge, and a bearing portion transversely opposite said edges, for receiving and trimming a battery terminal, as described.

1,692,912. HEEL-ROUTING MACHINE. PEARL J. WENTWORTH, Fort Thomas, Ky. Filed Dec. 21, 1926. Serial No. 156,207. 1 Claim. (Cl. 144—134.)



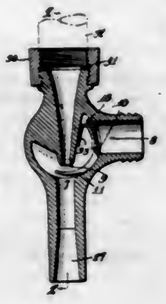
In a routing machine, a head stock, a spindle journalled in and extending through said head stock having a pulley on one end and a cutting tool removably secured into the opposite end, a table disposed transversely to the tool carrying end of the spindle having a stem extending therefrom slidably secured to the head stock, the cutting tool extending through an opening in the table and above the work supporting surface thereof, the table adjustable relative to the cutting tool for governing the cutting depth of the tool, and a guiding member slidably mounted upon said table adjustable relative to the cutting tool and carrying a pair of rollers disposed relatively at opposite sides of the axis of the cutting tool for edge engagement with the work, adapting a face of the work to be routed correspondingly to an outline of the work and within the edge of the work to a degree governed by the spacing of the rollers from the cutting tool.

1,692,913. MOLD. WILLIAM GILES WHITING, Vancouver, British Columbia, Canada. Filed May 10, 1927. Serial No. 190,289. 1 Claim. (Cl. 25—121.)



A mold for artificial stone and the like including a plurality of side walls adapted to be assembled in rectangular formation, and means for securing said walls together comprising a pair of horizontally extending lug plates attached to the outer surface of each wall adjacent opposite ends of the wall, the outer end of each lug plate being offset from the face of the wall at an angle equal to half the angle of the intersection of adjoining side walls and being projected beyond the adjacent end of the wall to which said lug plate is attached, the offset ends of certain of said lug plates having slots formed therein, bolts hingedly secured to the offset ends of the remaining lug plates and adapted to be engaged in said slots and nuts mounted on said bolts.

1,692,914. COUNTERBALANCING SYSTEM FOR ENGINES. RUDOLPH WINTZER, Milwaukee, Wis., assignor to Nordberg Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 22, 1927. Serial No. 185,832. 6 Claims. (Cl. 74—38.)

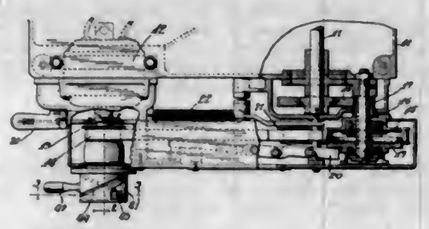


1. In an engine, the combination of a crank shaft having four cranks, which considered successively along the length of the shaft, are spaced each 135° angularly from the next, whereby the two end cranks are at 45° with each other; piston and connecting rod units of substantially uniform mass, one connected with each crank; and a pair of counterweights of substantially identical mass with one another mounted on said crankshaft near the ends thereof, and approximately opposite the end cranks, the centers of mass of said counterweights lying in a plane which bisects the angle between the end cranks.

1,692,915. CRATE. STANLEY O. WOOD, Kenova, W. Va., assignor to The Kenova Box Company, Kenova, W. Va. Filed May 18, 1927. Serial No. 192,363. 2 Claims. (Cl. 217—49.)

1. A crate comprising companion sections having upper and lower cross bars and strips having their upper and lower ends overlapping the outer side faces of said bars and secured thereto with the side edges spaced from the ends of the bar, the end faces of said bars being beveled and having flat contacting engagement with each other when the crate is disposed about an article with the bars overlapping the upper and lower ends of the article, binding wires extending across the upper and lower end portions of said strips and secured in flat contacting engagement with the extended end portions of said cross bars, said wires constituting pliable means connecting said sections and serving to reinforce the ends of the strips and having extended end portion adapted to be joined together to retain the crate about an article in protecting relation thereto.

1,692,916. EJECTOR. ASA ALLEN WOODRUFF, Philadelphia, Pa. Filed Jan. 4, 1927. Serial No. 158,858. 3 Claims. (Cl. 103—262.)



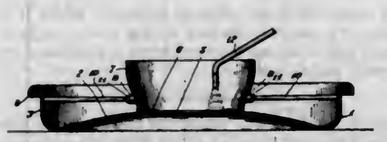
1. An ejector having a suction chamber, a jet nozzle discharging into said chamber, a discharge passage from said chamber, a suction inlet connected to said chamber and operatively arranged in respect to said nozzle, and a movable primer element arranged in the chamber and adapted in normal position to overlie the nozzle and in abnormal position to clear the nozzle, and said primer element disposed opposite the suction inlet in position to be moved by the fluid discharge from said inlet into abnormal position.

1,692,917. GRADUAL-CLAMPING CLIP FOR BRACES, SOCK SUSPENDERS, AND SUCH LIKE. PAUL ALENIC, Paris, France. Filed Mar. 12, 1926, Serial No. 94,164, and in France Aug. 13, 1925. 4 Claims. (Cl. 24—251.)

4. A clasp of the character described comprising a stationary jaw, a movable jaw intermediately pivoted to the stationary jaw, a roller at one end of the movable jaw, and a cam member movable within the stationary jaw and engaging the roller of the movable jaw for forcing the movable jaw towards the stationary jaw.

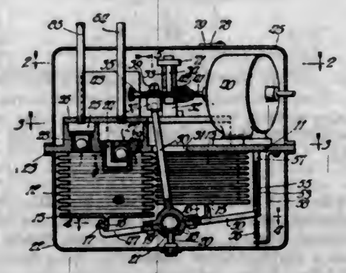
1,692,918. DRIVING MECHANISM FOR SLICING MACHINES. RUDOLPH BACHMAN, La Porte, Ind., assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed Apr. 14, 1923. Serial No. 632,046. 6 Claims. (Cl. 74—21.)

1. Driving mechanism comprising a pulley having a belt arranged to travel thereon, an expansion sleeve surrounding said pulley and movable in the direction of the axis thereof into and out of position between the driving face of said pulley and said belt, said sleeve having a convex face and a beveled edge for entering beneath the edge of said belt, and a rotary cam- co-axial with said pulley for moving said sleeve in the direction of the axis of said pulley.

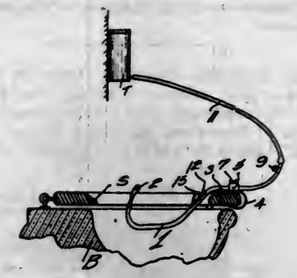


1,692,919. DISK-DRILL BIT. WALTER C. BAILEY, Norwalk, Calif. Filed Mar. 17, 1924. Serial No. 699,805. 12 Claims. (Cl. 255—71.)

1. In a rotary disk drill bit, the combination of: a body rotatable about its vertical axis and having a central depending leg; two rotatable cutting disks supported entirely by and mounted on opposite sides of said leg and transversely offset relative to each other in opposite directions from the vertical axis of the body, each disk being in advance of said leg in relation to the cutting rotation thereof; and an independent supporting bearing pin for each disk, each bearing pin extending entirely through said leg.

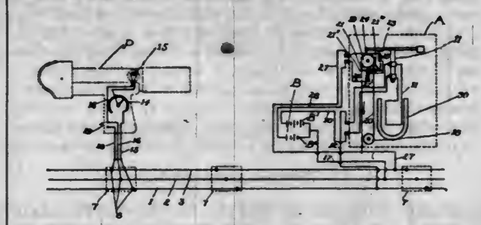


1,692,920. MEANS FOR DECORATING ARTICLES. ERLE K. BAKER, Chicago, Ill. Filed Dec. 29, 1924. Serial No. 758,569. 4 Claims. (Cl. 91—65.)



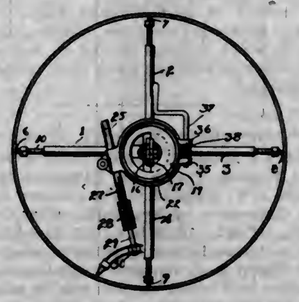
4. A device of the kind described embodying therein a tubular shaped guide member wider at one end than the other and open at both ends, and a plurality of radially outward arms on said guide member, longitudinally adjustable with respect thereto.

1,692,921. PUMPING AND METERING APPARATUS. THOMAS A. BANNING, Jr., Wilmette, Ill. Filed Oct. 13, 1926. Serial No. 141,309. 6 Claims. (Cl. 103—148.)



1. In a liquid displacement apparatus the combination of a base plate having curved inlet and discharge channels on its top face, a cover plate covering over said channels and sealing them, inlet and discharge pipes in connection with the channels, a plurality of expansible chambers located around a common center and having their upper ends secured to the base plate beneath the position of the channels aforesaid, means for sealing the lower ends of said chambers, inlet and discharge check valves in the base plate between the channels and the upper ends of the chambers, a cup enclosing all of the chambers and having its upper edge secured to the bottom of the baseplate, a ball projecting upwards from and supported by the center of the cup, a tilting member mounted upon said ball with a ball and socket joint and adjacent to the lower ends of all of the chambers, operative connections between said member and the lower ends of all of the chambers, there being a central opening in the base plate, an operating stem extending upwards from the tilting member through said opening, and means for moving said stem with a gyratory motion comprising a vertical stub shaft above the base plate, a disk on the lower end thereof, a ball and socket joint connection between the disk and the upper end of the stem, and means for driving the disk, substantially as described.

1,692,922. SYRINGE. LUDWIG C. BERG, Tacoma, Wash. Filed Feb. 16, 1928. Serial No. 254,666. 4 Claims. (Cl. 128—227.)

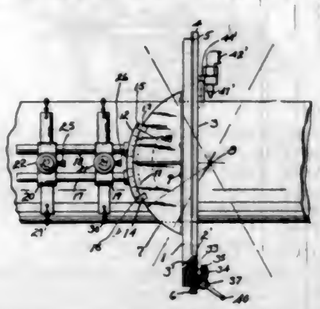


1. The combination with a rigid tube having a nozzle and a bearing head thereon, of an adjustable bushing on the tube and retaining means therefor, a resilient clamp hook on the bushing for co-action with the bearing head, a valve in the tube and a hose connected to the tube for the purpose described.

1,692,923. RECORDING OPTICAL PYROMETER. OSWALD H. BLACKWOOD, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 2, 1924. Serial No. 729,686. 2 Claims. (Cl. 234—11.)

2. In combination, an electrical measuring instrument provided with means to make a record on a chart, a single, portable, optical pyrometer connected in circuit with a source of energy to control the extent of movement of the measuring instrument to correspond to the temperature of a flue being tested; and means operable at a point adjacent said pyrometer to cause said instrument to make a record for each manipulation of said latter means.

1,692,924. BURNER HOLDER. HUGH F. BROWN, San Francisco, Calif., assignor to Brown Brothers Welding Company, a Partnership, San Francisco, Calif. Filed May 19, 1926. Serial No. 110,068. 7 Claims. (Cl. 266—23.)



5. A pipe cutting burner holder comprising means to mount a burner in the end of a pipe to be cut off, means to

revolve said burner with its flame against the inside surface of the pipe, and means to cause the burner to travel in a path to cut the pipe off at an acute angle to the axis of the pipe, and means to change the angle of the path of travel of said burner.

---

1,692,925. BURNER HOLDER. HUGH F. BROWN, San Francisco, Calif., assignor to Brown Bros. Welding Company, San Francisco, Calif., a Partnership consisting of Hugh F. Brown and William P. Brown. Filed Aug. 29, 1927. Serial No. 216,071. 4 Claims. (Cl. 266—23.)

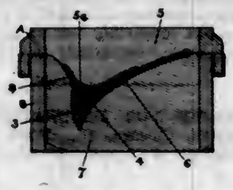
2. A burner holder of the class described comprising a fixed ring, a rotatable ring mounted on said fixed ring, a torch holder projecting from the side of said rotatable ring, a segment plate projecting from said fixed ring on the opposite side from said torch holder, a curved flange projecting downward from said plate, a bracket having a groove adapted to receive said flange and allow it to turn therein, means to mount said bracket on a pipe to be cut whereby said rings will be placed concentric of said pipe, and means to rotate said rotatable ring with the burner holder thereon.

---

1,692,926. PROCESS OF MAKING TETRA-ALKYL LEAD. WILLIAM S. CALCOTT, Penns Grove, and HERBERT W. DAUDT, Carneys Point, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 15, 1927. Serial No. 226,514. 25 Claims. (Cl. 260—11.)

1. In the process of making tetra-alkyl lead from a lead alkali metal alloy and an alkyl chloride, the improvement which comprises the progressive addition of the alloy to the alkyl chloride.

---

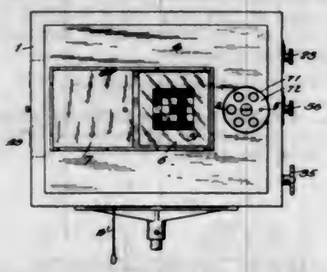


1,692,927. MANUFACTURE OF BENZOATES. WILLIAM S. CALCOTT and HERBERT W. DAUDT, Penns Grove, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 13, 1924, Serial No. 737,608. Renewed Feb. 27, 1928. 5 Claims. (Cl. 260—108.)

1. The method of manufacturing undiscolored water soluble white benzoates from crude benzoic acid made from phthalic acid which includes heating an aqueous solution of the benzoate with sufficient alkali metal permanganate to oxidize impurities.

---

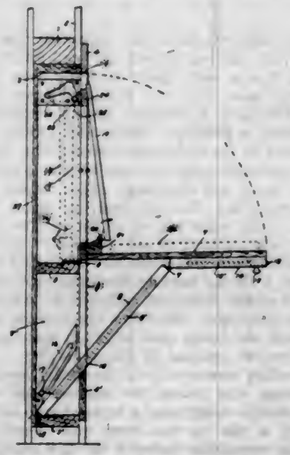
1,692,928. DENTURE, PARTIAL DENTURE, AND METHOD OF MAKING SAME. GEORGE WOOD CLAPP, RUSSELL WILFORD TENCH, and LAWRENCE W. DUNHAM, New York, N. Y., assignors to The Dentists' Supply Company, a Corporation of New York. Filed Oct. 3, 1922. Serial No. 592,021. 10 Claims. (Cl. 32—4.)



1. A set-up for use in making dentures, comprising a plurality of artificial teeth arranged in predetermined curved row formation and bound together side by side by a vulcanizable pliable material only partly vulcanized and capable of being incorporated into the finished vulcanite plate, said binder having a greatly smaller cross sectional area than that required by the plate in the finished denture in which the set-up is to be used, whereby it temporarily holds said teeth in relative positions and permits of

them being relatively adjusted while the set-up is used in making of a complete denture, and in which the partly vulcanized pliable binder material forms a portion of the final vulcanite plate thereof.

---

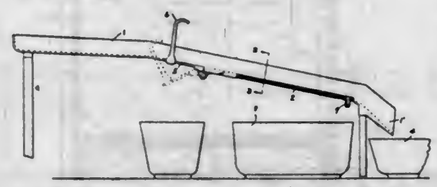


1,692,929. OPTICAL TEST CHART. HANS CLEMENT, New York, and ELMER LE ROY RYER, Hawthorne, N. Y., assignors to General Optical Co., Inc., a Corporation of New York. Filed Mar. 24, 1924. Serial No. 701,340. 28 Claims. (Cl. 88—20.)

1. An optical test chart comprising a casing provided with a front observation opening, a chart carriage within the casing movable toward and from the opening, and charts on the carriage shiftable into and out of line with the opening.

---

1,692,930. FOLDABLE SERVICE BOARD. EARLE W. CUMMINGS, Santa Barbara, Calif., assignor of one-half to Santa Barbara Lumber Company, Santa Barbara, Calif., a Corporation of California. Filed June 17, 1925. Serial No. 37,704. 5 Claims. (Cl. 45—51.)



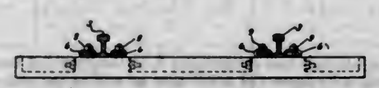
1. In a wall recess cupboard having front and rear walls and a bottom, a service board hinged to the cupboard to fold vertically within the same and to outfold downwardly to substantially horizontal extension therefrom, a panel strut hinged to the underside of the outfolded board extending angularly therefrom into the lower part of the cupboard free of the front wall of the cupboard and resting at its lower edge against an abutment formed on the bottom of the cabinet.

---

1,692,931. APPARATUS FOR SEPARATING EGGS. JOHN G. DOW, San Francisco, Calif., assignor of one-half to Thomas P. Galvin and one-third to John C. Burdick. Filed Aug. 27, 1927. Serial No. 215,919. 4 Claims. (Cl. 146—2.)

1. In an apparatus for separating the whites from the yolks of eggs, a plurality of downwardly slanting laterally spaced wires over which the eggs are adapted to slide, said wires provided with a gap formed by a downward looping of the wires adapted to catch the whites and for the yolks to ride over.

---

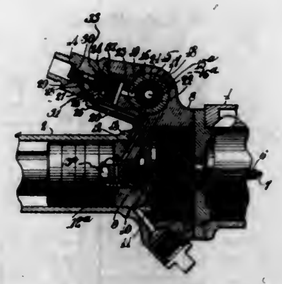


1,692,932. REAR-AXLE-HOUSING CONSTRUCTION. HENRY FORD, Dearborn, Mich. Filed Aug. 18, 1927. Serial No. 213,777. 5 Claims. (Cl. 29—148.1.)

1. In a method for forming drum axle housings, consisting of first forming the drum by rolling a channel section strip to form a broken ring, then forming a driveshaft sleeve having channel extensions from the edges thereof designed to complete the drum, then welding said driveshaft sleeve extension to the broken ring to complete the drum, then forming tube members by first forming tapered tubes, then forming bells, then forming axle end members having a securing flange and spring perch thereon, then welding the tubes to the bells and end members to form the tube members.

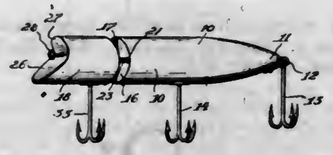
---

1,692,933. FERROREENFORCED-CONCRETE SLEEPER. KIJIRO FUKAGAWA, Saga, Japan, assignor to Maruichi-Goshikaisha, Tokyo, Japan. Filed May 24, 1927, Serial No. 193,787, and in Japan Dec. 20, 1926. 7 Claims. (Cl. 238—92.)



1. A reenforced concrete railroad tie comprising a recessed body portion provided with rail seats, said seats having slots therein and passages extending from the bottoms of said slots through said seats.

---



1,692,934. ROCK DRILL. ELMER G. GARTIN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed July 2, 1921. Serial No. 482,217. 17 Claims. (Cl. 121—8.)

1. In a rock drilling mechanism, means for conducting cleansing fluid to a drilled hole including a plurality of tubes, means for supplying cleansing fluids thereto comprising a plurality of separate conduits leading to said tubes, and means for controlling the flow of fluid through said tubes comprising a plurality of valves, and controlling means for said valves operable to permit flow past one of the same while the other is closed and including pressure controlled means for controlling one of said valves wholly controlled by another thereof.

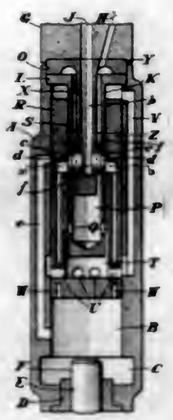
---

1,692,935. ARTIFICIAL BAIT. CHARLES HEDDON, Dowagiac, Mich., assignor to James Heddon's Sons, Dowagiac, Mich., a Corporation of Michigan. Filed Sept. 15, 1926. Serial No. 135,505. 9 Claims. (Cl. 43—46.)

1. A bait consisting of a head section having a nonplanate frontal surface configured to provide a channel for the escape of the water and having opposed walls positioned to receive inequalities in lateral pressure of the escaping water in imparting lateral movements to the head, and a body having flexible relation to the head and connected to swing laterally with respect thereto, the body being rigid and having a greater mass than the head, substantially as described.

---

1,692,936. COPPER ALLOY. FRIEDRICH HEUSLER, Dillenburg, Germany. Filed July 17, 1926. Serial No. 123,250. 4 Claims. (Cl. 148—11.)

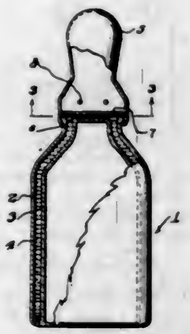


3. The method of increasing the hardness and elastic limit of alloys containing a predominant proportion of copper, 0.5 to 20% of manganese, 0.3 to 8% of silicon, which consists in first annealing the alloys after they have been cast, rolled or forged, at a temperature above 450° C., then cooling and finally hardening the same at a temperature of from 200 to 350° C.

---

1,692,937. PERCUSSIVE TOOL. GEORGE W. HULSHIZER, Stewartsville, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 2, 1927. Serial No. 217,108. 7 Claims. (Cl. 121—17.)

1. A fluid actuated percussive tool, comprising a cylinder having an inlet passage leading to one end thereof, a reciprocatory piston in the cylinder having a chamber, a

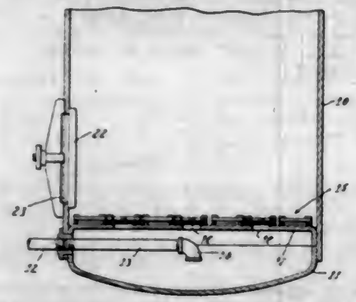


hollow inlet plug extending into the chamber constantly associated with a supply of pressure fluid, said inlet plug and piston having ports communicable for intermittently admitting pressure fluid into the chamber and through

the inlet passage to one end of the cylinder, passages in the piston for conveying pressure fluid to the other end of the cylinder, and a hollow exhaust plug in the inlet plug for conveying exhaust fluid from the cylinder.

---

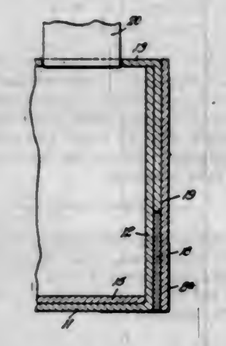
1,692,938. TOY NURSING BOTTLE. JOSEPH JACOBS, New York, N. Y. Filed Feb. 15, 1927. Serial No. 168,307. 3 Claims. (Cl. 46—40.)



1. In a device of the class described, a bottle formed of transparent material having double walls forming a chamber, a liquid in said chamber, a nipple attached to the neck of said bottle and communicating with said chamber, the said liquid adapted to be poured in said nipple when the bottle is inverted.

---

1,692,939. WATER SOFTENER. OSCAR W. JOHNSON, Rockford, Ill., assignor to Ward-Love Pump Corporation, Rockford, Ill., a Corporation of Illinois. Filed Oct. 15, 1926. Serial No. 141,688. 5 Claims. (Cl. 210—24.)

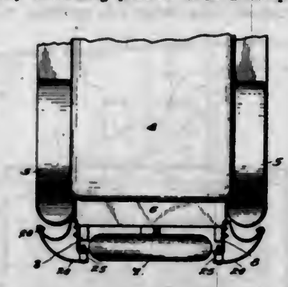


1. In a water softener having a bed of base-exchange material, a perforated supporting and retaining wall for said material arranged to serve as a frame-work onto which may be fastened a network or patchwork of pieces of diaphragm material, a plurality of pieces of diaphragm material for said network or patchwork, and individual means for each piece of diaphragm material for securing the same to said wall in such a way as to permit its separate removal and replacement while permitting each piece to buckle individually under the action of the water

flowing therethrough, each of said pieces of diaphragm material being provided of substantially circular form with rings of gasket material on its marginal edges on opposed faces, and the means for securing the same in place comprising a ring arranged to be superposed on the piece of diaphragm material and to be fastened to the supporting and retaining wall whereby to clamp the piece of diaphragm material in place between its rings of gasket material.

---

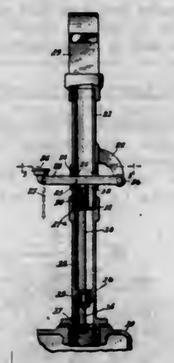
1,692,940. FOLDING STORAGE FILING CASE. FRED H. JONES, Chicago, Ill. Filed Sept. 4, 1926. Serial No. 133,548. 3 Claims. (Cl. 229—23.)



1. A storage case comprising a vertically sided frame, a spacing strip upon the inner face of one of the side walls of the frame, a case unit in the frame and having one of its side walls spaced from said frame wall to provide a longitudinal pocket, and a hinged closure for the case unit having a tongue engageable in the pocket when the former is in closed position.

---

1,692,941. BUMPERETTE. FRANK J. KERBER, Chicago, Ill. Filed Dec. 27, 1926. Serial No. 157,026. 5 Claims. (Cl. 293—55.)

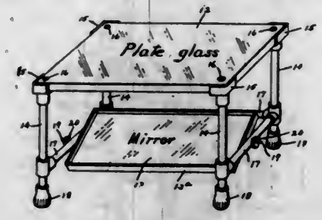


5. A bumperette comprising a plurality of bars in contact and adapted to attach to a chassis, both having inwardly bent rear ends, one bar having at its forward end an outwardly extending portion with a compound curve,

a curved bar connected to the outer end of the latter bar, and a compensating connection between the curved bar and the inwardly bent rear ends.

---

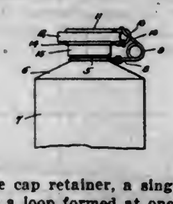
1,692,942. TRAFFIC-SIGNAL APPARATUS. JOHN KUALI, Hudson Heights, N. J. Filed Apr. 26, 1924. Serial No. 709,148. 2 Claims. (Cl. 116—137.)



1. Apparatus of the character described comprising a receptacle adapted to hold an operating fluid under pressure therein, a tubular member having an end in communication with said receptacle, said tubular member having a valve seat therein, a valve stem guide disposed adjacent the other end of said tubular member, a valve and a valve stem disposed within said tubular member, said stem projecting beyond said other end, a second tubular member disposed in alignment with said first mentioned tubular member and detachably secured to said other end and into which said valve stem projects, a valve operating device carried by said second tubular member, a whistle also carried by said second tubular member, said valve operating device including a member located partly within and partly outside of said second tubular member, that part of said device which is within said second tubular member being arranged to engage the projecting end of said valve stem, and a spring on said stem all being arranged whereby said first tubular member, said valve, said valve seat and said spring constitute one unit, and said second tubular member, said whistle and said valve operating device constitute a second unit, said tubular members having separable connection one with the other for the purposes described.

---

1,692,943. FOOT DEMONSTRATOR. JOSEPH LELYVELD, Rockland, Mass. Filed May 6, 1926. Serial No. 107,019. 3 Claims. (Cl. 128—2.)



1. A foot demonstrator comprising a flat transparent tread, an open frame surmounted by and horizontally supporting the tread, and a mirror located under the tread and arranged to reflect a foot bottom bearing on the tread, the frame including tread-supporting standards extending downward from the tread and spaced apart, to permit access to the bottom of the tread for cleaning, and the pas-

sage of light between the standards to the tread for illumination of a foot bottom thereon, the arrangement being such that a reflection by the mirror is visible from a point wholly at one side of the demonstrator, and without obstruction by the tread and by feet thereon.

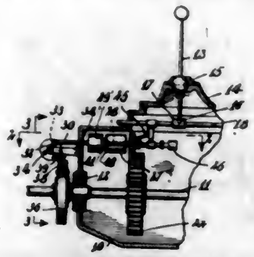
---

1,692,944. REMOVABLE CAP ATTACHMENT. JOHN JOSEPH MCGRATH, Brooklyn, N. Y. Filed Nov. 11, 1927. Serial No. 232,618. 1 Claim. (Cl. 221—60.)

In a removable cap retainer, a single strand of spring-like wire, having a loop formed at one end adapted to engage the neck of a compressible tube, a loop formed intermediate the ends of the wire adapted to engage the top of the cap, a loop formed at the opposite end of the wire adapted to engage the hub of the cap and co-acting with said intermediate loop to secure the cap therebetween in gripping relation and a spring formed from the wire intermediate the first named loop and the intermediate loop whereby to yieldably retain said loops in relative position with each other.

---

1,692,945. KNITTING MACHINE. JAMES MCNAMEE, Ballston Spa, N. Y. Filed Aug. 29, 1927. Serial No. 216,175. 9 Claims. (Cl. 66—79.)

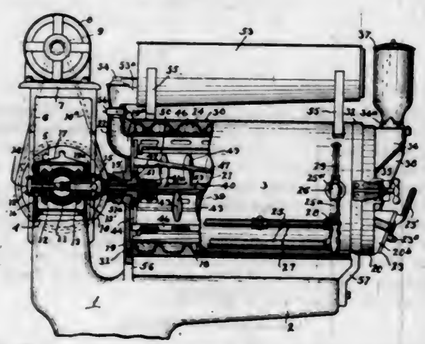


1. A knitting machine having a circular series of spring needles, alternate needles being longer than the remaining needles, means for shifting one of the needles laterally to position the long needle in lapped relation with an adjacent short needle, and means for looping over the short needle the stitch carried by the long needle, said needles being adapted, when released, to spring apart to spread the engaged stitch.

---

1,692,946. AUTOMATIC AUTOMOBILE BACKSLIDE BRAKE. CHARLES W. MILLARD, Jr., Scarsdale, N. Y. Filed June 16, 1927. Serial No. 199,194. 2 Claims. (Cl. 192—4.)

1. In a motor vehicle brake of the class described, a clutch member mounted on a shaft, as a means of grip-

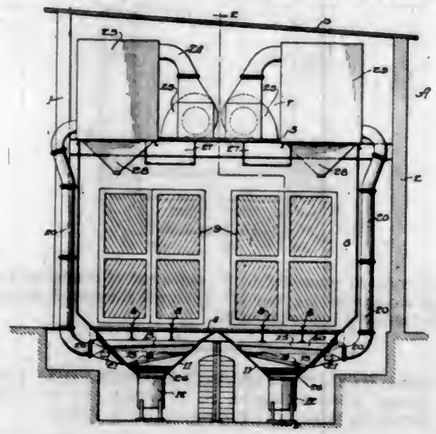


ping the said shaft when the clutch is rotating in one direction, and as a means of securing free rotation of the said clutch member in the opposite direction, said clutch member having secured thereto, and extended therefrom pins,

adapted to engage in apertures formed in a block member, said block member threadedly mounted in a second shaft, said second shaft in alignment with the first mentioned shaft, the said second shaft rotatively mounted in the said transmission case.

---

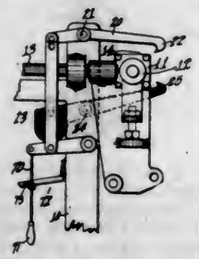
1,692,947. MACHINE FOR TREATING MATERIALS. HARVEY H. MILLER, Canton, Ohio, assignor to The H. H. Miller Industries Company, Canton, Ohio, a Corporation of Ohio. Filed Jan. 28, 1927. Serial No. 164,150. 3 Claims. (Cl. 259—6.)



1. In a machine of the class described, the combination of a cylinder for material having an inlet and an outlet, inner and outer members mounted to rotate within said cylinder in different paths measured radially thereof and relative to each other, said outer member operating to scrape the material from the inner surface of said cylinder and said inner member comprising sets of blades disposed upon opposite sides of the axis of said inner member and arranged to propel the material toward one end of the cylinder and an element arranged midway between the outer ends of said blades and traversing a circular path within but closely adjacent the scraping elements of said outer member and operating to impel the material substantially outwardly against said inner surface, and means for operating said members.

---

1,692,948. SAND-BLAST APPARATUS AND PROCESS. RAYMOND H. MOORE, Chicago, Ill., assignor to The American Foundry Equipment Company, New York, N. Y., a Corporation of Ohio. Filed May 20, 1922. Serial No. 562,469. 6 Claims. (Cl. 51—8.)



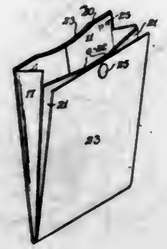
1. The combination of a separating chamber into which the abrasive and dust may pass and pneumatic means for separating the abrasive and dust from one another in said chamber, said separating chamber comprising a hopper for receiving the abrasive and dust and having a trough within the hopper, said trough being connected with said pneumatic means there being side openings to permit the

entry of the abrasive and dust into said trough, and also a bottom opening to permit abrasive to fall from the trough while the dust is being removed therefrom by the pneumatic means.

---

1,692,949. CYLINDER PAWL FOR JACQUARDS. JACOB B. OLCH, Providence, R. I., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed May 11, 1927. Serial No. 190,584. 4 Claims. (Cl. 139—329.)

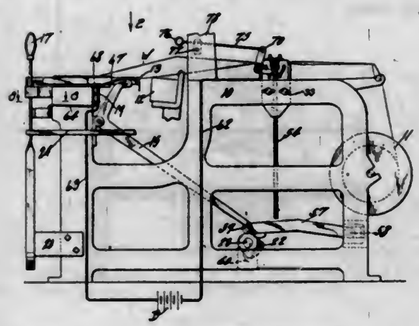
1. In a jacquard mechanism having a cylinder movable back and forth in a prescribed path and having a plurality of pull over pins, a pull over pawl having a fixed pivot, said pawl to cooperate with the pins one at a time to cause a partial rotation of the cylinder as the latter moves, a control member for the pawl, and means defining a loose connection between the pawl and the member to lift said pawl positively away from the pins when said control member moves in one direction, said pawl being movable away from the pins independently of the control member because of the loose connection.



---

1,692,950. PROCESS FOR PROTECTING ANIMAL FIBER. PAUL ONNERTZ, Berlin-Wilmersdorf, and BENNO SCHWÄRZEL, Berlin, Germany, assignors, by mesne assignments, to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed June 22, 1925, Serial No. 38,901, and in Germany Aug. 21, 1924. 4 Claims. (Cl. 8—20.)

1. The method of protecting animal fibers from the injurious effect of alkaline liquids, which comprises treating the fibers with an alkaline liquid in the presence of a sulphurized phenol which does not possess the properties of a dyestuff and which is soluble in a sodium carbonate solution with only a slight color.

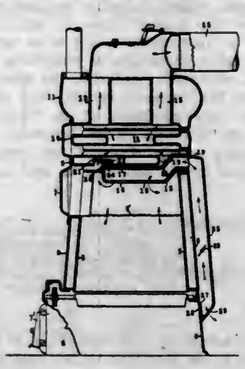


1,692,951. DRINKING CUP AND THE LIKE. ARTHUR S. PINCKNEY, Dayton, Ohio. Filed July 29, 1926. Serial No. 125,808. 2 Claims. (Cl. 229—1.5.)

1. A collapsible drinking cup comprising an inner portion folded along the opposite edges and converging toward the bottom edge thereof, an intermediate portion of like material and a cover portion of unlike transparent material, folded transversely over the opposite sides of said inner portion.

---

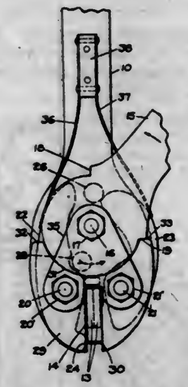
1,692,952. ELECTRICALLY-OPERATED WARP STOP MOTION. JOHN REGAN, New Bedford, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 4, 1927. Serial No. 210,661. 9 Claims. (Cl. 139—351.)



1. In a warp stop motion, a plurality of drop wires, a fixed electric contact bar positioned to be engaged by a fallen drop wire, and additional mechanical means effective to agitate a fallen drop wire to force said wire repeatedly against said fixed bar until electrical contact with said bar is effected.

---

1,692,953. FURNACE. DWIGHT S. RICHARDSON, New York, N. Y., assignor to Richardson & Boynton Co., New York, N. Y., a Corporation of New York. Filed Jan. 9, 1925. Serial No. 1,866. 6 Claims. (Cl. 100—75.)

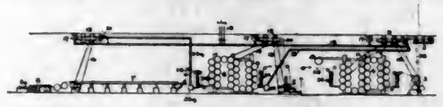


1. In combination, a furnace having a combustion chamber defined by walls, an airbox within said combustion chamber, and means to support said airbox within said chamber, said means including a shoulder formed on one of said walls, a hook associated with another of said walls, and extending in a direction away from the first wall, a hook associated with said box and extending to-

wards said shoulder, and an air intake member associated with said box and extending substantially in the same direction as the latter hook and engaging said shoulder.

---

1,692,954. CLAMP-APPLYING TOOL. JOHN E. ROUGHAN, Liberty, Ind., assignor to Walter F. Bossert, Liberty, Ind. Filed Apr. 30, 1927. Serial No. 187,934. 6 Claims. (Cl. 81—9.1.)

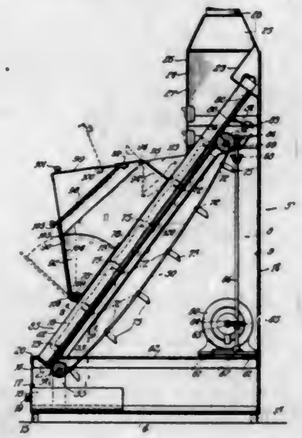


1. A clamp-applying tool comprising a handle having a clamp-receiving depression in its extremity, a jaw pivoted at each side of the depression and having its inner edge provided with a cam portion, and a member pivoted on said handle between said cam portions and provided with a pair of spaced pins adapted when the member is oscillated to force the cam portions of the jaws apart to cause the jaws to perform the clamping operation, said cam portions being arranged at different angles so that the movement of one of the jaws will precede the movement of the opposed jaw whereby the clamping operation will be successively performed, substantially as set forth.

---

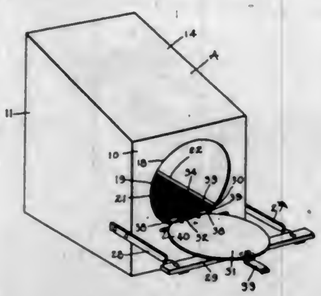
1,692,955. METHOD AND MEANS FOR OPERATING TEXTILE RANGES. WILLIAM S. ROWLEY and HARRY W. BUTTERWORTH, Jr., Philadelphia, Pa., assignors to H. W. Butterworth & Sons Company, a Corporation of Pennsylvania. Filed Mar. 28, 1924. Serial No. 702,564. 6 Claims. (Cl. 271—2.3.)

1. The herein described method of controlling the operation of a plurality of different machines constituting a



"range", through which machines a textile material is required to pass in succession and by which the material is subjected to treatments of different kinds peculiar to the several machines, which consists in operating all of the machines of the "range" through which the textile material passes at approximately the same surface speeds allowing for possible shrinkage or stretching which may normally occur, manually regulating the speed of one of the machines of the "range", varying the speed of one or more of the other machines of the "range" whereby the surface speed is increased or decreased to compensate for stretching or shrinkage of the textile material while being treated as the case may be, and automatically

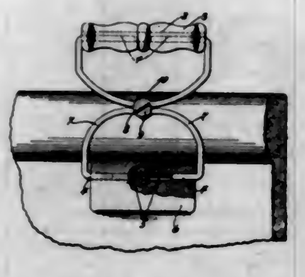
controlling the increasing and decreasing of the speeds of the respective other machines by the degree of stretching or shrinking of the material undergoing treatment therein and wherein further, one of the other machines immediately preceding the manually controlled machine and through which the textile material passes before passing through the manually controlled machine has its speed decreased or increased commensurately in accordance with the varying stretching or shrinking of the textile material and established at a point intermediate of its treatment in the manually controlled machine and the said other machine immediately preceding it in the "range."



---

1,692,956. FRANKFURT MACHINE. THOMAS C. RUSSELL, Evanston, Ill., assignor to Adam H. Kulikowski, Evanston, Ill. Filed June 13, 1927. Serial No. 198,620. 5 Claims. (Cl. 126—41.)

1. In combination, a longitudinal cooking trough, heater means extending along said trough, an endless conveyor operable adjacent said trough, means on said conveyor and for feeding the articles through said trough with the movement of the conveyor, said trough being inclined and having means to permit grease to drain vertically therefrom as formed, a drip pan underlying said trough for receiving the grease from said trough, a storage bin overlying said cooking trough and heated by said heater means, means for automatically discharging the articles as cooked from said conveyor and into said compartment, and means on said conveyor for actuating said last means with the movement of the conveyor.



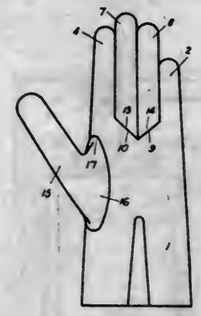
1,692,957. TRAP NEST. JOHN L. SKINNER, Minneapolis, Minn. Filed Feb. 17, 1927. Serial No. 168,927. 7 Claims. (Cl. 119—49.)

1. A trap nest comprising an enclosure having a wall formed with an entrance opening, a door for said opening adapted to normally extend outwardly beyond said wall to form an approach to said opening, a portion of said door extending across the sill of said opening and inwardly within said enclosure and adapted to rest thereon, a movable member within said enclosure, a stop formed on said door in proximity to the point of contact of said door with said sill for swingably mounting said door in conjunction therewith, and means connecting the inwardly extending portion of said door with said movable member for swinging said door into closing position upon downward movement of said member.

---

1,692,958. BAIL. CARLTON B. STAHL, White Hall, Ill. Filed Oct. 29, 1927. Serial No. 229,568. 3 Claims. (Cl. 215—100.)

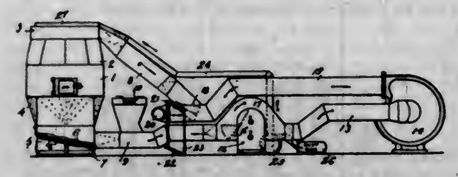
1. A bail comprising a pair of wire members each composed of a single thickness of material throughout its length and each being bent to provide an eye intermediate of its ends composed wholly of a single thickness of said wire and overlapping the eye on the other member, a handle engaging the upper ends of said members, projections on the opposite ends of said members for engagement with a lug of a jar, and a clamping element passing through said overlapping eyes.



---

1,692,959. GLOVE. JOHANN STEINERT, Chemnitz, Germany. Filed July 15, 1926, Serial No. 122,649, and in Germany Aug. 14, 1925. 2 Claims. (Cl. 2—169.)

1. A glove of the character described, comprising a blank which is cut so as to form at one side the back pieces for the second, third and fourth fingers and at the other side a counter-part for the fourth finger and a complete piece for the index finger, and separate pieces forming the front and sides of the second and third fingers, the blank being



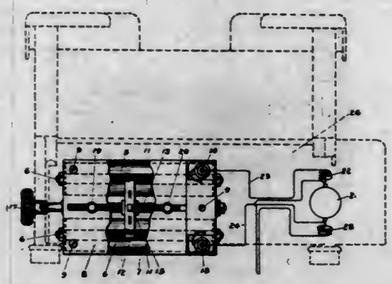
slit obliquely at the base of and between said counter-part and complete piece so as to form flaps which, when turned back, coincide with the obliquity of the dividing surface between the fingers of the hand, said separate finger pieces being formed with straight-edged triangular incisions

forming in each case three triangular flaps, the outermost of said flaps being adapted, when turned back, to coincide with the obliquity of the dividing surface between the fingers of the hand, the middle flaps of the two pieces being adapted to fill the gap formed by the slitting of the blank.

---

1,692,960. MATTRESS-FILLER-TREATING MACHINE. HUGO R. SWANSON, Brooklyn, and KILIAEN M. VAN RENSSELAER, Woodmere, N. Y., assignors to Triangle Kapok Machine Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 21, 1927. Serial No. 176,938. 5 Claims. (Cl. 19—144.)

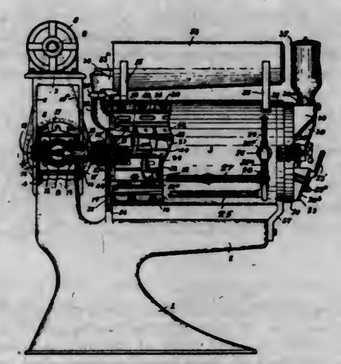
1. In a machine of the character described the combination with an aeration tank, a circulatory system associated therewith and means for causing the material to be treated to circulate in said system of means communicating with said tank for removing the dust therefrom whenever a back pressure is created in said system.



---

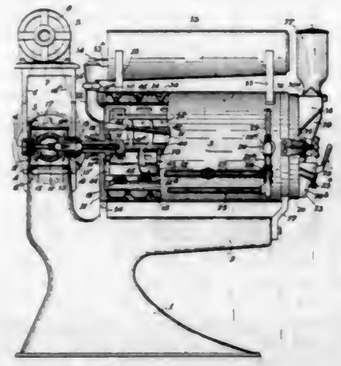
1,692,961. ALTERNATING-CURRENT RELAY. ELMER O. THOMPSON, Tomkinsville, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 29, 1921. Serial No. 525,728. 5 Claims. (Cl. 200—91.)

1. In a selective alternating current relay, a tuned reed, two members carried thereby and normally separated, one of them having inertia and being capable of displacement relatively to the other member and being adapted on vibration intermittently to make contact with the other, and a circuit to be closed and opened correspondingly.



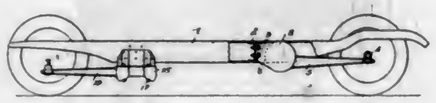
1,692,962. MOTOR CONTROLLER. RUSSELL G. THOMPSON, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 2, 1925. Serial No. 66,425. 2 Claims. (Cl. 201—62.)

1. A rheostat comprising: two resistance devices provided with parallel series of contact points, a screw lying between and parallel with the resistance devices, a housing enclosing the resistance devices and provided with a slot parallel with the screw, a nut member, of insulating material, threaded upon the screw and comprising a lateral projection which engages said slot to prevent turning of the nut member about the screw, and a contact blade centrally perforated to receive said projection and spanning the two series of contact points.



---

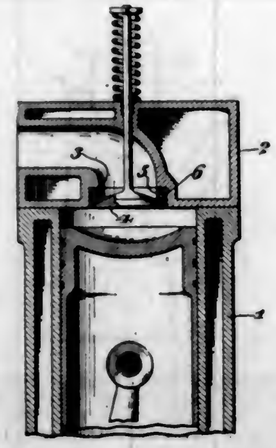
1,692,963. MACHINE FOR TREATING MATERIALS. WILLIAM H. THOMPSON, Canton, Ohio, assignor to The H. H. Miller Industries Company, Canton, Ohio, a Corporation of Ohio. Original application filed Mar. 17, 1924, Serial No. 699,849. Divided and this application filed Oct. 31, 1925. Serial No. 66,045. 12 Claims. (Cl. 259—105.)



1. In a machine of the class described, the combination of a cylinder for material having an inlet and an outlet, members mounted to rotate within said cylinder and relative to each other, one of said members operating to scrape the material from the inner surface of said cylinder and the other of said members extending longitudinally of said cylinder and traversing a circular path parallel to the first mentioned members and operating in the opposite direction to impel the material outwardly toward the wall of said cylinder, and means for operating said members.

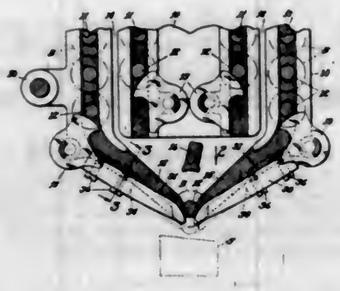
1,692,964. MACHINE FOR TREATING MATERIALS. WILLIAM H. THOMPSON, Canton, Ohio, assignor to The H. H. Miller Industries Company, Canton, Ohio, a Corporation of Ohio. Filed Mar. 17, 1924. Serial No. 699,849 10 Claims. (Cl. 257—84.)

3. In a machine of the class described, the combination of a cylinder for material having an inlet and an outlet, means for applying a temperature changing medium around the outer surface of said cylinder, inner and outer members mounted to rotate within said cylinder in different paths measured radially thereof and relative to each other, said outer member operating to scrape the material from the inner surface of said cylinder, and said inner member comprising a plurality of blades arranged to propel the material toward one end of the cylinder and an element carried by said blades and operating to impel the material substantially outwardly against said inner surface, and means for operating said members.



1,692,965. MOTOR VEHICLE. MILTON TIBBETTS, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 4, 1926. Serial No. 92,257. 5 Claims. (Cl. 267—21.)

1. In a motor vehicle, the combination with an arm connected to an axle, of rubber blocks having groove and rib connection with opposite faces of the arm, a frame, and retainers connected to the frame and cooperating with the rubber blocks whereby said rubber blocks clamp and support the arm.

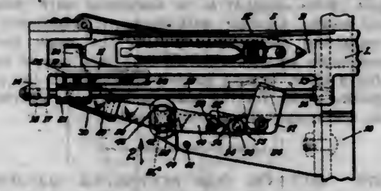


1,692,966. METHOD OF UNITING METAL OBJECTS. OTIS D. TREIBER, Collingswood, N. J., assignor to Treiber Diesel Engine Corporation, Camden, N. J., a Corporation of New Jersey. Filed Sept. 13, 1927. Serial No. 219,258. 7 Claims. (Cl. 29—156.4.)

1. The method of uniting two metal bodies one of which is provided with an opening for the reception of the other of said bodies or a portion thereof of a diameter slightly greater than the diameter of said opening, which consists in causing the said metal body or the portion thereof which is to be inserted into the said opening to contract to a

diameter slightly less than that of the said opening, inserting the same into said opening, and thereafter permitting expansion thereof.

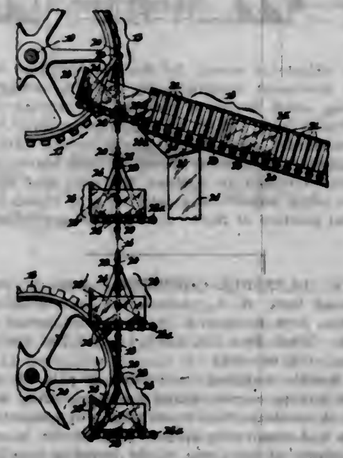
1,692,967. RESILIENT SUPPORT FOR BOBBINS. RICHARD GREENLEAF TURNER, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 19, 1926. Serial No. 142,720. 7 Claims. (Cl. 139—251.)



1. In a weft replenishing mechanism having a supply of bobbins and a transferrer mechanism, a frame forming part of the replenishing mechanism, a pair of bobbin supports located under the transferrer mechanism and inclined downwardly and toward each other and affording a support for a bobbin in transfer position, said supports being formed of rubber and having portions thereof held in fixed contact with a part of the frame, each support being compressible in the direction of its length due to the inherent resilience thereof.

1,692,968. LUBRICATING DEVICE FOR PICKER SPINDLES. KENNETH J. UNWIN, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 7, 1928. Serial No. 252,615. 5 Claims. (Cl. 139—142.)

1. In a lubricating device for a loom having a lay movable back and forth in the loom and having a picker stick and a picker spindle, a device movable about a fixed pivot to have engagement with the picker stick as the lay moves, and a lubricating element pivotally mounted on said device

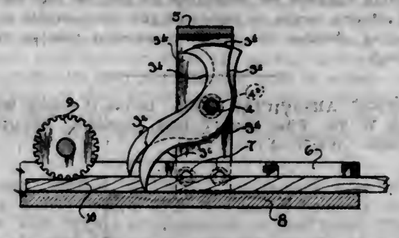


and having a spindle engaging portion offset from the axis thereof, whereby movement of the lay will cause a side slipping movement of the lubricating device along the portion of the spindle.

1,692,969. CLOSURE MEANS FOR TOBACCO POUCHES AND OTHER CONTAINERS. GEORGE S. VAN VOORHIS, Brookline, Mass. Filed Apr. 13, 1927. Serial No. 183,472. 2 Claims. (Cl. 150—8.)

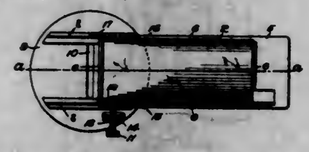
1. In combination with a container having a portion consisting of resilient sheet material formed with a mouth having a resilient rim, a separable closure member therefor consisting of a plug of slightly larger diameter than the normal diameter of the said mouth and having a peripheral groove with which said resilient rim is adapted to be engaged under tension, the relative diameters of the rim of the mouth and of the plug being such that the said rim must be stretched to permit insertion and removal of the plug, said plug extending outward beyond said rim of the mouth to form a finger grip.

1,692,970. DISTRIBUTING SYSTEM FOR BRICKYARDS AND THE LIKE. GEORGE D. WARNICK, Jenkintown, Pa. Filed Dec. 3, 1925. Serial No. 72,952. 2 Claims. (Cl. 198—153.)



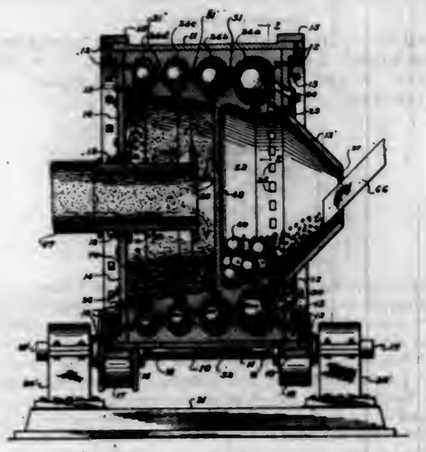
1. In distributing systems of the character described, the combination of an elevating conveyor with pivoted scoop-like carriers each equipped with a series of rollers to support articles thereon, and stationary cam means engageable by the forward roller of each successive carrier to deflect the latter into alignment with a distributing chute for automatic discharge of the carrier content.

1,692,971. ADJUSTABLE CIGAR AND CIGARETTE HOLDER. MAURICE ALLAND, Atlantic City, N. J. Filed Feb. 19, 1927. Serial No. 169,464. 3 Claims. (Cl. 131—10.)



3. A smoking device, comprising a shank having a bore leading from the mouth-engaging end and communicating with a recess in the other end adapted to receive the end of a cigarette, the outer surface of said latter end being provided with a plurality of sets of screw-threads separated by an unthreaded area and a sleeve rotatably surrounding and having a free end of larger internal diameter than the recessed end of said shank, the inner supporting end of said sleeve being provided with screw-threads adapted to engage either of said sets of threads, to maintain said sleeve in extended position and adapted to receive the end of a cigar, or to maintain said sleeve in retracted position to permit the recessed end of said shank to receive the end of a cigarette.

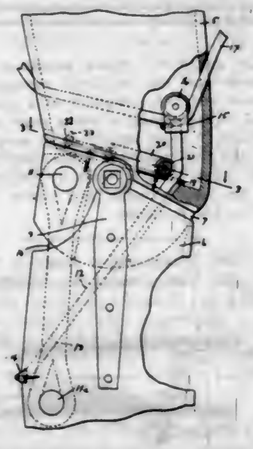
1,692,972. SAFETY GUARD. WALTER DOUGLAS ANDERSON, Newcastle, New Brunswick, Canada. Filed June 24, 1927. Serial No. 201,163. 4 Claims. (Cl. 144—244.)



1. A safety guard for power machines comprising a bracket, a horizontal rod supported thereby and a shield carried by said rod and composed of a plurality of free swinging and independently working dogs pivoted side by side on said rod in close contact with each other to provide a solid wall for the side next the machine that is of a double curve form being convex at its lower end and concave at the top to catch and throw back particles tossed out from the machine.

1,692,973. LENS. FREDERICK G. BABCOCK, Madison, Ohio. Filed Apr. 27, 1922. Serial No. 556,961. 8 Claims. (Cl. 88—57.)

1. A lens having a transversely curved face constituting a refracting surface uniformly increasing in refractive power from zero to a selected maximum power of refraction in a longitudinal direction only, and means to direct a plane of light through a selected transverse plane of said lens.



1,692,974. BALANCED BALL MILL. WILLIAM M. BARKER, Canton, Ohio. Filed Sept. 1, 1926. Serial No. 132,987. 15 Claims. (Cl. 83—9.)

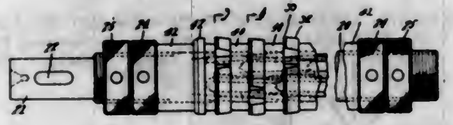
1. A ball mill and the like including walls forming a feed chamber, a discharge chamber and an annular grinding chamber, a plurality of material inlet ports communicating between the feed chamber and the grinding chamber, a plurality of outlet ports communicating between the grinding chamber and the discharge chamber, a plurality of auxiliary inlet ports in the end wall of the grinding chamber for admitting air and the like thereto, and grinding means as balls and the like movable in the grinding chamber for grinding material passing therethrough.

---

1,692,975. ARTIFICIAL LIMB. IRVINE P. BOGGS, Wheeling, W. Va. Filed Nov. 17, 1927. Serial No. 233,948. 1 Claim. (Cl. 3—2.)

In an artificial limb of the class described, a thigh section, a lower leg section and a complemental breakable joint between said sections, means for limiting the swinging movement of the lower leg section in a forward direction, a pivotal connection between said sections, a cord fastened at its lower end with the calf of said lower leg section and extending upwardly and into the thigh section, a head on the upper end of said cord, pulleys carried by said head and pull cables trained over said pulleys, said pull cables adapted to be associated with shoulder operated means, together with manually adjustable tension regulating means mounted in the thigh section, and cooperable with said cords, said last named means including a plate, a yoke slidably mounted on the plate, an adjusting screw for the yoke, and a pulley carried by the yoke and cooperable with said cord.

---



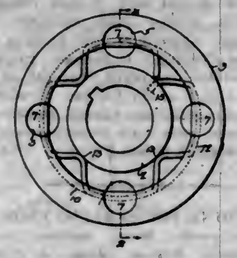
1,692,976. MUFFLE FOR SINTERING MACHINES. JOSEPH CHARLES DEVICK, Helena, Mont., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 21, 1925. Serial No. 51,562. 6 Claims. (Cl. 266—20.)

1. A muffle comprising a plurality of one-piece arch shaped sections of fire resisting material having a fuel ignition chamber, interfitting means between adjoining sections around said chamber, and a clamping device for clamping said sections together including an elongated member extending between end sections.

---

1,692,977. BROACH WITH ADJUSTABLE BROACHING MEMBERS. WILLIAM DE VOE, Worcester, Mass., and JAMES J. WARD, Detroit, Mich., assignors to Detroit Broach Corporation, Detroit, Mich., a Corporation of Michigan. Filed May 23, 1927. Serial No. 193,467. 15 Claims. (Cl. 90—33.)

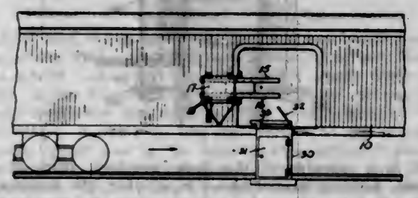
1. An adjustable broach for finishing internal work by relative movement longitudinally thereof, comprising a supporting shaft having a plurality of bearing surfaces spaced apart, both axially and circumferentially, and inclined outwardly with respect to the broach axis, and a separate broaching member seated on each bearing surface and firmly retained in position thereon, said broaching members being adjustable axially of said broach to vary the radial position of their outer circumferential surfaces.



---

1,692,978. FLEXIBLE COUPLING. JOHN R. DUNHAM, Highland Park, N. J., assignor to John Waldron Corporation, New Brunswick, N. J., a Corporation of New Jersey. Filed June 15, 1927. Serial No. 199,054. 4 Claims. (Cl. 64—96.)

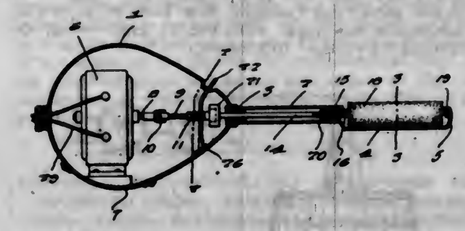
1. A flexible coupling comprising a pair of coupling members having corresponding and registering series of cylindrical openings, flexible coupling pins connecting said members and comprising keepers adapted for insertion in said openings, at least one of the coupling members and the associated keepers of the coupling pin having registering transverse recesses, and a resilient split element



carried in the recess of said coupling member and adapted to project into the recesses of the keepers to anchor them in said member, said element including parts projecting

inwardly and in abutment with a surface of said member and preventing accidental contraction of said retaining element to an extent permitting rotation of the keepers in the coupling members.

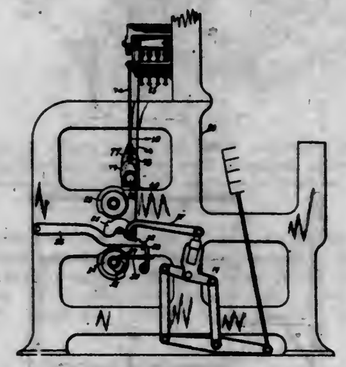
---



1,692,979. DEVICE FOR DELIVERING MAIL BAGS FROM RAILWAY CARS. EUGENE E. EDENHARDER and JACOB E. EDENHARDER, West Allis, Wis., assignors of one-third to Helen Edenharder, West Allis, Wis. Filed Jan. 20, 1926. Serial No. 82,560. 6 Claims. (Cl. 258—19.)

1. In a device for delivering mail bags from moving railway cars, a receptacle carried by the car, and having a V-trough or hopper formed of converging grids one of which is movable, and adapted to support a mail bag in position for delivery, in combination with a stationary grid adapted to engage the mail bag and deflect it from the hopper through its movable grid.

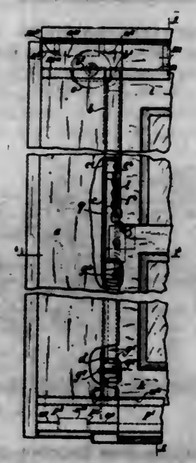
---



1,692,980. MOTOR-DRIVEN ROTARY TOOTHBRUSH. GORDON C. FARMER, Blacksburg, Va. Filed Sept. 7, 1927. Serial No. 217,953. 2 Claims. (Cl. 15—28.)

1. A tooth brush comprising a casing, an elongated sleeve extending forwardly from the forward end thereof, a motor supported in the casing, a stub shaft, a universal coupling connecting the stub shaft and the motor shaft, a driven shaft extending through the sleeve from within the forward portion of the casing, a brush head connected to the driven shaft, a sleeve slidably connected on the stub shaft, an enlarged circular head on the forward end of the sleeve, a circular recessed member supported on the inner end of the driven shaft, said circular head being adapted to be engaged in the recessed member for effecting the rotation thereof, a lever supported at its lower end in the casing, the upper portion of the lever extending through a transverse slot provided in the top of the casing, the intermediate portion of the lever being secured to said sleeve, said lever being adapted to be moved rearwardly and laterally by virtue of the slidable connection and universal coupling to disengage the head from the recessed member and to move the head into engagement with the outer peripheral face of the recessed member, whereby the driven shaft may be rotated in opposite directions.

---

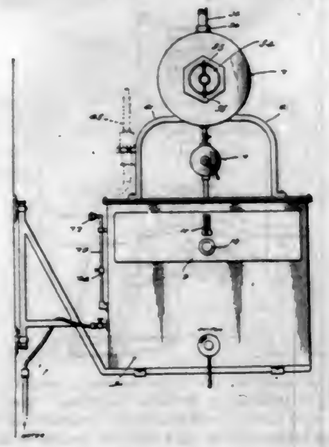


1,692,981. BOX INDICATOR FOR JACQUARD LOOMS. HENRY S. FAVOR and GEORGE J. PFEIFFER, Providence, R. I., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 16, 1926. Serial No. 95,059. 7 Claims. (Cl. 139—180.)

7. A box indicator for looms having a plurality of drop boxes and actuating mechanism including vibrator levers therefor, said indicator comprising a plurality of indicator levers link-connected to said vibrator levers, a fixed shaft on which said indicator levers are pivoted, retaining devices effective to hold any indicator lever in raised position, a separate stand for each retaining device also pivoted on said fixed shaft, and separate means to secure each stand to said shaft in angularly adjusted position thereon.

---

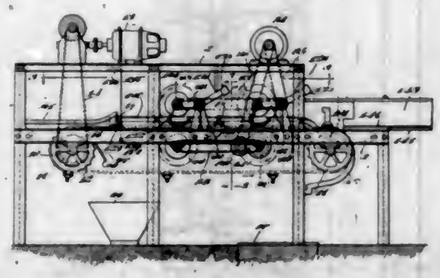
1,692,982. METAL WINDOW. ALPHONSUS FIEN, New York, N. Y., assignor to S. H. Pomeroy Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 3, 1927. Serial No. 230,755. 9 Claims. (Cl. 189—75.)



1. In a metal window the combination of a jamb formed of a sheet of metal having its opposed edges spaced apart, a

pulley stile seated between the opposed edges of the jamb and formed with vertical rails and grooves to receive the flanges of the sash, the pulley stile comprising an upper section and a lower section with one of the ribs of the upper section narrower than the corresponding rib of the lower section to form a wider groove, a flanged metal sash having its flanges received in the grooves of the pulley stile, and a counterbalance chain connected to the sash and disposed in said wider groove of the pulley stile.

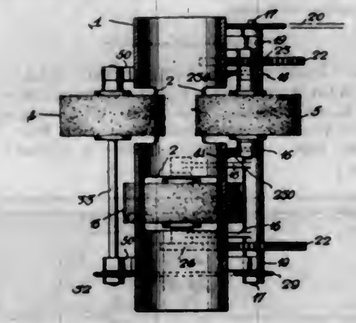
---



1,692,983. STERILIZING APPARATUS. HARRY A. FOSTER, Bradenton, Fla. Filed Oct. 8, 1926. Serial No. 140,374. 3 Claims. (Cl. 167—3.)

1. In a structure of the class described in combination, an instrument cleansing cabinet including an instrument drawer, and a superposed device carried thereby and constructed for subjecting a dental hand-piece to the sterilizing action of an antiseptic spray, and means interposed between the antiseptic device and the cabinet for conducting a portion of the antiseptic solution from said device into said cabinet, where it is deposited in said instrument drawer.

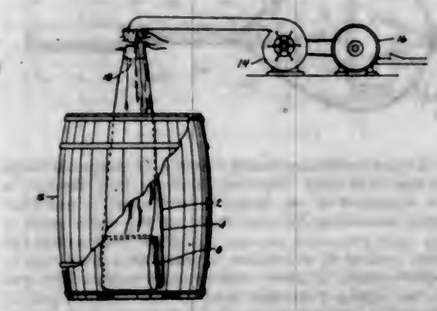
---



1,692,984. FISH-SCALING MACHINE. ERNEST A. GALLISON, Watertown, Mass., assignor to Bay State Fishing Company, Boston, Mass., a Corporation of Maine. Filed Feb. 19, 1927. Serial No. 169,623. 18 Claims. (Cl. 17—5.)

10. A machine of the class described comprising a pair of similar endless conveyor elements, a series of clamps each having a part spanning the space between said elements and a part pivotally connected thereto and yieldably urged toward the first-named part, prong members upon each clamp adapted to penetrate a member gripped therein, the second-named part of each clamp having an outward extension, spaced guide elements upon which said extensions are adapted to ride to open said clamps twice during one circuitous movement, means holding a portion of the endless conveyor elements at a predetermined level for a part of its journey between said guide elements, and scale removing factors adjoining this portion of the machine, said scale removing factors comprising oppositely rotatable brushes.

---

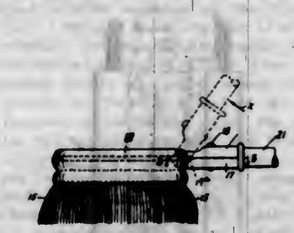


1,692,985. MACHINE FOR SCALING FISH. ERNEST A. GALLISON, Watertown, Mass., assignor to Bay State Fishing Company, Boston, Mass., a Corporation of Maine. Filed Feb. 19, 1927. Serial No. 169,624. 8 Claims. (Cl. 17—5.)

6. In a machine of the class described, pairs of rotatable brushes located above each other, the brushes of each pair being disposed at opposite sides of a downwardly extending central opening, one of the brushes of each pair being rotatable about a fixed axis, and the other being rotatable about an axis that is yieldably pressed inward toward the opening and the opposite brush with the fixed axis, driving means for said brushes, said means being arranged to drive one brush of each pair at a higher speed than the other brush of the same pair.

---

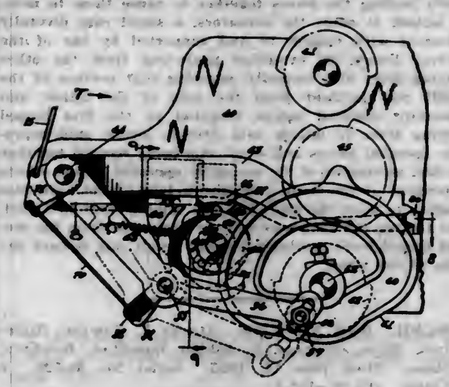
1,692,986. METHOD OF LINING TUBULAR CONTAINERS. ELBERT C. HARDY, Ludington, Mich., and PEDRO JOSE MORALES, Chicago, Ill., assignors to Arkell Safety Bag Company, New York, N. Y., a Corporation of New York. Filed Feb. 21, 1928. Serial No. 256,055. 5 Claims. (Cl. 93—1.)



1. The method of lining a tubular container closed at one end, which consists in inserting into the container a lining member comprising an elongated paper tube closed at one end, said tube being folded so that its inner walls are in contact with one another and adapted when distended within said container to contact with the side walls thereof on all sides so that the lower portion of said inserted member is positioned adjacent to the bottom of the container and supplying air under pressure to the mouth of said folded member thus positioned so as to inflate the same and cause its outer wall to contact with the inner wall of the container.

---

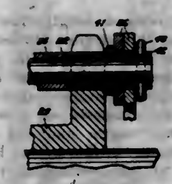
1,692,987. MOP. FRED E. HILL, Woburn, Mass., assignor to Quality Manufacturing Company, Inc., Woburn, Mass., a Corporation of Massachusetts. Filed Jan. 16, 1928. Serial No. 247,100. 1 Claim. (Cl. 806—19.)



In a mop which comprises an operating handle and a looped mop frame, provided with mop material and including alined ends provided with spaced apart fingers at right angles therewith; a connecting shank composed of upper and lower cast metal sections, riveted together and collectively forming in one end portion of the shank a handle socket, and in the opposite end portion a bearing for said alined ends, and spaced apart upper and lower abutments for said fingers; said bearing being formed by coinciding transverse grooves in the sections at right angles with the handle socket, the upper abutments being formed by spaced apart parallel longitudinal grooves in the upper section, and by the inclined forward ends of two spaced apart parallel longitudinal slots in the lower section coinciding with said grooves, said abutments diverging from the bearing and cooperating with the fingers in permitting a limited swinging movement of the shank relative to the frame, so that the shank may extend horizontally in the plane of the frame, to permit use of the mop under an obstruction above a floor, and may be inclined relative to the frame, to permit downward pressure of the frame and mop material thereon, by upward and forward pressure exerted on the handle, the sides of said slots being slidable in contact with the said fingers, and sustaining the frictional wear caused by swinging movements of the shank on the fingers, the abutments and slots being independent of the handle and socket, so that the handle may be applied and removed without affecting the connection between the shank and the frame.

---

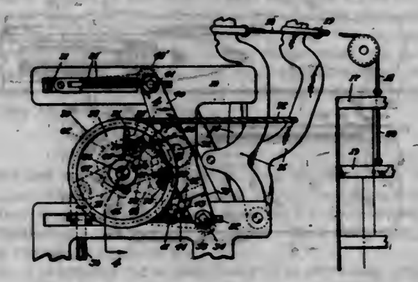
1,692,988. BOX-CONTROLLING MECHANISM FOR JACQUARD LOOMS. ELBRIDGE R. HOLMES, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 27, 1926. Serial No. 98,010. 5 Claims. (Cl. 139—180.)



1. A box indicating and controlling mechanism for a Jacquard loom comprising means on the loom effective to receive and hold a jacquard indication for any desired number of picks, a box controlling and operating mechanism having a frame, cylinder gears mounted therein, vibrator gears selectively movable between said cylinder gears, vibrator levers for said gears mounted on said frame, positioning members for said vibrator levers movably mounted adjacent thereto, an actuating member mounted adjacent said positioning members, means to give said actuating member a regularly repeated actuating movement, and engaging devices on said actuating member

movable to either of two operative positions relative to said positioning members, said engaging devices being selectively controlled by the pattern mechanism.

---

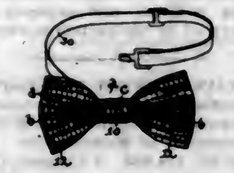


1,692,989. CHAIN ELEMENT FOR PATTERN MECHANISM. ELBRIDGE R. HOLMES, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 13, 1926. Serial No. 154,392. 3 Claims. (Cl. 139—333.)

1. In a pattern mechanism for looms, a chain cylinder, a pattern chain comprising a plurality of bars, a sleeve for each end of each bar to engage the cylinder, each sleeve being held against angular and longitudinal movement relatively to the corresponding bar, connecting links having contact with adjacent sleeves, and means defining a shoulder on the sleeve located between the cylinder and the links to space said links from the cylinder.

---

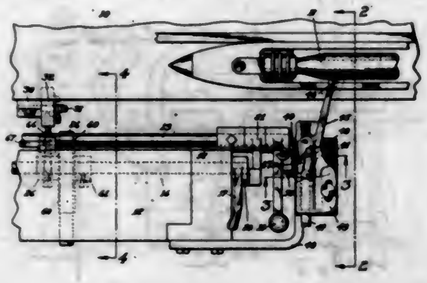
1,692,990. HARNESS-LEVELING MECHANISM FOR LOOMS. ELBRIDGE R. HOLMES, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 12, 1927. Serial No. 239,326. 9 Claims. (Cl. 139—75.)



1. In a harness evening motion for a loom having harness levers and a pair of actuators reciprocating in op-

posite directions to impart motion to the levers, a pair of driving levers pivoted about the same axis and each having an arm connected to one of the actuators, means normally locking the levers together to cause them to move in unison to move the actuators, a scroll cam pivotally mounted with respect to and supported by one of the driving levers, an extension projecting from the other driving lever and normally engaging that portion of the scroll cam farthest from the axis of the latter, and manually operated means mounted on the first named driving lever to unlock said driving levers, said manually operated means and scroll cam being secured together so that movement of the manually operated means effects movement of the scroll cam, the weight of the harnesses tending to move the second named driving lever to a position to even the harnesses and the projection from the second named lever moving along the scroll cam toward the axis of the latter.

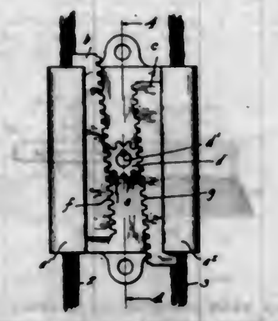
---



1,692,991. BOW NECKTIE. ALBERT L. HOWARD, Braintree, Mass., assignor to Ashton Hamilton, Brockton, Mass. Filed June 11, 1925. Serial No. 36,526. 1 Claim. (Cl. 2—151.)

A bow-tie comprising a longitudinal member formed of a single piece of thin flexible leather having its ends overlapped and secured together in proximity to the said ends and shaped to provide the longitudinal member with substantially parallel opposing halves, one of said halves being composed of a single thickness or layer for its entire length, and the other half being composed of a single thickness or layer for its entire length except at the overlapping ends forming part thereof, and a transverse annular member formed of a single piece of leather slidable on said longitudinal member and of a diameter materially less than the width of the halves of said longitudinal member to compress the latter near its center and to be frictionally held thereon and provide the longitudinal member with wings on opposite sides of the transverse member.

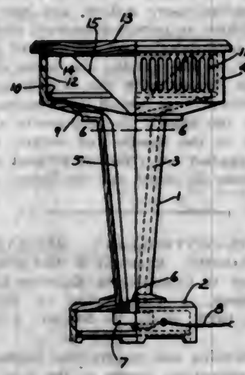
---



1,692,992. WEFT DETECTOR TO STOP LOOM. VICTOR H. JENNINGS, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed July 18, 1927. Serial No. 206,474. 11 Claims. (Cl. 139—371.)

1. In a stopping mechanism for a loom having a lay and a weft carrier, a dagger carried by the lay, loom stopping mechanism including a bunter, a shield normally guarding the bunter to engage the dagger and move the same to have an inoperative stroke, a weft detector to cooperate with the weft carrier, and means effective when the weft detector indicates substantial exhaustion of weft carrier to move said shield to uncover the bunter whereby the dagger will engage said bunter to stop the loom.

---



1,692,993. WIRE-ROPE CLAMP. GEORGE E. LAMBERT, Salem, Oreg., assignor of one-fourth to James W. Duff, Portland, Oreg. Filed Feb. 8, 1928. Serial No. 252,794. 6 Claims. (Cl. 24—126.)

1. A cable clamp, a plate formed at its opposite lateral edges with companion clamping guide clamps adapted to receive sections of cable therein, a wedge bar slidable in each guide flange and accommodating said cable section, the free edge of the wedge bar provided with ratchet teeth, and a rack pinion journaled on said plate between and engaging said wedge bars.

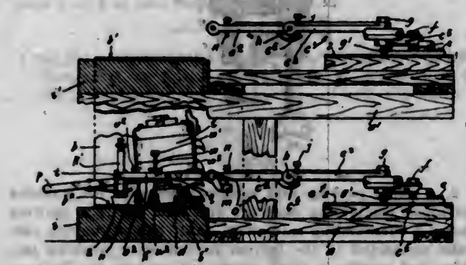
---

1,692,994. RADIO LOUD SPEAKER. FRANK MATTIS, Dayton, Ohio. Filed Feb. 11, 1926. Serial No. 87,659. 8 Claims. (Cl. 181—27.)

1. A device of the type described, comprising a sound box having apertured side walls and a sound wave opening in its bottom, and a conical sound deflector in said sound box, tapering downwardly from points at its edge portion to a sharp apex within said sound wave opening.

1,692,995. GUN. JOHN J. MURPHY, Norwich, Conn., assignor to The Davis-Warner Arms Corporation, Norwich, Conn., a Corporation of Connecticut. Filed Aug. 24, 1927. Serial No. 215,000. 10 Claims. (Cl. 42—48.)

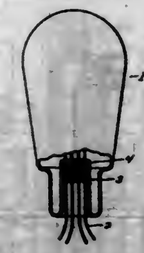
1. In a gun, an action frame, a gun barrel mounted for pivotal movement on the action frame, and a fore-end iron carried by the barrel, in combination with a spring actuated ejector member mounted on the fore-end iron, a primary detent forming a primary lock to hold the ejector member normally in restraint, a secondary detent to hold the ejector member in restraint after it has been released by the primary detent, an ejector element operable by the ejector member and forming a part of the breech of the gun, a hammer, a coil main spring for operating the hammer, a rod extending through and beyond the main spring and constituting a follower therefor, a cam operable by said rod to trip the primary detent when the hammer is released to fire the gun, and means to trip the secondary detent when the gun is broken to thereby fully release the ejector member whereby the ejector element is operated to eject the shell.



---

1,692,996. METHOD FOR PROTECTING GRANULAR SUBSTANCES AND RESULTING PRODUCT. BENJAMIN P. RICHARDSON, Brookline, Mass.; Emma D. Richardson executrix of Benjamin P. Richardson, deceased. Filed Dec. 10, 1925. Serial No. 74,650. 1 Claim. (Cl. 23—243.)

A method for protecting chemically active granular materials, comprising treating the same with an excess of a normally inert impermeable solid carried by an inert liquid vehicle, separating and agitating the wet granules, removing the surplus of the fluid mixture, and causing the resulting deposit upon said granules to solidify.



---

1,692,997. SAW-DRESSING DEVICE. JAMES H. ROBERTS, St. Helens, Oreg. Filed Oct. 27, 1925. Serial No. 65,144. 3 Claims. (Cl. 51—126.)

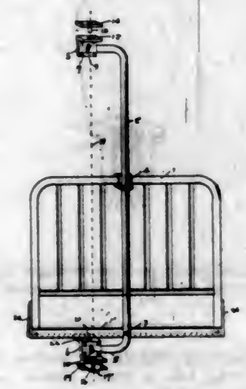
1. A device of the character described comprising a flat base, an articulated arm pivoted at one end on said base, said arm adjustable to arrange the free end thereof substantially parallel with the surface to be ground, an operating handle pivoted for vertical movement in the free end of said arm, a motor-driven grinding-disc carried by said operating handle, said grinding disc provided with a circular beveled grinding face and rotating on an axis oblique with the surface to be ground whereby said grinding face is disposed parallel with said surface, an adjustable guide provided at the free end of said arm at each side of said grinding disc, thereby to limit the depth of cut made by the latter, and means normally holding said operating arm uplifted.

1,692,998. LEADING-IN CONDUCTOR. SAMUEL RUBEN, New York, N. Y. Filed Sept. 8, 1927. Serial No. 218,495. 2 Claims. (Cl. 250—27.5.)

2. A leading-in conductor comprising a metal body with a layer of cuprous oxide integrally formed with the said metal body.

---

1,692,999. DISPLAY FRAME. CLARENCE I. SIEGEL, Chicago, Ill. Filed Dec. 6, 1927. Serial No. 238,161. 2 Claims. (Cl. 40—156.)

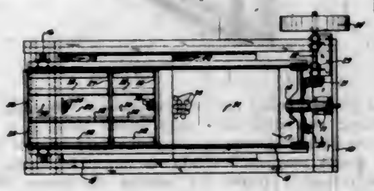


1. A poster display device comprising a retaining frame, a backing extending over said frame forming a poster receiving pocket therein, a complementary shaped locking frame snugly receivable within the poster receiving pocket of the retaining frame for holding the poster therein, snap fasteners at spaced points along one side of said frame for establishing a connection therebetween, a snap fastener at one point intermediate of said spaced snap fasteners along the opposite side of said frame for establishing another connection therebetween, finger engaging pockets formed in that side of said retaining frame having a single snap fastener adapted to have locking engagement with the retaining frame for facilitating the disengagement and removal of the locking frame from the poster receiving pocket thereof, and said snap fasteners being hidden from view when said locking frame is secured within the retaining frame.

---

1,693,000. WALL-BED PIVOT MOUNTING. NEIL SINCLAIR, Oakland, Calif., assignor to Rip Van Winkle Wall Bed Company, Inc., Oakland, Calif., a Corporation of California. Filed Dec. 22, 1926. Serial No. 156,311. 2 Claims. (Cl. 5—170.)

1. A mounting for a wall bed of the vertically pivoted type including an end frame of a bed, a vertically disposed bar secured on its vertical run to said end frame, offset ends on said bar extending parallel to the plane of the

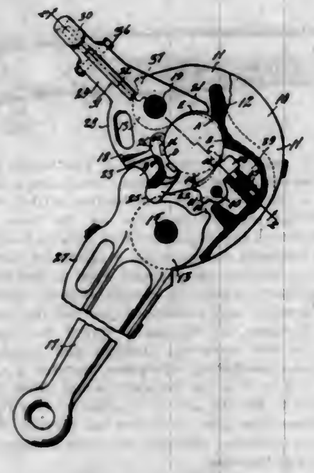


frame, brackets vertically slotted and secured therethrough to said ends whereby the brackets are vertically adjustable on said bar, vertical pivot joints on said brackets, and

said frame also secured to one of said brackets through a slot in the same whereby the plane of the frame may be adjusted with respect to the vertical.

---

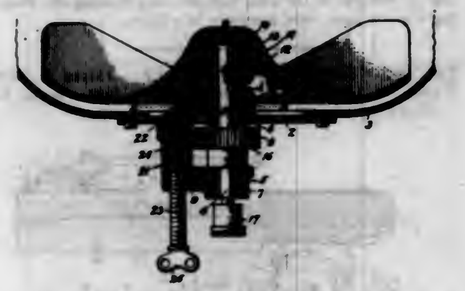
1,693,001. GRAVEL WASHER. CHARLES F. SMITH, Milwaukee, Wis., assignor to Smith Engineering Works, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 24, 1926. Serial No. 137,494. 2 Claims. (Cl. 209—270.)



2. In a revoluble gravel washer, a cylindrical perforated washing screen having perforations of graduated sizes and extending substantially the length of said member whereby water and material may be flushed therethrough at any point, transverse retainer rings within the screen and dividing it into a scrubbing section and a gravel section, the rings serving to restrict the removal of large material from the scrubbing section to the gravel section, longitudinally extending lifting blades within only the scrubbing section and extending parallel with the axis of the screen, and means for revolving the gravel washer.

---

1,693,002. TONGS. NELSON K. SMITH, Dallas, Tex. Filed Jan. 22, 1925. Serial No. 4,094. 4 Claims. (Cl. 81—67.)



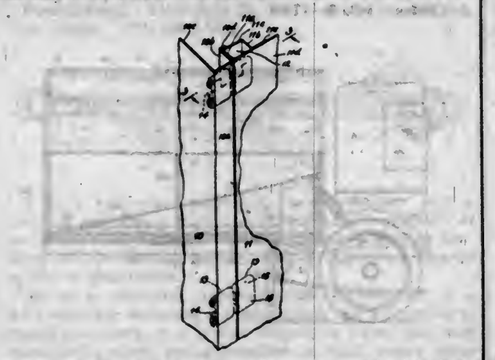
1. A pipe tongs including, an integral yoke for receiving a pipe, a swinging gripping arm pivoted to the outer end of the yoke, an outwardly extending handle member on the pivoted end of the arm having a hand loop on its outer end, a latch pivoted in the handle member and having an operating element extending into the hand loop of the handle member, said latch co-acting with the yoke to hold the arm

in its closed position, and a handle lever pivoted to the inner end of the yoke and engaging with the free end of the arm for gripping a pipe.

---

1,693,003. PACKING AND PACKING DEVICE. HOWARD F. SNYDER, Newton, Iowa, assignor, by mesne assignments, to The Maytag Company, Newton, Iowa, a Corporation of Delaware. Filed June 14, 1922. Serial No. 568,157. 5 Claims. (Cl. 308—134.)

2. A shaft packing and lubricating device for washing machines comprising bearings for said shaft, a packing chamber surrounding said shaft, said chamber having side walls connected to the bottom portion of a washing machine and making a tight closure to prevent any leakage from said machine, a plunger chamber eccentrically located with respect to said shaft, a passage extending from said plunger chamber and extending to said passage chamber, a fluidal packing in said chambers and passage, and means in said eccentrically disposed plunger chamber operable to compensate for loss and to lubricate said bearings.



---

1,693,004. HINGE. JOSEPH SOSS, Brooklyn, N. Y. Filed Mar. 3, 1927. Serial No. 172,943. 5 Claims. (Cl. 16—164.)

1. In a sheet metal body having spaced and parallel walls, a hinge butt adapted to be mounted in said body between said spaced walls, one of said walls having an aperture

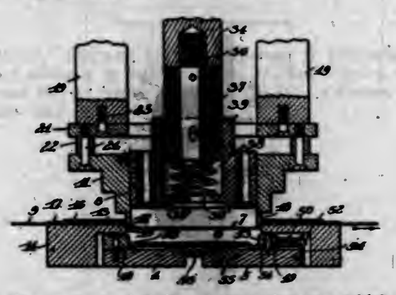
substantially similar to the peripheral contour of the butt and in which the butt is mounted so that the outer face of the butt will lie flush with the outer face of said apertured

wall, and means mounted in connection with the sheet metal body and engaging said butt for retaining the same in connection therewith.

---

1,693,005. HAIR WAVER. MARIE CATHERINE STEICHEN, New York, N. Y. Filed Nov. 10, 1927. Serial No. 232,234. 4 Claims. (Cl. 132—48.)

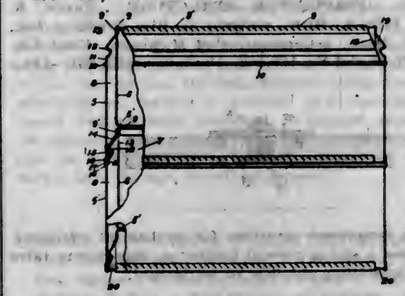
1. A hair waving device comprising lengths of flexible wire secured together in substantially parallel side by side relation and having intermediate the ends of the same transversely bent loops projecting laterally from opposite sides of the device, said loops and the substantially parallel end portions of the wires being independently bendable over a lock of hair laced thereabout.



---

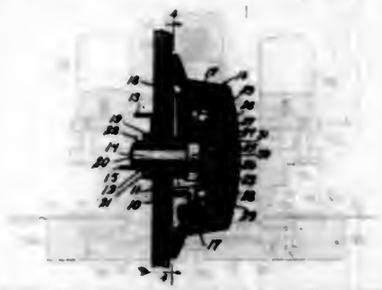
1,693,006. AUTOMOBILE KEY AND LICENSE HOLDER. EDWARD H. C. THOMAS, Buffalo, N. Y. Filed Sept. 29, 1927. Serial No. 222,785. 3 Claims. (Cl. 150—40.)

1. An automobile key and license holder comprising a plurality of sheet sections united to form a pair of pockets having openings between the sections providing access to the pockets, one of said pockets being adapted to receive a license card, and the other pocket being adapted to receive keys, and a key holder detachably connected with said sections at the open end of the pocket receiving the license for preventing removal of the license in the attached position of the holder, said key holder providing a carrier for keys to be inserted and removed from said key receiving pocket.



1,693,007. METHOD OF AND APPARATUS FOR LINING CLOSURE ELEMENTS. LOUIS P. TOSCANO, Utica, N. Y., assignor to Fonda Container Co., Inc., Utica, N. Y., a Corporation of New York. Filed Nov. 28, 1924. Serial No. 752,728. 23 Claims. (Cl. 113—80.)

1. The method of lining closure elements which comprises placing a cover element having a beveled or inclined portion upon an anvil, positioning a lining strip upon a holder in registry with the anvil, moving a cutter in registry with the anvil to sever a blank from said strip and moving the blank along the axis of the cutter into engagement with the cover by means of a crimping die moving relative to the cutter and shaping the blank upon said inclined portion by continued movement of the crimping die.



---

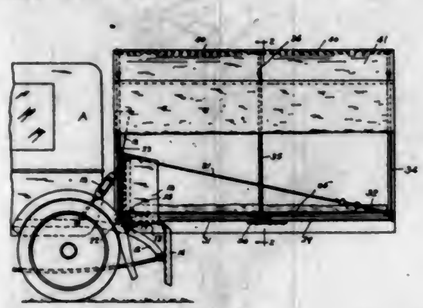
1,693,008. FURNACE STACK. CHARLES H. WAGNER, Milwaukee, Wis., assignor to L. J. Mueller Furnace Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 28, 1924. Serial No. 752,663. 1 Claim. (Cl. 137—75.)

A furnace stack, comprising a stack section formed of inner and outer walls in spaced relation, the upper portion of the outer wall being bent to form an outwardly projecting stop rib and then extending upwardly in a straight line to provide an alining portion and then extending inwardly upwardly and then outwardly in spaced relation to the inner wall to form a yielding locking shoulder extending approximately at right angles to the inwardly and upwardly extending portion, said locking shoulder being spaced from the inner wall, the said outer wall then extending upwardly at an angle towards the inner wall to form a guide portion, and then extending upwardly in a straight line to form an alining part and is then bent downwardly to form a channel into which the upper edge of the inner wall extends and is secured, the lower portion of the inner wall being bent inwardly to form a stop rib and then extending downwardly in a straight line for a short distance and then inclined downwardly outwardly to the outer wall to form a guide part and then bent inwardly approximately at right angles to the inclined portion and then is bent downwardly outwardly to form a non-yielding locking shoulder which contacts with the outer wall, the lower edge portion of said inner wall then extending downwardly in a straight line and then bent outwardly and upwardly to form a channel into which the lower edge of the outer wall extends and is secured, the corner portions of said stack section being open to permit the circulation of air through said openings.

1,693,009. RHEOSTAT. CHESTER E. WARNER, Berwyn, Ill., assignor to Benjamin Electric Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 26, 1925. Serial No. 4,636. 6 Claims. (Cl. 201—48.)

1. A rheostat construction comprising a panel having an opening therethrough, a metal bushing extending through said opening, said bushing being provided with a wiring terminal in the rear of the panel, a metal stud extending through said bushing and insulated therefrom, said stud being provided with a wiring terminal in the rear of the panel, an insulating knob rotatably mounted on said stud in front of said panel, a resistance coil mounted on said knob and electrically connected with said stud and a contact mounted on said bushing and electrically connected therewith and engaging said resistance coil.

1,693,010. COMPRESSOR STRUCTURE. FRANK R. WEST, Detroit, Mich., assignor to Rice Products Inc., Detroit, Mich., a Corporation of Michigan. Filed Feb. 16, 1927. Serial No. 168,502. 10 Claims. (Cl. 251—119.)



1. In a compressor structure for mechanical refrigerating systems, a spring pressed laminated, imperforate valve disk for controlling the flow of refrigerant.

1,693,011. METHOD OF PERFORATING CASINGS. RICHARD C. WOODWARD, Los Angeles, Calif., assignor to McEvoy Wireless Well Strainer Corporation, Los Angeles, Calif., a Corporation of California. Filed Sept. 28, 1925. Serial No. 59,231. 1 Claim. (Cl. 29—163.5.)

A method of perforating a casing by means of a punch and die which comprises first advancing the punch against the casing to its most extended position thereby producing a bulge in the casing around the punch, and then advancing the die against the bulge while holding the punch in fixed position is such manner as to iron out the bulge against the punch and force part of the material outwardly to form an opening and part of the material laterally to compress the walls of the opening and harden the same.

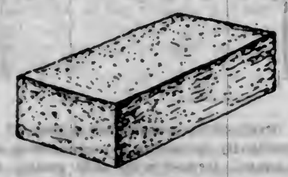
1,693,012. TRUNK, FOLDABLE BED-SUPPORTING STRUCTURE, AND CANOPY. JOHN K. WRIGHT, Denver, Colo. Filed July 1, 1926. Serial No. 119,935. 3 Claims. (Cl. 5—119.)

2. The combination with an automobile having rearwardly extending frame members, of a trunk mounted upon said frame members rearward of the body of the automobile, downwardly and forwardly extending braces connecting the top of the trunk to said frame members, and a foldable bed structure mounted within the trunk and including flexible elements connecting the outer extremities of the bed structure with the top of the trunk and entirely supporting the rear end of the bed structure when the latter is unfolded.

1,693,013. CASING-DRILLING MACHINE. MAYNARD N. YOUNG, Healdsburg, and DONALD C. PATTERSON, Geyserville, Calif. Filed Oct. 16, 1926. Serial No. 141,913. 4 Claims. (Cl. 77—6.)

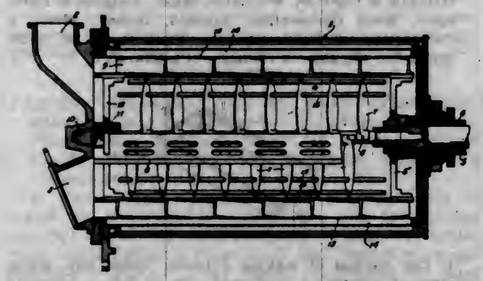
1. A drilling machine for well casings positioned within a well, comprising a shell for lowering into a casing and to be guided thereby, a drill bit carried by the shell with its end lying within the shell wall and capable of lineal movement radially thereof to project beyond the same and for rotation during its lineal movement for penetrating the well casing, an electric motor carried by the shell, driving connections between the motor and drill bit and operated in a single direction by the motor for automatically imparting simultaneous lineal and rotative movement to the drill bit, a motor operating circuit extending exteriorly of the casing, and means for automatically interrupting said circuit on the drill bit completing a lineal cycle of operation with its point free of the casing wall.

1,693,014. CONVEYING APPARATUS. MARTIN J. ANDERSON, Ellwood City, Pa., assignor to Mathews Conveyer Company, Ellwood City, Pa., a Corporation of Pennsylvania. Filed July 29, 1927. Serial No. 209,312. 21 Claims. (Cl. 198—38.)



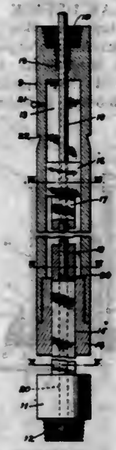
1. In a conveying apparatus, the combination with a conveyer including a main conveyer belt, of a plurality of conveyer rollers interposed in said conveyer, and an auxiliary belt frictionally engaged with said belt and adapted to rotate said rollers.

12. In a conveying apparatus, the combination of a main conveyer including a conveyer belt and a plurality of branch conveyers, of a carrier adapted to travel over said conveyers, control means provided on said carrier selectively cooperable with means over said main conveyer for diverting said carrier onto a selected branch conveyer, and a plurality of rollers in said main conveyer at the junction of each branch conveyer, having a driving connection with said main conveyer belt, said rollers constituting a portion of said main conveyer.



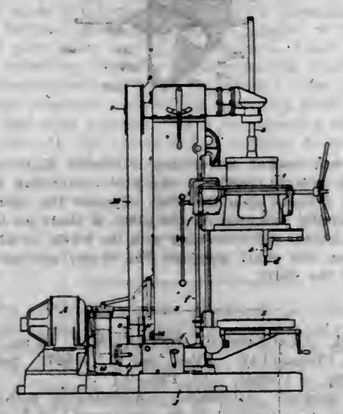
20. A conveying apparatus comprising a main conveyer belt, a depressed section in a run of said belt, a plurality of rollers mounted in said depressed section and arranged transversely of said belt, vertical guides for said rollers, and means operatively connecting said rollers with said belt, when a load passes thereover.

1,693,015. LIGHTWEIGHT MOLDED ARTICLE AND METHOD OF MAKING THE SAME. JOSEPH ALBERT BABOR, Elmhurst, and WILLIAM LUDLOW ESTABROOKE, Yonkers, N. Y. Filed Jan. 9, 1924. Serial No. 685,105. 6 Claims. (Cl. 106—19.)



1. A molded article comprising exfoliated sonolite and a binder.

1,693,016. DASHER FOR ICE-CREAM FREEZERS. RALPH B. BAGBY, Cedar Rapids, Iowa, assignor, by mesne assignments, to Cherry-Burrell Corporation, Wilmington, Del., a Corporation of Delaware. Filed Oct. 24, 1924. Serial No. 745,562. 2 Claims. (Cl. 259—9.)

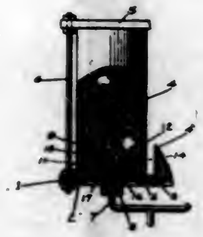


1. In an ice cream freezer, a revoluble dasher comprising a shaft, a plurality of independent angularly disposed beater blades projecting radially of the shaft and arranged in series extending lengthwise of the shaft to move a mixture longitudinally of the dasher, each series of blades having a round section rod extending therethrough and spaced from the shaft.

1,693,017. ROTARY DRILL. HERBERT D. BARTHOLOMAE and WILLIAM A. BARTHOLOMAE, Jr., Los Angeles, Calif. Filed May 11, 1926. Serial No. 108,411. 3 Claims. (Cl. 255—28.)

1. A slip joint for connecting two portions of an earth boring drill stem comprising an element having an axially polygonal opening therein, an element having a cooperating polygonal portion slidably and non-rotatably fitting within the opening, the two elements being non-rotatable relatively but having a relative axial movement, stop means limiting such movement to prevent separation of the elements, and a pipe extending through one element into the joint and having a sliding telescopic connection with a bore through the other element.

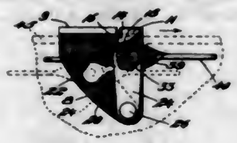
1,693,018. SUCCESSIVE PULLEY DRIVE FOR DRILLING MACHINES. WILLIAM F. BOCKHOFF, Richmond, Ind., assignor to The National Automatic Tool Company, Richmond, Ind., a Corporation of Indiana. Filed Feb. 26, 1924. Serial No. 695,250. 8 Claims. (Cl. 77—22.)



1. Apparatus of the class described, comprising a work-support, a tool-carrier, means to cause relative feeding

movement of said work-support and tool-carrier, means to impart to said tool-carrier an operative movement in predetermined ratio with said relative feeding movement, and means to compensate for casual adventitious variations in said ratio, said means including co-axial driving and driven pulleys of unequal widths, a belt driven by one of said pulleys and driving the other of said pulleys; and independent trains of mechanism driven respectively by the belt and said last named pulley.

---

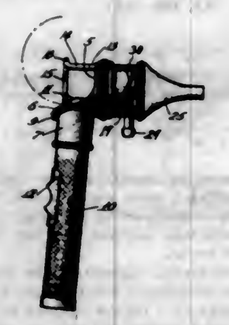


1,693,019. OIL-DISPLAY DEVICE. HANS M. BOE, Minneapolis, Minn., assignor to Boe Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Original application filed Mar. 16, 1927, Serial No. 175,903. Divided and this application filed Dec. 29, 1927. Serial No. 243,349. 3 Claims. (Cl. 40—126.)

1. In combination, a container of transparent material having liquid therein, an element submerged in the liquid and having a downwardly facing concave side and means for delivering gas beneath the element, said element having two compartments and being rockably mounted, the arrangement being such that gas is first delivered into one compartment, to cause the element to swing and release a bubble, and when so swung to dispose the other compartment to receive gas.

---

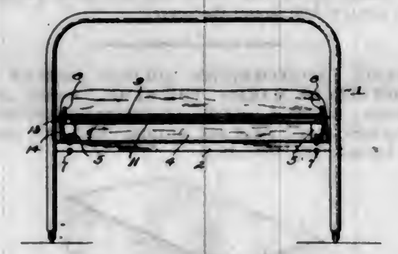
1,693,020. CAN OPENER. HUDGER BRUNEAU, Woonsocket, R. I. Filed Nov. 17, 1927. Serial No. 233,780. 5 Claims. (Cl. 30—3.)



1. A can opener comprising a carrier plate provided with an opening, teeth on the plate extending into the opening, a blade upon the plate adjacent the opening, an arm pivotally mounted on the plate, a shaft on the arm, a pinion on the shaft meshing with the teeth, an advancing disk upon the shaft adjacent the blade, and means for rotating the shaft.

---

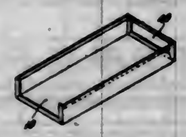
1,693,021. DIAGNOSTIC INSTRUMENT. WILL J. CAMERON, Chicago, Ill. Filed Jan. 12, 1927. Serial No. 160,636. 5 Claims. (Cl. 128—9.)



1. A surgical instrument comprising a hollow body providing a cylindrical sight passageway and providing means for directing the light rays beyond the body, a lamp at one end of said passageway, an air-inlet stub communicating with the interior of said passageway to illuminate an object beyond the passageway, and a light transmitting wall extending across said passageway between

said lamp and stub and sealed to the wall of the passageway whereby to permit the discharge of air from the end of the passageway opposite the lamp.

---

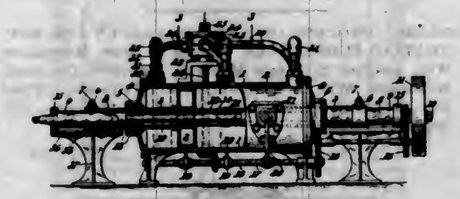


1,693,022. COVER-CLAMPING MEANS FOR BEDSTEADS. WILLIAM ELMER CHAPMAN, Columbus, Ohio. Filed Aug. 1, 1927. Serial No. 209,776. 3 Claims. (Cl. 24—72.5.)

1. A bed cover clamp comprising a pair of end plates and a longitudinally extending bar connecting said plates, upstanding guards formed with said plates, a clamping bar slidably mounted for movement relative to said first named bar and having the ends thereof provided with openings for the reception of said guards, tongues formed with the ends of said clamping bar, and spring means attached to the plates and detachably connected with the tongues of said clamping bar.

---

1,693,023. METHOD OF MAKING PAPER BOXES. WILLIAM S. CLEAVES, Wollaston, Mass., assignor to Pneumatic Scale Corporation, Limited, Quincy, Mass., a Corporation of Massachusetts. Filed Sept. 29, 1926. Serial No. 138,459. 3 Claims. (Cl. 93—43.)



1. The method of making a double ended box, which consists in severing a cardboard strip to form a plurality of blanks, each including a bottom portion, side portions integral therewith, and end flanges upon the side portions, severing a second cardboard strip to form a plurality of individual detached end blanks, adhesively affixing finishing strips to the outer surfaces of both cardboard strips before formation of the blanks, and folding, while the cardboard is in strip form, the finishing material over the side edges of the first strip and over the side edges of the end forming strip, and thereafter assembling a body blank and two of the detached end blanks in box forming relation and adhesively affixing the end blanks to said end flanges.

---

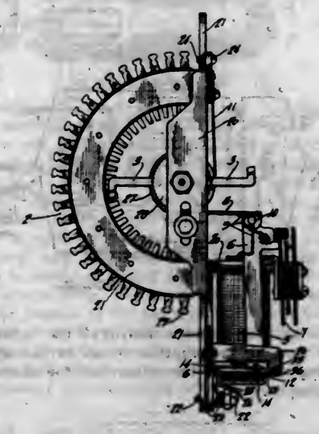
1,693,024. DOUBLE-ACTING TWO-STROKE-CYCLE INTERNAL-COMBUSTION ENGINE. GERALD DRUMMOND, Worcester, England. Filed June 2, 1923, Serial No. 643,048, and in Great Britain Aug. 14, 1922. 4 Claims. (Cl. 123—58.)

1. An internal combustion engine having, in combination, a cylinder, a shaft disposed in the cylinder, two pistons oppositely disposed in the cylinder, means connecting the pistons to the shaft to convert reciprocating movement of the pistons into rotary movement of the shaft, means whereby the pistons are adapted to be reciprocated in the cylinder simultaneously towards and from each other, the portions of the cylinder on both sides of the pistons constituting combustion chambers, and a sleeve in the cylinder surrounding the shaft to constitute a heat insulator for the shaft.

---

1,693,025. PRESERVATION OF CHEESE. ELMER E. ELDREDGE, Wilmette, Ill., assignor to Kraft-Phenix Cheese Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 10, 1927, Serial No. 167,366. Renewed May 18, 1928. 4 Claims. (Cl. 99—11.)

4. The improvement in the art of preventing deterioration in cheese while preserving its desirable characteristics, which consists in comminuting the cheese, mixing with the comminuted material a relatively small percentage of water soluble pectin while not exceeding a temperature of 125° F., subdividing the mixed material, introducing the same into closed shipping receptacles and then heating the material while in the containers to a temperature not materially in excess of 150° F., while maintaining the contents of the containers substantially quiescent.

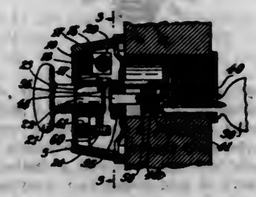


---

1,693,026. PRESERVATION OF DAIRY PRODUCTS. ELMER E. ELDREDGE, Wilmette, Ill., assignor to Kraft-Phenix Cheese Company, Chicago, Ill., a Corporation of Illinois. Filed June 13, 1927. Serial No. 198,697. 11 Claims. (Cl. 99—11.)

11. The method of improving the keeping quality of cheese which consists in incorporating with the starting material a relatively small percentage of gum tragacanth, while not exceeding a temperature high enough to impair desirable properties of the cheese, sub-dividing the mass and introducing it into shipping containers, and subsequently heating the material while in the containers sufficiently to destroy contained deleterious agents.

---

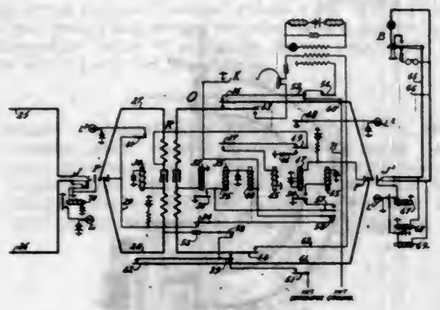


1,693,027. AUTOMATIC SWITCH. JOHN ERICKSON, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Apr. 29, 1921. Serial No. 465,356. 8 Claims. (Cl. 200—105.)

1. In a step by step switch, a driving magnet, an armature for said magnet, and a pole piece inserted in said armature adjacent to the core of said magnet adapted to engage the core when said armature is attracted, said pole piece being adjustable relative to the armature to limit the stroke thereof.

---

1,693,028. DOOR-SECURING MECHANISM. EDWARD E. GAGE, New York, N. Y. Filed Dec. 16, 1925. Serial No. 75,850. 4 Claims. (Cl. 70—29.)

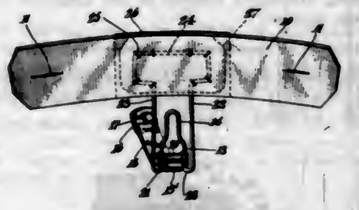


1. In a door securing mechanism, a securing bolt, a casing within which said bolt is housed, a rotatable member within said housing for moving said bolt into and out of operating position, a key operated tumbler lock mechanism including a rotatable barrel, a stem connected with said rotatable member, an apertured plate through which said stem extends, screws for securing said apertured plate to the barrel and a notched plate secured to the end of the stem cooperating with said screws to provide a lost motion connection between the stem and the barrel whereby the movement of the key to move the bolt into a fully extended position will bring said key into a position of withdrawal from the lock and leave the bolt in a dead locked position.

---

1,693,029. CORD CIRCUIT. ROY F. GOULD, Chicago, Ill., assignor to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed Mar. 23, 1927. Serial No. 177,548. 11 Claims. (Cl. 179—27.)

1. In a telephone system, called lines, a source of current permanently connected in bridge thereof, a cord circuit for answering incoming calls and for extending connections to said lines, a source of intermittent ringing current for signalling said lines, a relay responsive



to the connection of the cord with a line to cause said ringing current source to be applied thereover without disconnecting said current source in bridge of the called

line, and a relay placed under control of the called subscriber, each time an interruption occurs in the application of ringing current to the called line for disconnecting said ringing current.

---

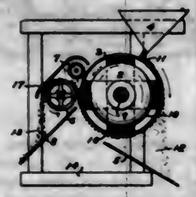
1,693,030. GARMENT SUPPORT. GEZA GREENBERG, New York, N. Y. Filed Sept. 28, 1926. Serial No. 138,221. 3 Claims. (Cl. 241—7.)

1. A garment support for men's wear comprising a holding band adapted to be mounted at a pair of ordinary trouser suspender buttons, a metal frame secured to said band between the ends thereof and including an upwardly extending pinch fastener loop and a limber tab hinged at the lower part of said frame and carrying the button of the pinch fastener loop for pinching the shirt material between the sides of the loop.

---

1,693,031. FLUID INDICATOR. HERBERT HASTINGS, Brighton, N. Y. Filed May 21, 1924. Serial No. 714,948. 15 Claims. (Cl. 116—117.)

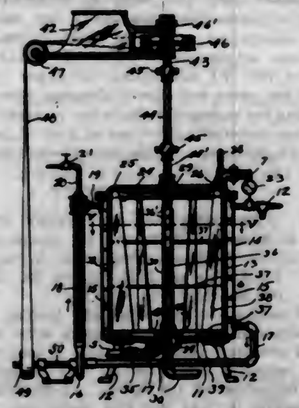
1. In combination with a liquid feed system a feed tube provided with vertically spaced inlet openings disposed below the normal surface of the liquid to be fed and adapted to take in proportions of air and liquid varying as the depth of said liquid varies and means including a piston operated by said varying proportions of air and liquid for indicating successively the fall of liquid below said openings.



1,693,032. FLOATING-VALVE SEAT. GUY J. HENRY, Chicago, Ill. Filed Oct. 29, 1926. Serial No. 144,945. 1 Claim. (Cl. 251—46.)

In a valve, a valve seat, a valve face member adapted to contact therewith, a valve stem having a groove adjacent its lower end, bearing members seated in said valve face member and projecting into said groove, said bearing members permanently withholding said valve stem from direct contact with said valve face member.

---

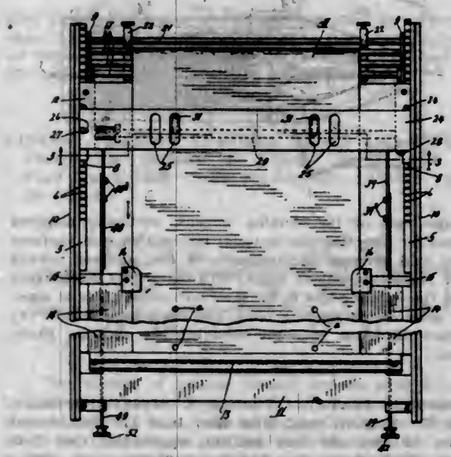


1,693,033. PROCESS OF AND APPARATUS FOR SEPARATING SUBSTANCES. JAMES L. HOPE, Milwaukee, Wis., assignor to Ding's Magnetic Separator Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 29, 1924. Serial No. 758,530. 3 Claims. (Cl. 209—227.)

1. The method of separating materials, which comprises, producing a movable magnetic field having an upwardly advancing portion and having another portion approaching the lower end of said upwardly advancing portion, precipitating a mixture of magnetic and non-magnetic particles into said upwardly advancing field portion to cause the non-magnetic particles to gravitate therethrough and to cause the magnetic particles to remain and travel downwardly along said upwardly advancing portion and then along said approaching portion, and subsequently removing the separated magnetic particles from said approaching field portion.

---

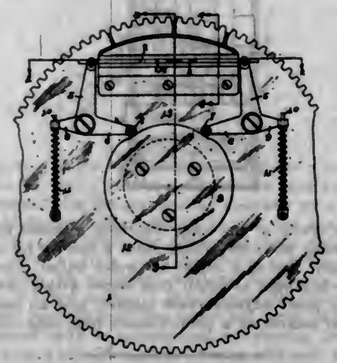
1,693,034. METHOD OF PASTEURIZING LIQUIDS. AAGE JENSEN, Los Angeles, Calif. Filed Feb. 2, 1926. Serial No. 85,471. 3 Claims. (Cl. 99—15.)



3. The method of pasteurizing liquids, which comprises subjecting the liquids in a closed chamber to a sufficiently

strong centrifugal action to cause said liquids to rise up on the side walls of said chamber, raising the temperature of the liquids to effect pasteurization by means of a heating fluid under pressure, and withdrawing deleterious gases centrally from said chamber by means of suction.

---



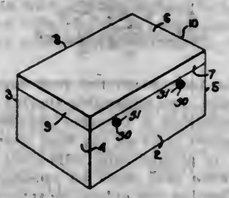
1,693,035. REGISTERING PAPER WEBS. LOUIS JENSEN, Chicago, Ill., assignor to United Autographic Register Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 25, 1926. Serial No. 83,645. 20 Claims. (Cl. 197—133.)

1. A device of the kind described comprising a suitable support, a horizontal table positioned thereon across which perforated paper webs are moved, a frame mounted adjustable towards and away from said table, said frame including a cross-piece past which the paper is moved to the table, a rock-shaft on said frame, pin-members projecting from said rock-shaft into coaction with said cross-piece whereby to arrest the movement of the paper towards the table by engagement in perforation in the webs.

---

1,693,036. TYPE-CASTING MOLD. WILLIAM E. KIER, Chicago, Ill., assignor to Individualizing Company of Illinois, Chicago, Ill., a Corporation of Illinois. Filed July 25, 1924. Serial No. 728,058. 9 Claims. (Cl. 199—57.)

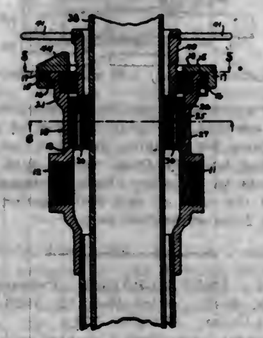
1. In a slug casting machine, a rotary member formed with a mold for casting slugs, slot forming elements slidable into and out of the ends of said mold, bell crank levers pivoted upon said member, one arm of each lever being connected to a slot forming element, a stationary cam whereby said elements are withdrawn from said mold, and yielding means for injecting said elements into said mold.



1,693,037. BILLIARD-CUE-TIP HOLDER. ROBERT E. MARLEY, Culver City, Calif. Filed Mar. 22, 1926. Serial No. 96,572. 1 Claim. (Cl. 273—70.)

In combination with a billiard cue, a ferrule over an end of said cue having an inwardly threaded surface on its outer end and a cylindrical shoulder member on its inner end, a cap having internal threads on its outer end engaged over said threaded surface on said ferrule and adapted to rest with its inner end against the outer end of said shoulder member, and a tip engaged by said internal threads in said cap to assist in holding the tip from disengagement and projecting from said cap, the portion of said tip in said cap resting against the end of said cue to relieve strain from the treads on said ferrule and cap caused by impact of the tip against billiard balls and the outer end of said cap being burred inwardly to form an inner stop shoulder for holding the tip from outward movement and said ferrule and cap being of substantially even diameter corresponding with said cue.

---

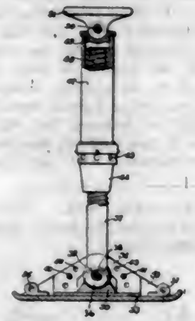


1,693,038. SECRET-LOCK BOX. THEODORE MELDER, Roxbury, Mass. Filed Oct. 15, 1927. Serial No. 226,479. 9 Claims. (Cl. 206—1.5.)

1. A secret-lock box comprising a receptacle and a cover normally positioned to register therewith, concealed cooperating locking devices rigidly secured respectively to said receptacle and said cover, means connecting said cover to said receptacle operable to permit swinging and relatively sliding movements therebetween and resilient means acting to maintain said locking devices interlocked when the cover is in closed position, but yieldable upon relative sliding movement to permit the locking devices to be disengaged and the cover swung to open position.

---

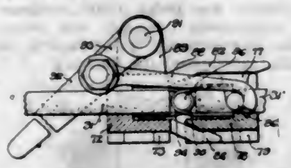
1,693,039. BLOW-OUT DEVICE FOR OIL WELLS. BURT S. MINOR, San Pedro, Calif., assignor to Regan Forge & Engineering Company, San Pedro, Calif., a Corporation of California. Filed June 9, 1926. Serial No. 114,604. 2 Claims. (Cl. 166—14.)



1. In a blow out device for oil wells, a vented casing head member adapted to be detachably secured to the up-

per end of a well casing, a packing ring seated in the head above the vented openings, an internally threaded ring seated in the head above the packing ring, means formed on said ring for preventing a rotary movement of the same an externally threaded sleeve engaging the threaded ring and bearing against the packing ring to expand the the same laterally, and a locking ring secured to the head to maintain the threaded ring against vertical movement.

---

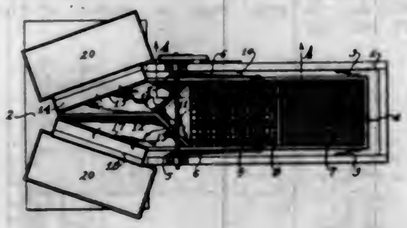


1,693,040. MINING SYSTEM AND APPARATUS. EDMUND C. MORGAN, deceased, New York, N. Y., by Olive Eugenie Morgan, executrix, New York, N. Y. Original application filed Aug. 11, 1921, Serial No. 491,474. Divided and this application filed Aug. 10, 1925. Serial No. 49,465. 7 Claims. (Cl. 254—101.)

1. In a mine jack, a pivoted roof supporting shoe, a pivoted floor shoe, and adjustable spacing means between said shoes comprising a threaded standard, spaced and upstanding parallel faces on the floor shoe between which said standard is pivoted, and adjustable stops bridging the space between said faces on opposite sides of said standard for limiting the pivotal movement of the standard, said stops comprising pins, and a series of openings in said spaced faces at different distances from the pivotal mounting for the standard for the reception of the ends of said pins.

---

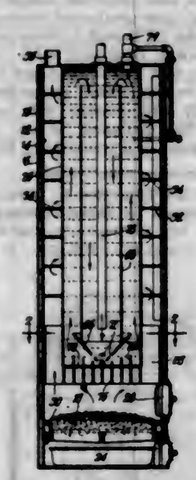
1,693,041. BELT FASTENER FOR CONVEYERS. EDMUND C. MORGAN, deceased, New York, N. Y., by Olive E. Morgan, executrix, New York, N. Y. Original application filed Aug. 11, 1921, Serial No. 491,474. Divided and this application filed Sept. 16, 1925. Serial No. 56,589. 3 Claims. (Cl. 254—52.)



1. In conveyer mechanism, the combination with a belt, of a clamp adapted to engage one end of said belt, an additional clamp for engaging the other end of said belt, pins extending laterally from one of said clamps, and a pair of hooks on the other clamp for engaging the said pins to hold the ends of said belt together while being connected to form an endless belt.

---

1,693,042. PRUNE GRADER. PRESSLEY MOTHORN, Healdsburg, Calif. Filed Mar. 12, 1928. Serial No. 260,864. 1 Claim. (Cl. 209—259.)



A prune grader comprising a shaking table provided at one end with a plurality of shaking screens disposed in superimposed horizontal planes, said table side walls at its opposite end being obliquely disposed and converging to a point, means for imparting a longitudinal vibratory movement to the frame to cause the prunes supported by the screens to travel longitudinally thereof, means for receiving the prunes from the surface of the shaking screens, comprising superimposed surfaces disclosed with their receiving ends in parallel alignment with the dis-

charge ends of the shaking screens, vertically disposed means for directing the material received on said surfaces from said screens longitudinally of the surfaces toward their respective oblique edges, with the prunes discharging from the oblique edges in the same horizontal plane at opposite sides of the shaking table, and fixed bins beneath the surface discharge ends for receiving the material therefrom.

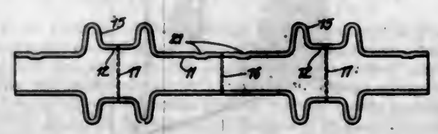
---

1,693,043. HEATER. THOMAS E. MURRAY, Brooklyn, N. Y. Original application filed June 17, 1924, Serial No. 720,486. Divided and this application filed Dec. 18, 1925. Serial No. 76,148. 2 Claims. (Cl. 122—159.)

1. In a device of the class described, a vessel having a longitudinally extending inner shell, a closure for one end of said shell having a restricted water outlet therein, an inlet pipe arranged to admit feed water within said inner shell at a point adjacent said closure, and an outlet for said vessel located at a point remote from said closure.

---

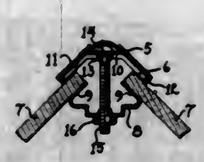
1,693,044. METHOD OF MAKING AXLE-HOUSING BLANKS. THOMAS E. MURRAY, Jr., Brooklyn, N. Y. Filed Feb. 2, 1923. Serial No. 616,487. 3 Claims. (Cl. 29—153.1.)



1. The method of producing a flat nonrectangular sheet metal blank for a segment of an axle housing of uniform thickness throughout its extent and comprising a body portion with one or more lateral and end projections therefrom, said method including the building up of a sheet of rectangular contour by welding together edge to

edge pieces of the same thickness, each piece being larger than the portion of the sheet which it forms, and cutting off the edge portions of said pieces to change the sheet to the desired contour.

---

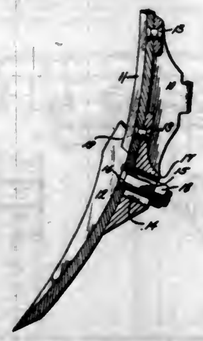


1,693,045. MAKING FLANGED TUBES AND OTHER PRODUCTS. THOMAS E. MURRAY, Brooklyn, N. Y. Filed June 8, 1923. Serial No. 644,188. 2 Claims. (Cl. 29—153.1.)

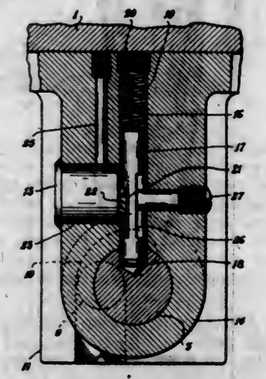
1. The method of making tubular articles with flanges of double thickness which consists in forming segments of sheet metal bent to V-shape at a plurality of determined points in their length, uniting such segments by butt-welding their edges together to form a tubular blank with said bent portions of the opposite segments in register so as to form hollow V-shaped flanges, dividing said tubular blank transversely at points between one such V-shaped flange and the next and bending such V-shaped flanges to bring the opposite sides together and form ninety-degree flanges of double thickness.

---

1,693,046. DEVICE FOR SECURING PLATE GLASS. CHARLES G. NELSON, Chicago Heights, Ill., assignor to Zouri Drawn Metals Company, Chicago Heights, Ill., a Corporation of Illinois. Filed May 31, 1927. Serial No. 195,212. 1 Claim. (Cl. 189—78.)



In a device of the character described, the combination of a front bar and a rear bar, one of said bars having reversely turned side flanges forming channels with parallel sides, said flanges being adapted to rest flat against one face of the glass while the other bar rests against the opposite face, a draw plate insertible endwise beneath one bar with its marginal portions engageable in said channels, a screw having a shank extending through the draw plate and through the other bar, said draw plate being formed with a countersunk noncircular seat, said screw having a shouldered head fitting said seat and normally concealed by the adjacent bar, said adjacent bar being so formed that normally its inner face is approximately in contact with the head of the screw, locking the same positively against both rotation and removal from its seat as long as the draw plate remains in the bar, and a nut cooperating with the end of the shank to draw the bars into clamping relation to the glass.

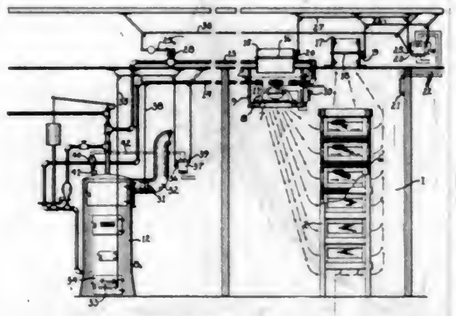


1,693,047. CULTIVATOR-SHOVEL STRUCTURE. CHRISTIAN OSMUNDSON, Webster City, Iowa. Filed June 22, 1925. Serial No. 38,729. 1 Claim. (Cl. 97—203.)

A cultivator shovel comprising a support adapted to be mounted on a cultivator, a parallel sided shank rigidly connected with the upper portion of said support, said support having a slot in its lower portion, a shovel engaging said lower portion and having in its upper end a notch having parallel sides to receive the lower end of the shank and engage the sides thereof, a bolt extended through the shovel and through said slot and a nut on said bolt, the sides of said slot in the shovel coacting with said shank and in conjunction with said bolt serving to hold the shovel rigidly in position with respect to said support even when the bottom of the notch is spaced from the bottom of the shank.

---

1,693,048. AUTOMATIC PRESSURE-SYSTEM LOCK. JOHN P. PACA, Canton, Ohio, assignor to The Diebold Safe & Lock Company, Canton, Ohio, a Corporation of Ohio. Filed June 16, 1926. Serial No. 116,334. 9 Claims. (Cl. 109—11.)

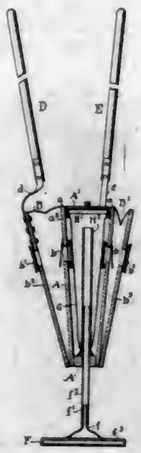


1. In a vault door or the like, the combination of a pressure system for the door including a rotating shaft, a bearing for the shaft, there being an aperture in the bearing, and there being a socket in the shaft for registering with the aperture, a plunger in the bearing aperture, and means automatically moving the plunger into the shaft socket when the socket registers with the aperture.

---

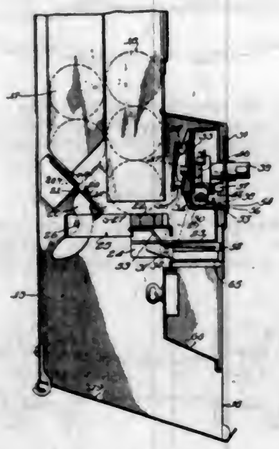
1,693,049. CHICK BROODER. ESTA M. PIERCE, Bowling Green, Ohio, assignor to The Bowling Green Poultry Supply Company, Bowling Green, Ohio, a Corporation of Ohio. Filed June 27, 1927. Serial No. 201,849. 4 Claims. (Cl. 236—6.)

1. A brooder having a closed chamber, air inlet and outlet vents for said chamber, a fan in the region of said



inlet vent for drawing air into said chamber and maintaining circulation therein, heating means adjacent said inlet vent, means controlling the operation of said heating

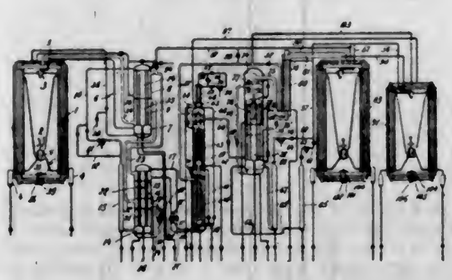
means, valves controlling said vents, and means common to said valves and said controlling means for automatically operating the same in accordance with the temperature conditions within the chamber.



---

1,693,050. VACUUM CLEANER. THOMAS PROCTOR, Nelson, England. Filed Apr. 24, 1925, Serial No. 25,649, and in Great Britain May 29, 1924. Renewed May 12, 1928. 1 Claim. (Cl. 15—17.)

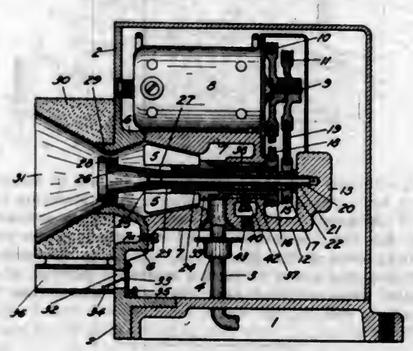
In a device of the character described, an elongated receptacle open at its top and having downwardly converging walls, a pipe fixed in the lower end of said receptacle and carrying an elongated suction nozzle at its lower end, a second pipe having a flared lower end removably fitting over the upper end of said first mentioned pipe, a dust bag in said receptacle provided with an open upper end registering with the open end of said receptacle and having its lower end secured to said second pipe adjacent the lower end thereof, a removable lid closing the open top of said receptacle and of said dust bag, a pair of bellows in communication with said receptacle and mounted on opposite sides of said receptacle, the bellows being connected by a rod for simultaneous operation, and handle means for operating said bellows.



1,693,051. VENDING MACHINE. MYRON H. RICHARDSON and ALFRED D. ANTOINE, Chicago, Ill., assignors to Advance Machine Company, Chicago, Ill., a Corporation of Illinois. Filed June 23, 1924. Serial No. 721,661. 13 Claims. (Cl. 194—63.)

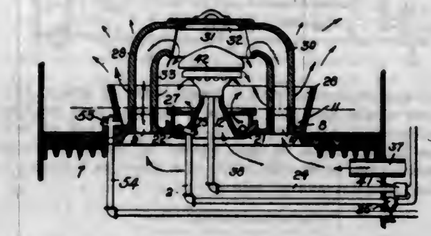
1. A vending machine including a container for the articles to be vended, an ejector for the articles, check controlled means for actuating the ejector, and means controlled by the articles in the said container for rendering the ejector inoperative by the check controlled means, the second recited means embodying an element adapted to be positioned in the path of movement of the check from the check seat in the check carrier for maintaining the check against delivery from the check carrier.

---



1,693,052. SEPARATION OF GASES FROM GASEOUS MIXTURES. MONTAGUE H. ROBERTS, Jersey City, N. J., assignor to Air Reduction Company, Inc., a Corporation of New York. Filed Jan. 25, 1919. Serial No. 273,186. 1 Claim. (Cl. 183—15.)

In a process of obtaining helium from natural gas, compressing and cooling the gas, expanding the cooled compressed gas and thereby liquefying a portion thereof, subjecting the remaining expanded gas to successively lower temperatures to condense its constituents other than helium in the order of their liquefying temperatures at the pressure to which they were expanded, collecting the liquids separately, and utilizing said liquids separately in cooling the gas to the said successively lower temperatures; whereby helium in gaseous form is concentrated as a final residue; and conducting off and collecting such final residue.

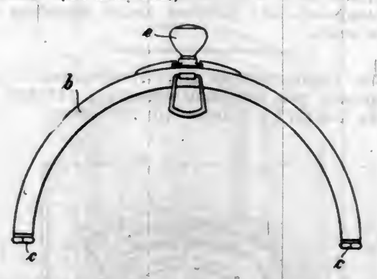


1,693,053. FLUID-FUEL HEATING APPARATUS AND METHOD OF FORMING A COMBUSTIBLE MIXTURE. HILMER F. RODLER, Davenport, Iowa. Filed Aug. 12, 1926. Serial No. 128,857. 10 Claims. (Cl. 158—77.)

1. In a device of the character indicated, a pipe rotatable about its longitudinal axis, a hollow member surrounding said pipe and rotatable in the opposite direction therefrom, air vanes carried by said hollow member near the extremity of the rotatable pipe, a tapered nozzle carried by the pipe and having its delivery end slightly beyond the air vanes, and means for feeding fluid fuel to said pipe.

---

1,693,054. HYDROCARBON BURNER. ALEXANDER E. SCHEIN, Flushing, N. Y. Filed Oct. 30, 1926. Serial No. 145,335. 6 Claims. (Cl. 158—80.)

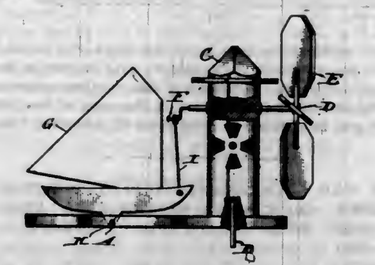


1. In an oil burner of the character described, the combination with a base plate having a central opening, a hollow pedestal on the base plate and above and communicating with the opening therein, an oil distributing plate thereon having a downwardly extending lip stepped therefrom, means for conveying oil to said plate, a crown surmounting said distributing plate having a chamber therein, means for maintaining spaced relation between the crown and the distributing plate, air ports below said plate for deflecting the oil vapors, and other air deflecting means for directing the air toward the pedestal.

---

1,693,055. PHARMACEUTICAL PREPARATIONS AND PROCESS OF MAKING SAME. WALTER SCHOELLER, Berlin-Westend, and KURT SCHMIDT, Berlin-Friedenau, Germany, assignors to the Firm: Chemische Fabrik auf Actien, vorm. E. Schering, Berlin, Germany. Filed July 28, 1927, Serial No. 209,174, and in Germany Aug. 2, 1926. 4 Claims. (Cl. 260—108.)

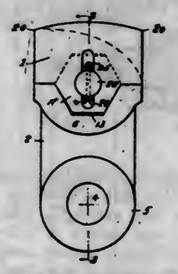
1. The process of producing iodine-substituted benzonitrils having a phenol ether-like linkage of the type R—O—R'—CN, wherein R and R' are iodine-substituted aryl radicals, comprising heating an iodine-substituted phenol ether with a metal salt of an iodine-substituted oxybenzo nitril in the presence of copper to a temperature between 210 and 240° C.



1,693,056. FASTENER FOR THE MOUTH FRAMES OF HAND BAGS. CHRISTIAN JOHANN GEORG SCHWARZ Offenbach-on-the-Main, Germany. Filed Oct. 11, 1926, Serial No. 140,898, and in Germany Aug. 25, 1926. 4 Claims. (Cl. 292—204.)

1. A fastener for mouth frame for hand bags, portmanteaus and the like comprising two bars, a pintle secured on one of said bars and adapted to be tilted thereon, a catch on said pintle, a counterpart to said catch on the other bar, a handle rotatably seated on said pintle, a pawl on said first-mentioned bar, and a part on said handle which is adapted to be retained by said pawl in a given position of said handle so as to prevent tilting of said pintle and to be released after said handle has been rotated out of this given position.

---

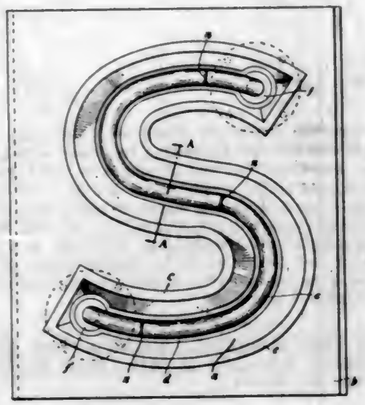


1,693,057. TOY WINDMILL. WALTER B. SCOTT, Marblehead, Mass. Filed June 15, 1925. Serial No. 37,252. 1 Claim. (Cl. 46—14.)

A wind toy comprising a wind wheel, a rocking sailboat having a sail, a vertical pivot therebetween about which both wheel and sailboat simultaneously revolve, means connecting the wheel and boat whereby axial rotation of the former rocks the latter, the shape of the sail being such as to have a relatively large height at a point removed from the vertical pivot whereby the sail simulates and has the function of the vane of a wind-mill.

---

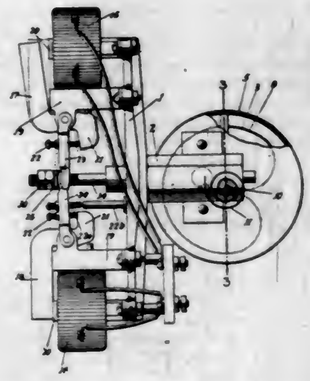
1,693,058. ROTARY PIVOTED HAMMER. HARRY J. SHELTON, University City, Mo. Filed Jan. 18, 1928. Serial No. 247,539. 6 Claims. (Cl. 83—11.)



1. A rotary pivoted hammer comprising a pivotal shank having a terminal tenon tapering radially outward and a

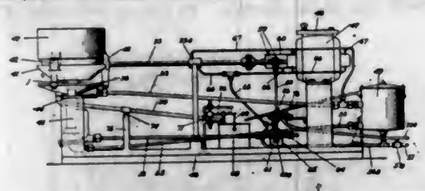
lateral recess at each side of said tenon tapering radially inward, a head detachably mounted on said shank and having a mortise and depending lateral lugs corresponding to said tenon and recesses respectively—the adjacent faces of said tenon with recesses and mortise with lugs being hexagonal,—and fastening means connecting said head and shank.

---



1,693,059. LUMINESCENT ADVERTISING SIGN. OTTO B. SHULHOF, New York, N. Y. Filed Aug. 11, 1927. Serial No. 212,157. 6 Claims. (Cl. 40—130.)

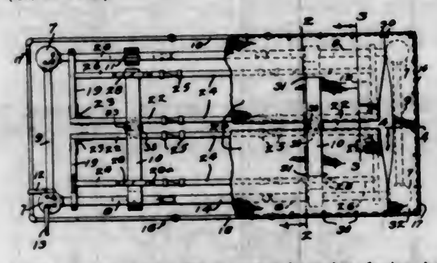
6. The combination in a letter for signs of a panel upon which is superimposed a character; said character having a beveled and grooved channel of like contour wherein the groove of the channel is located at the apex of the beveled channel and is adapted to receive an illuminating tube.



---

1,693,060. THERMOSTATICALLY-CONTROLLED DAMPER. IRA E. SMITH, Stockton, Calif. Filed Nov. 11, 1926. Serial No. 147,691. 17 Claims. (Cl. 236—74.)

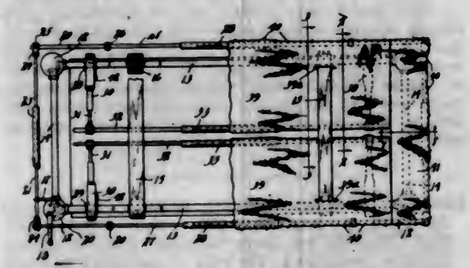
1. A thermostatically controlled damper system comprising in combination with a normally closed thermostat switch arranged to open under the influence of heat, and a circuit in which said switch is interposed; a damper unit; said unit including a passage member, a shutter interposed in said member, and electrically operated means interposed in said circuit and holding the shutter open when the switch is closed.



1,693,061. OIL-BURNING APPARATUS. IRA EDWARD SMITH, Stockton, Calif. Filed Nov. 17, 1924. Serial No. 750,248. 1 Claim. (Cl. 103—97.)

An oil pump and valve combination for use in pumping heavy hydrocarbon oils, comprising a pump structure having a discharge outlet, said outlet diverging outwardly from the pump, a longitudinally adjustable needle valve pointing toward the pump and constantly disposed in said diverging outlet to form a restricted passage of adjustable cross-sectional area therewith, and means for constantly rotating the valve.

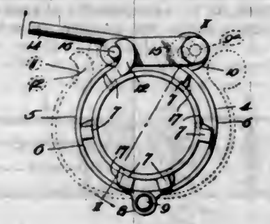
---



1,693,062. GRAVE LINING AND COVERING DEVICE. GUSTAF A. STARK, Atwater, Minn. Filed Nov. 15, 1926, Serial No. 148,349. Renewed Sept. 28, 1928. 11 Claims. (Cl. 27—32.)

1. The combination with a casket lowering device, having side shafts rotatable toward each other and webbing straps extending between said shafts, the ends of said straps being wound on said shafts, of means operated by said straps to line the walls of a grave as a casket is lowered into a grave by said device.

---



1,693,063. GRAVE COVERING AND LINING DEVICE. GUSTAF A. STARK, Atwater, Minn. Filed July 25, 1927. Serial No. 208,195. 14 Claims. (Cl. 27—32.)

1. The combination with a casket lowering device adapted to extend over an open grave and having side rollers rotatable towards each other, of means adapted normally to extend over the grave to conceal the same, and pawl and ratchet mechanism connecting said means with said rollers to permit said means to be swung downwardly by said rollers into the grave to line the walls of the same as a casket is lowered therein by said device and to allow continued rotation of said rollers in respect to said means after said means have been downwardly swung.

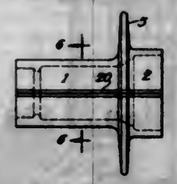
1,693,064. PIPE CLAMP. JOHN J. TIPTON, Pampa, Tex. Filed Sept. 8, 1927. Serial No. 218,234. 7 Claims. (Cl. 113—102.)

1. A pipe clamp comprising a pair of oppositely bowed members hingedly connected together at one side and adapted for engaging opposite sides of a pair of alined pipes, and provided at an intermediate point of the length of said members with inwardly-projecting lugs to enter between and space the adjacent ends of the pipes, and means for effecting closing movement of the clamp members.

---

1,693,065. PROCESS OF NEUTRALIZING THE ALKALINITY OF WATER. ALFRED H. WHITE, Ann Arbor, Mich. Filed Dec. 7, 1925. Serial No. 73,900. 4 Claims. (Cl. 210—23.)

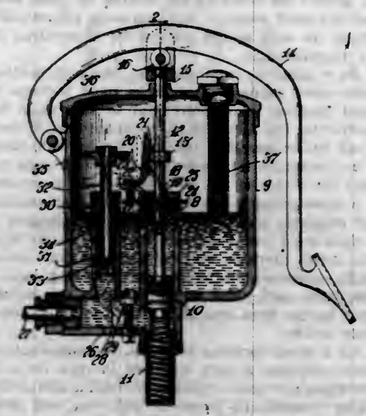
1. The process of neutralizing the alkaline content of water, consisting in commingling therewith a quantity of phosphoric acid adequate to reduce its final acidity, after reaction and removal of its carbon dioxide content, to a proportion not in excess of one half of one per cent.



---

1,693,066. PROCESS FOR PURIFYING THE WATER USED FOR STEAM-BOILER PURPOSES. ALFRED H. WHITE, Ann Arbor, Mich. Filed Dec. 7, 1925. Serial No. 73,901. 5 Claims. (Cl. 210—23.)

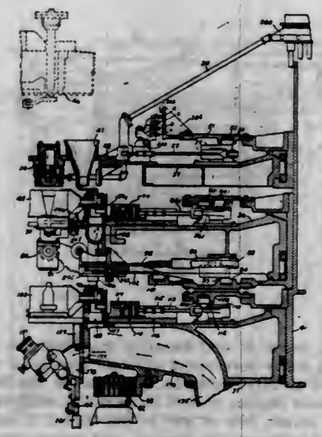
1. The process of purifying water which consists in contemporaneously adding thereto phosphoric acid, sufficient to form insoluble phosphates with the calcium, magnesium and iron carbonates in solution, and sufficient sodium phosphate to form insoluble phosphates with the other calcium, magnesium, and iron salts in solution, the relative quantities of phosphoric acid and the sodium phosphate used being such as to effect substantial neutralization of the water after the carbon dioxide has been removed from the solution.



---

1,693,067. MAKING HUBS. HERBERT H. WILLIAMS, Brooklyn, N. Y., assignor to Thomas E. Murray, Brooklyn, N. Y. Filed May 12, 1926. Serial No. 108,448. 3 Claims. (Cl. 29—159.3.)

1. In the production of vehicle hubs or similar hollow articles the method which consists in cutting blanks from a rolled bar having flat portions extending lengthwise in different planes and a longtudinal flange on one side, forging such blanks into segments having cylindrical ends of different diameters formed from the flat portions of the blank and an outer annular flange formed from the longitudinal flange of the blank, welding such segments together along their longitudinal edges with a resistance weld, trimming off the flash produced at the joints and turning the rough product thus formed to the exact dimensions desired.



1,693,068. PUMP FOR LUBRICATING SYSTEMS. IRVING COWLES, Chicago, Ill., assignor to Union Bank of Chicago, trustee, Chicago, Ill., a Corporation of Illinois. Filed Nov. 3, 1927. Serial No. 230,740. 8 Claims. (Cl. 184—28.)

1. In a lubricating system including devices for shutting off flow to points to be lubricated after discharge of some oil to each thereof, a pump including a cylinder, a manually operable piston therein, trip-mechanism associated with said piston for retaining it at the end of its discharge stroke, a spring operatively associated with said piston for returning it to normal position, a fluid pressure responsive spring-held member associated with said cylinder for receiving oil discharged from the latter in excess of the volume fed to the points to be lubricated, a relief port permitting resisted discharge of said surplus oil responsively to pressure exerted by said spring-held member, and means associated with the latter for tripping said mechanism upon discharge of said surplus oil.

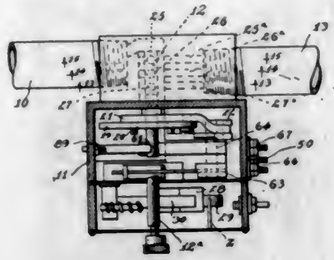
---

1,693,069. GLASS-FORMING MACHINE. ALBERT N. CRAMER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 31, 1925. Serial No. 78,581. 31 Claims. (Cl. 49—9.)

1. In a glass forming machine, the combination of a rotary mold carriage, molds thereon, each comprising sep-

arable sections, hollow arms carrying said sections, hollow shafts on which said arms swing for opening and closing the molds, said hollow shafts and arms providing communicating air passages through which cooling air is supplied, means for distributing cooling air to said hollow shafts, means for directing the cooling air from said arms against the mold sections, and manually adjustable valves individual to said hollow shafts for controlling the air supply therethrough.

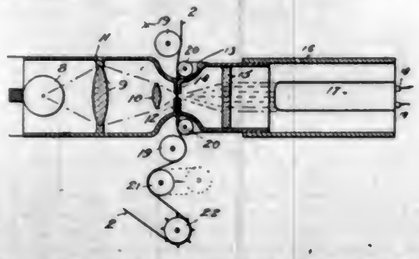
14. In a glass forming machine, the combination of a rotatable mold carriage, a series of mold bottoms tiltably mounted thereon, cams individual to said mold bottoms for controlling the tilting of the mold bottoms, a stationary cam, and means operated thereby to cause said individual cams to cooperate in succession with the mold bottoms to effect the tilting of the mold bottoms in succession.



19. A glass forming machine comprising, in combination, a mold carriage, body molds, turn-over units each including a neck mold and a support therefor, shafts supported on the mold carriage and supporting said units, and manually operated means for withdrawing said shafts endwise from said units and permitting the latter to be removed bodily from the mold carriage independently of the body molds.

25. In a glass forming machine, the combination of a rotatable carriage, a part mounted thereon for a limited reciprocating movement radially thereof, a stationary cam, operating connections between said cam and said part for causing the rotation of the carriage to effect said reciprocating movement, said connections comprising a rod having sections relatively movable in a direction lengthwise of the rod, springs placed under compression respectively by the lengthening and shortening of said rod, and means to prevent either spring from expanding while the other is being compressed.

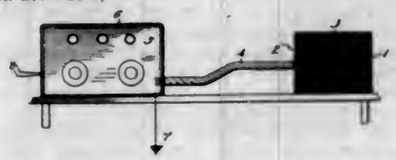
27. The combination of a continuously rotating mold carriage, blank molds and finishing molds thereon, a turnover unit comprising a neck mold, means for oscillating said unit to swing the neck mold between the blank mold and finishing mold, and means including rack and pinion mechanism permitting removal of said unit from the mold carriage independently of the blank molds and finishing molds and without interrupting the continuous rotation of the carriage.



---

1,693,070. ELECTRICAL CONTROL FOR GAS VALVES. SAMUEL G. CRANE, Pasadena, Calif., assignor to F. H. Ohrmund, Pasadena, Calif. Filed Feb. 28, 1927. Serial No. 171,658. 10 Claims. (Cl. 158—99.)

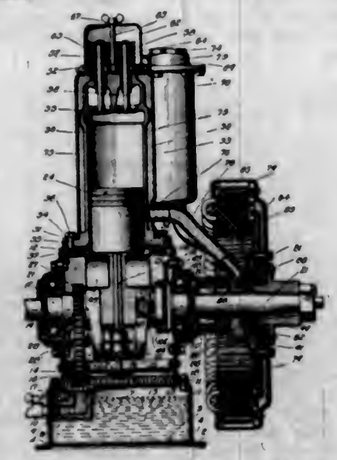
1. In a device of the character described, the combination with a gas burner and gas feed pipe, of a rotatable gas valve mounted between the ends of the feed pipe, means under manual control for partially rotating the gas valve to permit flow of gas to the burner, a spark plug positioned adjacent the burner, and means for causing intermittent sparking at the spark plug for a predetermined time set in operation by the movement of said valve.



1,693,071. SOUND-RECORDING ATTACHMENT FOR MOTION-PICTURE CAMERAS. LEE DE FOREST, New York, N. Y., assignor to De Forest Phonofilm Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 28, 1923. Serial No. 635,334. 4 Claims. (Cl. 179—100.)

3. A light controlled photographic sound reproducing attachment for motion picture projecting machines, comprising two aligned casings disposed so as to provide a film path therebetween, a slit in each of the adjacent ends of said casings, a light source in one of said casings, and a light sensitive cell in the other of said casings.

---

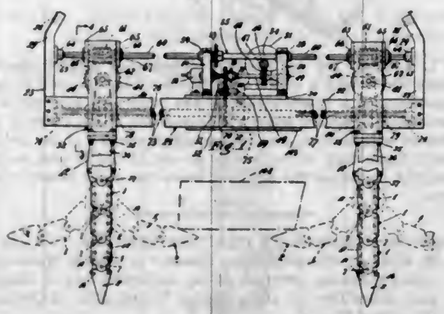


1,693,072. MEANS FOR SHIELDING SOUND DETECTOR AND AMPLIFIER APPARATUS. LEE DE FOREST, New York, N. Y., assignor to De Forest Phonofilm Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 28, 1923. Serial No. 635,337. 6 Claims. (Cl. 179—171.)

1. The combination with a microphone device, of means immediately associated with said device for shielding said device against electrical disturbances while allowing free access thereto by sound waves.

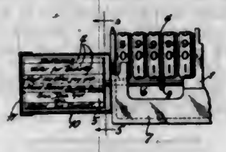
---

1,693,073. EXPLOSION MOTOR. OTTO A. DONATH, Clinton, Iowa, assignor to O. D. Collis, Clinton, Iowa. Filed Oct. 27, 1923. Serial No. 671,110. 2 Claims. (Cl. 123—195.)



1. In an engine comprising a supporting base, an inverted cup-shaped stamping secured to the top of said base to form a crank case, a crank shaft mounted in the crank case and a cam shaft gear engaged with said shaft, a sheet metal floor secured to said stamping in spaced relation to the top of said base to form an oil reservoir, said floor having downwardly struck depressions therein forming oil retaining recesses receiving the periphery of said cam shaft gear and, one of said recesses having an inlet opening connecting with said oil reservoir.

---

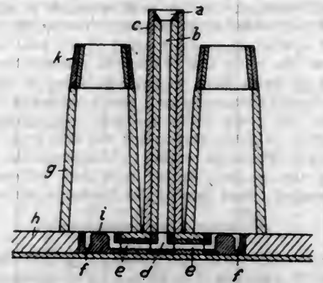


1,693,074. LIFTING DEVICE. MICHAEL FALCO, Canonsburg, Pa. Filed Dec. 24, 1926. Serial No. 156,774. 2 Claims. (Cl. 294—67.)

1. In a lifting device of the character described, a plurality of links; means for hingedly connecting the links end to end to form an articulated lifting member; a plurality of rollers positioned within said links; cables guided by said rollers and engaging alternately the inner and outer periphery thereof, and means for operating said cables.

---

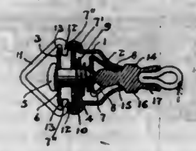
1,693,075. INDICATING ATTACHMENT FOR SPEEDOMETERS. JAMES HENLY FRIER, Jr., Webster Groves, Mo. Filed Aug. 22, 1927. Serial No. 214,583. 1 Claim. (Cl. 40—44.)



A device of the character described comprising a frame, a gear wheel supported in said frame for intermittent rotation, a shaft extending into said frame, means for imparting intermittent rotary movements to said shaft by said gear wheel, a drum mounted on the outer end of said shaft for rotation thereby and being removable therefrom and replaceable thereon in selected adjustments about the axis of said shaft, a housing enclosing said drum and having an integral inner end wall adjacent to said frame and an open outer end permitting removal and replacement of said drum upon said shaft, and a removable cap enclosing the outer end of said housing.

---

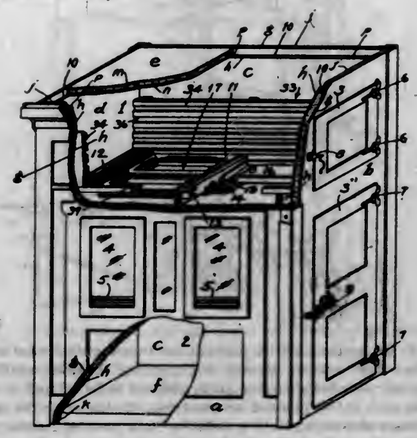
1,693,076. CASTING APPARATUS FOR FIRST QUALITY AND REFINED STEELS. FRANZ GEISSLER, Duseldorf-Oberkassel, Germany. Filed Mar. 24, 1927, Serial No. 178,070, and in Germany Dec. 8, 1926. 1 Claim. (Cl. 22—141.)



A casting apparatus for first quality and refined steel comprising in combination, a base plate having a vertical bore at the centre, a pouring tube above said vertical bore, a funnel shaped inlet at the top end of said pouring tube, conical ingot molds on said base plate around said pouring tube, circular grooves in said base plate one under each ingot mold and a channel connecting each circular groove with said vertical bore so that the point at which said channel terminates in said groove is tangential to said

ingot mold so that a circulating movement around the core formed underneath each ingot is communicated to the liquid mass and the impurities are carried up to the top end of said ingot mold.

---

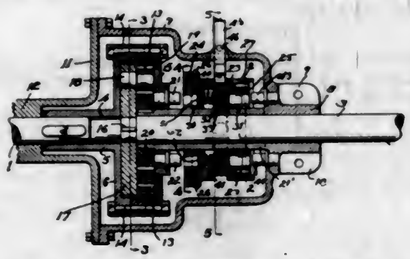


1,693,077. COUPLING DEVICE. AARON A. GOLDSTEIN, Buffalo, N. Y. Filed June 24, 1927. Serial No. 201,138. 4 Claims. (Cl. 24—201.)

1. A coupling device, comprising a casing having a convergent throat at one end, a link member pivotally connected to the other end of said casing, a locking clutch arranged within said casing, a stud having a head end adapted to enter the throat and engage said locking clutch and having a socket end, and a loop link rigidly secured in the socket end of said stud.

---

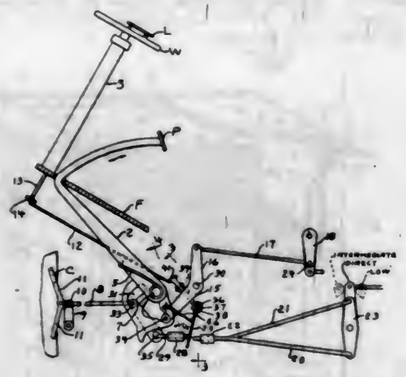
1,693,078. REFRIGERATOR. ANTON N. HORNUNG, Los Angeles, Calif. Filed Jan. 4, 1926. Serial No. 79,089. 6 Claims. (Cl. 62—46.)



1. In a refrigerator provided with insulated walls, top and bottom, and having a cooling chamber, and an ice chamber thereabove; a pan spaced from the top and from

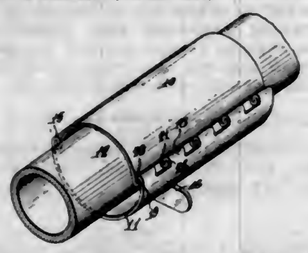
two of the walls and arranged between the ice chamber and the cooling chamber and having a rectangular border frame provided with a rim wall and with a central cross frame connected to the border frame to form therewith down draft openings; an ice rack arranged to support ice above the pan; baffle walls secured to two of the walls and extending upward from outer edges of the pan and spaced apart from the walls and top of the refrigerator to form therewith up draft flues on opposite sides of the pan; a trapped drain; drip collecting trays arranged to collect drip from the down draft openings and provided with drain outlets; a drain tray below the drip trays and provided with a discharge outlet to discharge the collected drip into the trapped drain; said drip collecting tray being arranged aslant toward the discharge outlet.

---



1,693,079. SPEED-CHANGE TRANSMISSION GEARING. ERNEST W. JACKSON, San Rafael, Calif., assignor to Perfecto Gear Differential Co., Oakland, Calif., a Corporation of Washington. Filed Oct. 25, 1921. Serial No. 510,384. 7 Claims. (Cl. 74—34.)

1. In a change speed mechanism, driving and driven members, a clutch element positively engaged with one of said members, a second clutch element frictionally engaged with said first clutch element, and means for positively engaging the second clutch element with the other member.



---

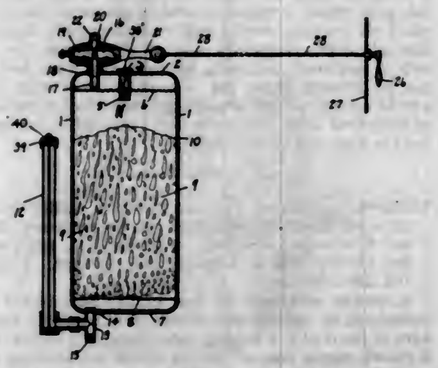
1,693,080. AUTOMATIC GEAR SHIFT. ARNOLD H. JESSEN, Los Angeles, Calif. Filed Mar. 27, 1926. Serial No. 97,868. 5 Claims. (Cl. 74—58.)

1. In a gear shifting apparatus, in combination, a selective speed setting means, a depending endwise shiftable spring retarded swinging plate adapted to be shifted by said means, a set of pivoted means for operating selective speed change means, operating rods for said pivoted means, said rods being adapted to be directly operated by said plate to operate said pivoted means, and means for operating said sets of pivoted means when said speed setting means has been set.

1,693,081. DIVIDED PIPE CLAMP. SAMUEL M. KASS, Philadelphia, Pa. Filed Nov. 2, 1926. Serial No. 145,784. 2 Claims. (Cl. 24—19.)

1. A clamp for pipe repairs comprising divided clamp parts one having a continuous clincher edge adapted to cooperate with a clincher edge of the other and both having interrupted clincher parts at the opposite edges adapted to interfit with partial longitudinal displacement of the parts and a tightening device carried by one of the divided parts adapted to engage the pipe and draw the other toward the pipe.

---

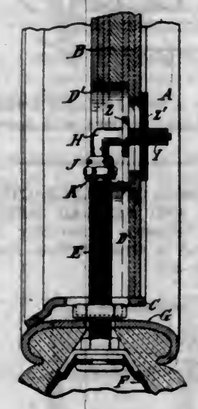


1,693,082. COMPOSITE DRAPERY FIXTURE. CHARLES W. KIRSCH, Sturgis, Mich., assignor to Kirsch Manufacturing Company, Sturgis, Mich., a Corporation of Michigan. Filed Oct. 13, 1926. Serial No. 141,257. 5 Claims. (Cl. 156—19.)

1. A drapery fixture including a master rod provided at its ends with arms, the latter having longitudinal slots in their opposed faces, said slots bordered by flanges, auxiliary fixtures such as a curtain rod or window-shade roller fixtures associated with the master rod, and brackets each housed in part by said arms and engaged with the flanges bordering said slots for interchangeably engaging and supporting said auxiliary fixtures.

---

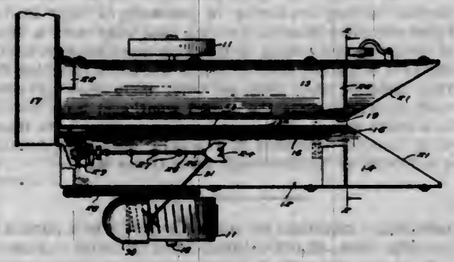
1,693,083. HUMIDIFIER FOR INTERNAL-COMBUSTION ENGINES. WILLIAM C. KITT, Cincinnati, Ohio. Filed Sept. 22, 1926. Serial No. 137,080. 3 Claims. (Cl. 261—96.)



1. A humidifier for internal combustion engines, comprising a closed tank having upper and lower substantially

horizontal screens arranged therein, a water gauge connected to the lower portion of the tank and extending upwardly to a point some distance below the top of the tank, a cap for the water gauge having a constantly open aperture to admit air to the gauge and to function as an overflow to prevent the tank from being filled beyond a predetermined elevation, a mass of sponge in the tank, resting on the lower screen and projecting upwardly above the top of the gauge into a space in the upper portion of the tank for feeding moisture into said space, an air inlet nipple communicating with said space, and a valve controlled moist air outlet communicating with said space above the upper screen.

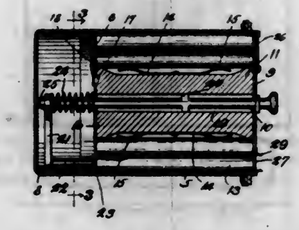
---



1,693,084. TIRE VALVE. HENRY P. KRAFT, Ridgewood, N. J.; Edgar J. Phillips and Earl A. Darr executors of the will of Henry P. Kraft, deceased. Filed May 10, 1920. Serial No. 380,024. 1 Claim. (Cl. 152—12.)

The combination with a wheel having a disk, an elongated slot through said disk, and a tire valve having an angled fitting passing through said slot, said angled fitting having means for clamping said disk, said clamping means comprising a fixed disk on the angled fitting and a screw-threaded disk adapted to engage a thread on the angled fitting and clamp the wheel disk between the two.

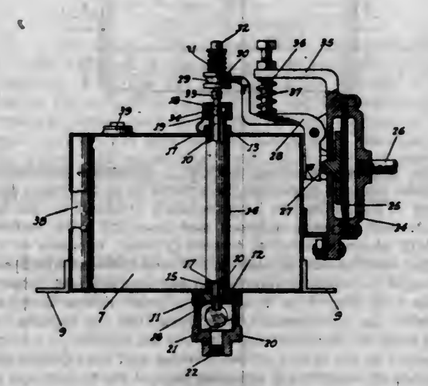
---



1,693,085. CORN-HARVESTING APPARATUS. MICHAEL E. KRAXBERGER, Buckingham, Colo. Filed Apr. 15, 1926. Serial No. 102,250. 4 Claims. (Cl. 56—63.)

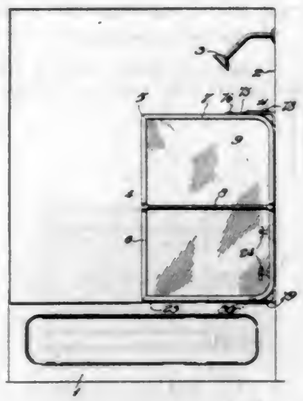
1. In corn harvesting mechanism and in combination, a wheel supported trough having upwardly diverging inclined side walls, there being a longitudinally extending slot in one side wall thereof, means at one end of the trough for directing plant stems into the slot as the trough is moved along a row, means associated with the trough for severing grain heads from the plants during their passage through the slot and a conveyor extending longitudinally of the bottom of the trough, said slot being of a width to permit passage of the stems while preventing passage of the grain heads.

---



1,693,086. CIGARETTE CASE. ROBERT L. LAIRD, Dallas, Tex. Filed Jan. 27, 1928. Serial No. 249,926. 6 Claims. (Cl. 312—84.)

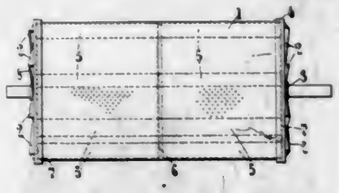
1. A cigarette container including a body portion, a rotary cigarette carrier mounted within the body portion, said carrier having a bore formed therethrough and having offsets, a shaft extending through the bore, lugs on the shaft disposed within the offsets, to rotate the carrier when the shaft is rotated, an ejector operated by the shaft and said ejector adapted to engage a cigarette contained in the carrier to force the cigarette from the carrier.



---

1,693,087. AUTOMATIC PRESSURE-ACTUATED GRAVITY OILER. WILLIAM A. LAUGHERY, Stockton, Calif. Filed July 7, 1926. Serial No. 120,913. 6 Claims. (Cl. 184—76.)

1. A control device for the outlet of a gravity oiler comprising a valve stem to close the outlet, a tube in which said stem is slidable, an adjustable cap on the outer end of the tube, a collar on the stem inwardly of the cap and adapted to abut thereagainst when the valve has been opened a predetermined amount, a lever, connection means between one end of the lever and the stem outwardly of the cap, and pressure actuated means applied to the lever to cause the same to then move the stem in a valve opening direction.

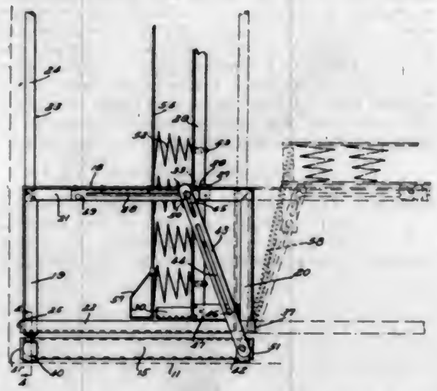


1,693,088. SHOWER INCLOSURE. LOUIS H. LEHMAN, Philadelphia, Pa. Filed Jan. 18, 1926. Serial No. 81,901. 9 Claims. (Cl. 4—146.)

1. The combination with a bath tube and a shower, of a shower inclosure comprising a door, an upper and a lower supporting bracket, therefor, a link pivotally connected with the upper bracket and with the door and locking mechanism co-operating with the lower bracket and the bottom of the door.

---

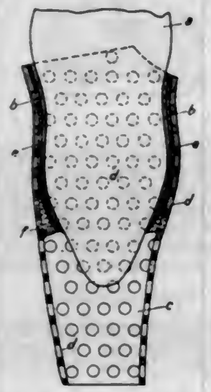
1,693,089. ROTARY WASHING MACHINE. VICTOR LISTER and SAMUEL WILLIAM LISTER, Woolwich, England. Filed Apr. 8, 1926, Serial No. 100,687, and in Great Britain May 6, 1925. 1 Claim. (Cl. 68—18.)



For a rotary washing machine a rotatable perforated cylinder adapted to receive the articles to be treated, a plurality of hollow beaters longitudinally arranged on the interior wall of said cylinder and provided with orifices radially arranged relative to said cylinder, two sets of V-shaped buckets one on each end of said cylinder which are arranged in opposite relation to one another and tangentially with respect to a circle of a lesser radius than the cylinder the arrangement being such that the buckets extend from the circumferential wall of the cylinder to a point adjacent to the centre of the cylinder and that during the rotation of the cylinder the inner ends of the buckets are in advance of their outer ends, and openings in the ends of said cylinder which register with said hollow beaters.

---

1,693,090. CLOSET OR RECESS BED. CHARLES LOFMAN, Los Angeles, Calif., assignor to Roberti Bros., a Corporation of California. Filed Dec. 7, 1925. Serial No. 73,585. 6 Claims. (Cl. 5—170.)

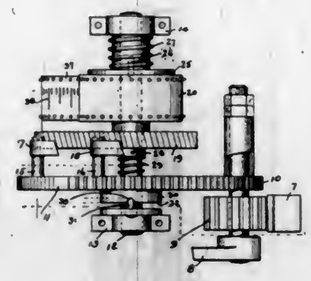


1. A bed organization of the general character described comprising a horizontally movable carriage, floor guides for said carriage within a closet or recess, a bed frame pivotally mounted on said carriage and rotatable between a vertical and a horizontal position, and means at each side of said carriage pivotally connected to the floor in a plane substantially in front of the vertical position of

said bed whereby a tilting of said frame causes a relative movement of said carriage with respect to the closet or recess.

---

1,693,091. METHOD OF MANUFACTURING ARTIFICIAL LIMBS AND SIMILAR DEVICES. JULIUS LOTH, Koslin, Germany. Filed Nov. 11, 1927, Serial No. 232,622, and in Great Britain Aug. 19, 1927. 4 Claims. (Cl. 3—9.)

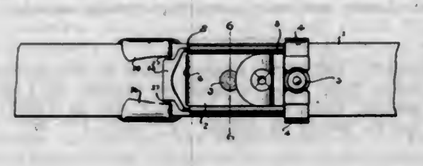


1. The method of manufacturing artificial limbs and similar devices, consisting in producing a copy of the respective body portion, covering said copy with a layer of so-called liquid wood, letting this layer solidify, applying to it a further layer of liquid wood and inserting the thus obtained shell into an outer main shell provided with apertures while the second mentioned layer still is in a liquid state in such a manner as to extend the liquid wood into the apertures of the outer shell thus forming a solid unit of the two shells when it has set.

---

1,693,092. RECORDING AND SALES-CHECK MECHANISM FOR FLUID-DISPENSING PUMPS. ARTHUR R. MASON and OTTO C. FAILING, Medford, Oreg., assignors to Accurate Gasoline Recording Company, a Corporation of Oregon. Filed Aug. 17, 1927. Serial No. 213,688. 5 Claims. (Cl. 271—23.)

1. Sales check mechanism for fluid dispensing apparatus comprising a member constrained to rotate in synchronism with said dispensing apparatus, a shaft on which said member is adapted to slide, a skew toothed ratchet on said shaft, means fixed to said ratchet for advancing



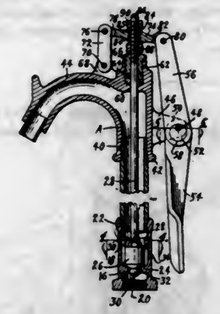
record strips, and a plurality of pawls carried on said member and adapted to selectively engage the said ratchet teeth when the said member is rotated.

---

1,693,093. BELT FOR PERSONAL WEAR. EDWIN S. MIX, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y. Filed Sept. 16, 1927. Serial No. 219,899. 4 Claims. (Cl. 241—8.)

1. The combination with a belt having an inturned reduced end, of a member held between the main or front portion of the belt and the inturned portion, spring means arranged on said member beyond the opposite side edges of the inturned portion of the belt, a member guided on the first named member and having its movement opposed by the spring means, and means for securing the other end of the belt to said last mentioned member.

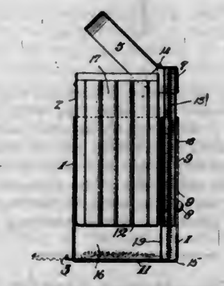
---



1,693,094. PROCESS OF FORESTALLING LEAKAGE IN CONCRETE RESERVOIRS. EUGENE R. ODEN, Lankershim, Calif. Filed Nov. 11, 1926. Serial No. 147,838. 3 Claims. (Cl. 72—13.)

2. The herein described process of producing cracks in concrete reservoirs and for repairing said cracks, which consists in subjecting the walls of the reservoir to the action of a chilling agent to suddenly lower the temperature of the reservoir material with a resultant opening up of the weak places in the reservoir material so as to purposely produce cracks therein and in the subsequent filling of the cracks with a crack sealing material, prior to an introduction of water to the reservoir for commercial purposes.

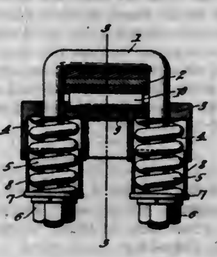
---



1,693,095. HYDRANT. THOMAS RITCHIE and ROBERT H. RITCHIE, Oskaloosa, Iowa. Filed Mar. 4, 1927. Serial No. 172,695. 6 Claims. (Cl. 137—13.)

1. In a hydrant structure, a valve casing, a valve seat on its interior, a valve in the casing for coacting with said seat, a stem extended from said valve and means for actuating said valve comprising a rocking bar pivoted at one end, a link pivoted at one of its ends to the other end of the rocking bar, means for rocking said bar comprising a pivoted handle, an eccentric disk on said handle, an opening in the other end of said link for rotatably receiving said eccentric and means on said stem adapted to be engaged by the rocking arm for closing and opening said valve upon swinging movement of said handle.

---



1,693,096. MECHANICAL RECEPTACLE. MAURICE V. SAMUELS, San Francisco, Calif. Filed Feb. 16, 1927. Serial No. 168,655. 2 Claims. (Cl. 206—38.)

1. A case for cigarettes and the like in combination with a casing external to the case and telescopically engaged therewith, a bottom for said casing, an opening in the side of the casing spaced from said bottom through which smokers' refuse may be introduced and trapped in the space between the case and the casing when the case and the casing are telescopically collapsed, a finger member fixed with the case and projecting through the casing adapted to displace the case clear of said opening.

---

1,693,097. VEHICLE SPRING CONTROL. PETER THOMAS STOUGHTON, Portland, Me. Filed Nov. 1, 1927. Serial No. 230,310. 3 Claims. (Cl. 267—48.)

1. A vehicle spring control comprising a yoke, a bar through which the yoke ends protrude, coiled springs sur-

rounding the yoke ends, nuts screw threaded on the yoke ends for adjusting the pressure of the coiled springs, recesses in the bar for receiving the coiled springs, enclosing members surrounding the coiled springs and adapted to slide telescopically within the cylindrical recesses in the bar, and anti-friction means between said bar and the vehicle springs.

---

1,693,098. CARD CLASP. GEORGE H. TAYLOR, Norfolk, Va. Filed Aug. 26, 1927. Serial No. 215,587. 3 Claims. (Cl. 40—11.)

1. A card clasp comprising a straight elongated shank having a rebent upper end contacting with the shank to form a fixed jaw, a substantially parallel portion bent upwardly from the base of the fixed jaw to form a movable jaw, and an operating plate extended downwardly and outwardly from the upper end of the movable jaw, the upper ends of both jaws being deflected outwardly in opposite directions to provide a curved inserting guide.

---

1,693,099. PENCIL. FRANK J. VIERLING, Minneapolis, Minn., assignor to Clover G. Irvine, Minneapolis, Minn. Filed June 3, 1926. Serial No. 113,450. 2 Claims. (Cl. 120—18.)

1. A pencil comprising a barrel carrying a bead and a tubular shell telescopically slidable therein, said shell being composed of resilient material and provided with a helical thread on its inner portion adjacent said open end, adapted for interengagement with said head, and a smooth portion extending beyond the end of said barrel, the inner portion of said shell being longitudinally slotted transversely of said thread and through said open end, and a lead carrier mounted on said shell substantially as and for the purpose set forth.

---

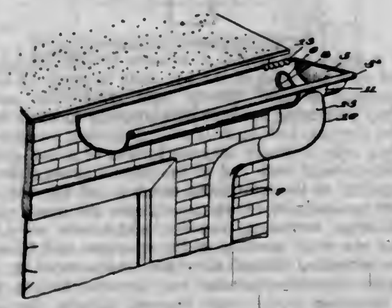
1,693,100. PENCIL. FRANK J. VIERLING and CLOVER G. IRVINE, Minneapolis, Minn.; said Vierling assignor to said Irvine. Filed Dec. 6, 1926. Serial No. 152,867. 3 Claims. (Cl. 120—18.)

3. A pencil comprising an outer barrel having a spiral bead extending around the inside thereof, a shell telescopically slidable within said barrel, said shell being longitudinally split adjacent one end and provided with spiral ridges thereon adapted to resiliently engage the bead on the inside of the barrel, and having the other end extending out of said barrel, the said outer end providing means whereby the barrel and the shell may be given a relative endwise movement or may be relatively rotated.

---

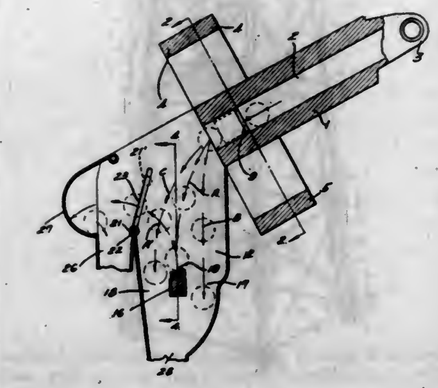
1,693,101. OIL-WELL PUMP. JAMES P. WORTHINGTON, Ponca City, Okla., assignor of one-half to Lory J. Mildren, Ponca City, Okla. Filed Feb. 23, 1926. Serial No. 90,119. 5 Claims. (Cl. 103—5.)

1. In combination with an oil well, relatively spaced inner and outer pipes in the oil well, a pump at the top of the oil well, means connecting the pump with said pipes including valves for selectively directing a liquid from the pump directly into either the inner or the outer pipes, deflecting means in the oil well below the top thereof for directing all of the liquid from one pipe to the other without directing liquid to the well, and an intake device from said pipes to the well below the deflecting means operated by the pump controlled liquid in said pipes to draw liquid from the well into said liquid first mentioned.



1,693,102. OIL-WELL PUMP. JAMES P. WORTHINGTON, Ponca City, Okla., assignor of one-half to Lory J. Mildren, Ponca City, Okla. Filed Feb. 23, 1926, Serial No. 90,120. Renewed Apr. 14, 1928. 10 Claims. (Cl. 103—5.)

1. In a well pump the combination of an outer pipe having a passageway therethrough, an inner pipe having a passageway therethrough, and located axially thru the passageway of the outer pipe, means for forcing an impelling fluid downwardly thru the passageway of the outer pipe, deflector means in the lower part of the passageway of the outer pipe for laterally deflecting the impelling fluid into the passageway of the inner pipe and upwardly therethrough, and motor means rotatably supported adjacent said deflector in the path of the impelling fluid for rotation thereby to create a suction thru the passageway of the pump below said deflector.



---

1,693,103. EAVES TROUGH. FRANK F. WRIGHT, Aurora, Ill. Filed Apr. 27, 1927. Serial No. 186,980. 4 Claims. (Cl. 108—30.)

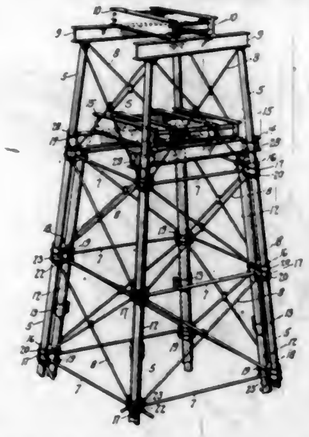
1. The combination with a filtering member having a side opening, of a conduit extending substantially at right angles to said filtering member having a discharge opening communicating with said filtering member, and a baffle member in the conduit adjacent the side nearest the side opening of the filtering member, for the purpose specified.

1,693,104. METHOD AND APPARATUS FOR SELECTING METAL CHECKS. HUGH E. WURZBACH and LESLIE H. WADSWORTH, Magna, Utah, assignors to Selector Corporation, Salt Lake City, Utah, a Corporation of Utah. Filed Jan. 27, 1928. Serial No. 250,036. 10 Claims. (Cl. 194—101.)

1. The method of selecting checks which comprises causing the check to pass through a zone of concentrated magnetic flux whereby the velocity of said check is diminished in accordance with the induced currents set up therein, permitting the check to move in a free trajectory after leaving said zone of magnetic flux, causing any check moving in a certain trajectory to strike against impact means and to rebound therefrom in accordance with the resiliency thereof, and delivering any check striking said impact means and rebounding therefrom in a certain manner separately from all checks failing to strike said impact means and all checks striking said impact means and failing to rebound therefrom in said certain manner.

---

1,693,105. COMPOSING STICK. WALTER C. BIGNOLD, San Francisco, Calif. Filed June 29, 1927. Serial No. 202,400. 3 Claims. (Cl. 276—39.)

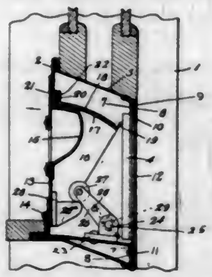


1. The combination with a composing stick having a plurality of openings disposed along one of its sides, of a stop, a slide carried by said stop, pins carried by said slide for entering said openings, a worm for moving said stop in either direction and a lever for securing said stop to said stick, and for preventing movement of said worm when said lever is swung into operative position.

---

1,693,106. METHOD OF DEGREASING RAW WOOL. RUDOLF BRAUCKMEYER, Grunberg i/Schlesien, Germany. Filed Jan. 14, 1926, Serial No. 81,324, and in Germany May 25, 1925. 2 Claims. (Cl. 8—12.)

1. Method of degreasing raw wool consisting in primarily freeing the wool from water leaving about 2 to 3% moisture in the wool, then treating the wool with water-soluble mild grease solvent.

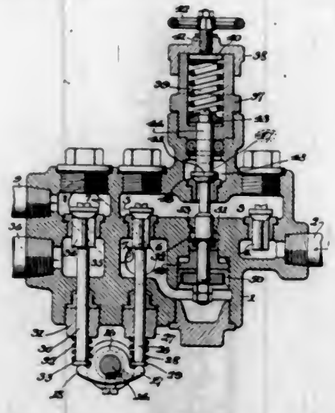


1,693,107. DERRICK. THOMAS F. CAMPBELL, Denver, Colo., assignor of sixty one-hundredths to Richard S. Shannon, Denver, Colo. Filed June 28, 1926. Serial No. 119,005. 5 Claims. (Cl. 189—13.)

2. A derrick comprising permanent and auxiliary tower units placed one within the other, each having supporting legs, a crown block on each unit cooperating for the support of a cable in the operation of the well, and clamps connecting the crown block of one unit with the supporting legs of the other unit.

---

1,693,108. VENTILATOR. OLIVE W. DENNIS, Baltimore, Md. Filed Dec. 13, 1927. Serial No. 239,777. 2 Claims. (Cl. 98—93.)



1. In a car ventilator, the combination with a housing having top, bottom and end walls, of a movable lid adapted to close one side of the housing, a screen to close the other side of the housing, wings extending inwardly from the ends of the lid and constituting with the lid a chute to direct air currents upwardly, a perforated cover overlying the lid and wings, a cam on the inner side of the lid, an arm in the housing coacting with said cam to lock the lid in both open and closed positions, and means holding said arm constantly in cooperative relation with said cam.

---

1,693,109. SEMIAUTOMATIC VALVE. WALTER ERNST, Mount Gilead, Ohio, assignor to Hydraulic Press Manufacturing Company, Mount Gilead, Ohio. Filed July 26, 1926. Serial No. 124,906. 5 Claims. (Cl. 138—16.)

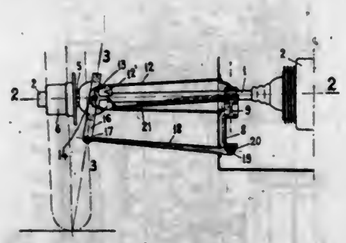
1. Valve mechanism comprising a casing, a chamber therein, means for admitting a fluid under pressure thereto, means for admitting a fluid under higher pressure to said chamber, which second means is operable automatically by the first-named fluid when the pressure in the chamber reaches a predetermined value, and a third means independently operable for connecting the chamber to the

exhaust, the first means being located intermediate the second means and the chamber and operating to cut off from the chamber the flow of both fluids before the second means closes, and the second means closing only after the chamber has been connected to the exhaust.

---

1,693,110. PAPER-BAG HANDLE. MAX FAISTENHAMMER, Binghamton, N. Y. Filed June 22, 1926. Serial No. 117,838. 1 Claim. (Cl. 229—54.)

In a paper bag handle, a foldable reinforcing member folded over the edge of the bag body in equal folds and permanently secured thereto, said reinforcing member and bag body being provided with aligning openings which extend through both folds of the reinforcing member and the bag body, a handle member formed of a flat strip of flexible material each end of the handle passing through an opening in the reinforcing member and bag body and turned upwardly to terminate adjacent the upper end of the foldable reinforcing member, said handle snugly engaging the upper portions of the openings, and fastening means extending through the double thickness of the handle and reinforcing member and through the bag body, said fastening means being disposed between the upper edge of the bag and the openings.



---

1,693,111. WHEEL-SUSPENSION MEANS FOR MOTOR VEHICLES. GUIDO FORNACA, Turin, Italy. Filed July 13, 1927, Serial No. 205,458, and in Italy July 16, 1926. 7 Claims. (Cl. 180—43.)

1. A mounting for vehicle wheels comprising a hollow member extending transversely to the vehicle frame and

pivoted thereon for vertical oscillation, said hollow member having a cross section which is vertically depressed and elongated in a direction parallel to the axis of the vehicle frame, a rigid member extending transversely to said vehicle frame at a distance below said hollow member

and mounted on said frame for vertical oscillation, a member linking said hollow and rigid members, a wheel hub, means on said link member for supporting said wheel hub, and resilient suspension means in said hollow member to damp oscillations of said interconnected parts and wheel with respect to the vehicle frame.

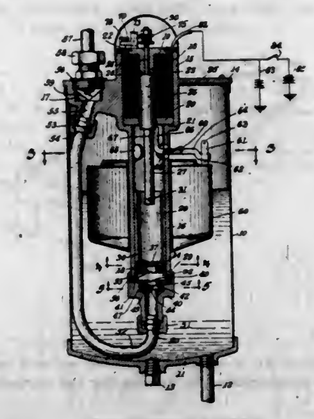
---

1,693,112. PHENOL RESIN AND PROCESS OF MAKING SAME. FRAZIER GROFF, Verona, N. J., assignor to Bakelite Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 21, 1927. Serial No. 170,059. 6 Claims. (Cl. 260—4.)

1. Process of making a dehydrated reactive resin composition, comprising reacting a phenol with furfural in proportion to yield an infusible resin, arresting the reaction before the infusible stage is reached, adding thereto a non-reactive resin, heating the mass to dehydrate the resin and further advance the same, and adding a methylene-containing hardening agent.

---

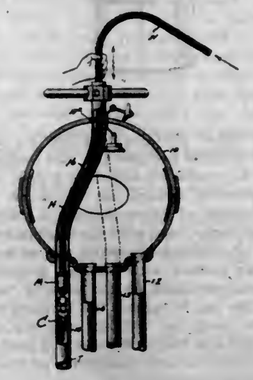
1,693,113. ANIMAL-FEEDING DEVICE. CARL HAMPEL, Jackson, Mich. Filed Sept. 30, 1927. Serial No. 222,959. 8 Claims. (Cl. 119—61.)



1. A feeding device comprising a receptacle having a laterally projecting rim, a base plate having an aperture for receiving said receptacle, and means for supporting said receptacle within said aperture by said rim comprising a substantially U-shaped member engaging the projecting rim, the free ends of said member being secured to said base plate on opposite sides of said aperture.

---

1,693,114. FUEL-SUPPLY SYSTEM. JOHN ALLEN HEANY, New Haven, Conn., assignor to Heany Laboratories, Inc., New Haven, Conn., a Corporation of Connecticut. Filed Sept. 27, 1923. Serial No. 665,109. 17 Claims. (Cl. 103—26.)

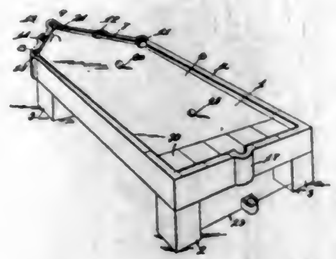


1. In a fuel supply system, the combination of a main fuel tank; an auxiliary fuel tank positioned above said main tank; pumping mechanism associated with said auxiliary fuel tank to lift the fuel from the main to the

auxiliary tank; and means adapted to make said mechanism self priming under normal conditions of engine operation.

---

1,693,115. TUBE-CLEANING DEVICE. DAVID S. JACOBUS, Jersey City, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed June 20, 1922. Serial No. 569,703. 8 Claims. (Cl. 15—104.11.)

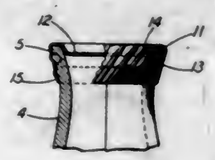


1. A device for use with cleaning means for a plurality of tubes having their ends entered in the periphery of a drum at one side thereof and arranged in a group with a plurality of tube ends in the group substantially equidistant from the geometrical center of the group, said drum having a handhole in the side of the drum opposite the tube ends and substantially opposite the geometrical center of said group, said device comprising means to guide a cleaner from said handhole into the end of any one of the tubes in said group.

---

1,693,116. GAME. ELI H. LEE, Monrovia, Calif. Filed Mar. 23, 1927. Serial No. 177,532. 2 Claims. (Cl. 273—11.)

1. A game table comprising an elongated, horizontal top having one end V-shaped and the other end rectangular, a marginal upstanding flange surrounding said table top, a pocket in said rectangular end, a pocket in the apex



of said V-shaped end, said pocket being relatively narrow, a pocket located centrally of each side of said V-shaped end, and a pocket located in the outer end of said

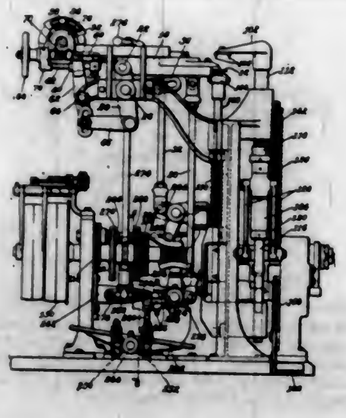
V, and a plurality of squares indicated on said table adjacent said rectangular end as and for the purpose specified.

---

1,693,117. CLOSURE FOR CONTAINERS. ANTHONY F. MCDONNELL, Dunmore, Pa., assignor of one-third to William Aloysions Quinn, Scranton, Pa. Filed Oct. 29, 1927. Serial No. 229,710. 1 Claim. (Cl. 215—46.)

A bottle or other container having its neck formed with shoulders inclined peripherally and upwardly toward the mouth of the container and with a part inclined outwardly and upwardly toward the mouth, in combination with a cap formed of paper having a pliant metallic binding around its rim, said metallic binding being adapted to be crimped or contracted around the neck of the container and being formed with internal projections to engage the inclined shoulders on the neck of the container, so that, when the cap is turned, the inclined shoulders on the neck of the container will lift the cap off the neck and the upwardly and outwardly inclined part of the neck will expand the rim and ease the lifting of the cap.

---

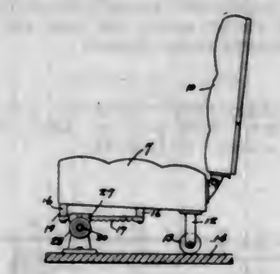


1,693,118. HIGH-PURITY CRYSTALLINE DEXTROSE. WILLIAM B. NEWKIRK, Riverside, Ill., assignor to International Patents Development Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 10, 1927. Serial No. 167,362. 5 Claims. (Cl. 127—30.)

1. Crystalline anhydrous dextrose in the form of granules the majority of which are individual crystals having smooth faces.

---

1,693,119. UPPER-SHAPING MACHINE. ARTHUR F. PYM, Marblehead, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 20, 1925. Serial No. 51,404. 23 Claims. (Cl. 12—14.)



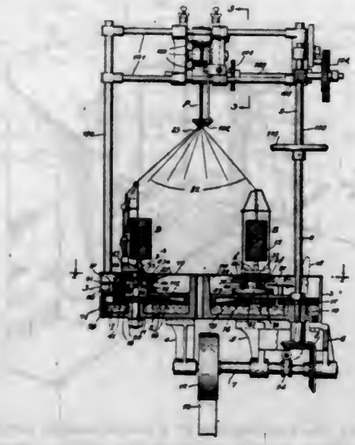
1. In a machine of the class described, the combination with shoe-positioning means and toe-embracing wipers relatively movable to upwipe and to overwipe the toe of an upper, of power-operated means for effecting the relative upwiping and overwiping movements comprising a power-driven shaft and independently controlled mechanisms operated thereby for starting or stopping the rela-

tive upwiping movement or the relative overwiping movement, each independently of the other, at the will of the operator.

---

1,693,120. ADJUSTABLE SEAT FOR AUTOMOBILES. WILLIAM J. RHYNES, Spreckels, Calif. Filed Aug. 5, 1926. Serial No. 127,366. 1 Claim. (Cl. 155—14.)

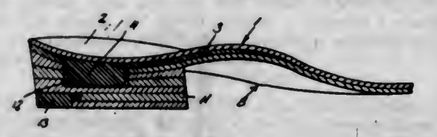
A device of the type described comprising a seat portion, racks secured to said seat, a supporting shaft, means for supporting said shaft, said racks being swingable about said shaft, pinions carried by said shaft and meshing with said racks, brackets connecting said racks with said pinions and permitting a swinging of said racks about said shaft as a center, means for supporting the rear portion of the seat and a back hingedly connected to the rear portion of the seat.



---

1,693,121. BRAIDING MACHINE. HARRY G. ROBINSON, Waterbury, Conn., assignor to Industries of America, Inc., a Corporation of Delaware. Filed Sept. 24, 1926. Serial No. 137,395. 34 Claims. (Cl. 96—9.)

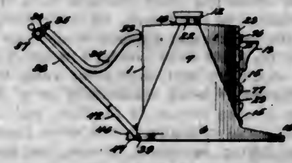
1. A braiding machine characterized by rotatable drivers adapted to co-operate upon braiding devices or carriers for the transport of said carriers through a sinuous path, said drivers having holding members, rotatable with said drivers, to secure said carriers adventitiously to said drivers in succession, said machine being further characterized by the arrangement of said holding devices to be biased from holding position by the action of centrifugal



force, and also characterized by means acting positively to move said holding members into position to secure said carriers to said drivers successively, said means being

adapted to release said holding members at the transfer regions and thereby to permit transfer of said carriers from driver to driver.

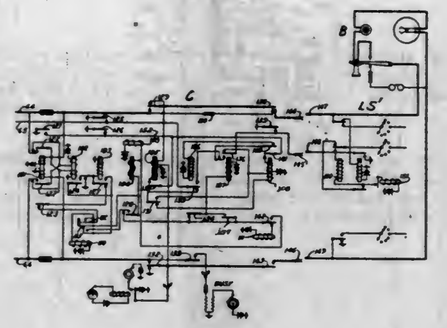
---



1,693,122. SHOE CONSTRUCTION. HENRY H. SCHWARTZ, Scranton, Pa. Filed Aug. 25, 1926. Serial No. 131,446. 2 Claims. (Cl. 36—37.)

2. In a shoe, the combination of an inner whole sole, and an outer whole sole, the outer whole sole having an opening formed in the heel portion thereof, of a heel attached to the bottom of the heel portion of the outer whole sole, said heel having a pocket formed in the upper portion thereof, a flexible shank interposed between the shank portions of said soles, the same comprising a strip of rubber which is stretched across the shank of the inner whole sole and cemented to the bottom thereof, and a rubber cushioning plug molded to said strip, said plug extending downwardly through the opening in the heel portion of the outer whole sole and disposed within the pocket provided therefor in the heel.

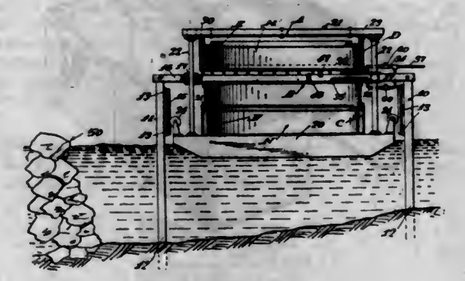
---



1,693,123. PNEUMATIC TOOL. WILLIAM JACKSON SPENCER, Troy, Idaho. Filed Jan. 5, 1926. Serial No. 79,387. 5 Claims. (Cl. 138—9.)

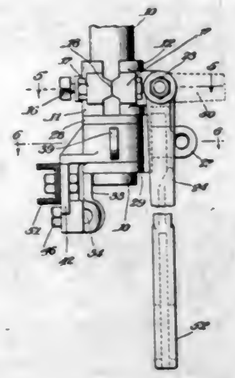
4. In a pneumatic jack the combination of a supporting stand, a vertical piston-rod secured in said stand, a piston at the upper end of said piston-rod, a cylinder telescoping over said piston, a vertically parallel pair of guide-bars on said cylinder and on opposite sides thereof, a pair of uprights on said stand, one on either side thereof and having their opposing faces vertically grooved for engagement with said guide-bars, and inlet and exhaust ports in the upper part of said cylinder.

---



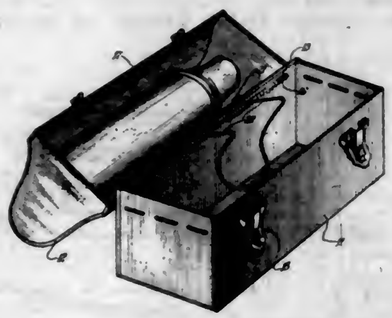
1,693,124. AUTOMATIC TELEPHONE SYSTEM. RUDOLPH F. STEHLIK, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed May 29, 1924, Serial No. 716,577. Renewed Feb. 27, 1928. 16 Claims. (Cl. 179—18.)

1. In a telephone system, a connector switch having wipers, a test conductor for said switch, a relay for connecting said wipers to said switch, a winding on said relay, circuit connections controlled by said relay for grounding said test conductor through said winding, a circuit for applying ringing current to a wiper of said connector, a second relay for opening said ringing circuit, and contacts on said second relay for connecting the ground potential to said test conductor over a path independent of said winding and for removing said winding from the circuit.



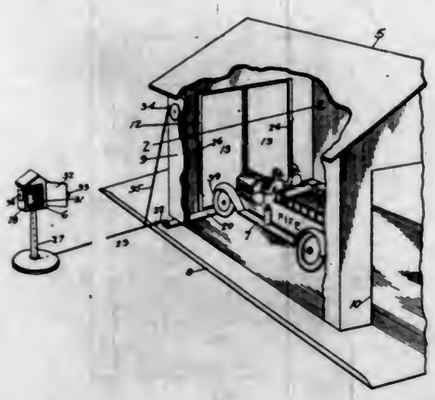
---

1,693,125. TIDE-OPERATED AIR COMPRESSOR. THEODORE C. VAN EPPS, Los Angeles, Calif. Filed May 25, 1927. Serial No. 194,067. 7 Claims. (Cl. 230—67.)



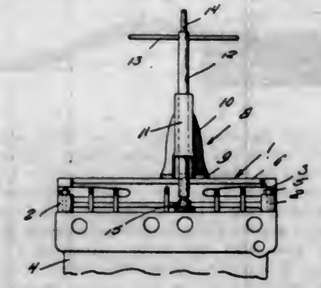
1. A tide operated compressor comprising in combination a pontoon, a super-structure above said pontoon, a stationary structure between said pontoon and superstructure, a collapsible tank attached to said pontoon and stationary structure, a second collapsible tank attached to said super-structure and stationary structure, and inlets and outlets for said tanks.

1,693,126. ADJUSTABLE LOCKING BEARING. TONY VAN RYAN and ALFRED ALSAKER, Chicago, Ill., assignors to The Delta-Star Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 27, 1926. Serial No. 137,929. 14 Claims. (Cl. 200—42.)



1. In combination, a switch operating shaft, an operating handle for said shaft, a support for said shaft, and adjustable means mounted on said support to which said handle may be secured in fixed position relative to said support.

1,693,127. LUNCH KIT. GEORGE F. WALTER and JOHN M. HOTHERSALL, Brooklyn, N. Y., assignors to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed July 13, 1925. Serial No. 43,079. 8 Claims. (Cl. 206—4.)

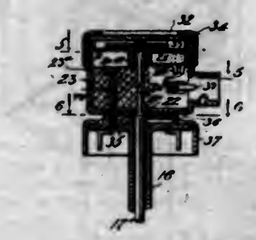


8. A lunch kit, comprising a body, a cover hinged thereto, and means for retaining a thermos bottle, or like article, in said cover, said means comprising a pivotally mounted member shaped to engage around a part of the circumference of the bottle and adapted to be automatically pressed against the bottle by the closing movement of said cover.

1,693,128. TOY FIRE-ENGINE HOUSE AND CALL BOX. FRED W. WARNER, Denver, Colo. Filed Oct. 8, 1925. Serial No. 61,238. 12 Claims. (Cl. 46—48.)

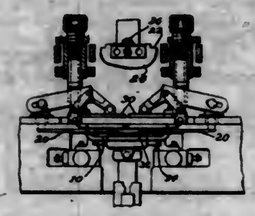
1. In a toy, the combination of a house element having a normally closed door, a self-propelling vehicle element having propelling means adapted to be pre-set, said element being held in check by the door when same is closed, and means for releasing the door at a point distant from the house element.

1,693,129. VALVE-SEAT REAMER. REX C. WILLIS, Seattle, Wash. Filed Mar. 11, 1925. Serial No. 14,740. 1 Claim. (Cl. 90—12.5.)



A valve seat reamer adapted to be removably secured to a cylinder block comprising a base having a bearing surface substantially coextensive with the length of the block including the valve seats, the upper surface of the base presenting a surface at true right angles to the axis of the valve seats, a tool mounting comprising a bracket having a broad bearing on the base, a connection between the bracket and base to permit a free rotative movement of the bracket with respect to the base, said connection having slidable connection with the base on a line parallel to a line joining the valve seats, an elongated arbor guide carried by the bracket and disposed beyond one edge thereof to permit the guide to be arranged in direct axial alignment with any valve seat, said arbor guide in any position of adjustment being maintained at a direct right angle to the bearing surface of the base, and a tool arbor freely slidable and rotatable in the arbor guide and held against any tilting movement therein, the lower end of the arbor being formed to removably cooperate with a reseating tool, whereby with the bracket adjusted to dispose the arbor guide and valve seat in axial alignment, the tool is compelled to cut the seat at right angles to the surface of the head.

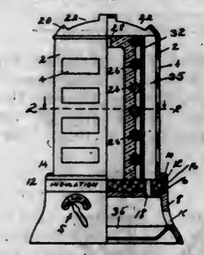
1,693,130. ENAMEL-COATED ARTICLE. JOHN A. ANDERSON, Gardner, Mass., assignor to Central Oil & Gas Stove Company, Gardner, Mass., a Corporation of Massachusetts. Filed Dec. 5, 1923. Serial No. 678,784. 13 Claims. (Cl. 106—36.2.)



1. An a new article of manufacture, a heat resistant object comprising a base coated with enamel whose components include 60% silica and an anchoring material.

1,693,131. SIGNAL SWITCH FOR TANKS. SILVIO ANTONELLI, New Haven, Conn. Filed Mar 1, 1924. Serial No. 696,144. 2 Claims. (Cl. 200—84.)

1. In a signal device for gasoline tanks, a hollow stem having a head with openings therein radiating from said hollow stem, a rotatable shaft extending through said hollow stem, one end of said shaft extending into the gasoline tank to be immersed at times by the gasoline in said tank, an arm and float operatively connected to said rotatable shaft, an insulation member through which the other end of said shaft passes, conductor terminals carried by said insulation member, means on said stem for protecting said member from gasoline, and means carried by said stem for closing an electric circuit to operate a signal device when the rotatable shaft assumes a predetermined position.

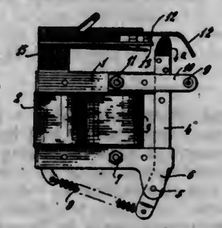


1,693,132. METHOD FOR USE IN THE MANUFACTURE OF SHOES. WILLIAM C. BAXTER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed July 25, 1921, Serial No. 487,394. Divided and this application filed Sept. 10, 1926. Serial No. 134,711. 9 Claims. (Cl. 12—142.)

1. That improvement in methods of making shoes which consists in utilizing a presenting tool to engage positioning surfaces provided in definite predetermined locations on a shoe part, for example on an upper, and to move the shoe part by such engagement into a predetermined position relatively to means for performing an operation thereon, and then removing the tool and operating on the part.

1,693,133. ELECTRIC HEATER. PAUL ROBERT GEORGE BIEDERMANN, Los Angeles, Calif. Filed July 29, 1927. Serial No. 209,249. 4 Claims. (Cl. 219—34.)

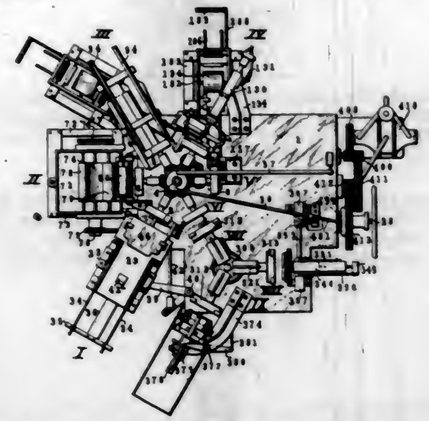
4. In an electric heater, a casing, a base upon which said casing is positioned, means for insulating said casing from said base, grooved cylinders of refractory material in said casing, means for insulating said cylinders from said casing and said base, electric heating coils partly positioned in said grooves for heating said cylinders to incandescence, said casing being provided with air passages



whereby the external air may be heated by convection currents, means for varying the electric current supplied to said coils, and means associated with said casing for moistening the heated air.

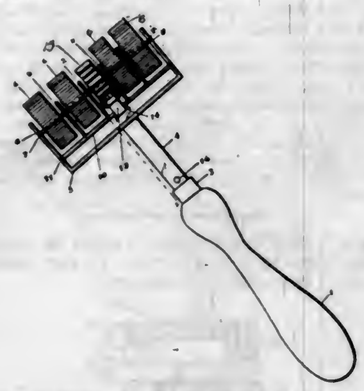
1,693,134. DEVICE FOR CLEANING TUBES OR THE LIKE. ADOLF BRENDLIN, Knapsack, near Cologne, Germany. Filed Apr. 8, 1926, Serial No. 100,517, and in Germany July 27, 1925. 6 Claims. (Cl. 15—104.05.)

1. A tube-cleaning device comprising a screw spindle, a pair of nuts rotatably threaded on said spindle and spaced from each other, a cage encircling said spindle and formed of a plurality of helical scraping members each having its opposite ends secured to said nuts, the direction of the helices of said scraping members being opposite to that of the threads of the screw spindle, so that the torsion caused by pushing the device through the tube causes one of said nuts to move toward the other thereby decreasing the diameter of the cage as the resistance increases, and vice-versa.



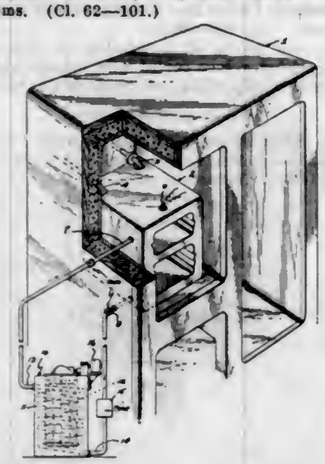
1,693,135. ELECTROMAGNET. ALLEN D. CARDWELL, Rockville Center, N. Y. Filed Feb. 17, 1927. Serial No. 168,851. 10 Claims. (Cl. 175—337.)

1. An electromagnet including an armature, means to produce a magnetic circuit, and means to produce a second



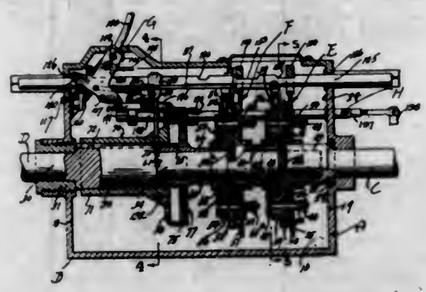
magnetic circuit in inductive relation to and operative only by the first named circuit for producing a resultant magnetic flux for operation of the armature, the armature being out of control by either magnetic circuit independently.

1,693,136. MACHINE FOR MAKING PAPER BOXES. HAROLD CARLE, Buffalo, N. Y., assignor to F. N. Burt Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario. Filed Apr. 27, 1923, Serial No. 635,078. Renewed Sept. 8, 1928. 132 Claims. (Cl. 93—40.)



1. In a machine of the class described, in combination, a mandrel having means for holding a blank thereon while it is being folded, a second mandrel having means for holding the folded blank thereon, means for moving the mandrels synchronously to cause them to register after a predetermined movement, and means for transferring the folded blank from the first to the second mandrel when they are in register.

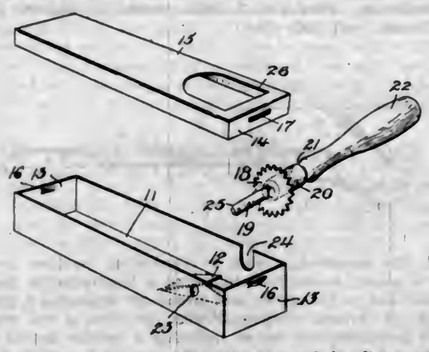
1,693,137. MASSAGE INSTRUMENT. LOUIS CASPER, Brooklyn, N. Y. Filed Nov. 8, 1924. Serial No. 748,667. 4 Claims. (Cl. 128—57.)



1. In a massage instrument having a head, a handle attached to a shaft supported by said head, a series of spaced rollers mounted on the shaft, a gear wheel mounted upon the shaft and between two of the rollers, a vibrating finger between two of said rollers, and means co-acting with said gear wheel to vibrate said finger, the applicator end of said finger being normally in the space between the rollers, and adapted to operate upon the body or flesh of the operator.

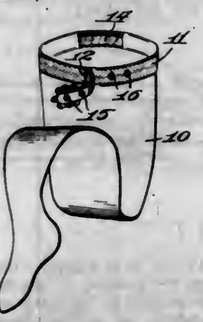
1,693,138. REFRIGERATING SYSTEM AND METHOD OF OPERATING THE SAME. LLOYD G. COPEMAN, Flint, Mich. Filed Sept. 18, 1926. Serial No. 136,245. 6 Claims. (Cl. 62—101.)

1. A domestic refrigerating system comprising a refrigerating unit provided with a refrigerating apparatus for continuous normal operation, a separate refrigerating unit adapted for infrequent operation, both of said refrigerating units being provided with cooling units, a refrigerant circulating means comprising pipes formed in a closed path and passing through the wall of said domestic refrigerating unit for connecting said cooling units and positioned in heat absorbing relation with the cooling unit of said first refrigerating unit, and means for stopping the flow of refrigerant between said two units.



1,693,139. CHANGE-SPEED MECHANISM. OSCAR A. DIETSCHE, Los Angeles, Calif. Filed Jan. 12, 1927. Serial No. 160,683. 12 Claims. (Cl. 74—84.)

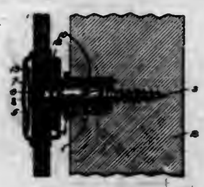
1. In a change speed mecbanism the combination of a drive shaft, a driven shaft, a sleeve rotatable on the driven shaft, reduction gears geared with the drive shaft and sleeve for drive of the latter at a reduced speed ratio, means for clutching the gears in a locked relation with the sleeve and drive shaft for bodily rotation therewith, a second sleeve rotatable on the driven shaft, reduction gears in a geared relation with said sleeves, for drive of the second mentioned sleeve at a reduced speed ratio, means for locking the second mentioned reduction speed gears with the two sleeves for drive of the same at the same rate of speed, means for keying the second sleeve with the driven shaft including a shiftable member, and means for shifting the member to key or disconnect the second mentioned sleeve with respect to the driven shaft.



1,693,140. RATTLE. CARL H. DIETZE, JR., Newark, N. J. Filed Apr. 9, 1928. Serial No. 268,459. 4 Claims. (Cl. 46—46.)

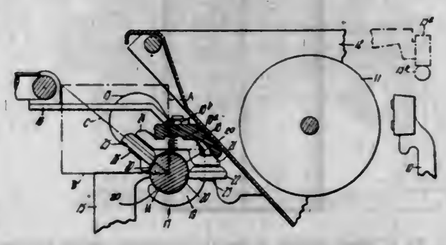
2. A rattle comprising a sheet metal box-like casing with a lip struck up from the bottom and having opposed openings, at least one of said openings being a slot, a spindle fitting in the openings and including a handle beyond the casing, a ratchet on the spindle to engage the lip, and a lid to close the box and having flanges to engage the spindle to hold it in place.

1,693,141. HOSIERY. HARRY H. DUCAT, Los Angeles, Calif. Filed June 15, 1927. Serial No. 198,973. 1 Claim. (Cl. 2—240.)



The combination with a hose or stocking provided at the upper end of its body with a hem, of a flexible strap arranged within said hem, one end of which flexible strap, projects through an opening in said hem, the other end of said strap terminating within said hem immediately adjacent to the opening through which the opposite end of said strap projects and means for detachably connecting the projecting end of said strap to said hem.

1,693,142. SEPARABLE FASTENER. DIDRICK DYRESEN, Malden, Mass. Filed Dec. 20, 1924. Serial No. 757,154. 13 Claims. (Cl. 24—211.)

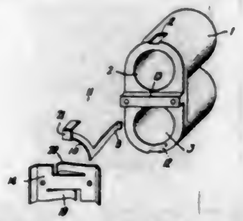


13. A fastener stud comprising a casing countersunk into a rigid support and a socket-engaging part shiftable axially in said casing to present beyond the outer end of said casing a head and a neck for cooperating with a suitable socket.

1,693,143. SEPARABLE FASTENER. DIDRICK DYRESEN, Malden, Mass. Filed Dec. 20, 1924. Serial No. 757,155. 2 Claims. (Cl. 24—211.)

2. A fastener stud presenting, in combination, a casing part, a socket-engaging part axially shiftable relative to said casing part, said socket-engaging part presenting a head and a neck, and spring means interposed between an abutment presented by the casing and an abutment presented by the socket-engaging part thereby normally pressing said socket-engaging part inwardly relative to the casing, and means cooperating beyond the socket-engaging part and the casing part to limit the inward movement of the socket-engaging part whereby only the head and a portion of the neck of the socket-engaging part are normally exposed beyond the outer end of said casing part.

1,693,144. TYPEWRITING MACHINE. WILLIAM F. HELMOND, Hartford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 17, 1925. Serial No. 62,998. 5 Claims. (Cl. 197—69.)



1. In a typewriting machine, the combination with a way-rod and a carriage to be guided thereby, of guiding units articulated to the carriage near the ends thereof, each unit formed to fit a locating seat upon the carriage, and means to secure the unit upon the carriage, each unit having a collar and a pair of rolls, all of said rolls being between said collars, each collar fitted to said way-rod to support and guide the carriage thereon and prevent upward displacement of the carriage, each of said units having one carriage-supporting roll to relieve the friction between the collar and the way-rod when the carriage is weighted, said carriage-supporting roll bearing upon the rear upper crown-portion of the way-rod to relieve the friction of the collar upon said crown, and to form the main support for the weight of the carriage at that end, and the other roll in each pair mounted to bear against the front side of the way-rod to support the carriage against the blows of the type falling upon the front of the platen.

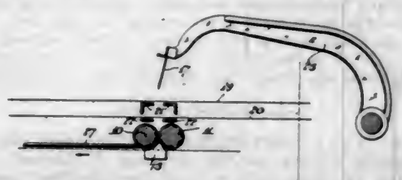
1,693,145. ADJUSTABLE SOCKET FOR LUMINESCENT-TUBE SIGNS. WILLIAM F. HENDRY, Ossining, N. Y., assignor to Manhattan Electrical Supply Company, Inc., a Corporation of Massachusetts. Filed Oct. 27, 1926. Serial No. 144,468. 8 Claims. (Cl. 173—328.)

1. In a mounting for luminescent tubes, a socket having a body of insulating material with two perforations for

receiving the electrodes, a leaf spring in each perforation bulging outwardly at its middle to press the electrode against the wall of the perforation, a tab formed on the end of each spring extending to the outside of said body,

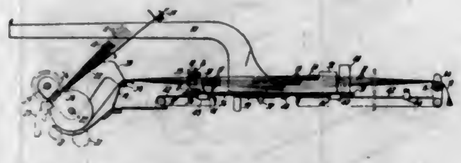
two stationary bus bars, means for supporting said socket so that it may be rotated and horizontally displaced with respect to said bus bars, and means for maintaining said tabs in contact with said bus bars in all positions of said socket.

---



1,693,146. LIQUID HOLDER. GEORGE THOMPSON KEELER, New York, N. Y. Filed Nov. 23, 1927. Serial No. 235,219. 5 Claims. (Cl. 221—108.)

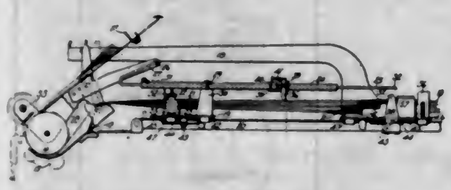
1. In a liquid holder, a multi-chambered casing having an outlet neck, in combination with a stationary inner cone having an orifice communicating with each chamber, and a rotary cone within the first cone and having a single orifice that coincides with either of the orifices in the stationary cone, said rotary cone having a disk projecting outwardly so as to be manually engaged for adjustment, and having an outlet within the outlet neck.



---

1,693,147. SHEET FOLDING. HOWARD K. KING, Philadelphia, Pa., assignor to Chambers Brothers Company, a Corporation of Pennsylvania. Filed July 1, 1927. Serial No. 202,874. 5 Claims. (Cl. 270—45.)

1. The method of folding sheets which consists in exerting actuating force on the sheet at intervals on a straight line of crease and simultaneously to cause the same to be subjected to creasing pressures at other intervals on said line of crease alternating with the first intervals.



1,693,148. TYPEWRITING MACHINE. HIRAM S. LASHER, Bronx, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 7, 1925. Serial No. 67,544. 15 Claims. (Cl. 197—126.)

1. The combination with a typewriting machine having a platen, means for conducting a longitudinally fan-folded web to the platen, and means for displacing a plurality of carbons interleaved with the plies of the web, said last-mentioned means including a carrier having a plate and means for attaching the carbons to said plate, of means for separating the plies of the web, said last-mentioned means being adjustably mounted upon said plate, at a point between the means for attaching the carbons and the platen.

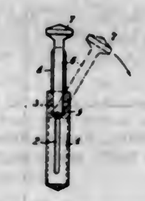
---

1,693,149. TYPEWRITING MACHINE. HIRAM S. LASHER, New York, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 12, 1925. Serial No. 68,553. 28 Claims. (Cl. 197—126.)

1. The combination with a typewriting machine having a platen, means for guiding a longitudinally fan-folded web to said platen, means including a carbon-holder for shifting the position of carbons interleaved with the plies of said web, a device for displacing the platen preparatory to the carbon-shifting operation, of means for shifting the plies of the web previously to the insertion of the web around the platen; said last-mentioned means including a truck arranged to reciprocate towards and away from the platen, and means operatively connected to said displacing device for operating said truck relatively to said carbon-holder at the operation of the platen-displacing device.

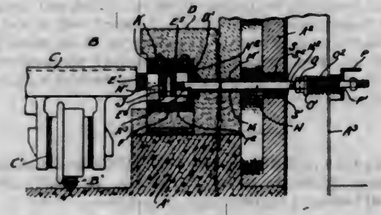
---

1,693,150. BOX. JOSEPH MALONYAY, Budapest, Hungary, assignor to Julius Donner, Budapest, Hungary. Filed Apr. 26, 1927, Serial No. 186,687, and in Hungary June 5, 1926. 1 Claim. (Cl. 220—60.)



A box of the type described, consisting of a body having a circular groove on its side and a tapering edge, in combination with a lid having a turned-down flange comprising a tapering upper zone adapted to receive said tapering edge of the body, and a cylindrical lower zone provided at opposite circumferential portions with narrow recesses forming internal feathers adapted to catch with said groove in the closing position of the lid and positively lock said lid against lifting, but capable of being disengaged from said groove by compressing said flange between said recesses, said circular groove being so distanced from said tapering edge that by causing said feathers to catch with said groove said tapering zone of the lid is forced on to said tapering edge of the body.

---

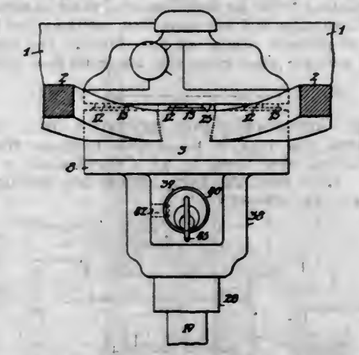


1,693,151. DEVICE FOR HOLDING AND APPLYING COSMETICS AND THE LIKE. PAUL MAYER, Vienna, Austria. Filed Aug. 3, 1926, Serial No. 126,821, and in Austria May 5, 1926. 13 Claims. (Cl. 206—56.)

12. A holder comprising a holder tube, a carrier member telescoping within said holder tube, a cover member having an arm disposed outside said holder tube, and means for connecting said arm and carrier member.

---

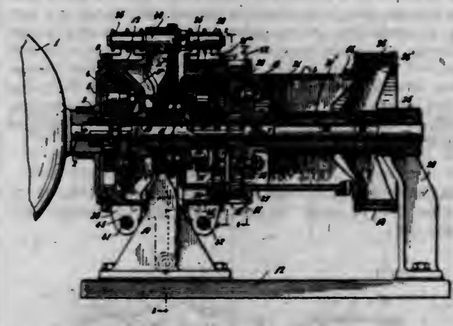
1,693,152. FURNACE-TRUCK SEAL. PAUL A. MEEHAN, Cleveland, Ohio, assignor to American Dressler Tunnel Kilns, Inc., Cleveland, Ohio, a Corporation of New York. Filed May 6, 1927. Serial No. 189,271. 6 Claims. (Cl. 25—142.)



1. In a tunnel kiln comprising an elongated kiln chamber and cars forming a ware supporting platform part movable longitudinally through said chamber, means for sealing a joint between said part and an adjacent part of the kiln wall comprising a bearing shoe mounted for horizontal movement on one of said parts, and mechanical means for holding said bearing member in frictional engagement with the other of said parts.

---

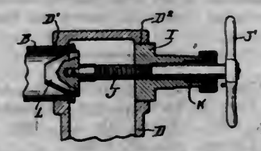
1,693,153. AUTOMOBILE STEERING-WHEEL HUB. JAMES A. MURPHEY, Germantown, Pa. Filed Jan. 6, 1926. Serial No. 79,546. 2 Claims. (Cl. 70—129.)



1. An article of manufacture consisting of a single unitary structure forming a hub for a steering wheel of an automobile, and having an axial opening therethru adapted to rigidly fit a steering shaft in coaxial relation therewith; an annular flange on said hub, intermediate of its length, adapted to form a protective covering for hub locking means; means on said flange, including a circular series of holes for fastening means, arranged to rigidly connect it with the spokes of a steering wheel; and a tubular skirt flange, depending from said annular flange, having a circular series of gear teeth formed upon the exterior thereof,

and terminating above the lower end of said hub; whereby, said hub is adapted to be held stationary by said hub locking means, in any selected position of rotation.

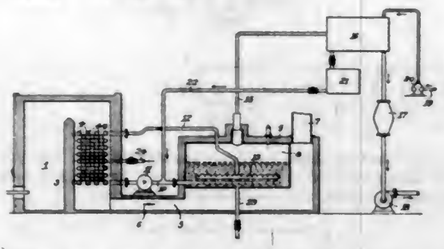
---



1,693,154. TRANSMISSION MECHANISM. JOHN NEWMANN, Glendale, N. Y. Filed Mar. 16, 1927. Serial No. 175,693. 8 Claims. (Cl. 74—34.)

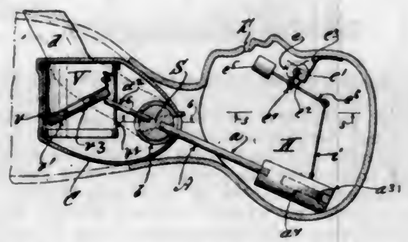
1. An apparatus of the character set forth comprising a driving member, a driven shaft, gearing for rotating said shaft at speed reduced from the speed of the driving member, a gear concentric with said shaft, brake means to control the rotation of said gear and the first named gearing, a driven member, reducing gearing operative by said shaft and cooperative with the concentric gear and with the driven member for rotating the latter at speed reduced from the speed of the driving member when the rotation of the concentric gear is retarded, and reversing gearing cooperative between said shaft and the driven member for rotating the latter by said shaft in a direction reverse to its rotation by the other gearing.

---



1,693,155. OIL HEATER. JOHN PRIMROSE, Richmond, N. Y., assignor to Foster Wheeler Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 7, 1925. Serial No. 13,709. 3 Claims. (Cl. 196—110.)

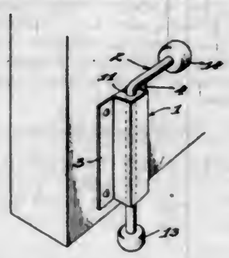
3. In an oil heater, the combination with a multiplicity of tubular elements and end connections providing a plu-



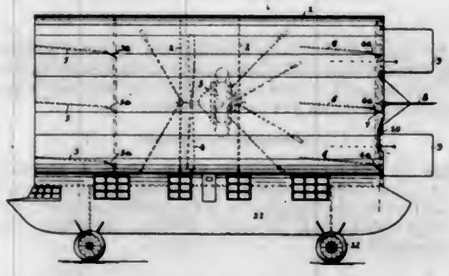
rality of similar flow paths for the oil to be heated, each comprising a number of said elements connected in series, of flow distribution controlling means comprising a separate flow regulating device for each flow path which is adustable between maximum and minimum flow positions and is incapable of entirely closing off flow through the path to which it pertains when in its said minimum flow position.

1,693,156. APPARATUS FOR REFINING OILS. JOHN PRIMROSE, New York, N. Y., assignor to Foster Wheeler Corporation, New York, N. Y., a Corporation of New York. Filed June 21, 1922. Serial No. 569,912. 2 Claims. (Cl. 196—83.)

1. An oil heating apparatus comprising a furnace having a fire chamber and a tube chamber separated from the fire chamber by a bridge wall over which heating gases from the fire chamber enter the tube chamber at the top and having an outlet for heating gases at the bottom of the tube chamber, a bank of horizontally disposed tubes in said tube chamber, an external tank, a circulating pump and connections between said tubes, pump and tank whereby the pump forces oil from the tank successively through tubes at successively higher levels in said tube bank and thence back into the chamber.



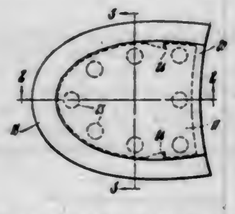
1,693,157. DOLL. FRED J. RAUFFUS, Great Kills, N. Y. Filed Dec. 14, 1926. Serial No. 154,732. 2 Claims. (Cl. 46—40.)



1. In a doll, a hollow head having eye openings, eyes pivoted in said head to swing to an "open" or "closed" position, a gravity means associated with the eye pivot and normally tending to close the eyes when the doll is recumbent and open said eyes when said doll is upright, a second gravity means associated with said first gravity means and normally overbalancing the same, to hold said eyes open when the doll is recumbent, and manually operable means associated with said second gravity means to move the latter to a position which will permit the first gravity means to operate to close said eyes when the doll is recumbent.

1,693,158. COMBINED DOORCHECK AND DOOR BUMPER. OTTO R. REINICKE and CHARLES R. LEEMAN, Jr., Detroit, Mich. Filed July 23, 1926. Serial No. 124,330. 6 Claims. (Cl. 292—60.)

1. A combined door check and door bumper, comprising a housing, an operating member movable longitudinally of the housing, resilient means within the housing normally tending to force the operating means downwardly, a key on said operating means and a key-way on said housing for registering therewith, said operating member being operative in one position to operate as a door check, and adapted to be moved vertically, and moved to another position to operate as a door bumper, and a third position in which it is totally inoperative.

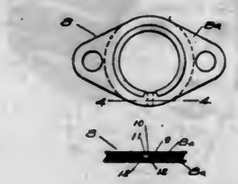


1,693,159. AEROPLANE. GUSTAV RICKELMANN, Haledon, N. J. Filed Sept. 7, 1927. Serial No. 217,960. 2 Claims. (Cl. 244—18.)

1. An aeroplane including a hollow cylindrical body arranged horizontally and having a forward and a rear end and planes arranged within said body so as to stand horizontally as viewed lengthwise and a rear plane-extension for each plane pivotally movable on a horizontal axis at the forward part of such plane-extension.

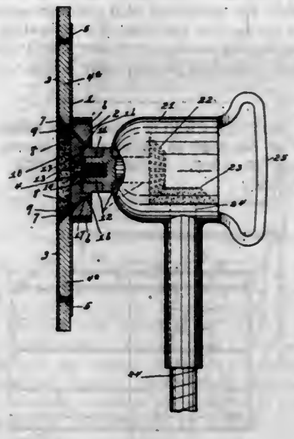
1,693,160. HEEL BASE FOR SHOES. CHARLES O. RYBERG, Brockton, Mass. Filed Jan. 16, 1928. Serial No. 247,085. 4 Claims. (Cl. 36—34.)

1. A heel base formed to be interposed between the outer face of the heel end portion of a shoe outsole and the top face of a heel attached to the shoe, said base comprising a heel-shaped body composed of layers of compressible material, and having a recessed inner face, formed to bear on an outsole, and a flat outer face formed to bear on a heel, and a stiffening layer of sheet metal of smaller area than the body, and secured thereto with its margin entirely within the margin of the body, and concealed thereby when the heel base is incorporated in a shoe.

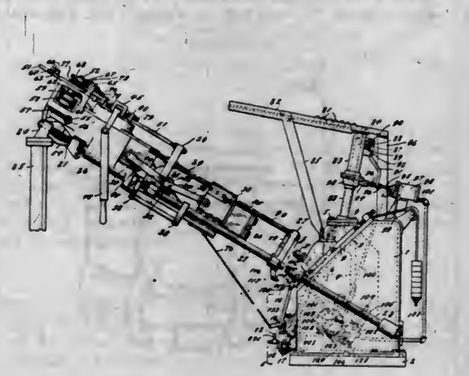


1,693,161. FOUNTAIN BRUSH. THOMAS SANDRETTO, Gary, Ind. Filed Jan. 6, 1926. Serial No. 79,665. 2 Claims. (Cl. 251—8.)

1. In a valve for fountain brushes, a pipe-section, a hollow handle adapted to be connected to a brush head, one end of said handle connected to the pipe section, said pipe section being threaded with its extremity closed and lateral intake ports spaced from said extremity, a coupling member threadedly mounted on said end of the pipe section and having an opening therein opposing the extremity of the pipe section and further having communicating passages leading from said opening to points with which said lateral ports are adapted to register, whereby when the handle and pipe section are turned in one direction said lateral ports and valve opening will be closed and when turned in another direction said opening and ports will be opened.



1,693,162. AUXILIARY AIR AND DRAINAGE DEVICE FOR GASOLINE-ENGINE INTAKES. EUGENE M. SATTERLEE, Meadville, Pa., assignor of one-half to The Standard Trailer Company, Cambridge Springs, Pa., a Corporation of Ohio. Filed Feb. 2, 1925. Serial No. 6,324. 1 Claim. (Cl. 48—180.)

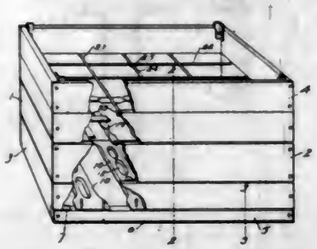


An auxiliary air and fuel drainage device adapted to be inserted between the carburetter and intake manifold, the air inlet opening in the gasket being on the drainage side of the manifold, said device comprising a gasket consisting of top and bottom metal plates and an intermediate layer of yielding material, said yielding material having an unobstructed spray and drainage opening therethrough, and a corrugated metal plate, the corrugation of the plate being arranged in the opening.

1,693,163. DISK SANDING MECHANISM. ELMER C. SCHACHT, Troy, N. Y., assignor to Peerless Surfacing Machine Co. Inc., Troy, N. Y., a Corporation of New York. Filed Mar. 1, 1926. Serial No. 91,426. 2 Claims. (Cl. 51—197.)

1. In an apparatus of the character described, the combination of a support including a hub provided in an end face with a depression or well of polygonal form in a plane transverse to the hub axis, an initially flat abrasive disk provided with a central aperture and a series of slits extending radially from said aperture, one for each angle of the polygon, a clamping plate conforming in shape to the cross-sectional form of the well in the hub of the support, and means for connecting said plate and hub, including a member extending through the central aperture in the disk and adapted to draw the plate into said well, the portions of the disk separated by said slits being thereby drawn into the hub well and clamped between the side walls of the latter and the plate, relative rotation between the disk and support being positively prevented by the shape of the clamping plate and well.

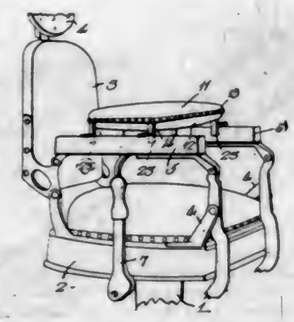
1,693,164. DIE-CASTING APPARATUS. MARC STERN, Flint, Mich., assignor to Doehler Die-Casting Company, a Corporation of New York. Original application filed May 24, 1924, Serial No. 715,712. Divided and this application filed Aug. 31, 1926. Serial No. 132,683. 6 Claims. (Cl. 22—69.)



1. A die casting machine comprising a pressure chamber forming a melting pot for metal to be cast and provided with a nozzle, automatically operated means including a valve device for admitting a fluid under pressure into the pot to eject the molten metal through the nozzle into the die and thereafter automatically to exhaust the pressure fluid from the pot, and a metal-replenishing feed mechanism operating automatically in timed relation to said valve device to feed ingots to the pot at times while the pressure fluid is exhausted therefrom, said feed mechanism comprising a valve to prevent the escape of pressure fluid from the top of the pot and operable to permit the passage of an ingot at times when the pressure fluid has

been exhausted from the pot, an ingot-feeding device operable to drop an ingot through the open valve into the pot, connections between said ingot-feeding device and valve to compel their concurrent operation, fluid pressure operated means for operating said valve and ingot-feeding device, fluid pressure controlling means in control of the pressure fluid for operating said fluid pressure operated means, and means for automatically operating said fluid pressure controlling means in proper timed relation with the automatic operation of said valve device.

---

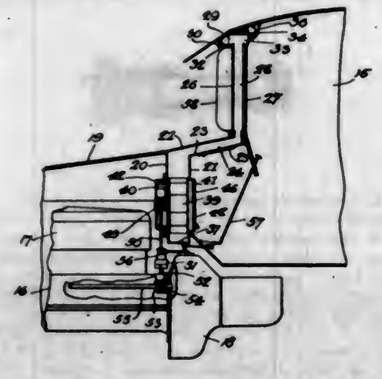


1,693,165. BOTTLE CRATE. JOHN VAN GEEM, Erie, Pa., assignor of one-half to Delmar Van Geem, Erie, Pa. Filed July 29, 1926. Serial No. 125,639. 3 Claims. (Cl. 217—19.)

1. In a bottle crate, the combination of a crate wall having wall strips with perforations opening from the edge of said strips; bottom plates having perforated ends extending over wall strips; and rods extending along the plates and at an angle to the body of the rods through the perforations in the plates and into the perforations in the adjacent strips.

---

1,693,166. BARBER-CHAIR SEAT FOR CHILDREN. JOHN J. WALCOM, Burlingame, Calif. Filed June 29, 1926. Serial No. 119,286. 1 Claim. (Cl. 155—131.)



A seat of the class described comprising a seat member upholstered on both sides, vertical lugs depending from said member, said lugs having laterally extending lugs, intermediate the ends of said vertical lugs whereby the portions of said vertical lugs above and below said lateral lugs are adapted to engage the sides of the arms of a chair when said lateral lugs rest thereon.

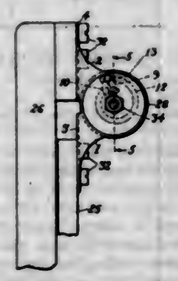
---

1,693,167. WINDOW SHIELD. JAMES R. C. WATSON, Philadelphia, Pa. Filed June 9, 1926. Serial No. 114,695. 5 Claims. (Cl. 296—84.)

1. The combination with a vehicle provided with a window, of a blower, a conduit leading from said blower to a point above the window; a closure for the outer end of said conduit adapted when open to deflect the stream of air issuing from the conduit downward across the win-

dow; and wings on both sides of the path of travel of said air stream to prevent deflection of the latter by side winds.

---

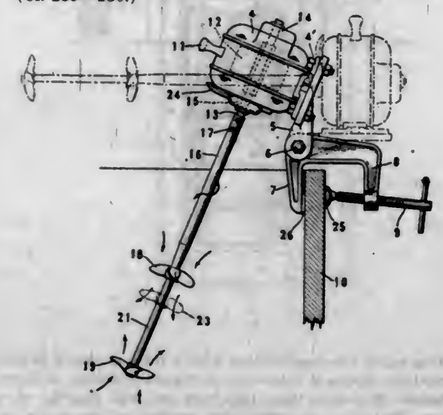


1,693,168. WATER-WAVE COMB. ARTHUR R. WELLER, Spokane, Wash. Filed Mar. 7, 1928. Serial No. 259,748. 4 Claims. (Cl. 132—38.)

1. The combination with a comb of a pair of longitudinally oppositely extending resilient anchoring prongs carried thereby and adapted to receive a cord arranged transversely of the comb.

---

1,693,169. HINGE. WILLIAM BERTRAM YOUNG, London, England, assignor to Frank Howard Hague, London, England. Filed Nov. 23, 1926, Serial No. 150,189, and in Great Britain May 29, 1926. 9 Claims. (Cl. 16—139.)



1. A hinging device comprising arms mounted to move angularly about a common axis each arm having a slot

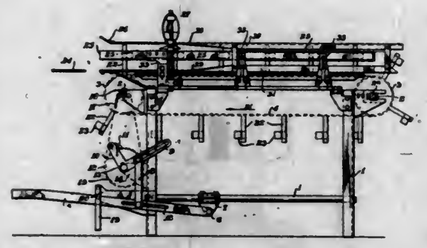
therein the two slots intersecting at different points in their length and different radial distances from the common axis with variation of the angular relation of the arms, an intermediate member engaging in both said slots at their intersection, and operating means rotatable about the common axis for varying the radial distance of said intermediate member from the common axis thereby varying the angular relation of the arms.

---

1,693,170. MIXER. SAMUEL ALSOP, New York, N. Y. Filed Mar. 30, 1925. Serial No. 19,263. 6 Claims. (Cl. 259—130.)

1. A mixer comprising, a clamp adapted to be secured to the edge of a liquid reservoir, a motor having a casing hinged to said clamp and a shaft rotatably supported in said casing and tiltable therewith, a number of propellers secured to said shaft and rotatable therewith, the lower propeller being shaped to raise an amount of liquid and the upper propeller being shaped to circulate a larger amount of liquid downwardly.

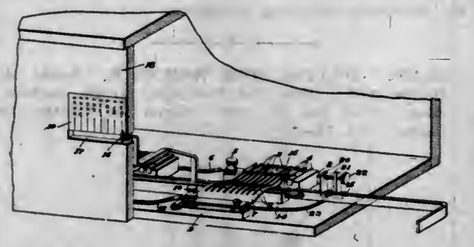
---



1,693,171. FOUNTAIN PEN. EDWARD BERGQUIST, New York, N. Y. Filed Nov. 25, 1924. Serial No. 752,127. 6 Claims. (Cl. 120—47.)

1. In a fountain pen, a pen barrel, an ink "fount" arranged therein, said fount consisting of telescopic tubes of different diameters, one tube communicating with the pen point and communicating with the interior of the outer tube and a plug secured to the outer tube, an atmospheric passage centrally arranged therein and a valve plug having its stem secured in the passage of the first named plug and with passages communicating with the air passage of the first named plug and the interior of the outer tube.

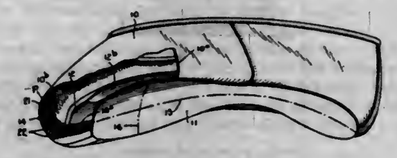
---



1,693,172. MEANS AND METHOD FOR MAKING AND SEALING BOXES AND THE LIKE. SAMUEL BERGSTEIN, Middletown, Ohio, assignor to The Interstate Folding Box Company, Middletown, Ohio. Filed June 21, 1926. Serial No. 117,350. 11 Claims. (Cl. 93—2.)

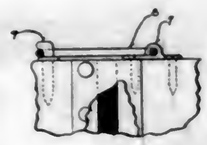
1. The herein described method of forming, filling and sealing boxes consisting in preparing the sealing flaps of box blanks with adhesive in enveloping a content in blank with sealing flaps extended, in causing the box to be acted on successively, to render one of the sealing flaps adhesive, to fold the sealing flaps one relative to another over a supporting element, and to effect adhesion between the flaps by causing opposing pressures to be applied upon the flaps between said supporting element and coacting pressure elements.

---



1,693,173. CONDENSER. GEORGE H. BROWN, Newton, Mass. Filed Oct. 7, 1925. Serial No. 61,017. 7 Claims. (Cl. 175—41.5.)

1. A condenser for radio telephony and the like, comprising a series of variable condenser units, each adjustable independently of the others to vary its capacity, and adjustable means for connecting any desired number of said units into a circuit, whereby the capacity necessary to modify an inductance to suit different wave lengths may be readily obtained.

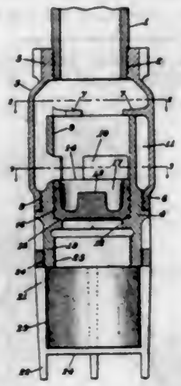


---

1,693,174. BALLET SLIPPER AND METHOD OF MAKING THE SAME. SALVATORE CAPEZIO, East Paterson, N. J. Filed Oct. 22, 1927. Serial No. 227,908. 15 Claims. (Cl. 36—1.)

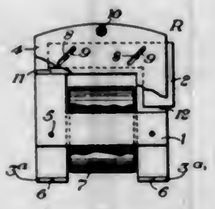
1. A ballet slipper for toe dancers comprising an outer sole, an inner shank and an upper attached to said sole and shank, said shank being convex longitudinally of the slipper to produce a relatively high arch and being convex transversely of the slipper over a substantial frontal area thereof to produce a balancing foot support.

1,693,175. KNOCKDOWN BOAT. IMMANUEL H. DIEHL, Milwaukee, Wis. Filed July 19, 1926. Serial No. 123,368. 1 Claim. (Cl. 9—2.)



A knock-down boat comprising a body portion formed of a plurality of sections, each of said sections having a bottom and side walls, each of said sections also having at one of its ends an upper and lower plate, said plates forming between them a channel for the reception of the adjacent edge of the next section, a yieldable gasket located in each channel, pivoted links carried by the upper face of the side walls of each section adapted to engage pins carried by the upper face of the side walls of the adjacent sections, whereby said sections may be rocked about their upper edges to cause engagement of their lower edges, and a plurality of longitudinally extending cables secured to the front and rear sections by means of eyelets, the rear eyelets terminating in shanks adapted to pass through brackets secured to said rear section, one of said cables being located below the bottom of the sections, and means for selectively tightening the cables.

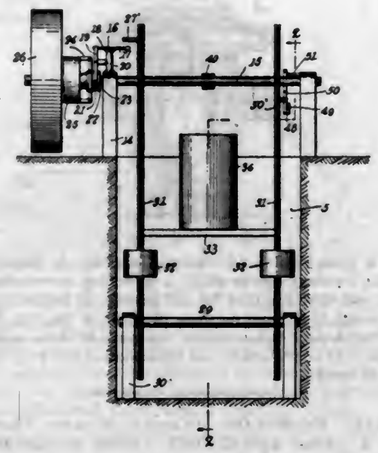
1,693,176. FOLDING HEM ADJUSTER. LAURA A. HANES, Tiffin, Ohio, and VERNE D. HANES, Jackson, Mich. Filed Oct. 31, 1927. Serial No. 230,160. 3 Claims. (Cl. 33—9.)



1. In a device of the character described, a base provided in its face with a transverse groove, a cross piece or yoke adapted to seat in said groove, measuring and marking strips carried by said yoke and resilient means for yieldably holding the yoke in said groove against casual displacement.

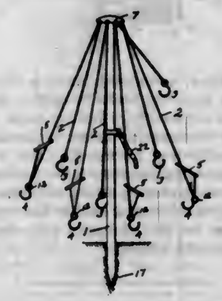
1,693,177. VALVE. JOHN H. HODGART and ANDREW V. BAYDON, Toronto, Ontario, Canada. Filed Dec. 28, 1925. Serial No. 78,032. 1 Claim. (Cl. 251—127.)

In a valve, the combination with a tubular casing having oppositely disposed inlet and discharge openings of lesser internal diameter than the body of said casing, of a sleeve threading into said inlet opening and having a reduced tubular extension extending into the body of said casing and providing an annular fluid chamber therearound, said sleeve having outlet ports at intervals therearound, the lower walls of said ports being above the bottom of said chamber, said sleeve providing a valve seat positioned below said chamber, and a valve slidable across said ports to alternate positions clear of said ports, said valve when in contact with said seat completely filling the space between the lower walls of said ports and said seat and when in its fully raised position filling the space within said sleeve above said ports.



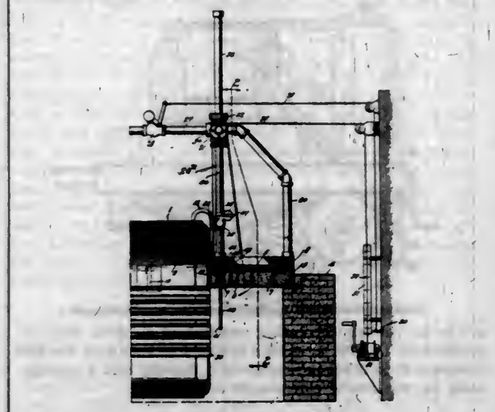
1,693,178. REACTANCE DEVICE. SAMUEL M. LUCAS, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Apr. 2, 1927. Serial No. 180,450. 5 Claims. (Cl. 171—242.)

1. An adjustable reactance device comprising a core of magnetizable material made up of a fixed portion and a movable portion, a winding on said fixed portion, a plate secured to the fixed portion and having inclined slots therein, and a plurality of pins in said movable portion co-operating with the slots in said plate for adjusting the position of said movable portion to vary the reactance of said winding.



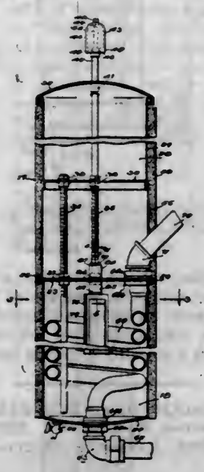
1,693,179. BRICK MACHINE. FRANK MILLER, Claysburg, Pa. Filed Nov. 11, 1926, Serial No. 147,642. Renewed May 2, 1928. 8 Claims. (Cl. 25—1.)

1. A brick making machine comprising a plurality of bearings adjacent and at the bottom of a pit, shafts journalled in said bearings, connections between said shafts and means on one of said shafts to transport plastic material from a storage hopper to a plurality of moulds.



1,693,180. FRUIT-TREE PROP. PHIL FRANCIS PHELP, Los Angeles, Calif., assignor of one-half to Harry L. Bonnell, Los Angeles, Calif. Filed Dec. 4, 1926. Serial No. 152,614. 3 Claims. (Cl. 47—43.)

3. In a tree prop, a pole, a rope strung loosely from the pole to be drawn in one direction or the other, means on the ends of the rope for engaging limbs of the tree respectively, and means for varying the length of the rope.

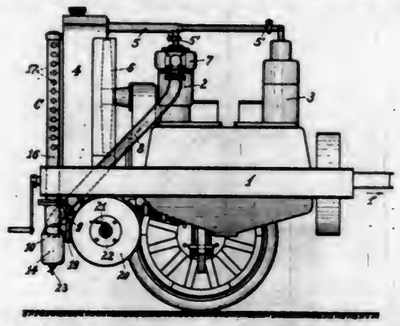


1,693,181. BOILER-TUBE-BLOWING DEVICE. JOHN N. QUINN, Cincinnati, Ohio; Richard W. Quinn administrator of said John N. Quinn, deceased. Filed Aug. 1, 1924. Serial No. 729,635. 5 Claims. (Cl. 122—391.)

1. In a device of the class described, a main frame structure including a vertically disposed conduit closed at its upper end and having a stuffing box at its opposite end, a movable conduit extending through said stuffing box and telescopically into said conduit, a manifold connected with

said movable conduit slidable on said frame, and a plurality of tubes depending from said manifold and relatively parallel, each tube having a nozzle opening at its lower end.

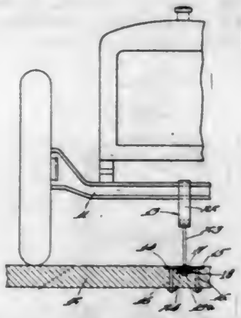
1,693,182. HEATING DEVICE. RICHMOND ROCHESTER, Jr., Chicago, Ill., assignor to Automatic Electric Boiler Co., Chicago, Ill., a Corporation of Delaware. Filed June 24, 1926. Serial No. 118,287. 14 Claims. (Cl. 219—40.)



1. The combination with a hot water tank, of a receptacle for holding water, spaced electrodes projecting into the receptacle and arranged so that an electrical current may flow therebetween through the water, tubular means disposed in the receptacle whereby water may be heated through an exchange of heat with the water in the receptacle, said tubular means being sealed from communication with the interior of the receptacle, and means connecting said tubular means with the tank to obtain a circulation of water therethrough by a thermo-siphon action.

1,693,183. PORTABLE COMPRESSOR PLANT. GERHARD ROTHMANN, Herne, Germany. Filed Apr. 9, 1928, Serial No. 268,555, and in Germany July 8, 1926. 9 Claims. (Cl. 230—211.)

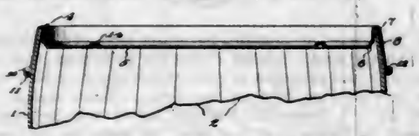
1. A portable compressor-plant comprising an air-compressor, a motor for operating said air-compressor, a



water-cooler, a ventilator for creating a current of air for cooling the contents of said water-cooler, an air-cooler arranged in the current of air created by said ventilator,

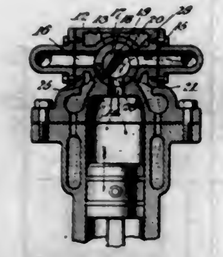
means for leading the heated compressed air from said air-compressor to said air-cooler destined to cool said air and condense the oil-vapours suspended therein, and a storage-tank for the cooled compressed air.

---



1,693,184. VEHICLE ANCHORING DEVICE. VINCENT P. RUMELY, Detroit, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 30, 1925. Serial No. 5,813. 5 Claims. (Cl. 105—368.)

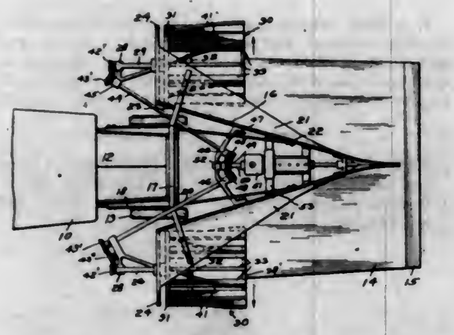
1. In combination, a freight car floor, a pair of rails secured to said floor, said rails being spaced apart to form a channel therebetween, an adjustable hold-down secured at its upper end to a vehicle, the lower end of said hold-down being insertable at a plurality of points between said rails.



---

1,693,185. METALLIC HEAD FOR BARRELS. NAJAH CARRINGTON TAYLOR, Staunton, Va. Filed Mar. 1, 1927. Serial No. 171,810. 3 Claims. (Cl. 217—76.)

1. A barrel head comprising a metal plate bent in spaced relation to its periphery to form an annular shoulder flat throughout its circumference and extending upwardly at an outward incline and leading to an upstanding circumferentially extending barrel engaging portion of an inverted U-shape in cross section and having inner and outer walls, the outer wall being of greater depth than the inner wall and having slits leading from its lower edge to provide spaced tongues, the free lower ends of the tongues being bent outwardly and upwardly to provide hooked ends, and a securing ring for said head encircling the same about the tongues and engaged by the hooked ends of the tongues when in place.



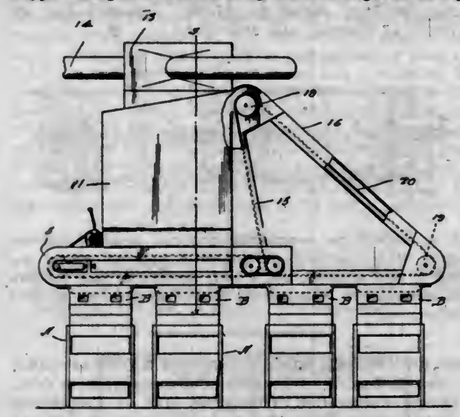
1,693,186. INTERNAL-COMBUSTION ENGINE. ROBERT J. THOMPSON, Harrisburg, Pa. Filed Jan. 13, 1927. Serial No. 160,934. 8 Claims. (Cl. 123—190.)

1. A rotary valve for internal combustion engines, including a rotary carrier shaft, a split ring surrounding the shaft and having a port for the passage of actuating fluid, and means interposed between the ends of the ring for expanding it, said means filling the space between said ends irrespective of the amount of expansion of the ring created by said means.

---

1,693,187. SNOWPLOW. CLAUDE L. WALLING, Sherburne, N. Y. Filed Apr. 25, 1927. Serial No. 186,367. 9 Claims. (Cl. 37—43.)

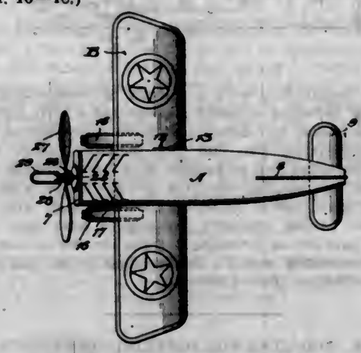
1. In a snow plow, a scooping blade, a turning blade arranged above the scooping blade to deflect the snow or the like laterally and outwardly, a hollow rotor arranged near the outer side of the turning blade to discharge the snow or the like laterally and outwardly from the same, said hollow rotor embodying spaced blades having their longitudinal axes approximately parallel with the axis of rotation of the rotor, the forward end of the rotor being open so that the snow or the like may pass into the hollow rotor inwardly of said blades.



---

1,693,188. COTTON DISTRIBUTOR. WILLIAM WALLACE WILLIAMS, Lubbock, Tex. Filed Nov. 17, 1926, Serial No. 148,887. Renewed Sept. 1, 1928. 1 Claim. (Cl. 19—74.)

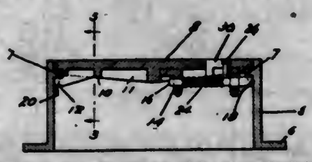
A cotton distributor constructed for disposition between a conventional pneumatic cleaner and supply device, and a battery of gin stands including the customary feeders on the upper ends thereof, said distributor comprising a horizontally elongated belt housing, the bottom of said housing being equipped with longitudinally spaced outlet necks adapted to fit telescopically in the upper ends of said feeders, pulleys located in said housing, an endless belt trained over said pulleys, a substantially open triangular belt enclosure at one end of said housing adapted to accommodate a triple flight belt, a triple flight belt having its several flights arranged for movement in the respective angular portions of said triangular enclosure, the base of the enclosure



being provided with additional outlet necks for cooperation with complemental feeders, a vertically disposed storage hopper rising from said housing and abutting said triangu-

lar enclosure and in communication with said housing and enclosure, the upper end of said hopper being constructed for connection with the aforesaid cleaning device.

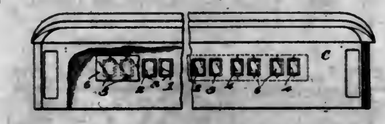
---



1,693,189. TOY AIRPLANE. THOMAS RAYMOND ARDEN, Baldwin, N. Y., assignor to American Flyer Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 18, 1927. Serial No. 213,898. 10 Claims. (Cl. 46—48.)

2. A toy airplane including a transversely arched sheet material fuselage member having pairs of slots in the opposite side walls thereof, a main wing adapted to be inserted in one pair of slots, means for releasably locking said wing to the fuselage to prevent accidental displacement from the slots, and a horizontal stabilizer member passing through the other of said slots and held therein by frictional engagement with the edges of the slots.

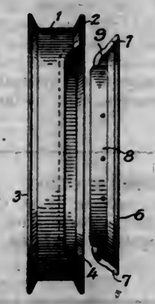
---



1,693,190. MANHOLE COVER. LOUIS BENEDETTI, Columbus, Ohio, assignor to Elsa D. Theobald Guenther, Columbus, Ohio. Filed Aug. 29, 1925. Serial No. 53,416. 1 Claim. (Cl. 94—35.)

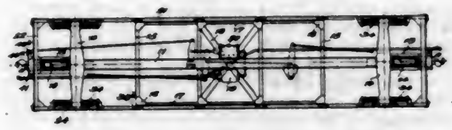
A manhole construction comprising a cylindrical casing having an internal circumferential flange spaced from its upper end, said flange having subjacent reinforcing and supporting portions formed integral with said casing and flange and having cut-outs cooperating with said frame to define sockets, a cover supported upon said flange and having a depending circumferential shoulder engaging the inner end of said flange, an integral depending lug extending laterally from the bottom of said cover and engageable beneath said flange and into said sockets whereby to prevent said cover from turning, a latch bolt, a pair of bosses projecting from the bottom of said cover and having alined bearings spaced from the cover and in which said bolt is slidingly mounted in spaced relationship to the cover and in a plane below said flange, an upstanding operating handle for said latch bolt, said cover having a slot through which said handle extends, and a coil spring surrounding said latch bolt and interposed between one of said bosses and said handle for normally holding the bolt in advanced position beneath said flange.

---



1,693,191. WINDOW CONSTRUCTION FOR TOY CARS. EARL D. BOISSELIER, Chicago, Ill., assignor to American Flyer Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 18, 1928. Serial No. 255,378. 1 Claim. (Cl. 46—48.)

A window construction for toy cars, comprising the combination of a part of a car having a window opening and a depressed seat surrounding said opening, the bottom of said seat being provided with fastening receiving clearances, a transparent element fitted to the window opening at the inside thereof, and a frame member having offset fastening lugs adapted to enter said clearances and to be bent at right angles to their normal plane to lock both the transparent member and the window frame in position.



---

1,693,192. AUTOMOBILE TIRE RIM. BERT D. COLGROVE, Denver, Colo. Filed July 15, 1925. Serial No. 43,816. 1 Claim. (Cl. 301—35.)

An automobile tire rim comprising a rim member provided with side flanges and having the flange at one side cut away for considerable distances around the periphery of the rim, and a removable rim section shaped to fit within the opening of the main rim and complete the flange thereof, said rim and removable section being formed to be substantially dovetail-shaped on their adjacent edges to interfit to hold the removable section against displacement radially with respect to the main rim portion, and a retaining plate carried by the removable section engaging between a tire and the body of the rim to hold the removable section against inward displacement.

1,693,193. CAR CONSTRUCTION. OTHO C. DURYEA, Waterbury, Conn., assignor to O. C. Duryea Corporation, Wilmington, Del., a Corporation of Delaware. Filed Apr. 14, 1925. Serial No. 23,111. 23 Claims. (Cl. 105—454.)

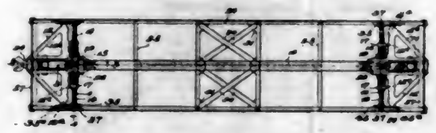
1. A device of the class described comprising running gear including bolsters, a car body having side sills mounted for movement on said bolsters, the ends of the latter having sliding engagement with said sills, and resilient means for controlling the relative movement of the body in either direction, said resilient means having operative engagement with said bolsters and side sills.

---

1,693,194. CAR CONSTRUCTION. OTHO C. DURYEA, Waterbury, Conn., assignor to O. C. Duryea Corporation, Wilmington, Del., a Corporation of Delaware. Filed Apr. 27, 1925. Serial No. 26,267. 46 Claims. (Cl. 213—8.)

1. In a railway car, a plurality of transverse supporting members, a center draft member extending substantially the length of the car and adapted for longitudinal movement relative to said supporting members, means including friction elements for resisting relative movement between said center member and said supporting members, and couplers having lost motion connection with the opposite ends of said center draft member, the movement of the couplers relative to the center member determining the train slack and being less than the movement of the center member relative to the supporting members.

33. In a railway car structure, a long travel draft member mounted for relative longitudinal movement, means including resilient members for yieldingly resisting said longitudinal movement whereby excessive forces imparted to the draft member are gradually resisted without damage to the structure, and means for securing reduced train slack.



---

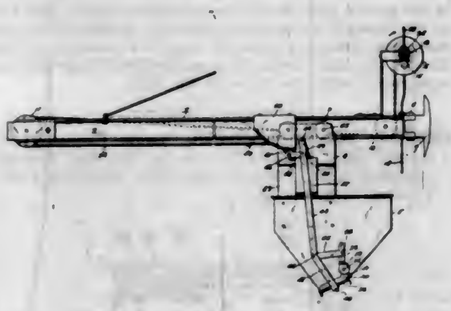
1,693,195. CAR CONSTRUCTION. OTHO C. DURYEA, Waterbury, Conn., assignor to O. C. Duryea Corporation, Wilmington, Del., a Corporation of Delaware. Filed Apr. 30, 1925. Serial No. 27,040. 16 Claims. (Cl. 213—8.)

1. A railway car comprising running gear including a center sill and draft sills secured thereto, a car body including transverse members mounted for longitudinal movement relative to said running gear, and resilient means operatively engaging said draft sills and a plurality of said transverse members for yieldingly resisting relative movement of said body in either direction.

1,693,196. CAR CONSTRUCTION. OTHO C. DURYEA, Waterbury, Conn., assignor to O. C. Duryea Corporation, Wilmington, Del., a Corporation of Delaware. Filed Apr. 30, 1925, Serial No. 27,041. Renewed Aug. 29, 1928. 17 Claims. (Cl. 105—454.)

2. A railway car comprising a center member, bolsters formed of a plurality of vertically disposed leaves secured to said member, and a body secured to said bolsters and adapted for longitudinal movement relative to said member.

---

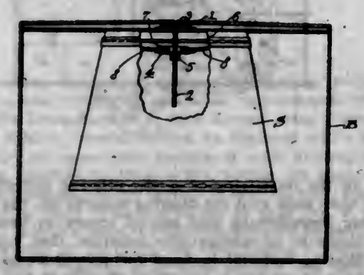


1,693,197. BRAKE MECHANISM FOR RAILWAY CARS. OTHO C. DURYEA, Waterbury, Conn., assignor to O. C. Duryea Corporation, Wilmington, Del., a Corporation of Delaware. Filed May 5, 1925. Serial No. 28,243. 20 Claims. (Cl. 188—33.)

2. In combination with a railway car comprising running gear including a center member and a body mounted for longitudinal movement relative to said running gear, brake mechanism for said car including truck brake rigging mounted for movement with said running gear, train air line sections mounted for movement with said running gear, means mounted for movement with said body and having operative engagement with said truck rigging, said means including a train air line section, and means connecting said air line sections permitting longitudinal movement therebetween.

---

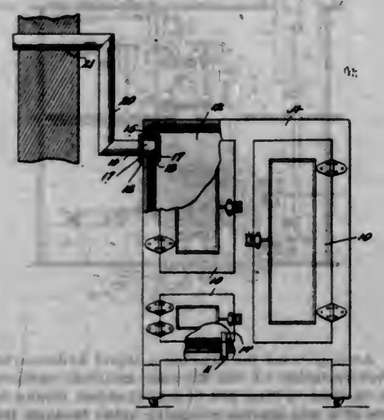
1,693,198. MACHINE FOR DISTRIBUTING CONCRETE. HUBERT EVERIST, Sioux City, Iowa. Filed Mar. 17, 1927. Serial No. 176,141. 13 Claims. (Cl. 214—59.)



1. In a machine of the class described, the combination of a bucket provided with an outlet and having a hinged door and locking mechanism for retaining the door in its

closed position comprising a rock shaft having a crank arm and a cam actuated arm disposed at an angle, the crank arm being arranged to be carried to one side of the dead center in the closing movement of the door, means for limiting the movement of the cam actuated arm, a relatively long upper link pivoted to and depending from the crank arm, a relatively short lower link pivoted to the lower end of the long link and to the door, and an oscillatory link pivoted to the bucket and connected with the said links at the adjacent ends thereof for causing the said ends of the links to move in an arc in the proper direction for maintaining a constant pull on the door in the closing movement thereof whereby the weight of the door will retain the mechanism in its locked position.

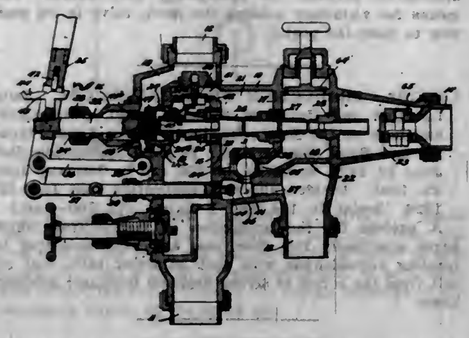
---



1,693,199. SHADE HOLDER FOR SHIPPING BOXES. ROBERT FAIR, Philadelphia, Pa. Filed Apr. 12, 1927. Serial No. 183,180. 1 Claim. (Cl. 206—65.)

The combination with a shipping box for holding lamp shades, of means carried by the box for suspending nested lamp shades within the box, said means including a screw extending through and supported by one wall of the box, a shade engaging member adapted to be housed in the nested shades and mounted on the screw, and means on the screw for thrusting against said member to bind the nested shades against that wall of the box from which the screw is suspended, said member including crossed separable strips for engaging one of the shades.

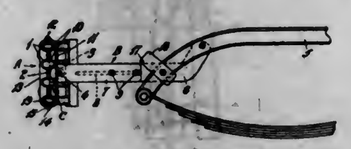
---



1,693,200. REFRIGERATOR. PERCY WIGHTMAN FLINT, North Charleston, S. C. Filed June 11, 1926. Serial No. 115,870. 1 Claim. (Cl. 62—96.)

An apparatus of the character described including in combination, a refrigerator of the usual type, adapted to be located within a closed building and having in addition to the usual doors only a single opening, said opening being located at the extreme upper end of the refrigerating chamber, a pipe extending from said opening to a point outside of the building housing the refrigerator, the outer end opening of said pipe being at an elevation as high as the opening in the upper end of the refrigerating chamber, means in said pipe for regulating the effective size of the opening therethrough at two separate points, said means comprising two sets of axially operated transverse shutters, said shutters having oppositely directed inclination to a horizontal plane and being interconnected for cooperative simultaneous movement.

---

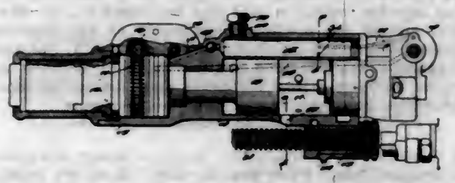


1,693,201. INJECTOR. JOAQUIN MORET GONZÁLEZ, Oriente, Cuba. Filed Mar. 31, 1926. Serial No. 98,935. 7 Claims. (Cl. 103—264.)

1. In an injector, a water supply chamber, an overflow chamber, an intermediate condensing water chamber between said supply and overflow chambers, nozzles extending into each of said chambers, an overflow discharge, and a three-way valve to provide communication between the overflow discharge, overflow chamber and auxiliary chamber.

---

1,693,202. COMBINED BUMPER BAR AND CARRIER FOR MOTOR VEHICLES. CECIL HAVELOCK HENDERSON, North Melbourne, Victoria, Australia. Filed Dec. 3, 1927, Serial No. 237,528, and in Australia Dec. 10, 1926. 7 Claims. (Cl. 293—55.)



1. A combined rear bumper and carrier for motor cars consisting of a vertical bumper rack pivoted to the end of extensible brackets projecting from the chassis and adapted to be swung into horizontal position with means for fixing said rack in both positions.

---

1,693,203. LUBRICATOR FOR ROCK DRILLS. AUGUST H. KATTERJOHN, Denver, Colo., assignor, by mesne assignments, to The Gardner-Denver Company, Quincy, Ill., a Corporation of Delaware. Filed Apr. 17, 1923. Serial No. 632,779. 4 Claims. (Cl. 121—13.)

1. In a lubricating system, the combination with a vibratory motor of a lubricant reservoir that vibrates with the motor, a motive fluid supply means for the motor, a passageway for admitting fluid to the reservoir and permitting the passage of lubricant from the reservoir, a valve chamber

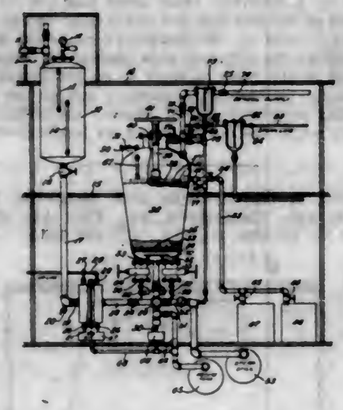
with which the passageway communicates, a plurality of ports between the valve chamber and different portions of the reservoir, a valve normally closing off the com-

munication between the passageway and chamber, and means for yieldingly holding the check valve in its position to close the port.

---

1,693,204. PRODUCTION OF METALDEHYDE. EMIL LÜSCHER and HEINRICH STEIGER, Basel, Switzerland, assignors to the Firm: Elektrizitätswerk Lonza, Gampel and Basel, Switzerland. Original application filed June 10, 1925, Serial No. 36,278, and in Germany June 23, 1924. Divided and this application filed July 22, 1926. Serial No. 124,288. 1 Claim. (Cl. 260—140.)

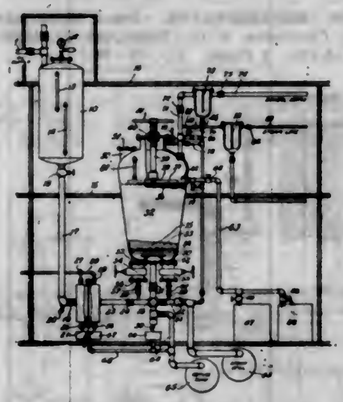
A process for the production of metaldehyde which burns practically free from soot and ash, consisting in treating acetaldehyde with such catalyzer salts that result from the action of strong acids on inorganic nitrogen bases.



---

1,693,205. NECKTIE STRETCHER. JOHN T. MCGRATH, Newark, N. J. Filed Aug. 25, 1926. Serial No. 131,441. 2 Claims. (Cl. 223—19.)

1. In a tie stretcher of the character described, a pair of elongated bars, a spring connection between the forward ends of the bars, said spring connections being in the form of a single length of spring metal, bent to provide a bell shaped loop for engagement at the ends of the bars, said length of spring metal being further bent as to provide a pair of longitudinal legs for engagement at the inner edges of said bars, means at the opposite ends of the bars for forcibly moving the same toward or away from each other upon said spring connection, said means consisting of a screw rod having reverse threads at the opposite ends thereof, lugs upon said bars having threaded openings within which the ends of the rods are arranged, and a thumb wheel disposed upon the rod intermediate the ends thereof.



1,693,206. REVIVIFICATION OF FILTERING MATERIALS. LESLIE W. NAYLOR, Florence, Colo., assignor to Continental Oil Company, Denver, Colo., a Corporation of Maine. Filed Aug. 31, 1922. Serial No. 585,422. 2 Claims. (Cl. 252—2.)

1. In the revivifying of earthy filtering materials after they have been used for filtering mineral oil, the steps of flowing therethrough coal gas oil known as benzol until the discharge is substantially colorless, then submerging the filtering material in benzol for several hours depending upon the relative quantities of solvent and filtering material, and then removing the benzol.

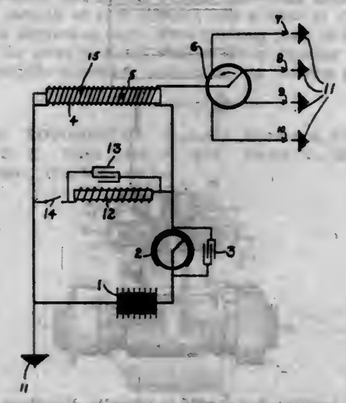
---

1,693,207. APPARATUS FOR REVIVIFICATION OF FILTERING MATERIALS. LESLIE W. NAYLOR, Florence, Colo., assignor to Continental Oil Company, Denver, Colo., a Corporation of Maine. Original application filed Aug. 31, 1922, Serial No. 585,422. Divided and this application filed Mar. 3, 1923. Serial No. 622,492. 7 Claims. (Cl. 210—144.)

7. An apparatus for filtering a liquid hydro-carbon and for revivification of the filtering material, comprising a filter chamber, a filter bed in said chamber, means to cause a flow of a non-aqueous cleansing agent through the filter bed in a direction reverse to the flow of the hydro-carbon, and means to supply a hot stream of water vapor through the bed, each of said means being valve controlled for successive flows.

1,693,208. CONVEYER. GUST NELSON, Vancouver, British Columbia, Canada, assignor of one-half to Frank R. Pendleton, Vancouver, Canada. Filed Dec. 2, 1926. Serial No. 152,272. 1 Claim. (Cl. 212—98.)

A conveyer comprising a traveling carriage including a beam, a pair of hangers secured to opposite ends of said beam, the lower portion of each hanger being formed to provide a block housing having an aperture at its upper extremity, an upper wall portion of each housing being hingedly mounted to form a flap having its upper edge disposed to constitute one margin of said opening, a spring arranged to exert leward pressure on said flap, a longitudinally movable latch rod slidably mounted on said beam with one edge of the latch rod overhanging a portion of the opening formed in each block housing, the said edge of the latch rod being provided with slots adapted at times to register with said openings, and a pair of load blocks provided each with a shank adapted to be passed upwardly through the opening of one of said housings between the latch rod and the hingedly mounted flap and provided with a projection adapted to hook over the latch rod to support the shank and block in elevated position, and means for shifting the latch rod to position the slots therein beneath the latch projections of said shanks and in registration with said openings to permit downward movement or withdrawal of the shanks from the housings.



---

1,693,209. WINDOW SCREEN. SAMUEL HENRY PETERSON and ADOLPH G. ANDERSON, Muskegon Heights, Mich. Filed June 29, 1927. Serial No. 202,409. 1 Claim. (Cl. 156—14.)

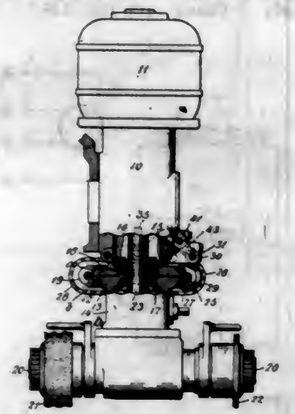
In a fastener of the class described comprising a screw having a head and a removable cap for the head provided with an inturned flange extending toward the shank of the screw in spaced relation from the head and a coil spring circularly arranged in the cap and interposed between the flange and said head whereby to urge the cap inwardly upon the head.

1,693,210. MEANS FOR INCREASING THE PERFORMANCE OF IGNITION SYSTEMS BY A BOOSTER DEVICE FOR IGNITION APPARATUS. EGBERT VON LEPEL, New York, N. Y. Filed July 16, 1926. Serial No. 122,964. 9 Claims. (Cl. 123—148.)

1. An ignition circuit comprising a battery; a spark coil; an inductance coil completely separated from the iron core of the spark coil and connected in shunt to said spark coil; and a timer in series with both of said coils, said inductance coil increasing the energy available in the secondary circuit of the spark coil.

---

1,693,211. AUTOMOBILE RADIATOR FLOW INDICATOR. IRA A. WEAVER, Springfield, Ill. Filed May 20, 1926. Serial No. 110,525. 7 Claims. (Cl. 116—117.)

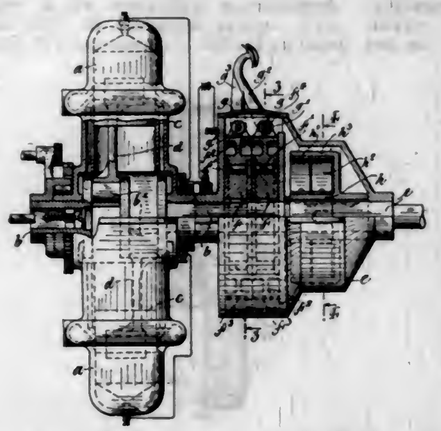


1. A cap for automobile radiator necks having, in combination, a turbine adapted to be positioned in the radiator when the cap is on the radiator neck and to be rotated by the movement of a cooling liquid therein, magnetic means rotated by said turbine, a transparent casing on said cap having a partial vacuum therein, a visible spirally-striped rotary indicator in said casing, and magnetic driving means for said indicator in said casing, whereby the rotation of said turbine revolves said indicator through said two magnetic means.

---

1,693,212. STONEWORKING MACHINE. JULIUS WEGNER, New York, N. Y. Filed June 24, 1927. Serial No. 201,043. 9 Claims. (Cl. 51—166.)

1. In a stone working machine, including a head, consisting of a relatively stationary section and a movable

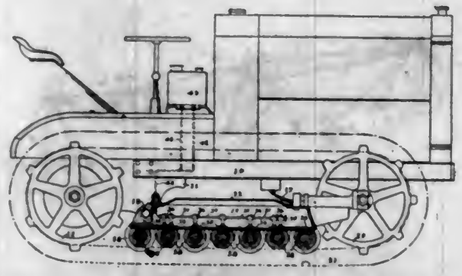


section rotatably adjustable relatively thereto and carrying a tool, the combination of means for locking said movable section in a selected position, and mechanism

having positive movements in opposite directions whereby said locking means may be adjusted to a locking position and to an inoperative unlocking position and automatically retained in the latter position at will.

---

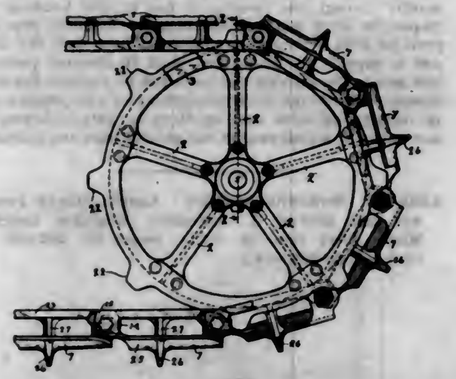
1,693,213. TRANSMISSION. CARL W. WEISS, Brooklyn, N. Y. Filed Aug. 1, 1924. Serial No. 729,477. 3 Claims. (Cl. 74—14.)



1. A transmission comprising a rotatable prime mover, having a reciprocating piston, a rotatable crank shaft, a connection between the piston of the prime mover and the crank pin of the crank shaft, and means independent of the rotation of the prime mover to prevent rotation of the crank shaft in a direction opposite to that of the prime mover and to permit rotation thereof in the same direction as that of the prime mover, whereby the torque action of the driven member is determined by the centrifugal action of the piston.

---

1,693,214. LUBRICATING SYSTEM. ROLLIN H. WHITE, Cleveland Heights, Ohio. Filed July 25, 1925. Serial No. 46,183. 5 Claims. (Cl. 184—7.)

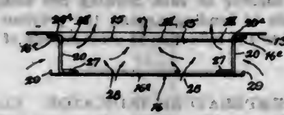


1. In a track laying tractor, the combination with a pair of laterally disposed longitudinally extending track frames, track rollers carried by the track frames, a chassis frame for the tractor disposed above the level of the track frames, a lubricant reservoir supported upon the chassis frame, a plurality of branch lubricant conduits for each track frame, each of which is adapted to conduct lubricant to a track frame roller, a main conduit for each track frame extending longitudinally thereof, said track frame

comprising a housing enclosing said main conduit and branch conduits, said track frames adapted to oscillate about an end pivot during operation of the tractor, said main conduits having an inlet portion extending laterally of the tractor frame closely adjacent and substantially parallel to the pivotal axis of the track frme, said inlet portions adapted to communicate lubricant from the reservoir to the respective main conduits for the track frames.

---

1,693,215. PROPELLING MEANS FOR CRAWLING TRACTORS. ROLLIN H. WHITE, Cleveland Heights, Ohio. Filed Dec. 17, 1925. Serial No. 75,955. 2 Claims. (Cl. 74—31.)



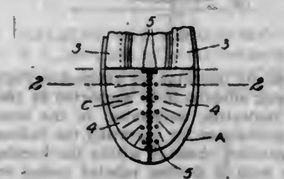
2. In an end roller wheel for a continuous track of a track laying tractor, the combination with the hub of the wheel, a pair of spaced parallel wheel rims, a plurality of thin transverse webs, integrally joining the rims to the hub, the peripheral surface of the wheel between the sprockets being substantially entirely radially opened from the radial exterior of the wheel to the spaces between the webs, and the wheel being substantially entirely laterally opened between the webs, whereby relatively large extraneous objects, such as stones, clods of earth, and the like, entering the track may be ejected by passing radially through the spaced sprocket elements.

---

1,693,216. RADIATOR COVER. EDWARD C. ABT, Chicago, Ill. Filed Nov. 7, 1923. Serial No. 673,837. 11 Claims. (Cl. 189—62.)

1. In a cover for radiators having a core and an enclosing shell provided with an opening in front of the core, a movable shield arranged to extend across said opening in the shell, hinged arms connected to said shield adjacent two opposite edges thereof, and means for holding one of said arms in any position of adjustment thereof, whereby said shield may be held in various positions approximately parallel with said enclosing shell.

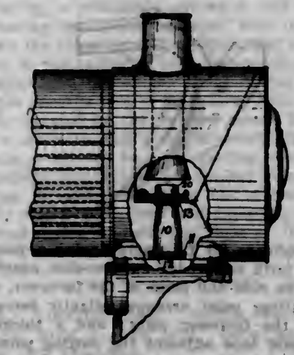
---



1,693,217. METHOD OF MAKING HYDROGEN CHLORIDE AND SODIUM SULPHATE. CHARLES S. BENJAMIN, East Orange, N. J., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed May 17, 1927. Serial No. 192,161. 6 Claims. (Cl. 23—155.)

2. The herein described improvement in the process of manufacturing sodium sulphate and hydrochloric acid by furnacing a mixture of sodium bisulphate and salt which consist in regulating the moisture content of the mixture to be furnaced substantially between the limits of 2 to 3.5% by weight.

---



1,693,218. SHOE AND METHOD OF MAKING SAME. ALEXANDER E. BLOCK, St. Louis, Mo. Filed Feb. 4, 1926. Serial No. 85,857. 2 Claims. (Cl. 36—45.)

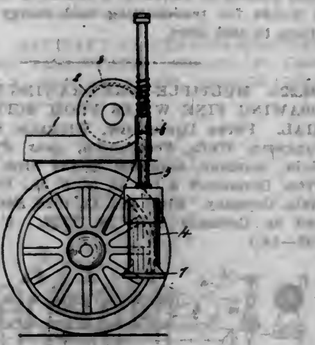
1. The improved method of shoe manufacture comprising the cutting of the lower margins of the upper materials to a length sufficient to fill the heel area of the shoe; securing said lower margins to form a substantially flat surface; and mounting a flat-topped heel on said flat surface.

---

1,693,219. VARIABLE EXHAUST NOZZLE. JAMES G. BLUNT, Schenectady, N. Y. Filed Mar. 29, 1927. Serial No. 179,228. 9 Claims. (Cl. 230—100.)

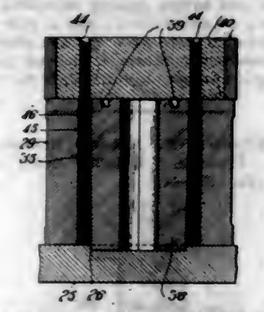
1. An exhaust nozzle for steam engines, comprising a base member having means for attachment to the top of the exhaust pipe, and a vertical circular flange; a cam plate adapted to rotate on the base member, and embodying a cam groove, and a circular opening which receives the vertical circular flange of the base member; a discharge tip divided by partitions into a plurality of discharge orifices, and having radially extending slots opening into certain of said orifices; and a slide in each of said slots adapted to move when the cam plate is rotated to vary the cross sectional area of the contiguous orifice, and comprising a member projecting into the cam groove.

---



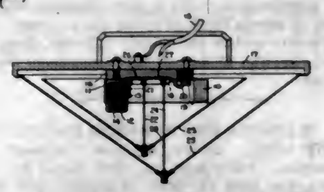
1,693,220. LOCOMOTIVE. HARRY S. BURNHAM, Schenectady, N. Y. Filed Sept. 8, 1927. Serial No. 218,160. 4 Claims. (Cl. 105—44.)

1. In a locomotive, having a middle cylinder and two side cylinders, each provided with a distribution valve chest, the combination, with a side cylinder distribution valve chest, of means for separating the currents of steam incoming thereto and to the middle cylinder chest and reversing the direction of flow of the currents to the middle cylinder chest.



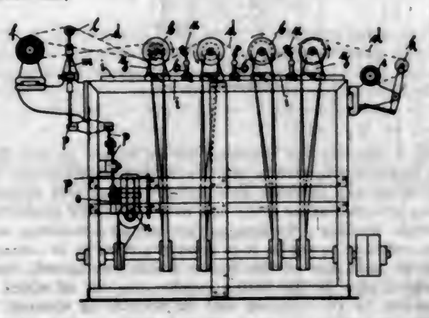
---

1,693,221. MACHINE FOR RAMMING PAVING STONES AND THE LIKE. ERNST HJALMAR CARLSSON, Oscarshamn, Sweden. Filed Sept. 22, 1926, Serial No. 137,020, and in Sweden June 16, 1926. 1 Claim. (Cl. 94—49.)



In a machine for ramming paving stones or the like, the combination with a rammer working individually on the stones and provided with upright guides, said rammer being provided at its lower end with a laterally projecting portion, forming a working surface having a ramming surface sufficient to enable it to cover the stone to be rammed and at least one of the stones which has already been rammed, of a flexible lifting member one end of which is attached to the rammer and an oscillating element to which the other end of the flexible lifting member is attached.

1,693,222. MOLDING APPARATUS. WILLIAM H. CROFT and ROBERT J. SHOEMAKER, Chicago, Ill., assignors to Magnus Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 27, 1926. Serial No. 111,993. 10 Claims. (Cl. 22—126.)

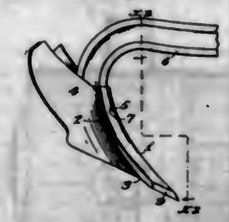


1. In molding apparatus the combination of a metal base, exterior mold members secured together and mounted on said base, a plurality of separate metal core members, engageable to form a single core, and a sand cope on said mold and core members.

1,693,223. SOUND REPRODUCER. HAROLD I. DANZIGER and CHARLES LUCAS WACHTER, New York, N. Y. Filed Jan. 4, 1927. Serial No. 158,848. 10 Claims. (Cl. 181—31.)

1. A sound reproducer comprising a plurality of vibratable discs, said discs being constructed to have differing normal periods of vibration, a source of vibratory energy, and means for transmitting said energy in equal proportions to said discs.

1,693,224. MULTIPLE-WIRE-DRAWING MACHINE FOR DRAWING FINE WIRES FROM SUITABLE MATERIAL. PETER DARMSTADT, WILHELM STEGMANN, and VALENTIN WEIL, Fechenheim, near Frankfort-on-the-Main, Germany, assignors to the Firm Drahtindustrie Peter Darmstadt & Co. G. m. b. H., Frankfort-on-the-Main, Germany. Filed Jan. 11, 1928, Serial No. 245,834, and in Germany Feb. 28, 1927. 6 Claims. (Cl. 205—14.)



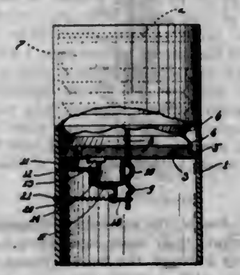
1. In a multiple wire drawing machine for drawing fine wires, the combination, with a plurality of dies, of a drawing roll between each pair of said dies, the arrangement being such that the wire to be drawn bears against each of said drawing rolls at an angle of less than 180°, the angle of bending on each drawing roll being smaller than the angle of bending around the previous drawing roll according to the reduction in cross-section of the wire.

1,693,225. TEMPERATURE INDICATOR. CLAYTON A. DUNHAM, Glencoe, Ill., assignor, by mesne assignments, to C. A. Dunham Company, Marshalltown, Iowa, a Corporation of Iowa. Filed May 1, 1926. Serial No. 106,028. 4 Claims. (Cl. 116—114.)

1. A temperature indicator for automobile engines, comprising a housing adapted to be supported by the radiator filling spout, indicating mechanism in the housing, and thermostatic mechanism for operating the indicator, comprising an expansible chamber within the housing, a well for a volatile fluid, a flexible tubular casing suspending the well from the housing so that the well will be immersed within the liquid in the radiator, and a flexible tube sealed to the expansible chamber and the well to form a fluid passage therebetween, the tube being housed within and protected from the liquid by the tubular casing.

1,693,226. FURROWER OVERSHOE. JACOB V. DYER, Bell, Calif., assignor to Dyrr Mfg. Co., Bell, Calif., a Corporation of California. Filed Mar. 18, 1924. Serial No. 698,888. 2 Claims. (Cl. 97—125.)

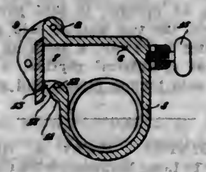
1. The appliance for furrowers having a point and a nose as set forth comprising an over-shoe adapted to be fitted over the nose and point of the furrower, said shoe having a cutting point arranged slightly below and in advance of the furrower point; and a thickened end portion to said shoe adjacent the cutting point thereof engaging the furrower point and adapted to be drawn out into a point when the cutting edge of said shoe is worn away.



1,693,227. BRICK-COURSE GAUGE. JOHN R. ELLIS, Memphis, Tenn. Filed Apr. 24, 1926, Serial No. 104,322. Renewed June 15, 1928. 3 Claims. (Cl. 33—111.)

1. A gauge, comprising an elongated member having spaced longitudinal corrugations, and having holes therethrough in corresponding longitudinal rows, the holes in any one row being equally spaced, and the spacing between holes in one row varying from that in any other row.

1,693,228. TALKING TOY MECHANISM. FRED EVANS, Summit, N. J., assignor, by mesne assignments, to Voices Incorporated, a Corporation of Delaware. Filed Mar. 21, 1923. Serial No. 626,498. 4 Claims. (Cl. 46—46.)

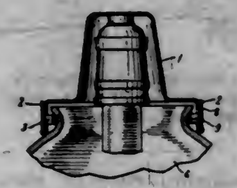


1. A device of the class described having in combination, a casing, a collapsible bellows in said casing, said bellows having two heads, one fixed with respect to the casing and the other being a weighty head movable back and forth in the casing to collapse and distend the bellows by gravity, a reed in the casing carried by the fixed head at the opposite side of the bellows from the movable head and operated by the bellows, means in the casing having an orifice through which the sound from the reed may escape, a pivoted door for opening and closing said orifice, resilient means normally tending to hold said door in position to close said orifice, and a control member carried by the weighty head and extending through the bellows and acting to open said door as the bellows is operated.

1,693,229. TOOTHBRUSH. VICTOR FELMAR, Taylorville, Ill. Filed Aug. 18, 1927. Serial No. 213,878. 2 Claims. (Cl. 15—167.)

1. As an article of manufacture, a toothbrush comprising a head, an arcuate extension integrally projecting from the head, spaced ears integrally depending from said extension, a roller disposed between and journalled for rotation upon the ears, and a circumferential set of radially projecting bristle-tufts carried by the roller and rotatable in the longitudinal plane of the head.

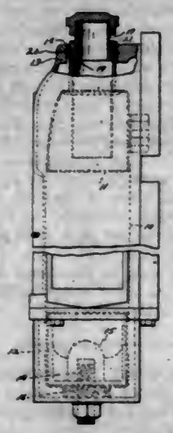
1,693,230. ROAD-OIL-SPRAYING NOZZLE. SIDNEY SAMUEL GIBLING, Saanich, British Columbia, Canada. Filed May 15, 1928, Serial No. 277,898, and in Canada Apr. 8, 1927. 2 Claims. (Cl. 299—105.)



2. A nozzle for a road spraying machine comprising, a body member of the nature of a pipe coupling, the body of the said member being extended on one side and intermediately of the ends to form a projection of the nature of an offset elbow the axis of the orifice and body of which is right angular to the axis of the said coupling-like member, a relatively large orifice in the end of the said projection, the said offset being such that the inner edge of the said orifice is approximately co-incident with the peripheral line of the pipe used in connection with the said coupling-like member, a cover hingeable on the said projection and adapted to partially close the said orifice, means for clamping the said cover to the said member, the rim of the said orifice being elongated to an approximately egg-shaped form, the smaller part of the said elongation being cut away to form a facet which is angular to the face of the said rim and to the inner face of the said cover when closed, a curved channel in said angular facet communicating with said orifice.

1,693,231. SANITARY DISPENSING CONTAINER FOR DINING TABLEWARE. WILLIAM R. GRUBER, New York, N. Y. Filed Feb. 5, 1927. Serial No. 166,157. 3 Claims. (Cl. 312—42.)

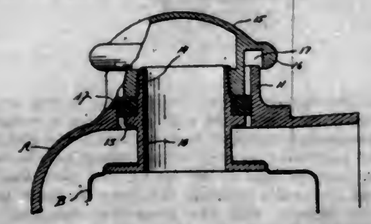
1. A dispensing container comprising a casing having an outwardly inclined front wall containing a series of transverse openings arranged in tiered relation, a plurality of vertical partitions forming compartments parallel with the upper front portion of the casing, said partitions being curved outwardly towards the front at their lower portions to register with the transverse openings, and means above and below the openings at the front edges of the partitions to normally prevent the discharge of articles from said compartments.



1,693,232. SCREWLESS HOLDER FOR LIGHTING FIXTURES. EDWIN F. GUTH, St. Louis, Mo. Filed Apr. 12, 1927. Serial No. 183,056. 2 Claims. (Cl. 240—132.)

1. A holder for lighting globes, comprising a canopy having a vertical cylindrical portion, a plurality of inwardly extending arcuate tongues struck out of said portion, there being an opening in said portion equidistant from said tongues, the top wall of said portion adjacent said opening being cut away, a securing ring which fits over said vertical cylindrical portion, a similar tongue formed thereon, said tongue fitting said opening.

---



1,693,233. RADIATOR. HARRY A. HIGGINS, Detroit, Mich., assignor to Long Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 8, 1925. Serial No. 55,104. 5 Claims. (Cl. 180—68.)

1. In a radiator, a casing, a core provided with a filler neck engaging an opening formed in said casing, an expansible member carried by said filler neck and disposed radially between said filler neck and casing and means adjustable on said filler neck for expanding said member radially.

---

1,693,234. RADIATOR. HARRY A. HIGGINS, Detroit, Mich. Filed Mar. 8, 1926, Serial No. 93,334. Renewed Oct. 11, 1928. 6 Claims. (Cl. 180—69.)

1. A radiator comprising a casing, an element within the casing provided with a filler neck extending within an opening in the casing and spaced from the inner wall of said opening, a yieldable member forming a connection between the filler neck and casing to absorb relative vibrations therebetween, and a closure cap threadedly engaging said filler neck and acting on said yielding member for causing disortion of said member.

---

1,693,235. METHOD OF MOUNTING PRESSURE-GAUGE DIAPHRAGMS. EMIL A. ILEMAN, New York, N. Y., assignor, by mesne assignments, to Consolidated Ashcroft Hancock Company, Inc., New York, N. Y., a Corporation of Delaware. Filed May 21, 1926. Serial No. 110,599. 8 Claims. (Cl. 29—157.)

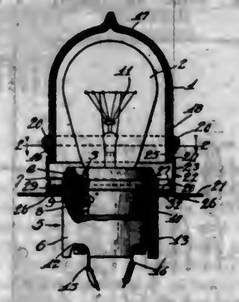
1. The method of mounting pressure gauge diaphragms which consists in providing a base member, securing a sheet metal diaphragm to the base member around the periphery of the diaphragm, the base member having a circular groove therein inside the periphery of the diaphragm, and forcing the metal of the diaphragm into said groove to take out irregularities in the diaphragm.

---

1,693,236. HEDDLE FRAME. JOHN JACOB KAUFMANN, Elkins Park, Pa., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 10, 1927. Serial No. 218,640. 6 Claims. (Cl. 139—92.)

1. In a heddle frame, the means for supporting the heddle bars intermediate their ends, comprising a bolt member extending entirely through the heddle frame rail and adjustably mounted with respect thereto, a plate member carried at the inner end of the bolt member having recesses adapted to receive and support the heddle supporting bars, a lock member slidably mounted upon said plate member and having overhanging lip portions adapted to engage the heddle supporting bars and retain the same in the recesses in the plate member, and a spring mounted on the bolt member adapted to impel the lock member to the locking position.

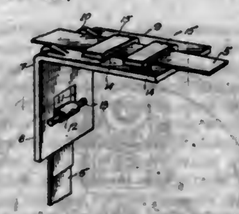
---



1,693,237. PROCESS FOR RECOVERY OF SODIUM SALTS FROM BRINES. WALTER A. KUHNERT, Los Angeles, Calif. Filed Mar. 29, 1927. Serial No. 179,400. 9 Claims. (Cl. 23—39.)

1. The process for recovery of carbonate compounds of sodium from brines containing the same, which comprises first carbonating such a brine by contact with carbon dioxide bearing gas, while maintaining the rate of supply of carbon dioxide to the brine sufficiently low to maintain the temperature below 45° C. and cause precipitation to occur principally in the form of coarsely crystalline sodium sesquicarbonate, until the concentration of sodium carbonate in the brine has been materially reduced, then discontinuing the carbonating operation and separating the resulting precipitate from the brine, subsequently further carbonating such brine by contact with carbon dioxide bearing gas to cause further precipitation to occur principally in the form of sodium bicarbonate, and then separating the resulting further precipitate from the brine.

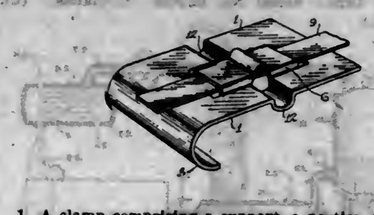
---



1,693,238. SUPPORT FOR LAMPS. WILLIAM L. LAIB, Oak Park, Ill. Filed Apr. 12, 1926. Serial No. 101,599. 4 Claims. (Cl. 240—128.)

1. In a device of the class described, the combination of a glass lamp hood adapted to enclose a lamp bulb, an outer annular metallic hood-engaging member in supporting engagement with said hood, securing flanges on said metallic hood-engaging member, an inner annular plate having peripheral marginal portions adapted to detachably engage said securing flanges on said outer annular hood-engaging member, said inner annular plate having an opening therein for receiving a lamp socket, a lamp socket extending into said opening, a lamp-supporting plate interposed between said lamp socket and said inner annular plate and adapted to form a sign board of an electric sign, and securing means on said socket and in securing engagement with said inner annular plate, said securing means comprising a peripherally shouldered screw-threaded sleeve having screw-threaded connection with the lamp socket and extending through an opening in said lamp-supporting plate and through and in clamping engagement with said inner annular plate and adapted to secure said socket and said inner annular plate to opposite sides of said intermediate lamp-supporting plate.

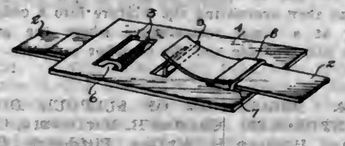
---



1,693,239. FORM CLAMP. HENRY H. LAMPERT, Chicago, Ill. Filed Apr. 9, 1928. Serial No. 268,658. 1 Claim. (Cl. 24—19.)

A device of the class described comprising a support having a pair of bearing portions disposed transversely of each other for engaging adjacent sides of a structural shape, one of said portions having an opening for receiving a bight in one end of a tie element, a separate pin adapted to extend through the bight for engaging said one portion on respectively opposite sides of said opening, and a member struck out from the other of said portions to provide a recess and an overlying bridge element, said bridge element and last named portion defining a passage for the other end of said tie, said bridge element being bendable to kink said tie element into said recess.

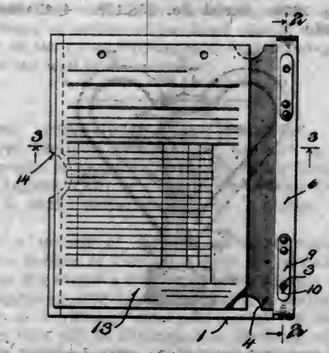
---



1,693,240. FORM CLAMP. HENRY H. LAMPERT, Chicago, Ill. Filed Apr. 12, 1928. Serial No. 269,589. 9 Claims. (Cl. 24—19.)

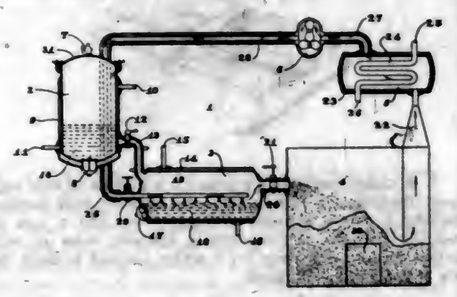
1. A clamp comprising a support, a portion of said support forming a guideway for a tie element, said support having a recess adjacent said guideway, and a pair of bearing portions on respectively opposite sides of said recess forming a keyway for a wedge adapted to bend the tie element into said recess.

---



1,693,241. FORM CLAMP. HENRY H. LAMPERT, Chicago, Ill. Filed Apr. 16, 1928. Serial No. 270,498. 4 Claims. (Cl. 24—23.)

1. A device of the class described comprising a flexible tie element, a sheet metal support mounted on one end of said tie and having a guideway for slidably receiving the other end of said tie, a bearing part struck out from said support, and a detachable tool arranged to grip said other end of said tie and to be fulcrumed on said bearing part for pulling said tie relative to said support.



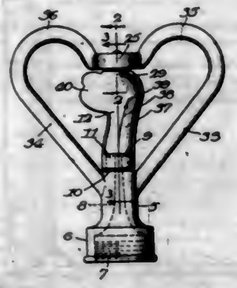
---

1,693,242. LOOSE-LEAF BINDER. OSCAR LOEWENBACH, Milwaukee, Wis. Filed July 14, 1927. Serial No. 205,619. 5 Claims. (Cl. 129—12.)

1. A loose leaf binder comprising a back having projecting posts extending therefrom adapted to receive loose leaves, and a locking bar apertured for the reception of said posts and having a pair of upwardly extending slanting spring fingers apertured for the reception of said posts, said spring fingers binding said posts against the walls of the apertures in said bar and being releasable by causing relative motion between the ends of the spring fingers and said bar.

1,693,243. METHOD AND APPARATUS FOR PURIFYING CAMPHOR AND SIMILAR VOLATILE SUBSTANCES. EVARTS G. LOOMIS, Newark, N. J. Filed Aug. 27, 1925. Serial No. 52,953. 6 Claims. (Cl. 260—133.)

1. The process of purifying camphor and similar substances which consists in reducing the camphor to a liquid form, forcing a current of gas below the boiling point of the camphor upon the surface of the same and thereby causing the gas to become saturated with the camphor vapor and then evacuating the mixture into a condensing chamber at a lower temperature where the gas and camphor will separate and the camphor condense.



---

1,693,244. PRODUCTION OF SULPHUR DIOXIDE AND HYDROGEN. CHARLES H. MACDOWELL, Chicago, Ill., and HERBERT H. MEYERS, Pittsburgh, Pa., assignors to Armour Fertilizer Works, Chicago, Ill., a Corporation of New Jersey. Filed Nov. 21, 1927. Serial No. 234,902. 3 Claims. (Cl. 23—210.)

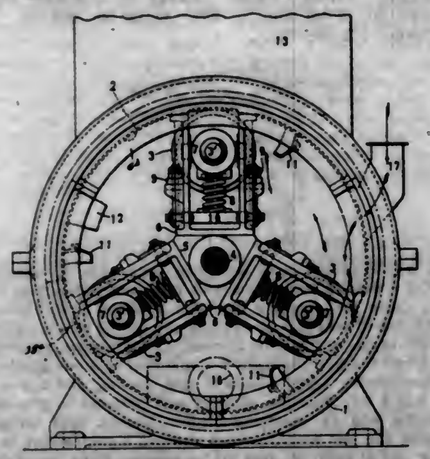
1. The process which consists of heating a mixture of sulphur-vapor and steam in the presence of iron-oxide as a catalyst at a temperature and for a period of time sufficient to produce a gaseous mixture containing sulphur-dioxide and hydrogen and recovering said sulphur-dioxide and hydrogen individually from such mixture.

---

1,693,245. SPRINKLER HEAD. HARRY E. MENG, Oak Park, Ill., assignor to W. D. Allen Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 31, 1926. Serial No. 158,138. 4 Claims. (Cl. 299—126.)

1. In a sprinkler head of the class described, the combination of a nozzle, a spraying member adapted to be rotated by pressure of water discharged from said nozzle, means for rotatably supporting said spraying member in operative position relative to said nozzle, said means comprising a bearing portion on the upper end of said nozzle, a bearing member on the lower end of said spraying member for engaging said nozzle bearing portion, combination radial and end thrust ball bearing anti-friction means for the upper end of said spraying member, and means for mounting said ball bearing anti-friction means comprising a cup-shaped member having an axial aperture in its bottom, means integral with said nozzle for supporting said cup-shaped member in fixed position relative to said nozzle, said cup-shaped member being adapted to receive said ball bearing anti-friction means and said spraying member being connected to a part of said ball bearing antifriction means through said axial aperture.

---



1,693,246. DISPLAY CARD. FREDERICK H. MIX, Brooklyn, N. Y., assignor to Joseph Dixon Crucible Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 1, 1926. Serial No. 138,847. 4 Claims. (Cl. 206—79.)

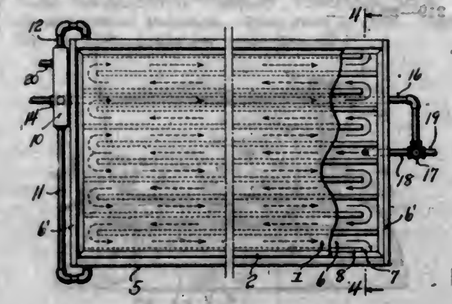
3. A display card for holding articles consisting of a tubular part and a solid part comprising, a card having therein a series of apertures, each aperture consisting of a space shaped to receive the solid part of the article and a space to receive the tubular part of the article, said last mentioned space having a tongue projecting therein and lying parallel with the inner face of the parallel walls of the article and adapted to engage said walls to a point adjacent to the base of the space receiving the solid part of the article.

---

1,693,247. RING MILL. JOSEPH MOLZ, Oberhausen, Germany, assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed July 6, 1923, Serial No. 649,813, and in Germany July 10, 1922. 12 Claims. (Cl. 83—9.)

1. In a pulverising mill, a stationary ring, a rotatable shaft, a frame carried thereby, rollers journalled in said frame and bearing against the ring, annular flanges carried by said frame at the ends of said rollers, said ring having an opening through the grinding surface thereof, and means for admitting material to be pulverized therethrough.

---



1,693,248. RESERVOIR COMB. FRANK H. NEWTON, Los Angeles, Calif. Filed Mar. 20, 1928. Serial No. 263,109. 1 Claim. (Cl. 132—13.)

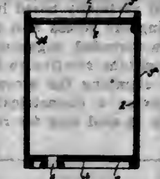
A reservoir comb, including in combination, a handle, housing removably mounted on the handle, a reservoir removably mounted on the housing, a heating element removably mounted in the reservoir, and a plurality of comb-teeth mounted on the reservoir, each tooth being provided with a duct passing longitudinally therethrough, and means for controlling the flow of liquid from the reservoir through the ducts, said means comprising a cylindrical valve rotatably positioned at the inner ends of the teeth and adjacent the reservoir, the said cylindrical valve being provided with a plurality of transverse openings adapted to be rotated into and out of alignment with the ducts in the comb-teeth.

---

1,693,249. VAT. CHARLES PAULY, Port Washington, Wis. Filed Oct. 9, 1925. Serial No. 61,472. 1 Claim. (Cl. 257—208.)

A vat comprising an outer jacket formed of wood and having a plurality of longitudinally extending channels in its side and bottom walls, said channels being open towards the interior of said jacket and communicating with each other at alternately opposite ends and forming between themselves inwardly projecting tongues, said side walls being slanted outwardly, and a sheet metal pan having slanting side walls and a flat bottom and adapted for positioning within said jacket, said bottom resting directly upon the bottom tongues formed between the bottom channels, and said sides wedging against the side tongues formed by the side channels, said jacket having inlet and outlet apertures communicating with said channels at opposite ends of the vat.

---



1,693,250. SEALED PACKAGE AND CLOSURE CAP THEREFOR. LOUIS P. PIARSOLI, Jr., Connellsville, Pa., assignor to Capstan Glass Company, Connellsville, Pa., a Corporation of Delaware. Filed July 15, 1926. Serial No. 122,517. 12 Claims. (Cl. 215—46.)

1. A sealed package, comprising a container, a glass closure cap having a laterally extending peripheral flange, and an annular shoulder beneath said flange adapted to seal a gasket, said flange having a continuous periphery with a recess on its under side to form a guideway leading to the inner edge of the gasket at an angle to the shoulder, whereby an instrument will be guided to the inner edge of the gasket between said shoulder and said gasket to break the vacuum in said container.

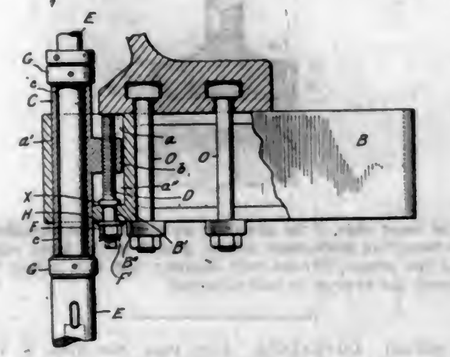
---

1,693,251. CONTAINER. PAUL PICK, New York, N. Y., assignor to The Kalbfleisch Corporation of New York, New York, N. Y., a Corporation of New York. Filed Mar. 16, 1925, Serial No. 16,069, and in Germany Mar. 17, 1924. 6 Claims. (Cl. 206—2.)

1. A closed container comprising a closed-in metallic frame provided with an outwardly-presented neck and an inner lining of acid-proof hardened plastic material, that portion of the lining withing said neck forming an orifice through the wall of the container.

---

1,693,252. CERAMIC-GLAZING PROCESS. WILLIS O. PROUTY, Hermosa Beach, Calif., assignor, by mesne assignments, to American Encaustic Tiling Company, Ltd., Los Angeles, Calif., a Corporation of New York. Filed May 6, 1925. Serial No. 28,500. 5 Claims. (Cl. 91—72.)



5. In a process of forming glazed ceramic products having a surface of variegated color the operation of applying to the bisque a coating of glaze mixture of selected color, applying over said first coating a coating of glaze mixture of a different color and containing an insoluble material that will be eliminated in the firing of the glaze, spraying a third coating of glaze mixture over the second coating and firing the product so prepared.

---

1,693,253. MULTIPLE-SPINDLE DRILLING-MACHINE ARM. AUSTIN A. RIDDELL, Jackson, Mich., assignor to Fox Machine Company, Jackson, Mich., a Corporation of Michigan. Filed June 28, 1927. Serial No. 202,063. 1 Claim. (Cl. 77—24.)

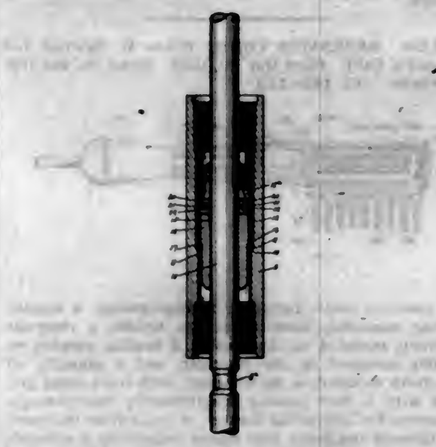
In combination in a multiple spindle drilling machine, an arm having means for connecting it to the head

of the machine, said arm being connected with the head and having a vertically disposed cylindrical bore therethrough adjacent its outer end and a vertically disposed rectangular recess adjoining said cylindrical bore and communicating therewith at one side, said arm having a horizontally disposed flange which extends from the lower end thereof to form a bottom for said rectangular recess, said flange being vertically bored to align and communicate with the said rectangular recess, a vertically disposed screw rotatably mounted in the bore in

the flange and being disposed in said recess, said screw having an integral annular enlargement engaging the upper surface of said flange, a tool spindle supporting sleeve mounted in said cylindrical bore and having an integral horizontally disposed vertically bored lug extending laterally into said rectangular recess and adapted to receive said screw in screw-threaded engagement to adjust the sleeve to various positions relative to the arm, a nut below said flange for clamping the screw in adjusted position, said screw having a diametrical hole through its end and a cotter pin in said hole for retaining the nut in the screw.

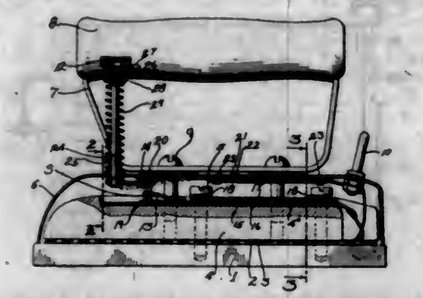
---

1,693,254. WATER HEATER. JAMES M. ROWLEY, Buffalo, N. Y. Filed Apr. 5, 1927. Serial No. 181,184. 2 Claims. (Cl. 122—208.)



1. A water heater comprising a body provided on its underside with a water conducting channel having an inlet at one end and an expansion chamber at the other end, said channel having an outlet, a thin metal diaphragm secured to said body so as to close the underside of said channel and expansion chamber and adapted to be subjected to heat for heating the water in said conduit, and a drain cock opening into said expansion chamber under said outlet.

---



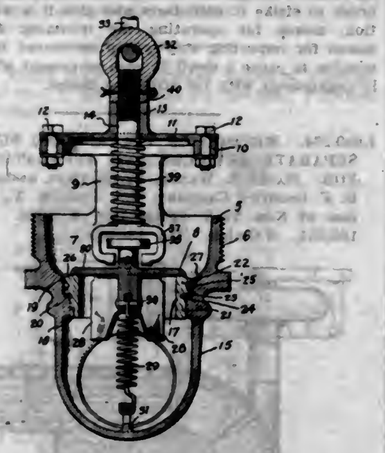
1,693,255. QUICK-ACTION RETENTION VALVE FOR WELLS. BERNARD H. SCOTT, Glendale, and SAMUEL E. ROSS, Long Beach, Calif., assignors to Scott-Ross and Company, Los Angeles, Calif., a Corporation of Delaware. Filed Oct. 6, 1926, Serial No. 139,848. Renewed Oct. 9, 1928. 8 Claims. (Cl. 103—202.)

1. A retention valve for wells comprising in combination with a well tube, plunger rod and plunger valve, a tubular member connected into said well tube, an annular valve seat therein, a valve member having a sliding fit on a portion of said plunger rod within said tubular member and having an annular shoulder adapted to seat upon said annular valve seat to close the opening therethrough, movable means carried as a part thereof for limiting the upward movement of said valve member away from said seat whereby to permit flow through said annular valve seat, and means for releasing said movable means on said valve member whereby it can be lifted out of said tubular member with said plunger rod.

---

1,693,256. AUTOMATIC CURRENT-CUT-OUT ELECTRIC FLATIRON. JOHN J. SHEA, San Diego, Calif. Filed Jan. 29, 1926. Serial No. 84,584. 3 Claims. (Cl. 219—25.)

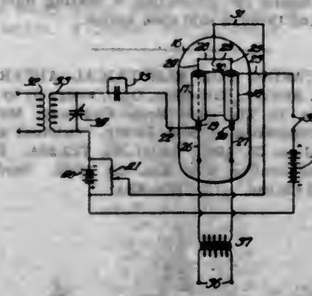
2. In an electric flatiron, a casing, a switch member positioned within said casing at the normally forward end thereof and connecting the flatiron with a source of electrical energy, another switch member positioned within said casing at the normally forward end thereof and in spaced relation with said first mentioned switch member, and a resiliently mounted reciprocating plunger supported by said casing and connected at its one end to said last mentioned switch member and provided at its opposite end with a knob positioned contiguous to the normally forward end of the handle of said flatiron whereby the same may be manipulated by a finger of the hand operating the flatiron for depressing the same when the iron is manipulated for connecting said switch members.



---

1,693,257. TANK VALVE. PAUL S. SHIELD, Cincinnati, Ohio, assignor to Augustine Davis, Jr., Covington, Ky. Filed Apr. 25, 1924. Serial No. 708,850. 14 Claims. (Cl. 137—21.)

1. In a tank having a screw-threaded outlet collar, a valve for closing said outlet comprising a valve disk, a

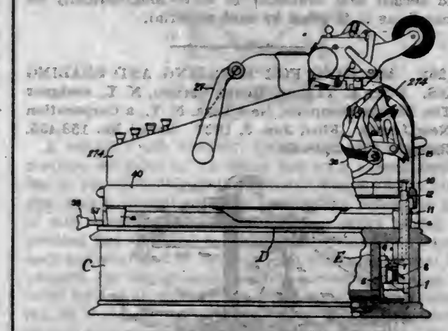


body provided with a screw-threaded portion for engagement with the thread of said collar, and a valve-seat annulus supported at its lower portion by a region of said

body offset from the zone of potential distortion which includes the screw joint between the body and the collar, said annulus extending upward free from the wall of the body and carrying the seat for the valve disk.

---

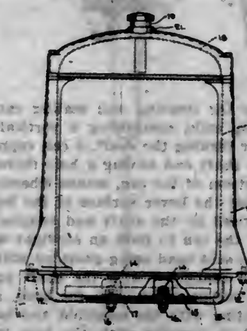
1,693,258. MEANS FOR ELIMINATING FLUCTUATIONS IN ELECTRIC CURRENT. CHARLES SPARTH, Chicago, Ill., assignor, by mesne assignments, to Raytheon Manufacturing Company, Cambridge, Mass., a Corporation of Delaware. Filed June 7, 1926, Serial No. 114,172. 3 Claims. (Cl. 250—27.)



1. An electron discharge device having a casing, a filament circuit therein, and a thermo-electric couple within said casing and associated with said filament circuit adapted to maintain at an average potential a given point of said filament circuit which except for said thermo-electric couple would not represent the point of average potential of said filament circuit.

---

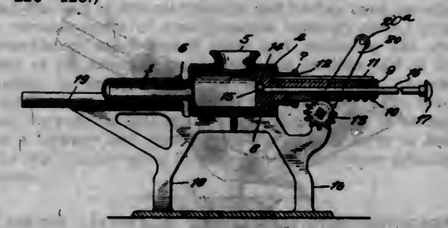
1,693,259. CASH REGISTER. OSCAR J. SUNDSTRAND, Rockford, Ill., assignor, by mesne assignments, to Sundstrand Corporation, Wilmington, Del., a Corporation of Delaware. Filed Aug. 15, 1921. Serial No. 492,244. 3 Claims. (Cl. 235—22.)



1. The combination of a casing, a cash drawer in the casing, a hook on the cash drawer, a lever in said casing having a stud arranged to engage said hook, a spring tending to move the lever to advance the drawer in said casing and disengage the stud from the hook, a registering machine on said casing, a primary latch for said lever, said latch being releasable by said registering machine, whereupon said spring partially opens the drawer, a secondary

latch located in said casing and adapted to restrain said lever against the influence of said spring, and manually operable means for disengaging the secondary latch from said lever.

---

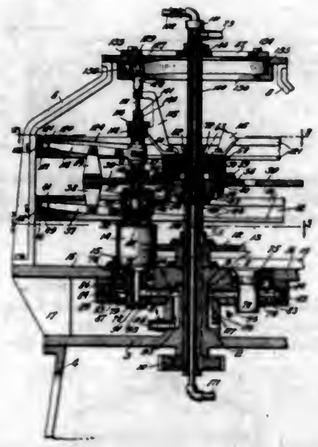


1,693,260. RADIATOR. ARTHUR L. SWANK, Detroit, Mich., assignor to Long Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 29, 1924. Serial No. 758,684. 3 Claims. (Cl. 180—68.)

1. A radiator comprising a casing, a core supported by the casing and capable of relative lateral movement, said core provided with a filler neck and a yieldable member spacing the filler neck from the casing.

---

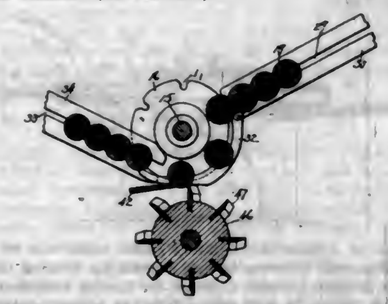
1,693,261. APPARATUS FOR FILLING FRAGILE CONTAINERS. ERNEST J. SWEETLAND, Hazleton, Pa. Filed July 17, 1924. Serial No. 726,499. 4 Claims. (Cl. 226—125.)



1. In an apparatus for filling edible containers of the type described, a casing having a charging opening therefor, an elongated nozzle a piston for forcing substantially solid ice cream in said casing into the nozzle, means to operate said piston, a secondary piston adapted to enter

said nozzle and force the material therefrom, means whereby said secondary piston may be manually operated and means to support an elongated container in position to receive the material as it is forced from said nozzle, and to permit said container to move longitudinally on said nozzle as it is filled by said material.

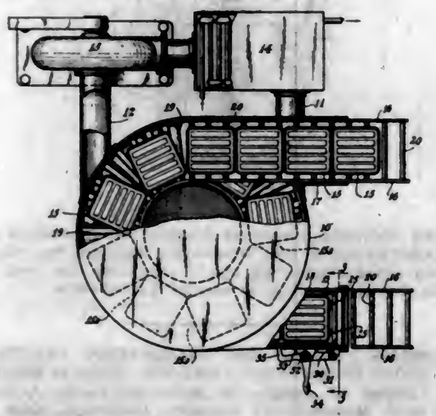
---



1,693,262. MACHINE FOR TREATING AND SEALING CANS. BURT E. TAYLOR, Mount Vernon, N. Y., assignor to The Borden Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 3, 1927. Serial No. 158,455. 3 Claims. (Cl. 226—68.)

1. A machine for treating and sealing cans having a hole in their top ends, comprising a vertically arranged shaft, means for turning the shaft, a can supporting plate attached to the shaft and having a hole therein affording access to the bottom of the can, means whereby a vacuum is created against the lower surface of the bottom of the can, a head carried by the shaft and adapted to contact with the top of the can to form an air-tight space around the hole therein, said head being provided with a passageway, a manifold connected with the shaft and having a hole leading to the passageway in the head, a stationary member cooperating with the manifold and having a hole therein adapted to register with the hole in the manifold, said member being adapted to be connected with an air exhausting means, and means for inserting a cap in the hole in the can and sealing it therein.

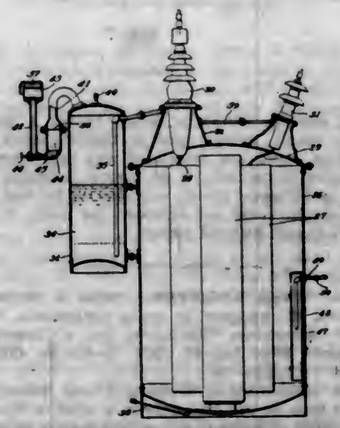
---



1,693,263. TRIMMER. ANTON VAN VEEN, Hartford, and HORACE H. FITZGERALD, Berlin, Conn., assignors to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed Oct. 15, 1923. Serial No. 668,549. 11 Claims. (Cl. 300—17.)

1. A trimming machine for cylindrical brushes including a feed member movably mounted and having means to engage said brushes and move them forward while permitting free rotation thereof, a trimming device comprising a number of cutters with their cutting edges spaced apart and movable in the path of the periphery of said brush to strike it with force and give it a whirling motion, means for operating the trimming device, and means for imparting step-by-step movement to said feed member to cause a dwell in such movement with a brush in engagement with the trimming device.

---



1,693,264. METHOD OF VULCANIZING SUCCESSIVE SEPARATE ARTICLES AND APPARATUS THEREFOR. HARRY E. WANER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Dec. 3, 1926. Serial No. 152,351. 6 Claims. (Cl. 18—6.)

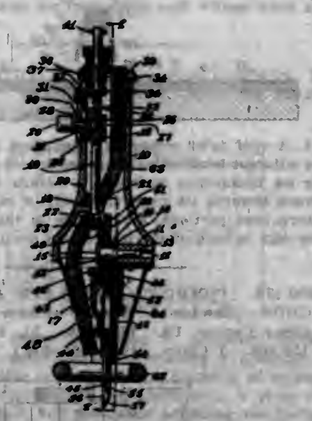
3. Vulcanizing apparatus comprising means for effecting movement of successive, separate articles in procession through a helical path with open spaces in the procession and means for circulating a heating fluid about the articles and through said open spaces.

---

1,693,265. CASING FOR ELECTRICAL APPARATUS. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Original application filed June 25, 1924, Serial No. 722,204. Divided and this application filed Nov. 20, 1925. Serial No. 70,220. 12 Claims. (Cl. 220—85.)

1. A housing for electrical apparatus having two conductor bushings extending through the top thereof, supports for said bushings providing chambers surrounding the interior portions thereof, means for connecting said chambers to permit the passage of air from one to the other, a vent communicating with the top of one of said chambers, and a liquid seal for said vent.

---



1,693,266. SEED BAG. ROSECRANS BALDWIN, Chicago, Ill. Filed Nov. 1, 1927. Serial No. 230,269. 7 Claims. (Cl. 139—383.)

1. A textile fabric seed bag formed of loosely woven toweling material, the material along the sides of the bag being provided with a selvage border approximately one inch in width and having a line of stitching therethrough forming the bag seam.

---

1,693,267. RUG-MAKING MACHINE. JOHN E. BERGLIND, South Acton, Mass. Filed Mar. 20, 1926. Serial No. 96,341. 2 Claims. (Cl. 112—80.)

1. In a rug making machine, the combination of a base, a needle and a loop holding device mounted in the base for reciprocating movement therein, a shaft rotatably mounted in the base, means for rotating said shaft, a crank secured to said shaft, a connecting rod connecting said crank and the needle, a cam secured to said shaft, a roller attached to said loop holding device, said cam and roller maintaining said loop holding device substantially at rest with respect to said needle during a predetermined portion of the travel of said needle.

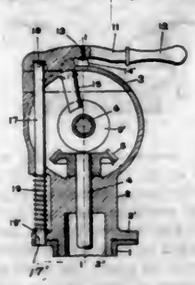
---

1,693,268. SMOKER'S ASH RECEIVER. ABRAHAM BURGER, Toronto, Ontario, Canada. Filed Feb. 3, 1927. Serial No. 165,717. 1 Claim. (Cl. 131—51.)

A smoker's ash receiver, comprising a bowl-shaped receptacle provided at its upper end with a neck terminating in an outwardly-facing annular flange and in its bottom with a conical spreader terminating below the mouth of said receptacle, and a cover for the latter having a depending rim arranged to slidably fit within the receptacle-neck and provided at its upper end with an external flange adapted for engagement with the receptacle-flange, said cover having an internal flange at its upper end terminating in a depending waste-receiving funnel disposed concentric with the cover-rim and normally resting at its open, lower end on the top of said conical spreader.

---

1,693,269. TOOL HANDLE. HARRY I. CLULEE, Wallingford, Conn., assignor to R. Wallace & Sons Mfg. Co., Wallingford, Conn., a Corporation. Filed Mar. 31, 1927. Serial No. 179,770. 1 Claim. (Cl. 145—61.)

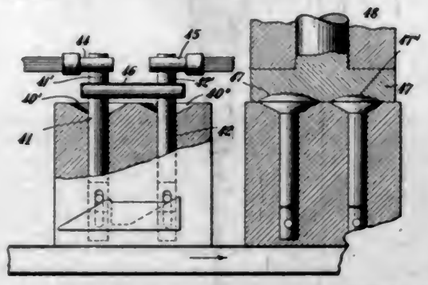


As a new article of manufacture, an armored wooden handle for ice picks and the like, consisting of a turned wooden handle comprising a ball-like end and a shank, the diameter of the said handle at the junction of its ball-like end and its shank being markedly less than the transverse diameter of its ball-like end, and a relatively thick and heavy one-piece metal cap comprising a domical body conforming to the curvature of the outer portion of the ball-like end of the said handle and having upon its edge a circular series of equally-spaced inwardly-curved gripping-fingers superimposed upon and embracing the surface of the inner portion of the said ball-like end of the handle to firmly anchor the metal thereupon, whereby and on account of the thickness and heaviness of the metal cap the armored ball-like end of the handle may be utilized as a hammer and whereby its fingers will serve to hold the cap in place solely by their rigidity and hence gripping power.

---

1,693,270. CONTROL MECHANISM FOR WRINGERS. HARRY J. CRINER, Davenport, Iowa, assignor of one-half to A. G. Bush, Davenport, Iowa. Filed Sept. 15, 1927. Serial No. 219,705. 9 Claims. (Cl. 68—32.)

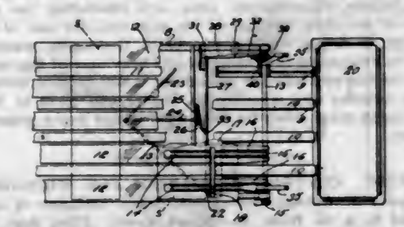
1. In a wringer control mechanism, the combination with a supporting column, of a housing revolubly mount-



able thereon, a locking bar slidably mounted within the housing, a control lever having one end united to the upper end of the locking bar and fulcrumed upon the housing, a slot formed in the top of the housing, a shift

arm united to the control lever and extending downwardly through the slot into the housing, and means within the housing controllable by the shift arm for throwing the wringer into and out of gear.

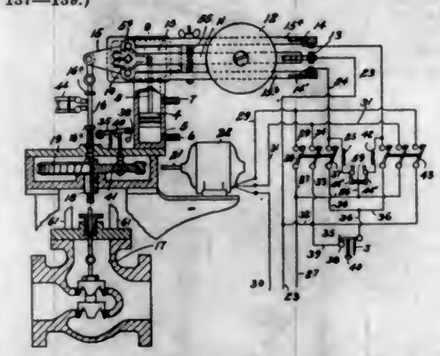
---



1,693,271. ELECTRICAL HEATING AND FORMING MEANS. ARTHUR G. DANNELL, New York, N. Y., assignor to Elektromatik Forging Machine Corporation, New York, N. Y., a Corporation of New York. Filed May 11, 1927. Serial No. 190,493. 30 Claims. (Cl. 219—3.)

1. Means for heating a metal article to a forging temperature, comprising a holding die member provided with a die cavity, means for supporting a metal article within said die cavity so that that portion of said metal article desired to be heated to a forging temperature extends beyond said die cavity, and means for heating said portion of said metal article to a forging temperature without overheating said die.

---



1,693,272. AUTOMATIC CONTROL FOR SHEET-MATERIAL-HANDLING MACHINERY. LOUIS J. ELSAS and ELMER M. JONES, Atlanta, Ga.; said Jones assignor to said Elsas. Filed Mar. 7, 1924. Serial No. 697,506. 9 Claims. (Cl. 192—128.)

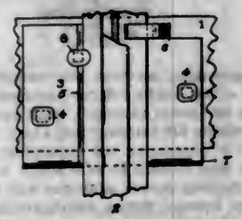
6. An apparatus for handling sheet material comprising a belt conveyer, a vacuum system having an inlet port disposed adjacent the conveyer in such position as to be sealed by the sheet material when being moved by the conveyer, a bellows-operated control mechanism, and other mechanism controlled by the bellows-operated mechanism acting on the sheet of material in timed relation to the movement of the material.

---

1,693,273. PRESSURE REGULATOR. LEWIS E. HANKISON, Pittsburgh, and WESLEY M. STEPHENS, Cheswick, Pa.; said Stephens assignor to said Hankison. Filed Apr. 25, 1924. Serial No. 708,910. 24 Claims. (Cl. 137—139.)

1. A pressure regulator comprising a member movable in response to unbalance fluid pressure, means controlled by said member for varying the fluid pressure, and an instrumentality actuated by said means for rendering said member ineffective as a controlling agent as the fluid pressure is counterbalanced independently of the position and movements of said member.

---

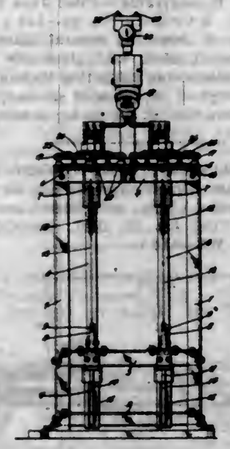


1,693,274. METALLIC-ROOF JOINT. EBER J. HAYMAN, Parkersburg, W. Va. Original application filed Sept. 26, 1927, Serial No. 222,006. Divided and this application filed Apr. 19, 1928. Serial No. 271,344. 3 Claims. (Cl. 108—21.)

1. A roof joint comprising elongated metallic sections, the adjacent longitudinal edge portion of each section having an upstanding wall and a return bent portion, returned towards its respective body, a cap overlying both return bent portions, a raw edge in the cap engaging a raw edge in each of the return bent portions.

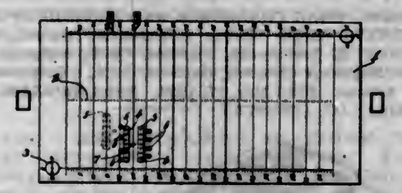
---

1,693,275. COMBINED TIE-PLATE AND RAIL ANCHOR. EDWARD J. HENGGI, O'Hara Township, Allegheny County, Pa. Filed Dec. 31, 1926. Serial No. 158,209. 1 Claim. (Cl. 238—304.)



A tie plate consisting of a rectangular metallic plate having an upstanding rib extending between opposite edges, said rib forming an abutment for one edge of a rail base, the plate having a slit extending inwardly from the edge facing said abutment and parallel to the adjacent edge, the material between said slit and adjacent edge being bent upwardly and toward the abutment to form engaging means for the opposite sides of the rail base, the edge of the plate opposite the rebent portion extending downwardly at right angles to the body of the plate.

---



1,693,276. MACHINE FOR USE IN THE MANUFACTURE OF SHOES. FRED HUME, St. Louis, Mo., assignor to International Shoe Company, St. Louis, Mo., a Corporation of Delaware. Filed Nov. 30, 1925. Serial No. 72,140. 16 Claims. (Cl. 12—1.)

1. A machine of the character described comprising, a table, a movable plate supported above said table and having a recess in one edge thereof, mechanism for raising and lowering said plate, wipers supported at the sides of said recess for converging movement, and cams supported by said table for converging said wipers when said plate is lowered.

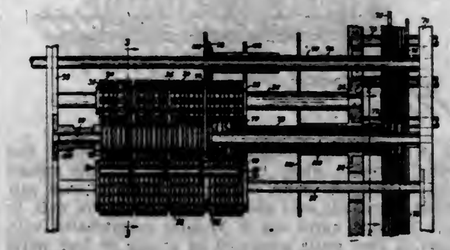
---

1,693,277. FOOTBALL GAME. ALFRED HUSTWICK, Los Angeles, Calif. Filed Mar. 5, 1928. Serial No. 259,044. 7 Claims. (Cl. 273—94.)

1. A football game comprising a miniature football playing field, a game piece representing a plurality of linesmen immovable to each other, a plurality of separate movable pieces representing back-field men, a piece representing a football, and means for actuating the football when making a kick or pass.

---

1,693,278. EXPANSIBLE BAND OR BRACELET. CHARLES H. KESTENMAN, Providence, R. I., assignor to Kestenman Bros. Mfg. Co., Providence, R. I., a Corporation of Rhode Island. Filed May 23, 1927. Serial No. 193,530. 4 Claims. (Cl. 59—79.)



1. An improved construction of link for expansible bands, chains or linkages comprising an outer member having a top-portion with sides bent at right-angles thereto and folded inwardly to form bottom-flanges provided with apertures, and an inner rectangular rigid frame having side-strips adapted to abut the sides of the outer mem-

ber and formed with projections on their edges, said frame being assembled in the outer member between the top-portion and bottom-flanges thereof with its projections engaging the apertures in the bottom-flanges to rigidly hold it in place therein.

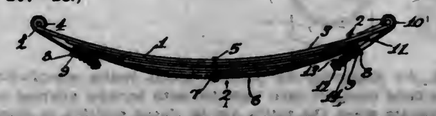
1,693,279. CASH REGISTER. WALTER J. KREIDER, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Mar. 5, 1927. Serial No. 173,164. 14 Claims. (Cl. 101—93.)

1. In a machine of the class described, the combination of a plurality of sets of type carriers, means for adjusting one set of the type carriers, and an internal gearing means operated by said means for adjusting the other sets of type carriers a like extent.

---

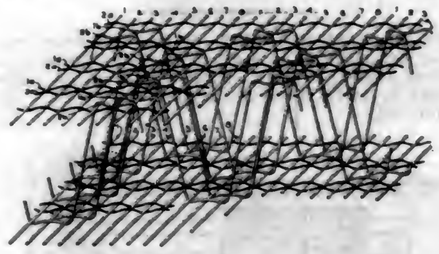


1,693,280. PISTON. JOHN C. LEARY, San Francisco, Calif. Filed Nov. 16, 1925. Serial No. 69,217. 7 Claims. (Cl. 74—108.)

1. In a piston for a reciprocating engine, an outer shell arranged for engagement with the cylinder walls of the engine and having a closed head, a shell arranged within said first shell and adapted for longitudinal adjustment relative thereto, a wrist pin held in said second shell, a spacing member for adjustably positioning said shells, and means cooperating with said spacing member and operable through said piston head to lock said shells in adjusted position.

---

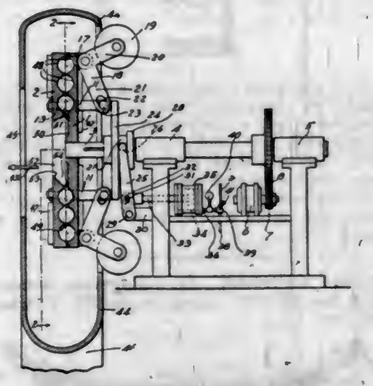
1,693,281. SNUBBER. IRA E. LITTEN, Orange, Calif. Filed Nov. 12, 1925. Serial No. 68,569. 4 Claims. (Cl. 267—28.)



1. A snubber comprising in combination a multiple leaf spring with a main leaf and successively shorter leaves,

the latter being on a convex side when flexed, means to bolt the leaves together at substantially one place, a snubber having a pair of strap-like elements bearing on the convex side of the spring with one end secured to the bolting means and its other end connected to one end of the main leaf, said elements bearing on some of the shorter leaves, one of said elements having a flange with an aperture therethrough, the other element having a rod extending through said aperture, and a compression spring between the flange and the free end of the rod.

---



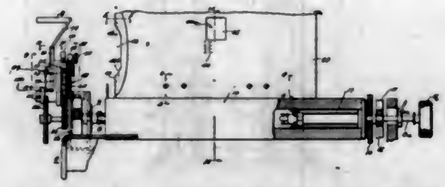
1,693,282. PILE FABRIC. HORACE MELLOR, Sanford, Me., assignor to Sanford Mills, Sanford, Me., a Corporation of Maine. Filed Jan. 25, 1928. Serial No. 249,330. 5 Claims. (Cl. 139—397.)

1. A pile fabric comprising wefts, pile warps and ground warps in which the pile warps and the ground warps alternate in pairs, the ground warps of each pair passing alternately over and under the successive weft, in which the pile warps are of W-form concatenated with groups of four wefts separated by groups of four wefts unconcatenated with the pile warps and in which the concatenation of the pairs of pile warps with the wefts is repeated transversely of the fabric a plurality of times with the same groups of four wefts and then alternately with the intermediate groups of four wefts, whereby a checkered effect is produced with the pile warp in the ground between the diverging arms of the W-sections of the pile warp and with the ground sections unconcatenated with the pile warps substantially concealed by the converging arms of adjacent W-pile warp sections.

---

1,693,283. APPARATUS FOR CASTING METAL BODIES. ALBERT E. MIX, Garfield, Utah. Filed May 18, 1926. Serial No. 109,825. 13 Claims. (Cl. 22—65.)

1. An apparatus for casting metal bodies comprising two mold members each provided with recesses adapted to cooperate when the molds are in closed position to form cavities corresponding in shape to the bodies to be cast, means engaging said members to cause them to rotate together while permitting one of said members to move longitudinally with respect to the axis of rotation toward or away from the other member so as to close or open the mold members, means for rotating said mold members, means mounted on one of said mold members to rotate therewith and adapted for operation by the centrifugal force due to the rotation thereof to hold said mold members in closed position, means at the central portion of said members for receiving molten metal, and passage means connecting said metal-receiving means with said recesses.

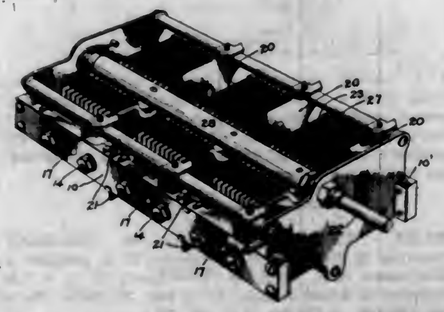


---

1,693,284. PROCESS OF PREPARING NATURAL ZEOLITES. MARTIN F. NEWMAN, Oakmont, Pa., assignor to Wm. B. Scaife & Sons Company, Oakmont, Pa., a Corporation of Pennsylvania. Filed June 8, 1925. Serial No. 35,825. 2 Claims. (Cl. 23—112.)

1. The process of preparing natural silicates such as greensand, greensand marl, and glauconite for use in water softening, comprising subjecting the material to the passage therethrough of superheated steam at a temperature of not less than 600° F. for an appreciable time.

---



1,693,285. MECHANISM FOR REVOLVING TYPEWRITER CYLINDERS. GUY V. NEWTON and ERNEST BLACKBURN, Los Angeles, Calif.; said Blackburn assignor to said Newton. Filed Jan. 12, 1927. Serial No. 160,603. 5 Claims. (Cl. 197—114.)
